Mr. Chairman, there are more than 250,000 miles of railroad in the United States. If we figure up the same proportion we can readily understand the amount that is being collected from the people of the country by these public service corporations in excess of that to which they are justly entitled. It will amount on passenger traffic alone, not including interstate business, to the enormous sum of \$240,000,000 per year, or, including interstate travel, the sum of one-half billion dollars. Down in our State they bond the railroads for more than \$60,000 a mile, whereas, as a matter of fact, they do not cost the builders more than \$15,000 a mile. In other words, the people are paying interest on watered stock that amounts to \$3 every time they pay on a real investment of \$1. The provision offered by my colleague, Mr. MURRAY, is to ascertain the physical valuation, the real value of these railroads, the amount of real dollars that has been invested in them after the water has been squeezed out. Nothing more important can be done, because we can never arrive at a just basis for fixing either passenger rates or freight rates until the water is squeezed out of the stock of these corporations and their real value is known.

Mr. Chairman, I think in Oklahoma we have one of the best corporation commissions in the world. Yesterday evening one of the members of that corporation commission talked to me and he said that the valuation of these railroads could be made for \$10 per mile. When I was a member of the Senate of Oklahoma we made an appropriation for that purpose, and the

railroad corporation commission of Oklahoma, using that appropriation, made a physical valuation for less than \$10 per mile. I think one of the greatest railroad experts in this country, and one of the greatest men in the country, who stands at all times for the interests of the people, is ROBERT LA FOLLETTE, of Wisconsin. Senator LA FOLLETTE, in speaking upon this question in May, 1911, used the following language:

I think I am able to make a fairly authoritative answer to the question of the Senator from New Hampshire. I have referred before to the very careful valuation of the physical properties of the railroads made by the Wisconsin commission. Their engineers, contractors, bridge builders, architects, real-estate experts have been sent to inspect every detail of the property. Engineers have gone on foot over the mileage. They know what bridges are built of wood; what bridges are built of concrete; what bridges are constructed of steel. They know how all the depots are constructed, how much real estate each railroad company owns. They know the value of the terminals used by the Wisconsin railroads outside of our State and the extent to which the companies outside of Wisconsin use those terminals. They have gone step by step over every inch of this ground, and I can say to the Senator from New Hampshire that at an expense not exceeding \$10 per mile, or \$2,400,000 for the entire mileage of the United States, we can learn the value of the physical properties of the railroad companies of this country engaged in interstate commerce.

Mr. Chairman, the railroad mileage of the United States is approximately 250,000 miles; at \$10 per mile it will cost the taxpayers of the country \$2,500,000 to ascertain the real value of the railroads. This amount would be about one-fortieth of what the people of this country pay out every year in excess passenger fare, or, to be accurate, the difference between a 2-cent fare and a 3-cent fare. If the moneys expended by the consumers of the country as freight is taken into consideration it would multiply the amount unlawfully taken from the pockets of the people many times.

If the money now taken from the pockets of the American people in extortionate and unlawful freight and passenger fares were placed in a separate fund and turned over to the Government, every dollar now taken from the burdened taxpayers of this country for taxes, National, State, county, municipal, and district, could be returned to them.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. THOMPSON of Oklahoma. Mr. Chairman, that statement of the Senator from Wisconsin is in line with a statement made by George A. Henshaw, who from 1907 until 1910, when he was elected a member of the State corporation commission, was assistant attorney general of our State and in charge of the litigation affecting the railroads of the State. He is the man who conducted all of the important litigations in our State, the man who prepared the case, and who, more than any other man in the country, finally won the 2-cent rate for Oklahoma and that line of States that run up and down the Mississippi Valley west of the great father of waters. That is in accord with his statement. It is exactly in accord with the figures of the corporation commission of Oklahoma. What do the railroads of the country want? They want a small appropriation. And why? Because a small appropriation extends the work out over a period of years, and this will permit the railroads to go on with their work of taking four dollars from the pockets of the people where, if they were making a reasonable earning on an honest valuation, they would be taking but one.

If the farmers, the laborers, the merchants, or any other honest and legitimate business of this country were to attempt to fasten on the shoulders of the American people a system one-half as hideous as the railroads have already fastened on them, the Congress would appropriate, and that, too, without quibble or question, many times the amount proposed by this amendment, and the people of this country would applaud our action.

Let us here and now take a stand for humanity as against greed, for man as against gold.

Now, Mr. Chairman, I want to say this: The corporations are the only people who are interested in extending this matter over a period of years. Now, the Interstate Commerce Commission at this time has appointed five division engineers. It is now trying to appoint one for every 5,000 miles of railroad in the country, to be called a division, to be engineers of the first class or first grade. That requires the appointment of about 50 additional men. Why, they could not begin to appoint these men, Mr. Chairman, unless there was an appropriation far in excess of \$300,000. I have been over there and talked with the Interstate Commerce Commission, and it tells me it needs the amount provided in the amendment of my colleague. I am willing to act on the judgment of the commission, for be it said to its everlasting credit, it is one of the departments of the Government that has always protected the rights of the great

common people. It may be true, as the gentleman from Georgia stated, that you will not expend between now and the 1st of February \$300,000, but they are making contracts or laying out work that means an expenditure of \$1,500,000.

Mr. BARTLETT. Oh, no; the gentleman is mistaken about that.

Mr. THOMPSON of Oklahoma. That is the gentleman's statement, and I oppose my statement to his.

The CHAIRMAN. Does the gentleman from Oklahoma yield to the gentleman from Georgia?

Mr. THOMPSON of Oklahoma. I do.

Mr. BARTLETT. The statement of Commissioner Clements, the oldest man on the commission, is to that effect; I am not making that statement. I do not know anything about it.

Mr. THOMPSON of Oklahoma. I will say this: That probably the statement of Commissioner Clements is correct, and it may be possible they will not use \$300,000 until the 1st of February; but they are trying to lay out work that requires \$1,500,000 according to their own estimate, and if the gentleman takes the testimony of Commissioner Clements he so states. Now, Mr. Chairman, I think this \$1,500,000 ought to be appropriated and that this work ought to be commenced. I think that work ought to be commenced on a broad basis, and that means that the water will be squeezed out of the stocks of these corporations and that the people of this country, the great producing masses of this country, will not be compelled to pay interest on three-fourths of the stock of railroad corporations that is watered stock and has no real value, but is purely fictitious—a charge against the people of this country, which, like Sinbad the Sailor, is riding the backs of our people and levying an unjust burden on every article produced by their industry.

Mr. Chairman, in this contest I take my place on the side of the people and against greed, graft, and monopoly in every form and everywhere.

Mr. MURDOCK. Mr. Chairman, I think the two gentlemen from Oklahoma who have preceded me are absolutely right in their statement that after this work shall have been begun it should be concluded as quickly as possible. This work ought not to stretch over a period of seven or eight years, but ought to be concluded in two or three or three and a half years. The New York, New Haven & Hartford Railroad has already made a physical valuation of its own property for use in court. It cost it \$75 a mile to do this. The Canadian Pacific has made a physical valuation of its property. It cost it \$65 a mile. The Union Pacific and the Southern Pacific have made valuations of their property for use in court, and it cost, I think, \$50 a mile.

Mr. BARTLETT. I will state that the average cost is \$50 a mile, the cost of making the valuation.

Mr. MURDOCK. If the gentleman will permit me, if the statement of the Interstate Commerce Commission is correct that the total railway mileage in this country is 250,000, and it should cost the Government anything like \$75 a mile, as it probably will, we will expend before we ascertain the physical valuation of the railroads something like \$18,000,000 to \$20,000,000. Now, I do not think it is material to appropriate more than \$300,000 at this time, but it will be material next year in February to make provision for a large sum for the quick inauguration and speedy continuation of this work. There is not any reason why when we do begin next year we should not begin in earnest. I do not think it will take over \$300,000 now, because the Interstate Commerce Commission is at present arranging and elaborating—

Mr. BARTLETT. Will the gentleman yield?

Mr. MURDOCK. Yes.

Mr. BARTLETT. If we gave those people a million dollars a minute they can not do any more work than they can do, because I know this department has plans which they propose to carry out as soon as they can, and they can only do so much work.

Mr. MURDOCK. It may not be material to increase this amount at this time, but it will be necessary for Congress next year to face the proposition that this is going to mean an enormous expenditure.

Mr. BARTLETT. There is no doubt about that.

Mr. MURDOCK. And when that time comes I hope the committee will not hold back but come through, full and free.

As a matter of fact, here is a very curious thing in our legislative life. One day we are presented with a document from the Interstate Commerce Commission which shows us that the New York, New Haven & Hartford Railroad Co. in its acquisition of the Rhode Island trolleys gave \$12,000,000 absolutely for nothing, and the next day we see in the newspapers where a wreck has taken place on the New York, New Haven & Hartford Railroad, with a loss of life and injury to the number of 25 or 30 or 40. It is curious, I say, that we do not seem to see

any connection between the two; that we do not seem to realize that the antiquated safety devices, the poor roadbeds, the old, ramshackle cars on that railroad are directly traceable to the swindling practices of the so-called captains of industry, who skin their property to the bone at the expense of decent service. And I think the time for dillydallying and dawdling and delay on the part of the American Congress in this matter has gone by, and I want to see this committee, when it comes here next session to make these appropriations, give this Interstate Commerce Commission enough money to do this thing, not in seven or eight years but in two or three years.

Mr. BARTLETT. They can not do it in that time.

Mr. MURDOCK. Take the plans of the Interstate Commerce Commission. They have five main engineers. They are to place those five main engineers each in charge of one-fifth of the United States, each district to have about 50,000 miles of railway. Each mile of that railway is to be surveyed and appraised. They are to appraise it by what they call field parties. At the head of each field party will be an engineer. Each field party will have in it, as I understand from the hearings—which, by the way, are very full and illuminating—five squads, and they will have at the head of each squad an engineer. Each one of these squads is to make an actual physical survey of the railroad property. It is estimated that each squad—

The CHAIRMAN (Mr. HOWARD). The time of the gentleman has expired.

Mr. MURDOCK. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. The gentleman from Kansas asks unanimous consent to proceed for five minutes more. Is there objection? [After a pause.] The Chair hears none.

Mr. MURDOCK. Each squad, it is estimated, can view physically about 2½ miles of property per day. The size of those squads may be increased or their number may be increased to expedite the work. If the number of squads is increased, it is going to take money, and lots of it, millions of dollars; and the thing for Congress to do is to make this work not only complete, but through early, adequate appropriations to make it as speedily as possible, as the gentleman from Oklahoma [Mr. MURRAY] has emphasized.

I have watched the railroad rate regulation proposition all during my years in this body. Originally the old interstate-commerce law was passed back in 1887, I think it was, or in 1889. In 1897, in a decision of the Supreme Court, some of its main provisions were emasculated, and there succeeded after the decision of the court in 1897 a long period of agitation, during which the potent features of the law were ignored, and new and evil practices grew up, among them the giving of rebates. We passed, along about 1903, the Elkins law against rebates, and a little later on we passed the Hepburn law. None reached the sore spot, none of them brought any remedy to this country, and we were compelled a little later on to pass still another railroad rate law. To-day we are to repeal a portion of that law, and all during the last 20 or 25 years Congress has been taking little, timid, mincing half steps, when it ought to have taken full strides toward some remedy for the railroad situation. The fact is we have reached now what approaches a remedy. We are getting down to brass tacks. We are to have physical valuation of these properties. We are to determine what part of them is water. And there is not anyone here who seriously doubts that the \$20,000,000,000 of capitalization of the railroads of the United States does have water in it.

We have gotten down to this point, to a place where we have at hand a remedy, or, at least, final steps toward an adequate remedy—a cure, not a palliative; actual correction, not cocaine. It is all right to appropriate the \$300,000 now, which will give the Interstate Commerce Commission the right to perfect its plans, but after its plans have been perfected and have been put before this body and the Senate next January, then it will be the business of Congress to grant them a full and free hand in the pursuance of this work to a speedy conclusion.

Mr. MANN. Mr. Chairman, just a word. I never was a very enthusiastic supporter of the physical valuation of railroads, because I was satisfied for years and am satisfied now that when the valuation is had it will prove that the railroads have higher valuation than the present capitalization, including stocks, bonds, watered stock, preferred stock, or any other form of capitalization or indebtedness. And if the rates are to be fixed in accordance with or on the basis of valuation the railroads will be in a far better position to demand an increase of rates after the valuation than they are when they have not been able to secure that increase. The cost—

Mr. SHARP. Will the gentleman yield?

The CHAIRMAN. Does the gentleman from Illinois [Mr. MANN] yield to the gentleman from Ohio?

Mr. MANN. In just a second. The cost of the railroad terminals of the United States, in the first instance, in the main, was comparatively little. The value at present is enormous.

A few years ago one railroad in Chicago, a railroad coming into that city, paid over \$10,000,000 to get terminal facilities. Other railroads which had paid practically nothing have far better terminal facilities than that road. But when you value the property, in my judgment, you have got to consider the present value as well as the original cost.

However, inasmuch as Congress has undertaken to provide for the valuation of the property, the sooner it can be done the better. Whenever we undertake something that can be finished we ought to finish it as soon as possible.

Now I yield to the gentleman from Ohio.

Mr. SHARP. Mr. Chairman, the gentleman's remarks, after I arose to interrupt him, have practically answered my question. The observation I was going to make was that the great increase in population, the business transacted, and the commercial development of this country in such expanding measure have enhanced the original valuation of the railroads as well as many of our private industrial corporations. I quite agree with the gentleman, so far as his statement is concerned, that when we do get the real valuation of many of these railroads it will be a surprisingly high figure. Quite as valuable for the purpose of imposing a just taxation as for fixing carrying rates will be this information.

Mr. MANN. Of course the railroads in the main have been projected ahead of the population.

Mr. SHARP. There is no question about that.

Mr. MANN. As the population has centered in certain localities, it has increased the value of the property of the farmers, and of the railroads, and of everybody else.

But the gentleman from New York [Mr. FITZGERALD], in charge of the bill, has assured us that the amount carried in the bill is all that the members of the Interstate Commerce Commission desire at this time. In private conversation with Commissioner Prouty some time ago concerning the appropriation for valuation, I said to him that in my judgment the Committee on Appropriations and Congress would give to the commission all the money at any time it said it needed for this purpose without question. I think that has been done in this case, and I have no doubt it will continue to be done, and that the valuation will proceed as rapidly as it is possible for the organization to carry it on.

Mr. FITZGERALD. Mr. Chairman, will the gentleman yield for a moment?

Mr. MANN. Certainly.

Mr. FITZGERALD. In the hearings that were had on this matter I made this statement:

These appropriations are made on the understanding that the amount put in this bill is to enable you to do this work, and the more quickly you do it the better everybody will be pleased.

That was my attitude in the committee. The purpose of the committee was to give the money that could be used until there could be an opportunity to make further provision.

Mr. MURRAY of Oklahoma. Mr. Chairman, I would like to ask one question of the chairman. I am convinced as to the amount of money that he says could be used until February, but I am not convinced as to the amount of money that can be used from February until July. I gathered from the statement of the gentleman from Georgia [Mr. BARTLETT] that the gentleman's committee intend to recommend another appropriation, whether in February or any other time, as soon as it is needed. Is that true?

Mr. FITZGERALD. That is true.

Mr. MURRAY of Oklahoma. With that understanding, then, I will withdraw the amendment. I was going on the assumption that the appropriation bills would not pass ordinarily until near the close of a session, or around about July.

Mr. FITZGERALD. We fixed the date as the 1st of February in the belief that at the next session of Congress before the 1st of February in all probability there would be an urgent deficiency bill.

Mr. MURRAY of Oklahoma. Then, Mr. Chairman, I will ask leave to withdraw my amendment in the light of that statement.

Mr. FITZGERALD. The intention was to give the commission all they could use. We gave them \$390,000. That is what the bill carries.

Mr. Sisson. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Mississippi [Mr. Sisson] moves to strike out the last word.

Mr. Sisson. Mr. Chairman, I did not intend to say anything, but there has been some criticism of the subcommittee and I want to answer it.

Now, so far as I am individually concerned, I do not suppose anybody in the House is more in favor of a proper physical valuation of the railroads than I am. But the very men who are going to organize this force and make this valuation, the men who are to have entire charge of this work, testified that they could not possibly use more money than we gave them. We gave them every dollar they asked for, and were willing to give them more than they asked for. Some gentlemen have talked as if we were just enacting a new law in reference to physical valuation. This is not true; we are simply providing funds for the commission to enforce the law as it is. I presume that every Member of the House is heartily in favor of carrying out the positive statutes on the books. It is only a question of how much money can be used, and this subcommittee recommended to the full committee and the full committee recommended to this House every dollar that these men said they could use. What more can we do? One of them said he was almost absolutely sure that by February they would not be able to use one-half of this money that we have given them, because under the civil-service rule insisted on by the President it will take 60 days to examine this vast army of men. Then it will take more than 30 days to get through with the results of the examinations and make the selections from that army of men who will be examined. After that they have got to organize this army of men who are appointed and assign them to their various places for the work. It is a Herculean task, and this does not require anything more than an office force, because these men will not be put upon the pay roll until they actually begin their work.

Mr. MURDOCK. Will the gentleman yield?

Mr. Sisson. I will.

Mr. MURDOCK. The gentleman will agree that after the organization is complete the work should then be prosecuted with all possible speed.

Mr. Sisson. Every member of the subcommittee was urgent that it should be done as quickly as possible.

Mr. MURDOCK. Then it will take a great deal of money, and take it all at one time.

Mr. Sisson. Yes; and nobody knows how much. Judge Prouty said he did not know. He started out with the idea that \$5,000,000 would be required. He soon got it up to \$12,000,000, and he said the chances are that it would cost \$20,000,000. Nobody knows, because it is such a Herculean task.

Some gentleman talks about crossties. If there are two or three crossties that are in bad condition in every hundred feet of track, these crossties are worth from 30 to 40 cents apiece in the raw and are worth from 50 to 60 cents apiece when put down; and when you take the vast mileage of the railways in the United States, if you do not ascertain the condition and value, even down to the crossties, your valuation will be far from correct. We must have a physical valuation upon which the courts of the country can sustain the freight and passenger rates which are made before that valuation will be worth the paper on which it is written. You ask whether they are going to count the crossties in four or five thousand miles of railway. I answer yes, and value them. At last it resolves itself into the question whether or not the people who make this valuation are honest men and are going honestly to do their duty by the people.

Mr. MANN. In valuing these ties does the gentleman think it will be necessary to take them up so that they can look at both sides of each tie?

Mr. Sisson. The gentleman from Illinois certainly does not ask that question seriously. I know the gentleman is not at all in sympathy with the idea of the physical valuation of railroads.

Mr. MANN. Oh, the gentleman is mistaken.

Mr. Sisson. I do not know how they are going to proceed about it. I am not an expert on crossties, but I will put the gentleman from Illinois on the stand and let him determine whether they shall look on both sides of each tie.

Mr. MANN. I do not think you will have to look on either side of the crossties in order to value a mile of railroad track.

Mr. Sisson. That shows what the gentleman knows about railroads, because it is the condition of the rails and the condition of the roadbed and the condition of the ties that fix the value of every mile of railroad; and the man who does not know that is a man who does not know enough about it to discuss the question. When I first commenced to look into this matter a little I did not myself realize the cost of the millions

of bolts, even, that go into thousands of miles of railroad. If we are to get a valuation that means anything to the country, all these things must be accurately determined. I believe the Interstate Commerce Commission will proceed with care and caution, and that they will obtain reports upon which the country can stand after they are made. I believe the personnel of the commission are doing their duty, and I believe they are asking for every dollar that they are entitled to, and that the subcommittee have done all they can do.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, page 8, following line 20, by inserting as a new paragraph the following:

"To enable the Interstate Commerce Commission, at its discretion, to investigate and report in regard to the use and necessity for block-signal systems and appliances for the automatic control of railway trains and any appliances or systems intended to promote the safety of railway operation, including experimental tests of such systems and appliances as shall be furnished in completed shape, to such commission for such investigation and test, free of cost to the Government, in accordance with the provisions of the joint resolution approved June 30, 1906, and the sundry civil appropriation act approved May 27, 1908, \$25,000."

Mr. MANN. Mr. Chairman, this amendment was prepared by me some weeks ago.

Mr. BARTLETT. I would like to ask the gentleman from Illinois if the Interstate Commerce Commission has not this authority now?

Mr. MANN. The commission has the authority now.

Mr. BARTLETT. Is this to carry out the act passed in 1908?

Mr. MANN. In 1906. In 1906 Congress passed a joint resolution providing that the Interstate Commerce Commission, at its discretion, might investigate block signals and other automatic appliances for control of railway trains. Subsequently, in the appropriation bill of 1908, it was provided that this authority should be extended to all safety appliances. Under this authority an appropriation of \$50,000 was made in the first place, and the commission created a board of train control, which made investigations for several years, especially concerning the automatic control of railway trains. They found some devices which the persons who owned them claimed would automatically stop the train. For instance, one device provided, in a normal condition of the track, when it was not clear, that a little projection should rise up by the side of the rail, and if that projection was up it struck a projection on the engine which put on the air brake and turned off the steam. These devices have not been put in operation. I am not confident that that degree of perfection has yet been reached where Congress is authorized to require by legislation the use of any of those devices. I feel quite confident, however, that we ought to proceed with the investigation until we reach sufficient knowledge of some kind of an automatic device that we can compel the railroad companies to install—automatic devices which will absolutely prevent rear-end and head-on collisions.

Mr. ADAMSON. Mr. Chairman, will the gentleman yield?

Mr. MANN. Certainly.

Mr. ADAMSON. The gentleman is satisfied that the authority already exists for these investigations, but he merely wants to furnish the money to do it with?

Mr. MANN. That is all. The original resolution came from the Committee on Interstate Commerce, of which the gentleman from Georgia is now the distinguished chairman, and was then a distinguished member, and the gentleman from Georgia [Mr. BARTLETT], now a member of the Committee on Appropriations, was also a member.

The reason that this was dropped was, in the main, inactivity. The board of train control probably thought it had got all the information it could, and one year, in making estimates, there was no estimate submitted for that appropriation. I discussed the matter with members of the Interstate Commerce Commission and with members of the board of train control. I think everyone admitted, at least that was my understanding, that it was desirable to proceed in endeavoring to obtain further information.

Now, these tests are made where the appliances are furnished free of cost, so that the cost to the Government is not very great. I have named \$25,000. I do not suppose that amount would be expended, but if the appropriation of \$25,000 is made the commission would feel assured that on any arrangement it made the unexpended balance would be reappropriated, if need be. I hope the committee will agree to this amendment.

Mr. SHARP. Mr. Chairman, I am very much interested in what the gentleman from Illinois has said, because it is along the line of a reform sought by me in the introduction of a bill in the last Congress providing for the creation of a commission that should investigate the causes of the numerous railway acci-

dents that we have been witnessing during the past few years. Everybody knows what a disparity there is between the fatalities in foreign countries, especially in England, and in this country. It is true we have many adverse conditions that they do not have in the European countries. But that there has been in years past a very great and needless negligence on the part of the railroads, especially in the carrying of passengers, is undeniable. While it seems to me that Congress may have been dilatory, perhaps, in trying to provide a remedy, yet out of all of the agitation upon the subject by this body have grown improved conditions, and this discussion to-day is along the right line. I have noticed, and perhaps some of my colleagues have also noticed, during the past year or two that the railroads themselves have taken up with renewed energy and activity this much-needed reformation as it applies to the safety of the traveling public. They have undertaken to provide schools of instruction, especially the western roads, and have instructors who teach their employees what to do in cases of emergencies, the more skillful use of safety appliances, meaning of signals, and so on. They are, as much as possible, guarding against the liability of their own negligence.

Mr. KINKEAD of New Jersey. Mr. Chairman, will the gentleman yield?

Mr. SHARP. Yes; for a question.

Mr. KINKEAD of New Jersey. I am very glad to hear the gentleman from Ohio say a good word for the railroads.

Mr. SHARP. I have not yet finished.

Mr. KINKEAD of New Jersey. No; but I just want to call the gentleman's attention to something in which I know he will be interested. I do not remember whether it was he or the gentleman from New York [Mr. TALCOTT] who introduced a bill to do away in four or five years with the use of wooden cars.

Mr. SHARP. That was the gentleman from New York [Mr. TALCOTT].

Mr. KINKEAD of New Jersey. One of the commissions in New Jersey during the past week investigated that situation, and it reports that there are few cars leaving the Jersey City terminal that are not constructed of steel, and it bears out exactly what the gentleman from Ohio is saying, that there is an evidence of a practical desire upon the part of the railroad companies of the country to do that which Congress is anxious they should do.

Mr. SHARP. Mr. Chairman, I am very glad to hear that. It only corroborates what I have thought myself. It may be an unkind reflection, but I think it is true, that many times we are unwilling to say even a just word in favor of a railroad corporation. There seems to be something about a railroad company that arouses the antagonism of the average Representative. I am not here to say anything in praise of railroads that they do not deserve, nor do I desire to criticize them unfairly in respect to something that can not be helped, but I do think there is plenty of room for improvement. The tremendous increase in the volume of traffic renders constant improvements necessary. It was with that view that I introduced the bill to which I have referred providing for the creation of a special commission.

The Interstate Commerce Commission has its hands full. It is doing a great work, which has resulted in untold benefit to the American people, not only to those who are shippers of freight, but to the traveling public as well. I do think that a commission composed of a personnel of not alone experts in railroad building, but of business men of wide experience, men of common sense who themselves have occasion to travel a great deal, could be of much service in conducting such an investigation. There would be many instances where such a commission, after making careful examinations of conditions and practices, could make a report that would contain very profitable recommendations looking to the elimination of many common causes of accidents.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. SHARP. For a question.

Mr. MANN. The gentleman understands that under this original appropriation, which this follows, the Interstate Commerce Commission did create a commission which they called the board of train control, and undoubtedly that will be done again.

Mr. SHARP. Yes; I am in sympathy with that plan. I think it is a step in the right direction. I am not criticizing it. I am also in favor of the gentleman's amendment.

Mr. MANN. I understand.

Mr. SHARP. I want to speak of one instance. I remember the time—a year or more ago—when a former distinguished Government official was making what I think was called his swing around the circle. In any event, he stopped temporarily in the city of Cleveland, and he made a great deal of complaint because the car on which he was riding was shunted back and forth for a long time in that dungeon of a depot.

We have in Cleveland one of the greatest cities of the United States, a city that is rapidly overtaking its few remaining rivals in respect to population and commercial growth, but at the same time one of the most miserable cavelike depots in existence. I can not condemn that structure too much. What the aforesaid official complained of is a common practice. I have met with it many times in my own experience. Trains come in from the East or West, perhaps on time, but due to one cause or another they are often held there for 25 or 30 minutes beyond the time scheduled for departure. What is the result? The train starts out of that station 30 minutes late. If the train is going west to make, say, the next division terminal, Toledo, it must run much faster than its schedule to reach Toledo on time.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. SHARP. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SHARP. The engineers and the conductors are very conscientious men. They are a high class of employees. The result of this delay is that when their trains leave the stations they speed them and improve upon an already fast schedule, which, in some cases, involves 50 miles an hour between stations, so that they very often run up to 65 or 70 miles an hour in order to make up time. In this connection I desire to speak of a delusion which seems to obtain throughout the country. In the newspaper columns we read of a railroad wreck and it is stated that the train was going at a very high rate of speed, estimated to be 45 or 50 miles an hour.

As a matter of fact that train in nine cases out of ten was going 65 or even 75 miles an hour. Of course you can not do that with any safety on some roadbeds. We have the finest roadbed in the world between New York City and Chicago on the Lake Shore Railroad. There are also some very good roadbeds in other sections of the country, but the topography of the country between those two points and the quality of the roadbed permits that speed.

Mr. COOPER. Will the gentleman yield?

Mr. SHARP. I will.

Mr. COOPER. The gentleman makes a very forceful statement, and I think he would make it more forceful if instead of saying minutes and 30, 40, 50, or 60 miles an hour he would simply call attention to the fact that where a train is going 60 miles an hour it is going at the rate of 88 feet a second, which is practically the length of this hall.

Mr. SHARP. Yes; and carrying further the excellent illustration of the gentleman from Wisconsin, I wish to quote from an expert railway man in connection with one of the recent wrecks in which he found fault with the practice of trying to stop a train going at high speed within too short a distance. He pointed out the fact of the impossibility of stopping one of the long, heavy passenger trains going at the rate of 60 or 70 miles an hour within the distance often attempted. He said it was absolutely impossible; that the distance within which they could stop trains going at various rates of speed had been carefully demonstrated. Now, the bill I introduced provided for the consideration of many of these questions by the commission, and I think it would be productive of a great deal of practical good if we could have some sort of an examination of that kind made by unprejudiced men.

I am heartily in sympathy with this movement to compel a better observance of the rules of safety, for they are even more important than the securing of more reasonable rates of transportation of passengers and freight. Anything that I can do by voice or vote I will be glad to do to further such kind of legislation.

Mr. ADAMSON. Mr. Chairman—

Mr. WILLIS. Will the gentleman yield for a question?

Mr. SHARP. Yes; for a question.

Mr. WILLIS. I wondered whether the attention of the gentleman had been called to a statement recently appearing in the press, purporting to come from one of the officials of one of the great railroad systems of the country, in which that official stated that already his company had saved—

The CHAIRMAN. The gentleman from Georgia [Mr. ADAMSON] had been recognized.

Mr. SHARP. But, Mr. Chairman, I yielded time for a question. I had not taken up all of my time.

Mr. WILLIS. I was directing the attention of the gentleman to this statement of an official of that railroad, who said that this company had already saved through the use of steel cars more than the cost of the cars through the elimination of accidents.

Mr. SHARP. I have no doubt that is correct, and I have no doubt but what self-interest on the part of railroad companies

has mainly been the actuating motive, of course, for many of their improvements and their willingness to further perfect their service.

Mr. ADAMSON. Mr. Chairman, I do not speak often in the committee. In this case a good deal of discussion has been going on about matters concerning which I have been trying for many years to learn something. For many reasons I do not speak often. One is that other Members want to speak. I love to hear them, and I am too polite to consume time they wish to use. It is hard work for me to speak, and I do not love to speak except when duty seems to require it. Sometimes I absent myself from the committee when pending business comes from committees other than my own for fear something might be said to tempt me to talk. The tongue, you know, is an unruly and dangerous member, and if a man can just abstain from talking he will not have much to account for in the future. I have listened with great interest to the remarks of the gentleman from Illinois [Mr. MANN] and the gentleman from Ohio [Mr. SHARP], and if the gentleman from New York [Mr. FITZGERALD], in charge of the bill, is in favor of accepting the amendment of the gentleman from Illinois, I will acknowledge that it is wise to vote for it. I am a very great stickler for discipline, and the only way I know to stick together, do business, and carry out policies is for us great chairman of committees to stick together and vote with one another every time. [Applause.]

It is true that there is ample authority for the investigations proposed by the gentleman from Illinois [Mr. MANN]. It is equally true that those investigations ought to be made. It was likewise true that there was ample authority for many years for the commission to make a physical valuation of property of the carriers, the only thing lacking being the sinews of war. They did not have the money. If appropriations for the purpose had been made sufficient, the valuation could have been made years ago. Therefore it was necessary for us to enact a compulsory law requiring the physical valuation.

Together with others I have worked on that for the last nine years. As it is not proper to mention what is said and done in committee, the first outcropping of our work is found in the minority report signed by Judge BARTLETT, Judge RICHARDSON, Judge PETERS, and myself against the administration railroad bill in 1910. With the help of a few patriotic Republicans we succeeded in placing the physical valuation in that bill in the House. It went out, however, in a conference in which the Democratic conferees were not permitted to participate. I became chairman of the committee in the next Congress, introduced the bill in the House, and it became a law.

Now, the authority exists for these investigations about safety appliances of which we woefully stand in need. It ought to be done. We are willing to provide for saving life and property, but human understanding is fallible, human information is often short. Human fallibility in operating the trains, I think, is more to blame, perhaps, than the steel and the iron and the cross-ties and the charters of the corporation that are so much anathematized on many grounds, including watered stock and other questions. We want to know what to do. For many years we have cooperated with the Interstate Commerce Commission as to steel cars, headlights, and other safety appliances. We have referred bills to the commission and had them before us on hearings. We have considered the state of the market, the output of the Steel Trust, the rapidity with which steel cars could be substituted for wooden cars. We do not want to do anything rash or drastic. We want to protect the public. We think trains running at a high rate of speed ought to have strong and indestructible cars. We think on trains where both steel cars and wooden cars are used they ought to be placed in separate parts of the train and not mingled together.

The railroads have all the time professed to us that they were substituting steel cars for wooden cars as rapidly as possible. They do not want to confiscate and throw away their entire rolling stock. They wanted to utilize it as long as they could and gradually substitute the steel cars. On inquiry we found some foundation for their statement. We are informed that at the present time there are very few wooden cars being constructed and turned out of the shops. All new cars are of steel or have steel frames. We are informed that on almost all the railroads running out of Washington solid steel trains are operated. It appears that the railroad monopoly in New England is an exception to this statement and that they had not substituted steel cars as rapidly as the other roads; but if they are only waiting to dispose of their wooden cars before doing so, it will not be long before it happens, because I understand they are now disposing of their wooden cars at very rapid rates, as the very frequent wrecks have been acting as instruments of retirement.

Mr. ROGERS. Will the gentleman yield?

Mr. ADAMSON. I will.

Mr. ROGERS. Has the gentleman's attention been called to the statement given out yesterday by President Elliott, of the New Haven Railroad? In answer to the question of "How many steel cars are operated on the New Haven Railroad?" he said:

There are 56 all-steel cars in operation, of which 26 are in service on the electric zone between Stamford and New York. In addition to this there are 60 steel underframe Pullman cars in service.

The CHAIRMAN. The time of the gentleman from Georgia [Mr. ADAMSON] has expired.

Mr. ADAMSON. Mr. Chairman, I ask unanimous consent that I may be allowed to proceed for five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. ADAMSON. I will state, in answer to the interruption of the gentleman from Massachusetts, that my information is that that road was slower than any of the others as to substitutions, and I hope the recent events there will suggest to them a different method of retiring the wooden cars and substituting steel cars more rapidly than they have been doing, without waiting for other wrecks to destroy them.

As to the subject of these investigations, I wish to say that I am opposed to creating any more original commissions. I am perfectly willing for the Interstate Commerce Commission to pursue the course already adopted by it of selecting its own expert agents to make these investigations. But we are not relying entirely upon them, however. We are all the time studying this question ourselves. Our committee has had at each Congress a subcommittee on the subject. It has one now. It has a subcommittee on safety appliances, including cars, including block signals, including headlights, and including spark deflectors. Hours of labor are included in that also, and that is a very great element in these wrecks.

The question of letting a sleepy man, working overtime, run a train and imperil the lives of a thousand passengers is a very important one. All of these questions are submitted to a subcommittee, headed by a Democrat from the rock-ribbed State of New Hampshire—a precious rarity—imbued with the ideas of reform and democracy and good government [Mr. STEVENS], who has two as good Republicans as you could find in the country and two other good Democrats on the subcommittee to help him, to study these questions in all their phases; and if any gentleman knows any quicker way to get at the truth, and better truth, and bigger truth, and more solid truth, than that, we would like him to appear before us and tell us anything he knows about it. We will do our best to find out as much about these subjects as we can. We do not propose to jump on the railroads and abuse them.

Mr. KINKEAD of New Jersey. God bless you for those kind words! [Laughter.]

Mr. ADAMSON. We want them. I know of sections of the country where thousands of miles of railroad are needed. It is the folks who run the railroads that give us the trouble, for they are human, and they are just as bad and just as good as the same quality of human nature would be if engaged in any other business. That is the trouble about that. They have the same amount of cupidity; they have the same amount of carelessness; they have all the supposed elements of original and acquired sin that any other mortals have if they get in the habit of using them. [Applause and laughter.]

That is the trouble. They ought to be treated just like any other citizens and just like any other owners of property—no better and no worse. They ought to be held up to the discharge of their duty like other citizens and not be required to do any more than other citizens in upholding the law and paying their taxes and discharging their responsibilities. [Applause.]

As common carriers, however, these corporations perform a public function by public authority. Every corporate official is a quasi public officer and charged with the same high degree of duty and obligation to the public that devolves on any other public official, and should be held to strict accountability accordingly. In view of what has been said by the gentleman from Ohio and others, it is but just to say that the railroads have been of late years making efforts to promote the safety of travelers and property. It is but natural that they should do so, because it is to their financial interests to protect their own property, which is usually destroyed in a wreck, although travelers may escape without injury. The fault to be found in the railroads was their resistance, strenuous and determined, against regulation by the Government, attempted in response to the demand for relief against discrimination as to persons and localities. If they had never done that, there would have been no prejudice against railroads. When regulation was attempted the carriers bitterly resented it and thereby provoked what ill feeling has

been indulged in against them. We do not promise now that our investigations will result in legislation. They may result in demonstrating no need for legislation. We have already indulged in much legislation on those subjects. People have gotten into a habit—more like a disease, which, having started, has spread like a contagion—that impels them to look to Congress for new legislation every time anything happens, whether that legislation be appropriate or pertinent to the subject or not. Many inquiries have come to us this week to know if we were going to investigate and legislate about the most recent New Haven wreck, when ample authority was conferred upon the Interstate Commerce Commission many years ago to do that work, instead of leaving it to Congress. What we need is more enforcement of law and more litigation instead of so much legislation. Law can not enforce itself. It is a dead letter unless human nature is willing to enforce it. Whatever we find necessary to perfect the legislation to protect life and property in transit and uphold the hands of the commission in securing just and reasonable rates and practices we shall be found trying to do, and we will thank our colleagues for their assistance.

Did the gentleman from New Jersey wish to interrupt me?

Mr. KINKEAD of New Jersey. No. I intended to speak after the gentleman had yielded the floor.

Mr. ADAMSON. Then I yield to the gentleman from Kansas [Mr. MURDOCK].

Mr. MURDOCK. I have no questions to ask. I shall want to make a statement in my own time.

Mr. ADAMSON. I thank the gentlemen of the committee for their attention. [Applause.]

Mr. KINKEAD of New Jersey. Mr. Chairman, the very interesting statement made by the gentleman from Georgia [Mr. ADAMSON] proves two things. The first is the truth of his statement that the great chairmen of great committees are strangely clannish. The second is that he proved that he merited the eloquent tributes paid to him by the gentleman from Illinois [Mr. MANN]. [Applause.]

I am glad, Mr. Chairman, that the committee this afternoon had an opportunity to listen to a business man talk. I am glad that the committee this afternoon heard the statement from the gentleman from Ohio [Mr. SHARP], a business man, relative to what the railroads in his State and the trunk lines that reach out from the metropolis on through Buffalo to the great city of Chicago are endeavoring to do in betterment of their service.

Too often we listen here to lawyers who are technical in their statements, as well as verbose and ambiguous in their arguments, and it was a genuine pleasure for me to hear the gentleman from Ohio [Mr. SHARP], in his plain, clear, concise method of addressing the committee, state that in his judgment the great railroads of this country are endeavoring, as the result of a desire to protect themselves, to protect the traveling public. Usually if a statement of that kind were made on this floor the motives of the railroads would be brought into the discussion. The gentleman from Ohio carefully, and I think manfully, avoided a discussion of that kind. None of us as representatives of the American people need question the motives of any public-service corporation in this country so long as we are convinced that they are endeavoring as best they may to protect the people who are temporarily committed to their care.

The public-service corporation of my State has been ridiculed and held up to scorn by the press of our State, sometimes Democratic and sometimes Republican. I do not know that one is any worse at times than the other in unfair criticism. What has it done under the able and intelligent direction of its president, Mr. Thomas N. McCarter? The public-service corporation of New Jersey examines physically, as well as mentally, all the men and women who come to them and ask that they may be appointed to some position in its service.

After they are employed this corporation grants them a pension of 50 per cent of their salary when they have been in its service for 25 years.

What else do they do? They have a restaurant in their big office buildings in Newark, N. J., and they feed their employees without charge for the midday meal. This, Mr. Chairman, I want to say to the gentleman who has so well stated his case this afternoon is the method by which the Public Service Corporation of the State of New Jersey has endeared itself to its employees, and the traveling public in our State is as well satisfied with its service as the employees are with their treatment. And it may be as a result of this method which extends to the Pennsylvania and possibly to some of the other railroads of New Jersey that the railway commissioners of our State were able to send on here to Washington yesterday the statement that of the through trains leaving Jersey City to go to Washington, to go to Buffalo, to go to Chicago, more than 90 per cent of the cars that were included in those trains were

built of steel. In these days of demagogic utterances against public-service corporations I am glad to have had an opportunity to state what one of the despised has done in New Jersey. [Applause.]

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. FITZGERALD. Mr. Chairman, in volume 35 of the Statutes at Large, page 325, is this provision:

Hereafter the Interstate Commerce Commission shall be, and is hereby, authorized, at its discretion, to investigate, test experimentally, and report on the use and need of any appliances or systems intended to promote the safety of railway operation, which may be furnished in completed shape to such commission for such investigation and test entirely free of cost to the Government. For this purpose the commission is authorized to employ persons familiar with the subject to be investigated and tested, and may also make use of its regular employees for such purposes.

This was carried in one of the appropriation bills for the fiscal year 1909, and thereafter provision was made specifically for such work.

In the estimates for the fiscal year 1913 no estimate was submitted for this purpose. In the hearings held by the Committee on Appropriations inquiry was made as to the failure to submit an estimate, and it was stated that it was the intention to discontinue the board, to which reference has already been made by the gentleman from Illinois.

My opinion is that the commission not only has authority but has ample funds to conduct this investigation for the fiscal year 1914. For 1913 the sum of \$1,000,000 was appropriated for the general purposes of the commission. The commission voluntarily submitted an estimate for the current fiscal year of \$950,000, and stated that they had a balance of \$191,000 from the previous year, but would expend \$40,000 additional in 1913. My recollection is that they would have about \$90,000 in excess of what they anticipated using out of the appropriation of \$950,000.

I believe there is a universal interest in the development of the block-signal system and safety-appliance devices, which interest has been accentuated by the recent disaster on the New Haven road.

I was about to suggest that we let this matter go over until to-morrow.

Mr. MANN. I am perfectly willing.

Mr. FITZGERALD. In the meantime I shall confer with the commissioners.

Mr. MANN. Before it goes over, let me remind the gentleman that the appropriation act from which he quotes only extended the authority of the commission to investigate all safety appliances.

Mr. FITZGERALD. That is true.

Mr. MANN. And that is the paragraph that provides for the use of the ordinary employees. The block-signal and automatic train-control provision was a joint resolution passed in 1906, and the purpose of that item in the appropriation bill by which the authority was extended over ordinary or other safety appliances was to give the same employees who were working on the block signals and automatic train control authority over other safety devices. I doubt whether that provision in the appropriation act would apply.

Mr. FITZGERALD. That may be true. In the hearing on March 26, 1912, this occurred in the committee:

The CHAIRMAN. Have you completed the investigations of the block-signal systems and appliances?

Mr. MILSTEAD. We have not completed the investigation, but we have not asked for any appropriation for another year. The block-signal board sits, on an average of about once a month, for a couple of days and passes on information submitted to them and the information collected by the block-signal inspectors, but their inspection of certain devices will be discontinued after the 1st day of July; there will be no block-signal board after that date.

The CHAIRMAN. Then you do not need them any more?

Mr. MILSTEAD. We do not say that; we do not say that we will not need them any more.

The CHAIRMAN. Then why do you discontinue them?

Mr. MILSTEAD. Well, the committee has given evidence a couple of times that they did not think we need them.

The CHAIRMAN. It was supposed when this investigation was started that it would be finished?

Mr. MILSTEAD. Yes; that is what I have reference to.

The CHAIRMAN. But it looked as though it was the intention to have it go on forever.

Mr. MILSTEAD. Well, there is evidence now that we have no intention of that at all.

The CHAIRMAN. Of course, if this block-signal board were allowed to drag along and keep drawing on the Treasury it would never finish its work?

Mr. MILSTEAD. Well, the commission decided to discontinue it and not ask for an additional appropriation.

Mr. MANN. I beg to say, having introduced both propositions, that it never was supposed that it ever would be completely finished.

Mr. FITZGERALD. That may be true; but, as I wish to have the committee rise now, I suggest that we allow the amendment to go over until to-morrow.

Mr. MANN. In view of the fact that the Democratic Members are going to have a caucus and that the Republican Members are not, but would like to go to the ball game, I hope the gentleman will make the motion.

Mr. FITZGERALD. I move that the committee do now rise. The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. Flood of Virginia, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7898) making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes, and had come to no resolution thereon.

ADJOURNMENT.

Mr. FITZGERALD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 5 minutes p. m.) the House adjourned until to-morrow, Saturday, September 6, 1913, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of waterway to connect Tennessee River with Tombigbee River, in the State of Mississippi, by way of Big Bear Creek or other practicable route (H. Doc. No. 218); to the Committee on Rivers and Harbors and ordered to be printed with illustrations.

2. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of Mosquito Inlet, Fla., with a view to securing a channel with suitable depth and width from the Atlantic Ocean to a point at or near the town of New Smyrna (H. Doc. No. 219); to the Committee on Rivers and Harbors and ordered to be printed.

3. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of Beverly Harbor, Mass., with a view to securing a channel depth of 24 feet and of widening the channel on the northern side by the removal of the ledge near the Essex Bridge (H. Doc. No. 220); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

4. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination of Port Huron Harbor, Mich., with a view to constructing some compensatory structure in the St. Clair River fronting the city of Port Huron that the city of Port Huron may have a depth of water not less than 20 feet from the present dock line out to the thread of the stream (H. Doc. No. 221); to the Committee on Rivers and Harbors and ordered to be printed with illustration.

5. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of Fenholloway River, Fla. (H. Doc. No. 222); to the Committee on Rivers and Harbors and ordered to be printed.

6. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of Pearl River from Bogalusa, La., to Columbia, Miss. (H. Doc. No. 223); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

7. A letter from the Acting Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Little Calumet River, Ill. and Ind., from the junction up to Blue Island (H. Doc. No. 224); to the Committee on Rivers and Harbors and ordered to be printed.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Military Affairs was discharged from the consideration of the bill (H. R. 7893) for the relief of Francis H. Connelly, and the same was referred to the Committee on Claims.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. PETERSON: A bill (H. R. 7935) to create in the War Department a roll to be known as the volunteer retired list, to authorize placing thereon with retired pay certain surviving officers of the United States Volunteer Army of the Civil War, and for other purposes; to the Committee on Military Affairs.

By Mr. STEENERSON: A bill (H. R. 7936) authorizing the Postmaster General to lease premises for post offices where the building is constructed upon plans approved by him for a term not exceeding 20 years; to the Committee on the Post Office and Post Roads.

By Mr. DEITRICK: A bill (H. R. 7937) for the acquisition of a site and the erection thereon of a public building at Medford, Mass.; to the Committee on Public Buildings and Grounds.

By Mr. RUCKER: A bill (H. R. 7938) to codify, revise, and amend the laws relating to publicity of contributions and expenditures made for the purpose of influencing the nomination and election of candidates for the offices of Representative and Senator in the Congress of the United States, limiting the amount of campaign expenses, and for other purposes; to the Committee on Election of President, Vice President, and Representatives in Congress.

By Mr. PEPPER: A bill (H. R. 7939) providing for the labeling, marking, and tagging of all fabrics and leather goods hereinafter designated and providing for the fumigation of the same; to the Committee on Interstate and Foreign Commerce.

By Mr. CHURCH: A bill (H. R. 7940) to provide for enlarging the United States building at Fresno, Cal.; to the Committee on Public Buildings and Grounds.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR: A bill (H. R. 7941) granting a pension to Ernest Miller; to the Committee on Pensions.

By Mr. CULLOP: A bill (H. R. 7942) granting a pension to Jacob B. S. Rice; to the Committee on Pensions.

By Mr. DILLON: A bill (H. R. 7943) granting an increase of pension to Archibald Branaugh; to the Committee on Invalid Pensions.

By Mr. FESS: A bill (H. R. 7944) granting a pension to Jefferson L. Wylie; to the Committee on Invalid Pensions.

By Mr. FARR: A bill (H. R. 7945) granting an increase of pension to Armina Miller; to the Committee on Invalid Pensions.

By Mr. HELM: A bill (H. R. 7946) granting a pension to Ann E. Fish; to the Committee on Pensions.

By Mr. PETERSON: A bill (H. R. 7947) granting an increase of pension to John B. Swoap; to the Committee on Invalid Pensions.

By Mr. J. M. C. SMITH: A bill (H. R. 7948) granting an increase of pension to Franklin W. Dickey; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. CARY: Petition of the Wisconsin State Federation of Labor, Milwaukee, Wis., protesting against the passage of the workmen's compensation bill (S. 959); to the Committee on the Judiciary.

By Mr. ROGERS: Petition of the American Free Art League, Boston, Mass., protesting against the placing of a tariff on art and artistic antiquities; to the Committee on Ways and Means.

By Mr. J. M. C. SMITH: Papers to accompany bill granting a pension to Franklin W. Dickey; to the Committee on Invalid Pensions.

SENATE.

SATURDAY, September 6, 1913.

The Senate met at 10 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.

The Journal of yesterday's proceedings was read and approved.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the concurrent resolution of the Senate (S. Con. Res. 5) providing for the printing and binding, with illustrations, of 16,500 copies of the proceedings in Congress and at the unveiling in the Statuary Hall of the statue of Zachariah Chandler.

COTTON CONTRACTS.

Mr. SMITH of Georgia. I desire to present two short telegrams that I have received with reference to a matter contained in the tariff bill. I should like to have them read. They are brief.

There being no objection, the telegrams were read and ordered to lie on the table, as follows:

HAWKINSVILLE, GA., September 5, 1913.

Hon. HOKE SMITH,
United States Senate, Washington, D. C.:

We, the undersigned merchants and farmers of Pulaski County, protest against passage of Clarke rider bill, and respectfully ask that you use every effort to prevent said passage.

E. J. Henry, D. R. Pearce, H. H. Sparrow, J. J. Pollock, J. D. Humphreys, T. R. Wilcox, J. T. Coleman, F. L. Royal, E. M. Coleman, T. B. Ragan, W. C. Merritt, J. R. Rogers, E. P. Walters, C. I. Anderson, M. H. Boyer, A. W. Lowry, J. B. Glover, J. K. Livingston, A. A. Smith, N. F. Powell, W. W. Wynne, E. F. Way, C. T. Smith, E. T. Pate, L. R. Langford, Mack D. Ferris, R. A. Anderson.

FORT GAINES, GA., September 5, 1913.

Hon. HOKE SMITH,
United States Senate, Washington, D. C.:

We respectfully urge you to have action on Clarke cotton-exchange bill deferred until cotton-selling season is past. The spinners would take advantage of the farmers who have to sell now and adopt a hand-to-mouth policy. To pass bill after Christmas would give country time to adjust before another selling season.

E. R. King, B. T. Castilo, E. W. Killingsworth, M. C. Gay, R. E. Peterson, J. R. Simpson, H. M. Shaw, R. L. Shaw, Emmett R. Shaw.

MEMORIAL.

Mr. PERKINS presented a memorial of the California State Board of Viticultural Commissioners, remonstrating against the imposition of the proposed tax of \$1.10 per gallon on brandy used for fortifying sweet wines, which was ordered to lie on the table.

MOSES HARRIS.

Mr. CHAMBERLAIN, from the Committee on Military Affairs, to which was referred the bill (S. 2600) for the relief of Moses Harris, asked to be discharged from its further consideration and that it be referred to the Committee on Claims, which was agreed to.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. PENROSE:

A bill (S. 3092) granting an increase of pension to Timothy D. Gallagher (with accompanying paper); to the Committee on Pensions.

By Mr. CHAMBERLAIN:

A bill (S. 3093) granting a pension to Adelaide W. Wheeler; to the Committee on Pensions.

By Mr. O'GORMAN:

A bill (S. 3094) to promote the safety of passengers and others upon railroads by compelling common carriers engaged in interstate commerce to use cars constructed of steel, and for other purposes; to the Committee on Interstate Commerce.

By Mr. BRADLEY:

A bill (S. 3095) for the relief of Oldham County, Ky.; to the Committee on Claims.

By Mr. SHIVELY:

A bill (S. 3096) granting an increase of pension to William H. Sherry; to the Committee on Pensions.

ENDOWMENT OF AGRICULTURAL COLLEGES.

Mr. SMITH of Georgia. I introduce a bill to provide for cooperative agricultural extension work between the agricultural colleges in the several States receiving the benefits of the act of Congress approved July 2, 1862, and of acts supplementary thereto, and the United States Department of Agriculture.

In connection with the introduction of the bill I wish only to say that the subject matter covers the same subject as a bill which passed the House at the last session and which was considered by the Senate. The new bill is the result of conferences between the Secretary of Agriculture, Congressman LEVER, and myself, and the executive committee of the colleges of agriculture, its object being to bring more completely into harmony the Department of Agriculture and the colleges for agricultural extension for performing demonstration work.

The bill (S. 3091) to provide for cooperative agricultural extension work between the agricultural colleges in the several States receiving the benefits of an act of Congress approved July 2, 1862, and of acts supplementary thereto, and the United States Department of Agriculture was read twice by its title and referred to the Committee on Agriculture and Forestry.

AMENDMENT TO THE TARIFF BILL.

Mr. JONES. On yesterday I offered an amendment, by request, intended to be proposed to the pending tariff bill, and asked that it be referred to the Committee on Finance. I notice that the amendment was ordered to lie on the table. I

move that it be taken from the table and referred to the Committee on Finance.

The VICE PRESIDENT. That order will be made.

IMPORTS AND EXPORTS (S. DOC. NO. 180).

Mr. BRISTOW. Some days ago I asked to have printed as a public document tables that were collected by the junior Senator from North Dakota [Mr. GRONNA] on the imports and exports of the agricultural productions of the country. I renew that request and ask unanimous consent that the tables may be printed as a public document.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

COMMISSION ON THE YAKIMA RECLAMATION PROJECT, ETC.

Mr. ROBINSON. I introduce a joint resolution and ask unanimous consent for its consideration.

The joint resolution (S. J. Res. 63) authorizing the Secretary of the Senate and the Clerk of the House of Representatives to advance to the chairman of the commission appointed under the act approved June 30, 1913, such sums of money as may be necessary for the carrying on of the work of the commission, and so forth, was read the first time by its title and the second time at length, as follows:

Resolved, etc., That to enable the commission appointed under section 23 of the act "Making appropriations for the current and contingent expenses of the Bureau of Indian Affairs for the fiscal year ending June 30, 1914," approved June 30, 1913, to make the investigation ordered in said section, in the States of Washington and New Mexico, that the Secretary of the Senate and the Clerk of the House of Representatives be, and they are hereby, authorized to advance to the chairman of said commission such sums as may be necessary to pay witnesses, stenographers at not exceeding \$1 per printed page, and for clerical assistance, and the traveling expenses of the commission incident to said investigation from the contingent fund of the Senate and House of Representatives; itemized vouchers for all such expenditures on the part of the Senate to be approved by the Committee to Audit and Control the Contingent Expenses of the Senate, and those on the part of the House of Representatives by the Committee on Accounts of the House of Representatives.

The VICE PRESIDENT. The joint resolution will be referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. ROBINSON. I ask unanimous consent for its present consideration.

The VICE PRESIDENT. Under the statute of the United States the joint resolution must go to the committee.

Mr. GALLINGER. I suggest that it should be a concurrent resolution instead of a joint resolution.

The VICE PRESIDENT. There is a statute of the United States which requires all such resolutions to be first presented to the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. ROBINSON. Very well, if objection is made—

The VICE PRESIDENT. It is not a question of objection. It is a question of complying with the law. It will go to the committee.

Mr. GALLINGER. I will suggest that it should be a concurrent resolution instead of a joint resolution. I think the Senator from Arkansas will agree to that change.

Mr. ROBINSON. A reference to the Committee to Audit and Control the Contingent Expenses of the Senate is, in my opinion, not imperative. The authority already exists for the expenditure, and it is the sole purpose of the joint resolution to obviate the inconvenience which will inevitably arise if the commission is to discharge its duties under the provision of law as it now exists without the right being granted to the disbursing officers of the House and Senate to make the advances.

The authority of law for the expenditure, I will say, is contained in the Indian appropriation act, and it is not contemplated by the joint resolution that that authority shall be increased or extended.

The sole purpose of the joint resolution is to prevent the commission from having to advance its own expenses. The joint resolution authorizes the Secretary of the Senate and the Clerk of the House of Representatives to advance such moneys to the commission, requiring that itemized vouchers shall be taken and filed and audited by the committee afterwards.

Further, Mr. President, the Senator from New Hampshire suggested that this should be a concurrent resolution. I do not want that. The resolution has been prepared by a disbursing officer who has been in the service of the Senate of the United States for 46 years, and he informs me that it is necessary that it shall be a joint resolution. For that reason, unless the Senator from New Hampshire can assign some particular reason for wanting to make it a concurrent resolution, I shall insist upon it as a joint resolution.

Mr. GALLINGER. I withdraw that suggestion. I will say to the Senator, if he will permit me, that I did not object to the

resolution at all. I merely made the suggestion, and that I very gladly withdraw.

Mr. ROBINSON. That was my understanding. Now I ask that the order referring the joint resolution to the committee be rescinded and I ask unanimous consent for its present consideration.

The VICE PRESIDENT. The Chair can not change the ruling of the Chair. This is the plain provision of the law:

Hereafter no payment shall be made from the contingent fund of the Senate—

That is what this calls for—

unless sanctioned by the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. ROBINSON. Mr. President, if you will hear me for a moment, the expenditure has already been authorized by law. I will read it to you.

The VICE PRESIDENT. The language of the law is clear, and the Chair rules that the joint resolution must go to the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. ROBINSON. I hope the Chair will not grow impatient with me for calling attention to the fact that a law has already been passed authorizing this expenditure and that the rule does not apply. I submit, if the Chair will look at the statutes he will see that his ruling is erroneous, and that he will not adhere to it and will permit the matter to be considered now.

Mr. SMOOT. Will the Senator from Arkansas yield to me?

Mr. ROBINSON. Yes, sir; I yield.

Mr. SMOOT. In noticing the resolution I think the Chair is clearly right in his ruling because the law as it passed made appropriations for current and contingent expenses of the Bureau of Indian Affairs. The Senator by this resolution wants to have a part of the money paid from the contingent expenses of the Senate. The law says it shall be paid from the contingent expenses of the Bureau of Indian Affairs.

Mr. ROBINSON. Oh, no, Mr. President; here is the law.

Provided, That one-half of all necessary expenses incident to and in connection with the making of the investigation herein provided for, including traveling expenses of the members of the commission, shall be paid from the contingent fund of the House of Representatives and one-half from the contingent fund of the Senate on vouchers therefor signed by the chairman of the said commission, who shall be designated by the members of the said commission.

The language is just as plain as can be. This expense is already provided for by the statute, and is to be paid in equal amounts from the contingent fund of the House and Senate. It does not make any additional charge on either of those funds, but it is intended to relieve the commission, as I have already stated, from the necessity of having to advance its own expenses and the expenses of witnesses necessary for the investigation. The joint resolution does not add any charge; it does not require any additional appropriation or authorization.

The VICE PRESIDENT. But let the Chair state to the Senator from Arkansas, suppose the Committee to Audit and Control the Contingent Expenses of the Senate—a baseless supposition—should not willingly advance the money, but prefer to pay after the services were rendered?

Mr. CLARK of Wyoming. I ask the Senator from Arkansas, if the position which the Senator now takes is a correct one, what is the necessity of the resolution now presented?

Mr. ROBINSON. The necessity for it is to authorize an advance to be made.

Mr. CLARK of Wyoming. But, if the Senator's position is right, the law has already provided for that.

Mr. ROBINSON. No; the expense is authorized under the statute, but no advance of any sum can be made. I call attention to a statute of the United States—

Mr. CLARK of Wyoming. Exactly so.

Mr. ROBINSON. If it were not for that statute, section 3648—

No advance of public money shall be made in any case whatever—

The joint resolution would not be necessary.

Mr. CLARK of Wyoming. Just to pursue that—

Mr. ROBINSON. Just a moment. A statute has been passed which applies to the cases of committees on the part of the Senate in this language:

That when any duty is imposed upon a committee of the Senate involving expenses which are ordered to be paid out of the contingent fund of the Senate, upon vouchers to be approved by the chairman of the committee charged with such duty, the receipt of the chairman of such committee for any sum paid to him or his order out of said contingent fund by the Secretary of the Senate shall be taken and passed by the accounting officers of the Treasury as a full and sufficient voucher, but it shall be the duty of such chairman, as soon as practicable, to furnish vouchers in detail for the disbursement of such moneys to the Secretary of the Senate, who shall file them with the accounting officers aforesaid; and this provision shall apply to all cases in which orders of the Senate have already been made.

Now, if this were a committee of the Senate there would be no necessity for this authorization of the advance, but it being a joint commission composed of Members of the House and Senate, in the view of some of us, it is necessary to get the authority for the advance. If the Senator objects the joint resolution will go over.

Mr. CLARK of Wyoming. I have no objection.

The VICE PRESIDENT. Permit the Chair to state that the Chair is not desirous of doing anything except simply to comply with the statute and the rules. The Chair has no knowledge as to the condition of the contingent fund of the Senate. Nobody knows except the Committee to Audit and Control the Contingent Expenses of the Senate. The Chair assumes that there is enough money there; he hopes so, at least. In three minutes time that committee can report the resolution back, and if the report is favorable, it will be passed.

Mr. ROBINSON. Very well. Let the joint resolution go to the committee.

Mr. SIMMONS. I will not object to the pending matter if there is to be no further debate.

Mr. ROBINSON. I have already agreed to let the matter go to the committee upon the suggestion of the Senator from Wyoming and the Senator from Utah.

The VICE PRESIDENT. The joint resolution will be referred to the Committee to Audit and Control the Contingent Expenses of the Senate.

Mr. WILLIAMS subsequently said: From the Committee to Audit and Control the Contingent Expenses of the Senate I report back favorably without amendment the joint resolution introduced this morning by the Senator from Arkansas [Mr. ROBINSON], and I ask unanimous consent for its immediate consideration.

There being no objection, the joint resolution was considered as in Committee of the Whole.

Mr. GALLINGER. I would suggest to the Senator from Mississippi, as the joint resolution provides that the money shall be paid from the contingent fund of the two Houses, it might be well to insert the words "in equal parts."

Mr. WILLIAMS. Yes. I did not draw up the joint resolution.

Mr. GALLINGER. It is the usual form.

Mr. WILLIAMS. I ask to insert the words "in equal parts." This is an expenditure already authorized by law.

The VICE PRESIDENT. Without objection, the amendment suggested by the Senator from Mississippi will be made.

The joint resolution was reported to the Senate as amended, and the amendment was concurred in.

The joint resolution was ordered to be engrossed for a third reading, read the third time, and passed.

THE TARIFF.

The VICE PRESIDENT. The morning business is closed.

Mr. SIMMONS. I ask unanimous consent that the Senate proceed to the consideration of House bill 3321.

There being no objection, the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

Mr. PENROSE. I suggest the absence of a quorum, Mr. President.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hollis	Overman	Smith, Ariz.
Bacon	Jackson	Owen	Smith, Ga.
Borah	James	Page	Smith, Md.
Bradley	Johnson	Penrose	Smith, S. C.
Brady	Jones	Perkins	Smoot
Brandeggee	Kenyon	Pittman	Sterling
Bristow	Kern	Poindexter	Stone
Bryan	Lane	Pomerene	Sutherland
Catron	Lea	Ransdell	Swanson
Chamberlain	Lippitt	Reed	Thomas
Chilton	Lodge	Robinson	Thompson
Clark, Wyo.	McCumber	Root	Thornton
Clarke, Ark.	McLean	Saulsbury	Vardaman
Cole	Martin, Va.	Shafroth	Walsh
Cummins	Martine, N. J.	Sheppard	Warren
Dillingham	Myers	Sherman	Williams
Fletcher	Nelson	Shields	Works
Gallinger	Norris	Shively	
Hitchcock	O'Gorman	Simmons	

Mr. JONES. I desire to state that the junior Senator from Michigan [Mr. TOWNSEND] is necessarily absent, and will be absent for the remainder of the day. He is paired with the Senator from Florida [Mr. BRYAN]. I will let this announcement stand for the rest of the day.

The VICE PRESIDENT. Seventy-four Senators have answered to the roll call. There is a quorum present.

Mr. LIPPITT. Mr. President, I have here a memorial, which was sent to me two or three weeks ago, signed by a very large number of the principal cotton manufacturers of New England, which I should like to have the Secretary read and to have the names printed in the RECORD as a part of my remarks.

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested, and the names will be printed in the RECORD.

The Secretary read as follows:

HON. HENRY F. LIPPITT.

United States Senate, Washington, D. C.

AUGUST 12, 1913.

DEAR SIR: We commend and thank you for your able exposition of the unjustifiable and extraordinarily unfair discrimination in the pending tariff bill against New England cotton products, which, as you show, are given a duty of from 7½ per cent to 30 per cent (an average of about 16 per cent), while silk cloth is given a duty of 45 per cent and woolen cloths of 35 per cent.

The percentage of labor cost, higher in cotton than in the other textile industries, seems to require at least as high a duty on cotton goods. With shorter working hours, higher wages, and a higher percentage of labor cost (as shown by the United States census reports) than maintain in the great cotton manufacturing States of the South New England seems to be the target of the framers of the pending tariff measure.

Not desiring any unfair advantage and being ready to compete on equal terms with any manufacturers in the world we urge you to continue your efforts to secure reasonably fair treatment for New England's greatest industry.

Southern manufacturers themselves are on record indorsing our position and the need of higher and fair rates for New England's products. They realize as do we that the continuation and development of the fine cotton goods manufacture of our mills is as important to the South as it is to the North.

Parkhill Manufacturing Co., Fitchburg, Mass.; Arthur H. Lowe, treasurer, Fitchburg, Mass.; Grant Yarn Co., by Geo. P. Grant, Jr., treasurer; Fitchburg Yarn Co., by Geo. P. Grant, Jr., general manager; Orswell Mills, by W. H. Stiles, treasurer, Fitchburg, Mass.; Star Worsted Co., by C. B. Smith, president, Fitchburg, Mass.; Theo. Harris, treasurer, Pawtucket; U. S. Cotton Co., Fred W. Easton, treasurer, Pawtucket; Waypoysset Manufacturing Co., Robt. B. Easton, secretary, Pawtucket; Interlaken Mills, E. C. Bucklin, Providence.

Mr. LIPPITT. Mr. President, the gentlemen who sign this memorial represent perhaps 100,000 employees and several thousand stockholders of cotton-manufacturing companies in New England, and the pay envelopes of the employees depend upon

the prosperity of these mills. It is for these people and their interests that I am speaking to-day.

When the Senate adjourned last night I was on the point of making a comparison of the effect of this change of duty from the high number of cotton yarns to the average number, as shown in Table No. 169 from the Tariff Board's cotton report. That table contains in the neighborhood of 100 different cotton fabrics, which were selected by the board at large through the dry-goods stores of the country as somewhat representative fabrics of the industry. Some of those fabrics contain silk, and as to some it is not possible from the data given by the board to discover just what effect the change in these duties would have; but upon about 80 of those samples it is possible to discover approximately what effect this change would produce in the duty applicable to them.

I have here a table, which I have prepared, showing the number of yarns of which the various fabrics are composed, showing the duty upon each that would be assessed under the principle of the high number of yarns and the duty that would be assessed upon each under the average number of yarns. The general result of that comparison is to show that on goods composed of coarse numbers of yarns there would be no change in duty at all; but that on goods composed of high numbers of yarns, in a very great number of instances, there would be a reduction of duty of from $2\frac{1}{2}$ to $7\frac{1}{2}$ per cent.

On the first 17 samples it will be seen, by an examination of the table, that they are all composed of coarse numbers of yarns. For instance, No. 1 is composed of 6 and 7; No. 3, of 10 and 11; No. 7, of 12 and 16; and so on down the list. On these 17 fabrics there will be no change in the duty.

We then come to numbers 18 to 21, and we find a reduction of the duty of $2\frac{1}{2}$ per cent on the first 3 of these and of 5 per cent on the other.

Sample 19 is composed of No. 80 and of No. 120 yarn; sample 20, of 80 and 100 yarn; sample 21, of 60 and 100. It is on account of the variation in numbers that occurs so frequently in goods composed of these fine yarns that this reduction is brought about. As we go on through the list, which I shall not read in full, it will be seen that wherever the numbers of the yarns are coarse almost without exception there is no change in the duty, and that almost without exception where the yarns are fine there is a reduction of the duty. In all, this table shows that there is a reduction on 31 of these samples that are composed of fine yarns and of fancy woven figures, which, as I have said, runs up as high as $7\frac{1}{2}$ per cent; and that there is no change on 49 of the samples composed of coarse yarn and ordinary weaves.

Mr. President, I do not know that there is any way in which the discrimination, if I may call it so, that this proposed amendment will make as against New England fabrics can be better illustrated than by that table.

Those fine yarn goods are not protected even in the bill as it came from the House to anything like the same extent that the coarser yarn goods are protected. The conditions of the industry, as has been several times stated in this Chamber, are such that for the present we can come very close to competing with foreign countries on some of the coarse fabrics of cotton, but we can not compete with them on the fine fabrics of cotton, where the proportion of labor, as compared with the proportion of cotton that enters into their cost, is very large.

After two years of Democratic study of this question, during all of which time it had been proposed to assess these duties by the high number contained in the cloth, suddenly at the last moment, after the bill had actually been presented in this body, owing to the difficulties of administering that method which ought to have been long since discovered, it is proposed to change this system. Under these circumstances it seems to me that a corresponding change should be made in the classification so as to leave the relative protection between these varieties of goods the same as originally proposed.

I have proposed an amendment, Mr. President, which to some extent will produce this result. This reduction in the duty is brought about on these goods because they are dropped from the class containing high yarns and a proportional duty to a lower class composed of goods made of a little coarser yarns and bearing a lower duty. In the amendment which I have proposed I simply apply the rate of duty of the high class in which these goods formerly came to the class into which they would now go. The average result of those changes is that where, under the previous rate, the duty was 17.8 per cent, under my proposed amendment it will be 17.5 per cent—a slightly lower average. I am proposing no duty higher than is contained in the present bill.

Mr. President, I offer the amendment which I send to the desk as a substitute for paragraph 257.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. As a substitute for paragraph 257, on page 76, it is proposed to insert the following:

257. Cotton cloth, not bleached, dyed, colored, stained, painted, woven figured, or mercerized, containing yarns the highest number of which does not exceed No. 9, $7\frac{1}{2}$ per cent ad valorem; exceeding No. 9 and not exceeding No. 19, 10 per cent ad valorem; exceeding No. 19 and not exceeding No. 29, $12\frac{1}{2}$ per cent ad valorem; exceeding No. 29 and not exceeding No. 39, 15 per cent ad valorem; exceeding No. 39 and not exceeding No. 49, 20 per cent ad valorem; exceeding No. 49 and not exceeding No. 59, $22\frac{1}{2}$ per cent ad valorem; exceeding No. 59 and not exceeding No. 79, 25 per cent ad valorem; exceeding No. 79, $27\frac{1}{2}$ per cent ad valorem. Cotton cloth when bleached, dyed, colored, stained, painted, printed, woven figured, or mercerized, containing yarn the highest number of which does not exceed No. 9, 10 per cent ad valorem; exceeding No. 9 and not exceeding No. 19, $12\frac{1}{2}$ per cent ad valorem; exceeding No. 19 and not exceeding No. 29, 15 per cent ad valorem; exceeding No. 29 and not exceeding No. 39, $17\frac{1}{2}$ per cent ad valorem; exceeding No. 39 and not exceeding No. 49, $22\frac{1}{2}$ per cent ad valorem; exceeding No. 49 and not exceeding No. 59, 25 per cent ad valorem; exceeding No. 59 and not exceeding No. 79, $27\frac{1}{2}$ per cent ad valorem; exceeding No. 79, 30 per cent ad valorem.

Mr. LIPPITT. Mr. President, in connection with what I have said on this subject, I should like to have the table to which I have referred in my remarks printed in full, and also a smaller table showing a brief résumé of the two rates of duty.

The VICE PRESIDENT. In the absence of objection, the tables will be printed as requested.

The tables referred to are as follows:

Kind of cloth, number of yarns, etc.

[From Table 169, Tariff Board's cotton report.]

Kind of cloth.	Number of yarns.	Average number.	High number duty.	Average number duty.	Reduction.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Rhode Island.

Mr. SMITH of Georgia. Mr. President, I understand the Senator from Rhode Island has the floor. When he finishes, I wish to say just a word.

Mr. LIPPITT. Mr. President, if the Senator from Georgia would like to speak on this subject, I will be very glad to yield.

Mr. SMITH of Georgia. I do not wish to speak upon the separate proposals the Senator offers in the nature of changes. I only wish to say that we do not agree with the conclusions of the Senator from Rhode Island in the figures which his calculation produces. I will not take the time of the Senate to go into them fully. In the first place, the Senate committee bill has changed the House classification by making a break at 79 and making a rise there. In the next place, the amendment which I offered on yesterday, providing that in the counting of threads all ply yarns shall be separated into singles of the count taken by the total singles, changes the classification. These two changes each raise the classification and increase the duty.

Illustrating by the numbers from 59 to 99, our classification shows that the duty on 12 items is not changed at all. That classification is also based upon the report of the Tariff Board and the classes of goods which they use. Six were reduced from 25 to 22½ per cent—making a reduction of 2½ per cent; one to 20 per cent, and one advanced to 30 per cent. That is the result of the calculation upon those goods, as shown in the Tariff Board report.

Mr. LIPPITT. In regard, Mr. President, to the effect of the change to which the Senator refers, of separating twisted yarns in the goods into their component parts and putting a special duty on twisted yarn goods, I will speak briefly in connection with an amendment which I propose to offer to a succeeding paragraph. I should like to have the question put on my amendment.

Mr. GALLINGER. Mr. President, I have taken no time whatever in the discussion of the cotton schedule, notwithstanding the people of New Hampshire are greatly interested in it.

I only wish to say this morning, in the briefest possible words, that there is a great deal of solicitude felt on the part of our manufacturers of the finer grades of cotton and of hosiery, and it is a matter of extreme regret to me that our Democratic friends do not see their way clear to agree to the schedule the Senator from Rhode Island [Mr. LIPPITT] has submitted this morning. I feel sure that there ought to be higher rates, though not to any great extent.

The increases proposed by the Senator from Rhode Island are very moderate, and it would be a great gratification if they

could be agreed to; but I assume that they will not be. All I can do or say, therefore, is that I feel that a great injustice—very likely inadvertently—is being done the manufacturers of New England in the matter of the finer grades of cotton and, as I suggested, of hosiery.

I should be glad if the amendment could be agreed to, but in view of the experiences we have had I confess I have not very much hope that it will be agreed to.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Rhode Island [Mr. LIPPITT].

The amendment was rejected.

Mr. LIPPITT. I offer an amendment to paragraph 268, which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. It is proposed to strike out, in paragraph 257, the words "woven figured," and, as a substitute for paragraph 268, to insert the following:

268. Figured or fancy cotton cloth woven by means of jacquard, dobby, drop box, lappet, leno, swivel, or other similar attachments, or containing novelty yarns in whole or in part other than the ordinary ply or cable-laid yarn or thread, there shall be paid a duty of 10 per cent in addition to the duty or duties imposed upon such cotton cloth by the various provisions of this section, the intent of this paragraph being to add this duty or duties to those to which such cotton cloth would be liable if the provisions of this paragraph did not exist.

Mr. LIPPITT. Mr. President, in this bill there are two special duties put upon fabrics that are fancy woven. One is in paragraph 268, for which I have proposed this substitute, which applies to cotton table damask and puts a duty of 25 per cent ad valorem upon it.

Cotton table damask is for the most part made out of yarns from 20s and 39s, and the duty upon that fabric, if it had not been put in this special paragraph, would be 15 per cent. The particular feature of cotton table damask is simply that it has a large brocade figure, usually a figure made by a Jacquard loom. The reason and excuse for raising the duty on this fabric from what it would be under the yarn clauses is the fact that it is woven upon a Jacquard loom.

In paragraph 263, as amended by the Senate, tapestries and other Jacquard figured upholstery goods received a duty of 35 per cent as the bill was first reported to the Senate, but as it was amended yesterday the word "Jacquard" was changed to "woven." So, as it would now read, woven figured upholstery goods receive a duty of 35 per cent.

These upholstery goods are also goods that are made for the most part out of coarse yarns. They are very expensive and very elaborate fabrics, and the duty of 35 per cent is not in any way an excessive duty for them; but if they did not have this special paragraph into which they fall they would also probably receive a duty of 15 per cent. So by this paragraph the duty is raised from 15 to 35 per cent, or something more than doubled.

The principle that is involved in both of these changes of duty is that decorated, figured, and fancy goods, on account of their greater labor cost as compared to their cotton cost, are entitled to some higher rate of duty than the more simple products of the loom; but there is no more reason for picking out these two kinds of fabrics to apply this duty to than there is for treating in a like manner all the other products of the fancy loom.

There are in this country in the neighborhood of 20,000 Jacquard looms. There are engaged upon tapestries and upon damasks perhaps between two and three thousand of those looms. Those two or three thousand looms have been very properly given this extra consideration in the duty. All I am maintaining and all I am asking is that the other 17,000, if that be the number, shall have their products treated in exactly the same way.

In addition to the Jacquard looms, there are perhaps in the neighborhood of 100,000 looms, all told, upon which fancy notions of some kind or other are in operation. They are dobbies, drop boxes, lenos, swivels, and lappets, such as I have referred to in my amendment.

The effect of the amendment is to put all the other fancy products upon a parity with these two products, which, for reasons known to the committee but which have not been very plainly put before this body, if at all, have been treated in this way.

I have not asked for a high duty. In one of these cases there is a difference made of 10 per cent. In the other case there is a difference made of 20 per cent. Day before yesterday there was passed, without debate and without explanation, a substitute for the paragraph applying duties upon silk cloth. In that substitute a duty of 45 to 55 per cent was put upon Jacquard goods made of silk. The percentage of labor cost in making those silk goods is no more than the percentage in making similar cotton fabrics. Nevertheless, this enormous discrimination has been made between the products of these two industries. It

seems to me that when in some cases such high duty has been applied, it is only a very moderate thing to ask that the lowest of those special duties shall be applied alike to all the other products of the fancy loom.

I noticed in the bill introduced by the Senator from Wisconsin [Mr. LA FOLLETTE] a paragraph very similar to the one which I have proposed and containing in effect practically the same duties upon these fancy cotton fabrics.

Mr. President, this is a matter that is of great importance to New England, because it is in New England that the great bulk of these advanced products of the loom are manufactured. I think every consideration of fairness and of equality, as between the treatment of one fabric and another in the various schedules of this bill, justifies the adoption of this amendment, and I ask for the yeas and nays upon it.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. TOWNSEND], and therefore withhold my vote.

Mr. McCUMBER (when Mr. GRONNA's name was called). My colleague [Mr. GRONNA] is necessarily absent. He is paired with the junior Senator from Illinois [Mr. LEWIS]. I will let this announcement stand on all votes during the day.

Mr. JAMES (when his name was called). I have a general pair with the junior Senator from Massachusetts [Mr. WEEKS]. I transfer that pair to the junior Senator from Montana [Mr. WALSH] and will vote. I vote "nay."

Mr. McCUMBER (when his name was called). I have a pair with the senior Senator from Nevada [Mr. NEWLANDS]. I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH] and will vote. I vote "yea."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from Ohio [Mr. BURTON]. I transfer that pair to the junior Senator from Oklahoma [Mr. GORE] and will vote. I vote "nay."

The roll call was concluded.

Mr. BRYAN. I transfer my pair with the junior Senator from Michigan [Mr. TOWNSEND] to the junior Senator from New Jersey [Mr. HUGHES] and will vote. I vote "nay."

Mr. REED. I transfer my pair with the senior Senator from Michigan [Mr. SMITH] to the senior Senator from South Carolina [Mr. TILLMAN] and will vote. I vote "nay."

Mr. CHAMBERLAIN. I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. I transfer that pair to the senior Senator from Virginia [Mr. MARTIN] and will vote. I vote "nay."

Mr. LODGE. I desire to say that my colleague [Mr. WEEKS] has been suddenly called from the city by illness in his family. He stands paired with the junior Senator from Kentucky [Mr. JAMES], as has already been announced.

Mr. GALLINGER. I have been requested to announce pairs between the senior Senator from Delaware [Mr. DU PONT] and the senior Senator from Texas [Mr. CULBERSON] and between the junior Senator from West Virginia [Mr. GOFF] and the Senator from Alabama [Mr. BANKHEAD].

The result was announced—yeas 29, nays 41, as follows:

YEAS—29.

Clapp	Gore	Oliver	
Crawford	Gronna	Smith, Mich.	
Culbertson	Hughes	Stephenson	

So Mr. LIPPITT's amendment was rejected.

Mr. POINDEXTER. Will the Senator from North Carolina inform me whether the committee has arrived at any conclusion

upon the amendment which they took under advisement in reference to lumber and shingles or a countervailing duty as against export duties levied upon logs? It is an amendment which I proposed to paragraph 157 of the bill. I do not know whether the Senator from North Carolina will recall it from my statement. I will read the amendment.

Mr. SIMMONS. I remember the Senator's amendment. I told the Senator I would present it to the committee for consideration. I did present it to the committee for consideration, as I promised the Senator I would do, and the committee did not approve of the amendment.

I call the Senator's attention to the fact, although it does not reach the case fully, that there is already such a provision in the bill. I think it is paragraph J of the section in the administrative part of the bill. It provides that whenever any foreign country imposes an export duty or a bounty upon any product shipped to this country the export duty and the bounty shall be added to the duty imposed upon that country by our tariff law. I confess frankly it does not reach the point the Senator has in view, although it does reach the general proposition of export duties imposed by foreign countries upon products imported into this country.

I simply desire to say to the Senator, in response to his question, that after consideration the committee did not agree to the amendment.

Mr. POINDEXTER. Mr. President, I am very much encouraged even by the committee taking the matter under advisement. I think it indicates considerable merit in the amendment that they were willing even to consider it. It is still pending. There is one modification that I should like to make in the amendment, and after a very brief statement in regard to it I shall ask for a vote upon it.

The VICE PRESIDENT. The Chair will state to the Senator from Washington that on his request the amendment was referred to the committee.

Mr. POINDEXTER. I will reoffer it in a somewhat modified form.

The VICE PRESIDENT. The amendment will be read.

The SECRETARY. On page 157, line 6, after the word "section," at the end of paragraph 649, insert the following proviso:

Provided, That when an export duty is imposed by any foreign country, or any Province or subdivision thereof, on logs, blocks, or other raw material from which lumber or shingles are manufactured, or if the export of such logs or raw material from such foreign country, or any Province or subdivision thereof, or any class of lands therein, into the United States shall be prohibited, then in either event there shall be levied and collected a duty of \$1.25 per thousand feet upon lumber and 25 cents per thousand upon shingles imported into the United States from such foreign country.

Mr. POINDEXTER. Mr. President, the amendment which the Secretary has just read to the lumber schedule in the bill is directly in line with the policy which the Democratic Party claims to believe in, namely, cheap raw materials, and is simply intended as a means by which this country may have some weapon by which it may induce a foreign country—and the foreign country, I will say frankly, I have in mind is Canada and its Provinces—to remit export duties which it now imposes upon the raw materials which go to the making of lumber in its various forms, and shingles. It is directly in line with the policy announced as one of the cardinal doctrines upon which this bill is framed, and at the same time it is not in conflict with any principle which the opponents of the Democratic Party believe in.

I want to call attention, Mr. President, to the laws which British Columbia and other Provinces of Canada have enacted in this regard. The Province of Ontario has this provision:

1. Every license or permit conferring authority to cut spruce or other soft wood, trees or timber, not being pine, suitable for manufacturing pulp or paper, on the ungranted lands of the Crown, or to cut such timber reserved to the Crown on lands leased or otherwise disposed of by the Crown, which shall be issued on or after the 30th day of April, 1900, shall contain and be subject to the condition that all such timber cut under the authority or permission of such license or permit shall, except as hereinafter provided, be manufactured in Canada, that is to say, into merchantable pulp or paper, or into sawn lumber, woodenware, utensils, or other articles of commerce or merchandise as distinguished from the said spruce or other timber in its raw or unmanufactured state.

The Province of Quebec has a regulation as follows:

All timber cut on Crown lands after the 1st of May, 1910, must be manufactured in Canada—that is to say, converted into pulp or paper, deals or boards, or into any other article of trade or merchandise of which such timber is only the raw material.

The Province of British Columbia has this provision:

All timber cut on ungranted lands of the Crown, or on lands of the Crown which shall hereafter be granted, shall be used in this Province, or be manufactured in this Province into boards, deals, joists, lath, shingles, or other sawn lumber.

The Province of New Brunswick has a similar provision, as follows:

And such condition shall be kept and observed by the holder or holders of any such timber licenses or permits, who shall cut or cause to be cut spruce or other soft-wood trees or timber, not being pine or poplar, suitable for manufacturing pulp or paper under the authority thereof, and by any other person or persons who shall cut or cause to be cut any of such wood trees or timber under the authority thereof, and all such wood trees or timber cut into logs or lengths or otherwise shall be manufactured in Canada as aforesaid.

The amendment, Mr. President, provides, in substance, that in such a case as that there shall be levied a duty of \$1.25 per thousand feet upon lumber from that country and 25 cents a thousand on shingles, which levy will be some inducement to Canada and its Provinces to remit this burden upon the manufacture of lumber, imposed by this obstacle; prohibition, in fact, in most of the Provinces, upon the export of logs.

I ask for a ye-a-and-nay vote upon the amendment.

Mr. CUMMINS. I should like to hear the amendment read.

The VICE PRESIDENT. The Secretary will read the amendment submitted by the Senator from Washington.

The Secretary again read Mr. POINDEXTER'S amendment.

The VICE PRESIDENT. Is the request for the yeas and nays seconded?

The yeas and nays were ordered.

Mr. JONES. Mr. President, I wish to submit just a word or two in behalf of this amendment. The ground has been well covered by my colleague [Mr. POINDEXTER]. I want to call especial attention to the fact that the committee, as he says, has recognized the justice of the principle involved in the amendment because it has provided that whenever a duty is imposed upon an article in this bill and restrictions are imposed in another country there shall be a countervailing duty. I can not see why that principle should not also be applied to articles which in this bill are placed upon the free list where some other country imposes restrictions upon the exports into this country. That is simply the situation in this case. If there was a duty, however small, upon any of these articles, then the general provision of the bill would apply and there would be a countervailing duty.

I will state what is the situation as it relates to the products in our State under the provisions of this bill. Nearly everything that we produce has been placed upon the free list—wheat, lumber and all its products, meat, coal, wool, cattle, sheep, swine, potatoes, sugar, and a great many other products—and practically everything that has not been put on the free list has been very greatly reduced in duty, such as fruit, oats, barley, hay, eggs, lime, horses, butter, and practically all the products of the farm.

It seems to me that we are asking nothing more than is fair and just; that upon these products of one of the greatest industries not only in our State but in the country, where the conditions are such that rigorous restrictions are placed upon the export of these articles to our country from an adjoining country, the principle of a countervailing duty should be applied.

In addition to what my colleague read as to the requirements in Canada, I want to call the attention of the committee to a few regulations set out in the British Columbia Timbermen's Guide for 1910. They state that—

Crown grant or patent gives absolute ownership in fee simple to land and timber thereon, and on the timber taken from land covered by deeds issued prior to the 7th of April, 1887, there is a tax of from \$1 to \$4 per thousand noted, which is refunded if the logs are manufactured into lumber in Canada. On all timber cut on deeded Crown-grant lands issued since the 7th of April, 1887, and prior to 12th of March, 1906, there is a royalty of 50 cents per thousand and no tax. Both these classes are exportable.

On any timber cut from Crown lands or from Crown-granted lands deeded since the 12th of March, 1906, there is a royalty of 50 cents per thousand, but the logs are not exportable until manufactured.

In other words, the regulations and laws relating to British Columbia and Canada are so framed as practically to compel the manufacture of the logs into lumber before they can be shipped or sent over into this country—legislation framed for the direct promotion of the development of manufacturing in Canada, and evidently aimed against the export of these products into this country until after they have been manufactured in Canada. They do not want us to get their raw material. They know the benefits arising from its manufacture in their own country by the employment of home labor and the development of home industries, and they do whatever is necessary to promote their own development.

All timber cut under lease, special license, or general license from provincial lands lying west of the Cascade Range of mountains, must be manufactured within the confines of the Province of British Columbia, otherwise the lease, special license, or general license shall be canceled.

That provision is aimed squarely and directly against the manufacturers in the industry of lumbering in the State of Wash-

ington, because it confines its application to lands in British Columbia west of the Cascade Mountains, and actually provides for the cancellation of the lease or the license if this timber is exported before it is manufactured. Not only do they impose export duties to encourage home industry, but they, by law, expressly require the raw material to be manufactured at home. This has been the British policy from time immemorial, and accounts for her greatness in many lines.

Now, it does seem to me that our people and Congress should endeavor to promote our industries, at least to a certain extent, when there are regulations and laws in force in an adjoining territory that are aimed directly and specifically at our people and our industries. If we do not protect ourselves and our industries, of course we need not expect other nations to have any regard for our interests. Then, again:

2. All timber cut on ungranted lands of the Crown, or on lands of the Crown which shall hereafter be granted, shall be used in this Province or be manufactured in this Province into boards, deal joists, lath, shingles, or other sawn lumber.

That applies specifically to lands and the industry in British Columbia, and is aimed directly at the industry in our State.

Then there is another regulation that is in force in that territory that operates against the export of logs into our territory, and that is the towage rates that are fixed in British Columbia. I have here a table showing the towage rates that are fixed, which I ask may be put into the Record.

The VICE PRESIDENT. In the absence of objection, permission to do so will be granted.

The table referred to is as follows:

British Columbia towage rates per mile.

From—	Vancouver.	Blaine.	Bellingham and Anacortes.
Squamish.....	\$0.20	\$0.80	\$0.90
Vancouver.....		.60	.75
Wilson Creek.....	.35	.75	.90
Harris Camp.....	.40	.75	.90
Jervis Inlet.....	.85	1.25	1.25
Vancouver Bay.....	.60	1.00	1.10
Captain Island.....	.50	.90	1.00
Sechelt Inlet.....	.60	1.00	1.10
Thunder Bay.....	.50	.90	1.00
Porpoise Bay.....	.75	1.10	1.10
Bute and Toba Inlets.....	1.00	1.25	1.25
This side Yucaltaw Rapids.....	.75	1.00	1.25
Discovery Passage.....	1.00	1.25	1.25
Hole-in-the-Wall.....	1.00	1.25	1.25
Between Yucaltaw Rapids and Johnston Straits.....	1.00	1.25	1.25
Johnston Straits to entrance Knight Inlet.....	1.25	1.50	1.50
Knight Inlet.....	1.50	1.75	1.75
Drury, Kingcome Inlet, and Greenway Sound.....	1.50	1.75	1.75
Comox.....	1.00	1.25	1.25

Towage from any of the above places to Chemainus or Nanaimo same rate as to Vancouver.

Towage to New Westminster and Victoria 25 cents per mile more than to Vancouver.

Mr. JONES. Mr. President, it does seem to me that with these facts and these conditions existing in an adjoining country, that apply specifically and directly, and are intended to apply specifically and directly to our industry, Congress would be derelict in its duty if it did not provide a way by which we might lead to a relaxation of those regulations in order that our industries may be protected to a certain extent at least. Can the majority afford to vote down a proposition that has for its purpose the securing of fair treatment for our own? Not only self-interest but self-respect requires us to insist upon fair and equal treatment.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Washington [Mr. POINDEXTER] on which the yeas and nays have been ordered. The Secretary will call the roll.

The Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the Senator from Michigan [Mr. TOWNSEND], and therefore withhold my vote.

Mr. CHAMBERLAIN (when his name was called). I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence, I withhold my vote.

Mr. JAMES (when his name was called). I have a general pair with the Senator from Massachusetts [Mr. WEEKS]. In his absence, I withhold my vote. If I were permitted to vote I should vote "nay."

Mr. McCUMBER (when his name was called). I have a general pair with the senior Senator from Nevada [Mr. NEWLANDS], and in his absence I withhold my vote.

Mr. THOMAS (when his name was called). I make the same announcement of the transfer of my pair as before and vote "nay."

The roll call was concluded.

Mr. JAMES. I transfer the pair I have with the Senator from Massachusetts [Mr. WEEKS] to the Senator from Virginia [Mr. MARTIN] and vote "nay."

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from South Carolina [Mr. TILLMAN] and vote "nay."

Mr. WILLIAMS (after having voted in the negative). I have just been informed that the senior Senator from Pennsylvania [Mr. PENROSE], with whom I am paired, did not vote. That being the case, I wish to withdraw my vote.

Mr. LEWIS. I desire to announce my pair with the junior Senator from North Dakota [Mr. GRONNA].

The result was announced—yeas 27, nays 43, as follows:

YEAS—27.

Burleigh	Goff	Newlands	Williams
Burton	Gore	Oliver	
Chamberlain	Gronna	Penrose	
Clapp	La Follette	Smith, Mich.	

So the amendment of Mr. POINDEXTER was rejected.

Mr. SIMMONS. Mr. President, I ask that we recur to paragraph 646. The Senator from North Dakota [Mr. McCUMBER] desires to offer an amendment to that paragraph, which by inadvertence we passed by.

The SECRETARY. Paragraph 646 is on page 155.

Mr. McCUMBER. Mr. President, I move to amend paragraph 646, on page 156, line 1, by striking out the numerals "10" and inserting in lieu thereof the numerals "20."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 156, line 1, before the word "cents," it is proposed to strike out "10" and insert "20," so as to read:

That wheat shall be subject to a duty of 20 cents per bushel, etc.

Mr. McCUMBER. Mr. President, duty toward the people of my State, who will, under normal conditions, be injured to the extent of from ten to twenty million dollars annually if this bill passes unchanged, compels me to make a last attempt to penetrate the seemingly impregnable wall which a Democratic caucus has built around the Democratic conscience, with the hope that I might possibly reach that conscience, and, reaching it, it might influence and govern the Democratic will to do justice to the northwestern section of the country.

Mr. President, during my absence from the Senate there have been made upon the floor of the Senate and read into the Record editorial statements bearing upon the grain situation of the Northwest so deceptive in their wording and so false in their conclusions that I have felt it incumbent upon me to avail myself of the very first opportunity to uncover the deceptions and to refute the false inferences.

The CONGRESSIONAL RECORD of August 14, page 3376, contains the following:

Mr. SMITH of Georgia. Mr. President, I desire to relieve somewhat the apparent distress of my friend from South Dakota [Mr. CRAWFORD] and also my friend from North Dakota [Mr. GRONNA]. I sent this morning to the office of the Secretary of the Senate to obtain a paper with the prices of commodities, to see what the relative prices of wheat were in Minneapolis and in Winnipeg. I want to give the Senators the pleasing information that in Winnipeg No. 1 northern is selling at 95½ cents and at Minneapolis at 89½ cents per bushel, and No. 2 in Winnipeg is selling at 93½ and in Minneapolis at 87½ cents per bushel.

I have also a slip of a week ago quoting the market prices, which showed only No. 2, and it gives No. 2 at Winnipeg at 93 cents a bushel and at Minneapolis at 87½.

Mr. CRAWFORD. The same grade of wheat?

Mr. SMITH of Georgia. The same grade, No. 2—

The Senator from Georgia made a mistake in that, because it is not the same grade, although the denominating numerals are the same.

Mr. SMITH of Georgia. Mr. President—

The PRESIDING OFFICER (Mr. KERN in the chair). Does the Senator from North Dakota yield to the Senator from Georgia?

Mr. McCUMBER. Certainly.

Mr. SMITH of Georgia. I will say to the Senator that they were given in the paper as the same grade. I understand the Senator means not that the paper did not give them that same grade, but that the No. 2 to which the paper referred, while of the same apparent number, was really a different grade.

Mr. McCUMBER. Yes; the Senator quoted correctly from the paper, and I would not want to convey any other impression. The Senator from Georgia proceeded:

Furthermore, I wish to read to my friend a comforting assurance from one of the Republican papers of Dakota, known as Sheldon's Progress. It is headed:

"THAT TARIFF AGAIN."

"Yesterday No. 1 northern wheat sold at Winnipeg for 96 cents, at Minneapolis for 88 cents, at Duluth for 87 cents, and at Chicago for 91 cents. Would we suffer from the importation of Canadian wheat, or would we not?"

Furthermore, I desire to read from another Republican paper of North Dakota upon the subject of wheat. It is from the Fargo Forum. I understand it is one of the leading Republican papers of the State. I shall not read that portion of the editorial which comments upon the speech of my friend, the Senator from North Dakota, but I shall read a portion of it which refers to the relative prices of wheat in Winnipeg and in Minneapolis.

Mr. President, the Senator from Georgia properly refrained from quoting in the Senate the words in the editorial of the Forum because of their insinuating character; but that I may the better show the misleading character of this editorial and refute its conclusion I shall quote the greater portion of it. The editorial bearing upon this phase of the question is as follows:

GRONNA MADE A SPEECH.

Senator GRONNA, of North Dakota, made a speech in the United States Senate yesterday. He lammed right into that old Democratic tariff bill—for the sake of the folks back home—and he certainly did "soak 'er a good one." As Mr. Dooley would say, "Twas a turbid slaughter, Hinnissy."

Mr. GRONNA is not going to stand idly by and see rank indiscriminate against the farmer. Not on your life. If the farmers of North Dakota had been forced to have sold their 1912 crop, the 143,000,000 bushels of wheat that was raised in this State last year under the conditions that will be imposed by the new tariff, they would have lost \$15,000,000.

That's what GRONNA said. These are his figures.

The Forum wonders just what the hard-headed North Dakota farmers who make a study of the grain markets of the world—are often better posted on prices and conditions in the world's markets than professional traders—will think of a statement like that. Mr. GRONNA says that under the conditions obtaining in 1912, when there was a short crop in foreign countries; that if the farmers had been forced to sell in the open market of the world they would have lost \$15,000,000.

The North Dakota farmer will take that statement and subject it to a little analysis. He will pick up his last edition of the Forum—the one which was printed last night, and which contained the report of the speech made by Mr. GRONNA in Washington—and, turning to the market report, he will find the following very significant figures:

Winnipeg wheat, cash, close, No. 1 northern, 95 cents.

Minneapolis wheat, cash, close, No. 1 northern, 87 to 88½ cents.

And the North Dakota farmer knows that Winnipeg prices have been higher than North Dakota prices during almost if not the entire time since the 1912 crop was harvested. If the North Dakota farmer has any competition to fear in selling his wheat or any other crop, it is from the Canadian northwest; and the Canadian farmer, selling in the open market, has been obtaining higher prices than the American with his protected market.

Mr. President, the article is a criticism upon the address of my colleague, in which he showed to the Senate what would have been the loss to the farmers of North Dakota if we had had free trade during a number of preceding years, and if he inadvertently used the comparative prices of the 1912 crop in Winnipeg and Minneapolis, the only crop in years in which our price has dropped to the Canadian level, as a basis of calculation, that inadvertence was apparent and in no way detracted from the force of his argument, which was that under normal crop conditions our prices, by reason of protection, were very much higher than the Canadian prices. The editorial in question, seizing that one comparison, made it a basis for an argument that our tariffs did not protect and conveyed the idea that this was the usual condition.

The argument of my colleague was based upon normal conditions in the Northwest and was unassailable in any respect whatever.

The first answer to the claim that Winnipeg prices of wheat are higher than the Minneapolis prices is that it is wholly untrue. That No. 1 northern Manitoba grade is higher in Winnipeg than No. 1 northern Minnesota grade in Minneapolis is true. Why? Because No. 1 northern Manitoba grade is

entirely a different grade of grain from No. 1 northern Minnesota grade and is worth more. One might just as reasonably say that wheat is higher in Chicago than in Duluth by citing the price of Macaroni in Duluth and the price of Winter Red in Chicago. Minnesota No. 1 northern and Manitoba No. 1 northern are different kinds of wheat, as the following requirements for each of these commercial grades will show. I will have these grade requirements inserted so as to show the distinction:

MINNESOTA GRADE.	CANADIAN GRADE.
No. 1 northern spring wheat must be sound and well cleaned; it may be composed of the hard and the soft varieties of spring wheat, but must contain a larger proportion of the hard varieties and weigh not less than 57 pounds to the measured bushel.	No. 1 Manitoba northern wheat shall be sound and well cleaned, weighing not less than 60 pounds to the bushel, and shall be composed of at least 60 per cent of hard Red Fife wheat.

It will be noticed that the Manitoba grade for No. 1 northern requires a wheat that weighs not less than 60 pounds to the bushel, while the Minnesota grade requires a wheat that shall weigh not less than 57 pounds to the bushel, a difference of 3 pounds; that the Manitoba grade must be composed of at least 60 per cent of hard Red Fife wheat, while the Minnesota grade requires only a larger proportion of hard varieties than of soft, and Blue Stem takes the place of Red Fife. I assume that neither the North Dakota papers referred to nor the Senator presenting those excerpts on the floor of the Senate knew of these facts. Certainly the Senator would have disclosed them had he known them. The truth is, there is no material difference in the prices of the same kind of wheat. Both countries are on an export basis and are receiving exporting prices. We have not exported before, as I remember, for fully 15 years.

Now, if we will turn to the Liverpool prices—and I take my statement from the quotation as given in the Manitoba Free Press of August 16, quoting prices for August 15—we will find:

Manitoba No. 1	\$1.12½
Duluth No. 1	1.05½

Difference between these two grades in Liverpool, 7½ cents.

There is a difference of 7½ cents because the Manitoba No. 1 is a higher grade than the Duluth No. 1. If I turn to the Winnipeg prices for August 15 and Duluth for the same date, I find—

	Cents.
Manitoba No. 1	94½
Duluth No. 1	88½

Difference between the two grades in Duluth and Winnipeg, 5½ cents.

Winnipeg makes less difference between the two grades than does Liverpool.

I find in comparing the same grades with Minneapolis quotations—

	Cents.
No. 1 Manitoba (Winnipeg)	94½
No. 1 Minneapolis	90

Difference between the two grades in Minneapolis and Winnipeg, 4½ cents.

Again, that difference, while not as great as the two grades in Liverpool, represents a difference in quality of grade and not a difference in the price of the same grade.

In other words, Liverpool pays 7½ cents more for Manitoba than for Duluth No. 1, and Winnipeg pays 5½ cents more for Manitoba No. 1 than Duluth pays for Minnesota No. 1.

If Minnesota No. 1 northern were exactly the same quality as Manitoba No. 1 northern, there would be an actual difference of from 5 to 5½ cents in favor of Winnipeg. As a matter of fact there is no material difference in grain of the same quality between Winnipeg and Duluth or Minneapolis, because to-day both are on an export basis. I do not admit that there is 7½ cents difference in real value between the Duluth No. 1 northern and the Winnipeg No. 1 northern, as shown by the Liverpool quotations. There probably is an actual difference in value of from 4 to 5 cents. Why, then, is there 7½ cents made in Liverpool?

I have explained that before the Senate many times in my plea for Federal inspection of grain. Europe has confidence in the Canadian grades, where Government inspection is in force. It has not confidence that the American grade will measure up to the American requirements for that grade, which it would have to do with Federal inspection. It has been deceived so often by the mixing concerns of the country that it discounts the American grades in all European exchanges.

The next question which challenges attention, and the answer to which the American farmer is entitled to know, is this: Why is it that while our wheat has for the past 12 or 15 years prior to this 1912 crop averaged about 10 or 12 cents a bushel more

than the Canadian crop, the prices of our 1912 crop have suddenly gone down to the Canadian price?

Let us have the truth of this great change in prices on the 1912 crop. Let us take into consideration all the factors that enter into this changed condition.

Those unacquainted with grades, classes, and species of wheat raised in the United States seem to be imbued with the single idea that wheat is wheat; therefore if we raise more wheat in the United States than we consume in the United States our prices can not be seriously affected by importations. The fallacy of their reasoning follows the fallacy of the assumption. Blue Stem wheat is wheat, but it is not Fife wheat. Soft wheat is not hard wheat. Macaroni is not Winter Red. Turkey Red is not Velvet Chaff. Now, if Senators will just remember that each of these species of wheat makes its own character of flour; that each character of flour has its own markets; that each section of the country manufactures its particular kind of flour and has its own market for that flour, the conditions will not be quite so difficult for them to understand. What we call the hard and the northern wheat is raised principally in the States of Minnesota, North and South Dakota, and eastern Montana. Those States supply the wheat that makes the Pillsbury brand of flour, that makes the several brands of flour noted throughout the land for their superiority. The mills of the Dakotas and Minnesota, and especially of Minneapolis and Duluth, and of Buffalo and Rochester, manufacture this particular hard wheat into flour for the American and the foreign markets. Their market is fixed for a given amount of product. That given amount measures the full output of the hard wheat of those States under an ordinary yield, and demands a little more than the normal product. It is because of the higher price paid for the flour made of this wheat and the rather undersupply of the grain under normal conditions that gives the farmers an average of about 10 cents per bushel better price for their wheat.

Now, why does this not apply to the 1912 crop? It does not apply, Mr. President, simply because the 1912 crop of these States was a phenomenally large crop. The 1912 crop not only fully met the demand but more than met it. For the first time, therefore, in all these years our prices have gone down to an export basis. The crop of wheat of these four States aggregated:

	Bushels.
1908	178,550,000
1909	243,194,000
1910	156,200,000
1911	144,234,000
1912	282,389,000

In other words, the 1912 crop was almost double the 1911 crop. It was more than 100,000,000,000 bushels in excess of a normal crop. The result is that the 1912 crop not only gave us enough of this wheat to supply the home demand, but also forced us upon an export basis. That is why we dropped down this year to the level of the Winnipeg prices, which are always prices for export.

Mr. STERLING. Mr. President—

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from South Dakota?

Mr. McCUMBER. Certainly.

Mr. STERLING. Notwithstanding conditions in 1912, was not the mean price—that is, the price between low and high—of No. 1 northern greater throughout the year at Minneapolis than it was at Winnipeg?

Mr. McCUMBER. That is, during the year 1912?

Mr. STERLING. During the year 1912.

Mr. McCUMBER. Yes, the mean price was greater; but I want to be perfectly fair. Part of 1912 takes the 1911 crop, and the 1911 crop was short, whereas the 1912 crop does not start to move, we will say, until October. I am dealing only with that crop, the marketing of which will run on into 1913. I am speaking now of the crop raised in 1912. The prices for this crop have been practically the same in Canada and the United States, because both are on an export basis.

This, Mr. President, explains why for a single crop we have not realized the benefit of our tariff upon wheat. But, Mr. President, during the preceding 15 years we did realize the benefit. We may not have a crop like that of 1912 for another 20 years. But it is when we have our normal crop, and especially when we have an abnormally small crop, that we need the better prices, and the protection that assures those better prices.

If the tariff does us no good and has done us no good on the 1912 crop, it has given us millions upon millions of dollars of benefit, as was shown by my colleague, and as I have shown

again and again, on the crops for the 15 years preceding, and will do us just as much good on the succeeding crops.

The articles therefore in the papers not only very unjustly criticize the argument of my colleague, but are deceptive and naturally mislead the people of the State as to the real conditions and effect of this tariff on wheat and other grains generally. Reduced to the simplest form of explanation: North and South Dakota, Minnesota, and Eastern Montana have a normal crop of wheat of about 175,000,000 bushels. Under such normal conditions the demand for home consumption is greater than the production of all hard wheat raised in those States.

Under such normal conditions and with protection, the American prices are much higher than the Canadian prices for the same grade and quality of grain. This has been the condition for about 15 years preceding the 1912 crop.

The 1912 crop was 282,000,000 bushels in these States, or nearly double the crop of 1911, and over 100,000,000 above the normal crop.

This created a large surplus, which must be exported, and reduced our price down to the export price.

This abnormal crop may not be produced again. The 1913 crop will at least in my State be less than normal and we should again receive the benefit of our protection. By removing it you will keep us down to an export basis with a lean crop. Why? Because Canada will have a large 1913 crop, nearly all of which must be exported, and with free trade between the countries, though she never imports a single bushel, her crop will be there ready to dump on our market the moment prices raise above an export basis and will therefore keep them down to an export basis.

The arguments of Senators ought to be fair to the farmers of the country; and the papers of North Dakota, no matter what their political views may be, ought to be honest with the Dakota farmers and give the full truth and not the one-fifteenth part of it, and thereby invite their readers to draw conclusions which are at absolute variance with the true facts.

Why do these commentaries deal with only the 1912 crop, and thereby mislead the farmers of the Northwest with the false assumption that the present spread of prices on the 1912 crop between Minneapolis and Winnipeg quotations represents the normal condition of affairs?

Mr. President, the half truth is far worse than a whole falsehood, and if that be true, then a fifteenth part of the truth must be just that much worse than a half truth. For a dozen or 15 years the American markets have averaged about 10 cents per bushel above Canadian markets for the same grain. Why, therefore, if these papers want to give its readers the exact situation, do they so carefully conceal the figures for the past 15 years and deal with the figures that range over only a few months? Why do they refrain from mentioning all of the years when our prices were so much higher than the Canadian prices?

As against the comparative prices for the 1912 crop between Winnipeg and Minneapolis let me place tables of comparative prices of the 1911 crop between these two places.

The 1912 crop was far in excess of the normal; the 1911 was below the normal, and, I think, shows a greater advantage in the Minneapolis markets than the average advantage during the past dozen or 15 years. But during all of that period we have had a very marked advantage in the Minneapolis markets, averaging an amount as I have heretofore stated.

The tables which I am now presenting to show the true facts and to bring these papers and the Senate to a realization of the real truth of the effect of the tariff bill on the products of the States of North and South Dakota, Minnesota, and Montana, were published in the Northwestern Agriculturist of January 20, 1912. The tables emanate from Mr. A. F. Mantle, deputy minister of agriculture, Regina, Saskatchewan.

Mr. Mantle, as I understand the article accompanying the tables, took samples of grain, had them graded in Winnipeg and in Minneapolis, and in his tables he gives the grade that is given at these two points and the respective prices for those grades at such points. The method of obtaining the prices paid in both countries will give you the exact truth, because in both instances the price is based upon identically the same grain.

By glancing at the first item in the first table it will be seen that the grain that was graded No. 1 northern in Minneapolis graded only good No. 2 northern at Winnipeg, confirming my statement that the Manitoba grade of a certain designation requires a better wheat than the same specified Minnesota grade.

Senators will also note that our Nos. 1, 2, 3, and 4 northern ranged from 12½ cents to 32 cents per bushel higher than in Winnipeg, ranging all the way from nearly 13 cents to 32 cents a bushel. I am speaking now of the identical prices at both

markets; oats from 10½ to 35 cents per bushel higher, barley from 41 to 48 cents per bushel higher, and flax from 21 to 28 cents per bushel higher.

Mr. President, the Senator from Arizona [Mr. SMITH] yesterday declared that all this protection we have been giving to the farmer was simply chimerical; that it was merely a sentiment; that there was not anything in it; and he cited the fact that as he had been a farmer at one time in his life it must necessarily follow that these figures do not speak the truth.

Mr. President, I do not know what kind of grain, wheat, corn, potatoes, or what not they raise in the State of Arizona. I know that a Senator who has not lifted anything heavier than a lead pencil for the last 40 years is hardly in a position to say to the farmer, who has carried the burden of taxation for years, that he is mistaken when he declares the prices which he sees day after day and year after year on one side of the line are greater than on the other.

If the Senator from Arizona were to go up to the little town of Portal, in North Dakota, which is divided from North Portal, in Canada, only by the main street, with the British flag flying on one side and the American flag flying on the other, and find that during all this period from 1911 the range of prices for wheat was in the neighborhood of 15 cents a bushel higher on the south side of the street than it was on the north side of the street, and then reiterate his statement he made here in the Senate, and if he would stand there and see barley sold for 30 cents a bushel more on the south side of the street than on the north, flax from 25 to 30 cents a bushel more on the south side of the street than on the north side of the street, and if he would tell a farmer there that it was a mere myth, that he was not really receiving any benefit from this protection, he would immediately be hauled before a board created by the laws of our State to pass judgment on the mental status of people who refuse to recognize undeniable and palpable facts.

Mr. President, our prices have been exceedingly higher, and they will remain higher under normal conditions with protection.

Now I will present this table. It is well worth reading by those who wish to get at the truth of these facts.

Table showing the values of samples of grain of certain of the established Minnesota grades on the exchanges of Minneapolis and Winnipeg, respectively, Dec. 19, 1911.

Graded at Minneapolis.	Closing cash price, Minneapolis.	Graded at Winnipeg.	Value Minneapolis sample market.	Closing cash price, Winnipeg.	Additional value per bushel, Minneapolis.
No. 1 northern wheat.	\$1.06	Good No. 2 northern wheat.	\$1.06½	\$0.92	\$0.14½
No. 2 northern wheat.	1.04do.....	1.04½	.92	.12½
No. 3 northern wheat.	1.02	Good No. 3 northern wheat.	1.02½	.85	.17½
No. 4 northern wheat.	No. 5 wheat.....	1.01	.69	.32
No. 2 white oats.	No. 1 C. W. oats.....	.48½	1.38	.10½
No. 3 white oats.	(2)	No. 2 C. W. oats.....	.48	.37½	.10½
No. 1 flax.....	2.12	No. 1 H. W. flax.....	2.12	1.84	.28
No. 2 flax.....	No. 1 Manitoba flax.....	2.07½	1.82	.25½
No. 4 barley.....	No. 3 barley.....	1.04-1.07	1.59	(2)

¹About.

²45 cents and 45½ cents.

³45 cents to 48 cents.

There are no other established or specified grades of hard spring wheat on the Minneapolis market. All other wheat is graded either "No grade" or "Rejected" and finds its level and value on the sample market. On the other hand, in Port Arthur, Canadian Northern Elevator, there was, on October 31, 1911, wheat of 54 Canadian grades.

Table showing the values of composite samples of grain of certain of the Canadian grades on the exchanges of Winnipeg and Minneapolis, respectively, Dec. 19, 1911.

[By A. F. Mantle, deputy minister of agriculture, Regina, Saskatchewan. To F. W. Eva, chief inspector of grain, St. Paul, Minn.]

Graded at Winnipeg.	Closing cash price, Winnipeg.	Graded at Minneapolis.	Value, Minneapolis sample market.	Additional value, per bushel, Minneapolis.
No. 3 northern.....	\$0.85	Rejected.....	\$0.90	\$0.05
No. 4 wheat.....	.78do.....	.85	.07
No. 5 wheat.....	.69do.....	.80	.11
No. 6 wheat.....	.60do.....	.75	.15
No. 2 C. W. oats.....	.37½	No. 3 white oats.....	.48	.10½
No. 1 feed oats.....	1.11½	No. 4 white oats.....	.46½	1.35
No. 3 barley.....	1.59	No. 4 barley.....	1.00	2.41
No. 1 Manitoba flax.....	1.82	No. 2 flax.....	2.08	.26

¹Approximated.

²About.

The samples of wheat graded "rejected" at Minneapolis were owing to the presence of frosted or of frozen grain in the sample.

Mr. President, the fact that once or twice in a lifetime we might raise such a bumper crop in these States that our tariff becomes inoperative is no reason on earth why in all the other years, when we are sadly in need of it, we should be deprived of its advantage.

My colleague's argument was sound and an earnest plea in behalf of the interests of the farmers of the State he represents.

Mr. President, every other great country in the world seeks by its legislation to advance the prosperity of its own people, without any thought whatever of the effect of its legislation upon the people of other countries. In the broad philanthropy of the Democratic Party for the foreigner and its seeming indifference to the people of our own country we are adopting the opposite plan. If England adopts the free-trade policy she does it because she believes that her own industries will better flourish under a free-trade arrangement. She makes no careful measurement of the cost of things at home and abroad. If Germany adopts a protective policy she does so solely with a view to stimulate and protect her own industries. She enters into no refined calculations as to comparative costs of production.

We, on the other hand, lose sight of our own highest industrial interest and adopt a policy that our industries shall yield no more net profit than the industries of any other country.

And so, some years ago, impelled more by fear than by reason, we adopted a tariff policy that the protection afforded the American industries should never be in excess of the difference between the cost of production at home and the foreign cost of production. Mr. President, as a Republican I have never given my assent to that doctrine, and I never will. That doctrine may meet a theory, but it fails to meet a condition. In some instances it will be right and just; in many instances it will not.

That doctrine, resolved to its ultimate results, means that the American farmer, the American producer of all important products, shall be satisfied with a profit equal to the profit which the foreigner secures in his own country. We forget that the profit of the foreigner may go further in the support of himself and family in his own country than a like profit would in this country. Our own people have gotten used to living upon a higher and a better plane than the foreigner, and there is no reason why we should drag them down to the foreign standard.

This in turn means that the producer in this country must live as cheaply as the producer in a foreign country.

Does Germany, in fixing her tariff schedules, ever base them upon the difference between the cost at home and abroad, or does she view the subject from a practical standpoint, not a theoretical one, and make her laws conform to the practical side—the actual needs of her own people? She finds herself in this twentieth century with a population of between 60,000,000 and 70,000,000 people. She finds that she has a territory capable of producing certain things. She knows that this population must secure a livelihood in the production of those particular things and she legislates to make such production profitable. She does not ask whether it costs the people of some other country as much or more to produce than it costs to produce in her own country. Her duty is to her own people, and she is by her protection and by her favors to exports making the whole country prosperous.

We have a country in which we not only can produce certain things but almost everything necessary for the comfort, convenience, and happiness of our people. We have lands capable of producing everything in abundance to feed our people. It has been estimated by Mr. Hill that we can produce sufficient food to take care of 800,000,000 people. We have mills and factories capable of supplying everything that the people of this country need. We have nearly 100,000,000 people dependent upon the production of these industries.

If those people stay Americans, they have got to live upon American land; they have got to work in American factories; they have got to make their living out of American resources.

Our highest legislative duty, therefore, so far as legislation can do it, is to make all those industries prosperous. The American people could still live and maintain their high standard of living by an interchange of their commodities if each producer had the whole American market for his production. The people can not be prosperous if that market is to be divided equally with the foreigner. Just to the extent that the foreign product enters into our own country, just to that extent are our own products displaced, just to that extent are our markets lessened, just to that extent is the demand for our products decreased, just to that extent is our money taken out of the country, and just to that extent is our prosperity diminished.

I do not care whether it costs more or less to produce a bushel of wheat in Canada than it does in the United States.

I know there are about 33,000,000 people in this country engaged in agricultural pursuits. I know that their business is not prosperous to-day compared with other businesses. I know that if they could hold the exclusive American market their prosperity would be greatly increased, and I know that if they could hold it until such time as their production would equal the normal consumption in this country they would then be placed upon a plane of industrial equality with the rest of the United States. That is what I want. But you legislate to protect the strong rather than the weak, the prosperous rather than the unprosperous.

It is a shame, Mr. President, that agriculture can not be carried on in this country on the same lines as any other business; that the farms of the country can not be made to pay a dividend where the labor employed is hired labor.

I have farms in my own State to-day, and I can not afford to work them with the present price of American labor where I have to hire all the labor done. The profits would not pay the expense. So I have to wait year after year until some year when the conditions are ripe and I can make a reasonably good profit under protection, when the Canadian crop is held in abeyance and can not be loaded upon us.

You legislate for the manufacturer with the idea and the purpose that the owner of a factory shall be able to make a reasonable profit upon his investment and hire all the work performed in that factory. And yet it strikes you with consternation if I insist that we ought to so legislate in regard to the agricultural interests that the owner of the farm shall make a profit, a reasonable profit, above what he must pay out for labor. This thing will adjust itself if you will give the farmer the same protection that you give the manufacturer. It will adjust itself just as soon as production and consumption equal each other. You are giving the manufacturer 25 and 35 per cent upon his product. Give the farmer 25 or 35 per cent upon his finished product and things would very soon equalize themselves. When that condition arises the farmer will be able to secure such prices for his products that he can afford to pay for labor the same wages that are paid in the city. When he can afford to pay those wages, then you will have a return back to the farm. Then the city laborer will go to the farm, where the rents are cheaper and where his earnings will in the end be equivalent to what he may obtain in the congested city.

But the Democratic Party, anticipating this condition and being fearful that the American farmer shall in time rise to this plane of equality, cuts off this possibility by destroying his home market, throwing it open to the people of the whole world.

By the adoption of this amendment you would give him some protection, which would last at least until the Canadian duty on our grain would be removed; and we will pray earnestly that that Government will make the same error it did when it turned down the reciprocity pact.

Mr. President, I ask for the yeas and nays on this amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I am paired with the junior Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the Senator from Mississippi [Mr. VARDAMAN] and vote "nay."

Mr. LEWIS (when his name was called). I again announce my pair with the junior Senator from North Dakota [Mr. GRONNA]. Were he here, I would vote "nay."

Mr. McCUMBER (when his name was called). I again transfer my pair to the junior Senator from Maine [Mr. BURLEIGH]. I vote "yea."

Mr. THOMAS (when his name was called). I make the same transfer as heretofore and vote "nay."

Mr. WILLIAMS (when his name was called). Did the senior Senator from Pennsylvania [Mr. PENROSE] vote?

The PRESIDING OFFICER. He has not voted.

Mr. WILLIAMS. I withhold my vote, then. I have a pair with him.

The roll call was concluded.

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from South Carolina [Mr. TILLMAN] and vote "nay."

Mr. BANKHEAD. I am paired with the junior Senator from West Virginia [Mr. GOFF]. I withhold my vote.

Mr. SWANSON. My colleague [Mr. MARTIN] is paired with the junior Senator from Vermont [Mr. PAGE]. If my colleague were present, he would vote "nay."

Mr. CHAMBERLAIN. I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence I withhold my vote.

Mr. DILLINGHAM. I desire to announce that my colleague [Mr. PAGE] is necessarily absent from the Chamber this afternoon and that he is paired with the Senator from Virginia [Mr. MARTIN].

Mr. WILLIAMS. I desire to transfer my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the junior Senator from Nevada [Mr. PITTMAN] and vote. I vote "nay."

Mr. JAMES. I transfer my pair with the junior Senator from Massachusetts [Mr. WEEKS] to the Senator from Maryland [Mr. SMITH] and vote "nay."

Mr. BANKHEAD. I desire to change the announcement of my pair. I transfer my pair to the Senator from Nebraska [Mr. HITCHCOCK] and vote. I vote "nay."

The result was announced—yeas 27, nays 41, as follows:

YEAS—27.

Borah	Dillingham	McLean	Smoot
Bradley	Gallinger	Nelson	Stephenson
Brandeggee	Jackson	Norris	Sterling
Bristow	Jones	Perkins	Sutherland
Cañon	Lippitt	Ransdell	Thornton
Clark, Wyo.	Lodge	Root	Warren
Colt	McCumber	Sherman	

NAYS—41.

Ashurst	James	Polindexter	Smith, Ga.
Bacon	Johnson	Pomeroy	Smith, S. C.
Bankhead	Kenyon	Reed	Stone
Bryan	Kern	Robinson	Swanson
Chilton	Lane	Saulsbury	Thomas
Clarke, Ark.	Lea	Shafroth	Thompson
Cummins	Martine, N. J.	Sheppard	Walsh
Fall	Myers	Shields	Williams
Fletcher	O'Gorman	Shively	
Hollis	Overman	Simmons	
Hughes	Owen	Smith, Ariz.	

NOT VOTING—27.

Brady	du Pont	Martin, Va.	Smith, Mich.
Burleigh	Goff	Newlands	Tillman
Burton	Gore	Oliver	Townsend
Chamberlain	Gronna	Page	Vardaman
Clapp	Hitchcock	Penrose	Weeks
Crawford	La Follette	Pittman	Works
Culberson	Lewis	Smith, Md.	

So Mr. McCUMBER's amendment was rejected.

The PRESIDING OFFICER. The question recurs on the amendment of the committee, which has been read.

The amendment was agreed to.

Mr. McLEAN. Mr. President, at the suggestion of a member of the majority of the Finance Committee, I desire to offer an amendment, and to ask to have it printed and referred to the Committee on Finance. I also offer an accompanying letter which is explanatory of the amendment.

The PRESIDING OFFICER. Without objection, it will be so ordered.

Mr. SHIVELY. To what does it relate, if the Senator please?

Mr. McLEAN. It is a mere matter of phraseology.

Mr. SHIVELY. Perhaps we can dispose of it right now. To what part of the bill does it refer?

Mr. McLEAN. On page 192, after the word "companies," in line 21, I propose to insert "or any business or manufacturing concern."

I called the attention of the Senate to the necessity of this amendment some two weeks ago. There are many very large manufacturing concerns that are neither joint-stock companies nor corporations nor associations, but are handed down from father to son and go by the family name. Under the bill they are deprived of the leeway which is given to all other manufacturing concerns which are incorporated.

Mr. SHIVELY. Are those partnerships?

Mr. McLEAN. No; not at all; the business may be carried on by one man, and the manufacturing concern only goes by his name.

Mr. SHIVELY. If the amendment can be so drawn as to absolutely distinguish such a concern from an individual, I think it should be incorporated in the bill.

Mr. McLEAN. It seemed to me that the words I have used would accomplish that purpose—"business or manufacturing concern." I suggest that the committee consider the amendment, because, unless some language which will cover the objection is adopted, it will result in great inconvenience to many very large manufacturing concerns.

Mr. SHIVELY. I think there is substance to what the Senator from Connecticut says in regard to the matter, and the committee will be very glad to take it up and consider it.

Mr. SMITH of Georgia. Mr. President, I have sent to the desk an amendment which, in behalf of the Committee on Finance, I ask to add at the close of paragraph 257, on page 77,

The PRESIDING OFFICER. The amendment proposed by the Senator from Georgia will be stated.

The SECRETARY. On page 77, the substitute of the committee has already been agreed to and an amendment was agreed to adding the words "or other suitable process."

Mr. SMITH of Georgia. The substitute of the committee has been agreed to for paragraph 257, and we wish to add at the close of it the additional sentence which I have sent to the desk.

The SECRETARY. On page 77, line 8, after the words "ad valorem," it is proposed to insert:

Plain gauze or leno woven cotton nets or nettings shall be classified for duty as cotton cloth.

Mr. SMITH of Georgia. On yesterday, Mr. President, I undertook to handle this same subject in connection with paragraph 68, but after some discussion the committee withdrew the proposed amendment. We submit this amendment to-day instead.

Mr. SMOOT. This provision covers mosquito nettings.

Mr. SMITH of Georgia. Mosquito nettings. We give them the same duty that the thread contained in them will carry.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the committee to the amendment. The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. BRANDEGEE. Mr. President, as appears on page 4556 of the RECORD, under date of September 3, I called the attention of the Senate to the question of photogelatin printing, and had inserted a part of a letter received from the Meriden Gravure Co., of Connecticut, on that subject. There was then some explanation by the Senator from Maine [Mr. JOHNSON], who was in charge of paragraph 335, one of the paragraphs dealing with the paper schedule. I have received a letter from the same company, which I shall send to the desk and ask the Secretary to read for the information of the Senate, and then I wish to make a statement.

Mr. LODGE. If the Senator will allow me a moment, I will say I received a telegram to the same purport as that received by the Senator from Connecticut in regard to photogelatin. We understood that the Senator from Maine said it came under the surface-coated papers, but I do not think it does.

Mr. BRANDEGEE. I think the subject will be cleared up a little if the letter which I have sent to the desk may be read, and then I will discuss it.

The PRESIDING OFFICER. In the absence of objection, the letter will be read as requested.

The Secretary read as follows:

MERIDEN, CONN., September 5, 1913.

HON. FRANK B. BRANDEGEE, Washington, D. C.

SIR: We have not seen the CONGRESSIONAL RECORD of yesterday ourselves but an interested friend in New York has just telephoned and read us part of the proceedings of yesterday, in which you introduced our letter to you regarding the tariff on photogelatin work. As near as we can understand the purport of the letter was overlooked, and the fact that the schedule on coated photogelatin paper had been placed at 35 per cent was offered as covering the point we raised. We therefore took the liberty of wiring you, and also Senator LODGE, who, we understand, took part in the debate, as follows:

"You misunderstand the purport of our letter. It is the finished product of the photogelatin press we are interested in. The schedule of 35 per cent on coated photogelatin paper will not help the manufactured product. It is a tariff on the printed photogelatin work; we need to hold our own with German competition."

If the writer is correctly informed, the matter as it stands will simply put 35 per cent on coated paper, which we think no people in our line of work are interested in at all, and leave the finished product out in the cold. The paper item we do not care at all about, but the finished work, or the photogelatin illustrations themselves, we are vitally concerned in.

Trust it is not too late to call your attention to this fact before the vote is taken.

Very truly, yours,

THE MERIDEN GRAVURE CO.,
J. F. ALLEN, Treasurer.

Mr. BRANDEGEE. Mr. President, the pending bill, paragraph 333, commencing on page 101, provides:

333. Pictures, calendars, cards, booklets, labels, flaps, cigar bands, placards, and other articles composed wholly or in chief value of paper lithographically printed in whole or in part from stone, gelatin, metal, or other material—

There is then a parenthesis including some exceptions—shall pay duty at the following rates.

And so forth. Then follow entirely new specifications of these lithographic prints based upon their thickness, and it adopts a rate of specific duties in relation to them. I find that the clause in the act of 1909, paragraph 412, provides:

412. Pictures, calendars, cards, labels, flaps, cigar bands, placards, and other articles, composed wholly or in chief value of paper, litho-

graphically printed in whole or in part from stone, metal, or material other than gelatin—

Then there is a parenthesis with some exceptions, and it continues—

shall pay duty at the following rates.

Then, paragraph 415 of the existing law provided:

Articles composed wholly or in chief value of paper printed by the photogelatin process and not specially provided for in this act, 3 cents per pound and 25 per cent ad valorem.

Mr. President, it is impossible for me to tell from the proposed classification based upon thickness, including the thickness of the card upon which the photogelatin engraving has been placed, exactly what the rates of these specific duties would provide as compared with the existing mixed rates consisting of a specific and an ad valorem; but I would ask the Senator from Utah [Mr. Smoot], who has the tariff notes in the large tariff handbook which was placed upon the desks of Senators, if he can give me any information upon that question.

Mr. SMOOT. Mr. President, in answer to the Senator's question, I will state that the equivalent ad valorem rate on the importation of photogelatin articles under the present law for the year 1912, is 29.61 per cent; that is, the rate of 3 cents per pound plus 25 per cent ad valorem is equivalent to a rate of 29.61 per cent.

Mr. BRANDEGEE. Now, will the Senator let me interpolate there something I wanted to say, and which I think ought to be in my statement?

Mr. SMOOT. Certainly.

Mr. BRANDEGEE. Mr. President, I omitted to state that on page 102, in line 15 of the pending bill the following language occurs:

All other articles not exceeding eight one-thousandths of an inch in thickness, 15 cents per pound; exceeding eight one-thousandths of an inch and not exceeding twenty one-thousandths of an inch in thickness and less than 35 square inches cutting size in dimension, 6 cents per pound.

The language is complicated and technical and, of course, nobody, from a superficial inspection of it, can tell anything about it. Now, I yield to the Senator from Utah.

Mr. SMOOT. Mr. President, I will begin by saying that 3 cents a pound duty on the valuation of this product imported for the year 1912 equals 4.61 per cent ad valorem; that is the specific rate changed into an ad valorem rate.

It is my opinion that the first bracket on page 102, lines 15 and 16, covers the paper upon which the photogelatin engravings are generally made; that is, I believe that the paper used in that process is not exceeding eight one-thousandths of an inch in thickness. Eight one-thousandths of an inch in thickness is the same thickness as view cards are printed upon. Therefore, I take it that the photogelatin engravings are printed upon no thicker paper than the view cards are; and, if that be the case, then it will carry a rate of duty of 15 cents per pound.

Based upon the value of the articles imported in 1912, 3 cents is equivalent to 4.61 per cent. Fifteen cents per pound is approximately five times that amount, or a rate of duty of 23.05 equivalent ad valorem; that is, if the 15 cents per pound under the pending bill is reduced to an equivalent ad valorem, based upon the value of the articles of this kind imported in 1912, it will give an equivalent ad valorem of 23.05 per cent. If the paper used for this process is thicker than eight one-thousandths of an inch, then, of course, the rate will be very much smaller.

Mr. BRANDEGEE. Well, Mr. President, in view of the statement just made by the Senator from Utah, let me call his attention to the fact that, in line 24, on page 102, the following language is found:

Providing that in the case of articles hereinbefore specified the thickness which shall determine the rate of duty to be imposed shall be that of the thinnest lithographed material found in the article, but for the purpose of this paragraph the thickness of lithographs mounted or pasted upon paper, cardboard, or other material shall be the combined thickness of the lithograph and the foundation upon which it is mounted or pasted.

Mr. SMOOT. I noticed that provision, which is a new provision; but, in my opinion, the paper that will be used for this process will come under bracket No. 1, being less than eight one-thousandths of an inch in thickness.

Mr. BRANDEGEE. I suggest to the Senator from Maine, in charge of this paragraph, that in line 15 the words "all other articles" are used, but it does not say—

Mr. JOHNSON. If the Senator will pardon me, to what paragraph does he allude?

Mr. BRANDEGEE. Paragraph 333, on page 102, line 15, where the words "all other articles" occur. Should not that be limited to "other articles of paper"?

Mr. JOHNSON. It seems to me from the context that the word "articles" could have no other meaning than to include paper. We are dealing under this paragraph with pictures, calendars, cards, and so forth.

Mr. BRANDEGEE. If it does, and if it is sufficiently plain, I have nothing further to suggest about it. Now, what does the Senator claim as to the decrease in the rates on the articles to which I have called his attention?

Mr. JOHNSON. I think the Senator from Utah [Mr. Smoot] is right, as I understood him. According to our information gelatin paper, printed, would come under the bracket "all other articles not exceeding eight one-thousandths of an inch in thickness, 15 cents per pound." Our information was that that is a reduction. Under the present law the ad valorem duty is 29 per cent plus.

Mr. SMOOT. Twenty-nine and sixty one-hundredths per cent.

Mr. JOHNSON. And we understand that our rate is a reduction of about 25 per cent from that duty.

Mr. BRANDEGEE. In the neighborhood of one-third reduction.

Mr. JOHNSON. Twenty-five per cent. That is the information that was furnished us.

Mr. SMOOT. The inconsistency of the rate lies in this: That the paper which the manufacturer has to purchase carries a rate of 35 per cent, whereas on the finished product you have only given 23.05 per cent. That is what the manufacturer is complaining of. He is not so much interested in the paper, as he states in his letter, but he does not think that there should be a rate of 35 per cent on the paper and only 23.05 per cent on the finished product.

Mr. BRANDEGEE. Mr. President, the letter which I put in the RECORD the other day states:

A large part of the paper used in this industry comes from Germany, on which the duty is 25 per cent. It surely can not be the purpose of the bill to assess raw material at 25 per cent and the finished product at 15 per cent.

The writer is mistaken about that if the Senator from Maine is correct—

Our presses are all imported under a duty, our gelatin likewise. With the tariff of 1909—3 cents per pound and 25 per cent ad valorem—we are in many lines in the closest competition with the German product. The new bill as it stands will simply hand the market over to our foreign competitors and close most of the shops in this country.

The process is of German origin, and in that country between 200 and 300 houses are engaged in it.

I will not read the rest of the letter, which was read the other day, but I want to ask the Senator from Maine, in view of the intricate character of this paragraph and the fact that this situation has arisen this morning by a telegram to me, and I have not been able to have any communication with my constituents interested in it, if he will not allow this matter to remain unacted upon as late as possible, so that I may offer an amendment?

Mr. JOHNSON. The paragraph has already been acted upon and adopted. Of course when the bill goes into the Senate, if the Senator wants to offer an amendment, opportunity will be then afforded, and I will look into the matter further.

Mr. BRANDEGEE. Very well, then. I wish the Senator would look into it, so that, if possible, he will accept an amendment if I can prepare one to his satisfaction.

Mr. JOHNSON. Mr. President, I wish to call up paragraph 651, which was passed over at the request of the senior Senator from Massachusetts [Mr. Lodge]. I have an amendment to offer for the committee to that paragraph. On page 157, line 18, after the word "pulp," I move to strike out the colon—

The PRESIDING OFFICER. The paragraph has not been read.

Mr. JOHNSON. I should like to have it read before the amendment is offered.

The SECRETARY. The paragraph was reported by the Committee on Finance with amendments. The first amendment was, on page 157, line 18, after the word "bleached," to insert the words "and rag pulp," so as to read:

651. Mechanically ground wood pulp, chemical wood pulp, unbleached or bleached, and rag pulp.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Mr. LODGE. Mr. President, I understand that the Senator from Maine desires to offer an amendment to strike out the whole proviso following the words proposed to be inserted.

Mr. JOHNSON. That is the amendment which I wish to offer.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

Mr. JOHNSON. Now, for the committee, I move to strike out the colon after the word "pulp," in line 18, and to insert a period and to strike out the remainder of the paragraph beginning with the word "Provided," in line 18.

Mr. LODGE. Mr. President, in regard to that amendment I wish to say that I think it is just as well to do openly what the proviso as it stood permitted covertly. I pointed out, in discussing the paragraph in regard to the duties on paper, that the countervailing provisions there were nugatory, because they omitted, among the methods of discrimination employed by foreign countries, prohibition. They applied only in the case of an imposition of an export duty or license fee. I then showed, not only by the laws to which the Senator from Washington [Mr. JONES] has referred to-day, but by letters from Canadian ministers, that the policy was prohibition. They can and do prohibit the export of pulp wood, wood pulp, and everything going into the manufacture of paper, unless the people who own the land and wish to export it have a mill in Canada.

This paragraph was arranged with a countervailing duty falling only on mechanically ground wood pulp, which is imported in but small amounts from Canada, and which would have been of but little consequence.

The Senator from Washington in the amendment which he offered this morning seeking to perfect the wood paragraph covered the point of prohibition, which is the essential point, and it is needless to say that it was voted down.

The purpose of all these provisions is to transfer the business of making print paper to Canada—not merely to allow it to come in free, but to enable Canada to force the erection of paper mills by American capital on Canadian ground. That is a perfectly reasonable thing for Canada to do; she naturally would like to have all the print paper of the United States made on Canadian territory; but it is something rather new to legislate for the purpose of building up a foreign industry.

The duties imposed by all the civilized countries in the world except England are imposed with a view of benefiting the inhabitants and the industries of the particular country. England opens her market to the products of all the rest of the world on an equality with her own citizens, but she does not attempt to give to foreign producers any advantages over her own citizens. In this bill, in various clauses which I have pointed out, an advantage is given to the foreign producer by making the raw material of the industry bear absolutely a heavier duty, or a proportionately heavier duty, than the manufactured product. Of course that is almost in the nature of a bounty to the foreign producer; but in this case, in relation to Canada, it has been carried further than anywhere else.

This arrangement in regard to paper, of course, has been made in deference to the wishes of a group of newspaper publishers who have been carrying on this agitation for a long time. I think they will no doubt succeed in injuring, if not destroying, a branch of an American industry. I think they are very likely to succeed in transferring it to Canada. But I think when they have got it over the line they will find that American manufacturers on Canadian soil, or Canadian manufacturers on their own soil, are not engaged in philanthropic or charitable work, and that they will charge them, as anybody else would charge them, the highest price they can obtain.

Forces beyond the reach of tariff legislation are advancing the cost of papers made from wood pulp. The attempt to save money for certain great newspapers at the sacrifice of an American industry and its transference to Canada I am inclined to believe will fail. At the same time I think it is desirable to point out that these countervailing provisions are shams as they appear in this bill. They were drawn by people who knew undoubtedly exactly what they were doing, and they have no meaning in them. The same is true in regard to the powers of retaliation given to the President, because you will find there also that prohibition as a method of discrimination is artistically omitted.

Therefore I desire to say that I think it is more honest to drop entirely the pretense of countervailing duties which occur in paragraph 651. I think it is more honest to leave it out. It amounts to nothing, or to very little, as it stands. We might just as well abandon it and give to those who have dictated these paragraphs precisely what they are seeking.

Mr. SMOOT. Mr. President, I shall vote for the amendment offered, not because the paragraph itself is right, but because the proviso is a fraud and a sham, and in an underhanded way tries to make it appear that the authors of it wanted to be fair. It was written for no other purpose than to try, if possible, to appear consistent.

Of course this question has been a bone of contention for five or six years past. The Newspaper Publishers' Association have spent a great deal of money in bringing about this result. It is now about to be accomplished. I think perhaps it would be perfectly proper now for me to extend congratulations to Mr. John Norris upon the successful conclusion of this long fight; and the Newspaper Publishers' Association ought to increase his wage from now on, large as it has been in the past.

Mr. GALLINGER. Does the Senator think he has earned more than \$15,000 a year, which he testified he was receiving?

Mr. SMOOT. Before the committee of which the Senator from New Hampshire is a member it was testified that there was one man in the United States who would save \$600,000 if this provision should become a law, and that to another man, the publisher in New York of a paper printed in a foreign language, it meant a saving of over \$200,000 per year. When asked if the subscriber or the purchaser of his paper would receive one cent of benefit, he had to acknowledge that they would not. In fact, I will say now that my friend Norris is safe in leaving the Senate gallery, in abandoning the corridors of the Capitol, and going back to New York to-night and reporting the successful termination of the fight he has been waging for so many years.

I wish to predict, however, that it will not be many years after this great industry is transferred to Canada before the Canadian manufacturers, in connection with the American manufacturers who will be forced into Canada in order to manufacture print paper from Canadian pulp, agree upon a price for paper, and the newspaper publishers will receive no ultimate benefit from this provision. The only result will be that the paper will be made in Canada instead of this country; the profits will go to Canadian manufacturers; and the publishers are not going to be ultimately benefited through a lower price on print paper.

I shall say nothing further, but agree with the statement that was made by the Senator from Massachusetts [Mr. LODGE] as to the effect of this amendment.

Mr. HUGHES. Mr. President, I am not at all surprised that the Senator from Utah and the Senator from Massachusetts agree as to this provision. Regardless of their general attitude on the question of the tariff or reciprocity between Canada and the United States, it seems to me they must admit that inasmuch as the duties on paper have been materially decreased it hardly would have been fair to the manufacturers of paper to insist upon a countervailing duty, or any sort of legislation which might result in placing a tax upon their raw materials.

It has been urged in the other body and before our committee that in some mysterious way the levying of this countervailing duty would benefit the consuming public of the United States. I am totally unable to see why we should expect to do in the future by means of this duty what we have failed to do by it in the past.

Our retaliatory policy with reference to Canada on this subject started, as I recollect, back in 1897. I do not think anybody will contend that the relations of the two Governments with reference to this particular article have been improved since it was started, and everybody must admit that we are rapidly consuming our raw supply in this country. Nobody wishes more than I do that it were not so.

Mr. LODGE. Mr. President, if the Senator will allow me to interrupt him—

Mr. HUGHES. Certainly.

Mr. LODGE. I quite agree that under the Canadian provisions we can not import one foot of pulp wood to-day. It is not going to save one tree in our forests—not one.

Mr. HUGHES. I do not quite understand the Senator.

Mr. LODGE. If the Senator had taken the trouble to read the letters from some of the Canadian ministers which I put in the RECORD the other day, or if he would take the trouble to read the laws which the Senator from Washington read this morning, he would see that Canada prohibits the exportation of pulp wood and wood pulp. She has gone to the stage of prohibition instead of the mere imposition of duties on these things. I demonstrated it with letters from her own prime ministers of the Provinces.

Mr. HUGHES. I understand that. That argument was made before the committee. It is true that there is a prohibition in one or two Provinces, I think. Is not that correct?

Mr. LODGE. There is a prohibition in the Province of Quebec and in all the ones that have any wood.

Mr. HUGHES. That is not my understanding of the matter.

Mr. LODGE. That is absolutely the case. The exportation of pulp wood and wood for the manufacture of paper is prohibited in the whole region surrounding New England and

New York, and the Canadian authorities will prohibit it anywhere else where they find it goes. They do not mean to allow it to come into this country. There is no saving of the forests in this bill.

Mr. HUGHES. Assuming that the deplorable situation which the Senator from Massachusetts has depicted exists at the present time, would it improve it any if, in response to our retaliatory conduct, Canada should still shut off our supply?

Mr. LODGE. Canada has shut off our supply. If we did not allow her to bring in this product in the form of print paper unless she allowed us to import pulp wood and wood pulp, some of that paper would be made on American soil.

Mr. HUGHES. At the present time we are dependent upon Canada for, I think, \$29,000,000 worth of pulp and wood pulp. At least that is the amount now imported into this country from abroad.

Mr. LODGE. Wood pulp comes from Sweden and Norway, too.

Mr. HUGHES. Yes; I know it does. Fifteen million dollars' worth of it comes from the Dominion of Canada, however.

Mr. LODGE. Exactly; and that is what she has prohibited. She has entered upon that policy within a year. I read the letters on the subject. They are here in the Record.

Mr. HUGHES. What does the Senator suppose Canada is going to do with her pulp and her pulp wood?

Mr. LODGE. Why, she is going to have it made into paper on Canadian soil. She is refusing to allow wood and wood pulp to be sold to American companies and is saying to them, "If you will come on to our soil, we will give you all the wood and wood pulp you want, but you will have to make it into paper on Canadian soil." It is stated in an order of the council of Quebec that that is their purpose; and the Senator from Maine [Mr. JOHNSON], who sits by the Senator from New Jersey, knows I am stating the policy that has been adopted in Canada.

Mr. POINDEXTER. Mr. President—

The PRESIDING OFFICER (Mr. ASHURST in the chair). Does the Senator from New Jersey yield to the Senator from Washington?

Mr. HUGHES. Certainly.

Mr. POINDEXTER. I only wish to correct the assumption of the Senator from New Jersey, that these restrictions upon the exportation of wood and wood pulp operate only in two Provinces of Canada. They operate in practically all the Provinces of Canada. I read this morning the specific provisions of the Province of Ontario, the Province of British Columbia, the Province of Quebec, and the Province of New Brunswick.

Mr. HUGHES. It is impossible to decide these questions at this time. It was not claimed before our committee that more than two Provinces, as I recollect, had made this prohibition; and in my opinion no prohibition will continue. Canada will continue to do business with us, and we will continue to do business with the best customer we have.

Mr. POINDEXTER. Mr. President—

The PRESIDING OFFICER. Does the Senator from New Jersey further yield to the Senator from Washington?

Mr. HUGHES. Certainly.

Mr. POINDEXTER. The Senator speaks about continuing to do business; and he inquired a moment ago as to the purpose of these restrictive provisions on the part of the Canadian Provinces. In response to that, all that is necessary is to read the provisions themselves. In express terms they state what the object is, and provide that the wood cut from these lands shall be manufactured on Canadian soil. That is what the law says.

Mr. HUGHES. It is not a law, as I understand. It is a license.

Mr. POINDEXTER. It is a law, Mr. President. It is a rule under executive order, made under a statute which gives it the effect of a law.

Mr. LODGE. Mr. President—

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Massachusetts?

Mr. HUGHES. Certainly.

Mr. LODGE. They have gone even beyond the point described so clearly by the Senator from Washington. Within the year they have adopted the policy of saying squarely to American companies: "We will not allow you to export any pulp wood or any wood pulp or have any wood from our forests unless you build mills in Canada."

Mr. SMOOT. Mr. President, within the last two years there have been invested \$152,000,000 in mills for the manufacture of paper in Canada.

Mr. HUGHES. I am glad somebody is building new paper mills. It seems to be the declared policy of the Paper Trust in this country not to build mills, to starve the market, to re-

strict the output, to work only five days a week, and in every method human ingenuity can conceive to try to continue the plundering monopoly they have had for years.

Mr. CUMMINS. Mr. President—

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Iowa?

Mr. HUGHES. Certainly.

Mr. CUMMINS. I rise to a parliamentary inquiry. What is the pending question?

Mr. LODGE. Striking out the proviso on page 157.

Mr. CUMMINS. I could not understand the argument.

Mr. LODGE. There is no use in leaving the proviso in. It is a sham and a humbug. Let it go out. It is proposed by the majority that it shall go out, but some of us want to call attention to one or two facts in relation to it.

I wish to call attention to one other fact, and that is that American companies and Americans individually who have bought lands in Canada long prior to this time are now forbidden to export wood pulp or wood unless they build mills in Canada.

Mr. HUGHES. So far as I am concerned, if everything the Senator says is true, I do not think the paper consumers of this country would be any worse off if left to the mercies of the Canadian Government in anything it can invent to their detriment than they will be if left to the mercies of the International Paper Co. It is admitted by everybody with whom I have talked that, outside of the great State of Maine, our supply of pulp wood is practically exhausted. Nobody is claiming anything else.

Mr. POINDEXTER. Mr. President—

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Washington?

Mr. HUGHES. Certainly.

Mr. POINDEXTER. I just want to comment upon that statement of the Senator from New Jersey, which opens up a very interesting bit of information with regard to another great political question that has been before the country, and to some extent before Congress, by saying that in the Territory of Alaska we have an unlimited amount of very fine pulp-wood forests.

Mr. HUGHES. I am glad to hear that.

Mr. THOMAS. Mr. President—

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Colorado?

Mr. HUGHES. Certainly.

Mr. THOMAS. While that is true, I should like to inquire how we can avail ourselves of that tremendous store of timber supply in view of the so-called conservation policy of the Federal Government, which regards these resources as too sacred for the use of the present generation and somewhat too sacred for the use of the next two or three succeeding generations of men?

Mr. HUGHES. Mr. President, I hope—

Mr. POINDEXTER. Mr. President, in view of this inquiry I hope the Senator from New Jersey will allow me to answer it in just a word.

Mr. HUGHES. Certainly; inasmuch as this conservation joint debate has been started I am going to let it go through. I can not do anything else. I wish, however, it had been started at another time.

Mr. POINDEXTER. I will make it very brief, so far as I am concerned. That was the other great question to which I referred; and I am not surprised that there was an immediate response from the Senator from Colorado, as he was present and heard the remark.

It seems to me that the remark of the Senator from Colorado illustrates the strange confusion of ideas that exists about this so-called conservation and the placing of the great forest of Alaska in a forest reserve. That does not shut it off from use for the making of wood pulp. The law expressly provides a method by which it can be used and the regulations under which it can be taken and used. As a matter of fact, there are dozens of sawmills sawing this wood for other purposes, such as fish boxes, at the present time. Anybody complying with these regulations, which are very reasonable, can obtain this timber for any purpose for which it is suited; and it is open to anybody who chooses to use it for the manufacture of wood pulp for paper.

Mr. THOMAS. Mr. President, I am not going to enter upon a discussion of this question. I merely wish to say that I am painfully familiar with the regulations to which the Senator refers, the operation of which, during the last year, saw 1 per cent or less of the timber reserves available for human needs, the remainder rotting and wasting away through the operation of a system which, upon its face, appears to be so fair.

Mr. HUGHES. Mr. President, there is another side of this question to be considered. Pulp wood and paper are not the only articles of commerce between the United States and Canada. The Treasury figures show that the Dominion of Canada has doubled its purchases from us within three years.

Mr. LODGE. Mr. President, I do not desire to interrupt the Senator in making a speech on our trade with Canada, as it seems an inopportune moment to do so. All I want to do is to call his attention to the fact that these countervailing duties relate alone to wood pulp and paper.

Mr. HUGHES. I understand that.

Mr. LODGE. They do not affect the general current of trade at all.

Mr. HUGHES. No, that is true; but the Senator knows, of course, as everybody must know, that it does not encourage commercial relations to slap in the face with a piece of legislation a neighboring nation with which we have a tremendous trade.

Mr. LODGE. Precisely; and Canada is encouraging it by prohibiting the export of an important commodity.

Mr. HUGHES. I simply wish to call attention to the trade we are doing with Canada outside of this particular commodity. Canada bought from us last year \$415,000,000 of goods of one kind or another as compared with \$216,000,000 in 1910. There is a growing, thriving trade with a neighboring nation. In addition to that, let me call the Senator's attention to the fact that out of 1,800,000 cords of pulp wood cut in Canada, the total Canadian cut, the United States took over 1,000,000 cords, or about 80 per cent, leaving only 20 per cent of her total cut for her own consumption. Does anybody think for a moment the Canadian Government is going to go out of its way to interfere with a neighboring nation with which it is doing such a profitable business and now has such profitable commercial relations?

I am satisfied that the Republican policy of retaliation against Canada is a failure. What will be the effect of our attempt to extend to them the hand of good-fellowship I shall not attempt to predict, because I am no more a prophet than is the senior Senator from Massachusetts. But I believe nations, to a great extent, are like individuals; and I believe our sincere effort to go on and do business with Canada should be appreciated and will be appreciated, and that Canada will continue to do business with us.

Mr. LODGE. Mr. President, if the Senator will allow me—

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Massachusetts?

Mr. HUGHES. I yield.

Mr. LODGE. If Canada has been desirous of enlarging her trade with us and has shown an unselfish and generous disposition, I have not observed it; but if our policy is to be to conciliate Canada by opening our markets and asking no return, then the Senator, in order to be consistent, should strike out the pretended countervailing duty of the paper paragraph, and should take from the President all power to retaliate on other articles where Canada discriminates, and should not allow us any chance to retaliate against Canadian discrimination, because in that way, on the Senator's theory, we shall win her trade.

Mr. HUGHES. I will say to the Senator that if I had my way—had absolute power over this legislation—I would do that very thing. I do not expect the Senator to agree with me about that, of course. I regard our ability to purchase from the Canadians as fully as much of a benefit as their ability to purchase from us. I think the right of the American people to go into the Canadian market and get what they want for what it is worth is just as big a boon as it is to permit Canada to sell it to us for what it is worth. There is not any doubt about my position on that matter.

Mr. GALLINGER. Mr. President—

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from New Hampshire?

Mr. HUGHES. Yes.

Mr. GALLINGER. Just a word. I have had occasion a great many times to make inquiry at close range as to the commercial relations between this country and Canada. It is well known that Great Britain gives to Canada a differential of something like 30 per cent; and yet Canada finds it to her advantage to buy from the United States, largely because of the fact that we are a contiguous people, and she gets her goods more promptly; she can buy them, as it were, in person. For that reason, and not from benevolent reasons, Canada trades largely with us. Of course we want to keep that trade, and I am satisfied that we will keep it without sacrificing what we are sacrificing in this matter of paper and pulp.

As I said about this bill the other day, however, I suppose the die is cast, and we are going to surrender this great industry absolutely and forever to our Canadian neighbors. We are going to plant American mills on Canadian soil, to give employment to Canadians instead of to Americans, and surrender the contest we have had heretofore between this country and the Dominion of Canada. That is the way I look at it.

Mr. THOMAS. Mr. President—

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Colorado?

Mr. HUGHES. Certainly.

Mr. THOMAS. On yesterday I introduced and had read an article upon this subject, and I desire to reread the concluding sentences of the article, as they relate to this particular subject:

Canada is buying from the United States very much more than China is, 20 times as much, in fact; sixfold more than Japan; and 100 per cent more than France.

All this, Mr. President, in the face of this discriminating duty of 33½ per cent favoring Great Britain as against us.

Not until the magnitude of the figures which tell the story of our increased commerce within five years with Canada were published was there a realization of the fact that our neighbor on the north is now, if cotton be left out of consideration, our best customer, and is likely to be within a few years our best customer, no matter how much cotton the South sells to the manufacturers of Great Britain and the Continent of Europe.

Mr. HUGHES. Mr. President, I was about to call attention to the fact that with the exception of the United Kingdom Canada is the best customer we have. It is amusing to think that when we speak so boastfully of our foreign trade, that so much of it is commerce with our neighbor on the north; we seem to have set out to affront in every way possible the one neighboring nation we should not affront when it comes to establishing commercial relations.

Mr. LODGE. Is it not true that this great commerce with Canada that the Senator describes so accurately has all grown up under the tariff act of 1897, and the tariff act of 1909? There had been no other tariff act since 1894.

Mr. HUGHES. Of course, that is true; and I am not going to prophesy, as Senators on the other side do, as to how much greater it would have been but for those tariff acts. But it is significant to reflect that this tremendous increase of trade with Canada has grown up without any result in harmony with the gloomy forebodings of impending evil that emanate from the other side of the Chamber when a further extension of that trade in the present bill is contemplated. As the Senator from New Hampshire said, we are going to try a new policy. I can not, of course, prophesy what the effect of it is to be, but I fondly hope and imagine that it will result as the change of relations from hostility to a state of friendliness always results among individuals.

Mr. President, just one word more in closing. Whatever the effect of this legislation is going to be, whatever different effects it will have, there will be at least one effect. It will take the consumers of print paper out from under the control of one of the worst trusts that ever has afflicted the body politic of this great Nation.

Mr. SMOOT. Mr. President—

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from Utah?

Mr. HUGHES. Certainly.

Mr. SMOOT. Does not the Senator think that it will fall under just the same sort of a trust in Canada and that perhaps greater hardships will be administered to them than at present?

Mr. HUGHES. I do not think so. I think if we abolished all antitrust legislation and repealed all the criminal statutes it would be hard to get a body of men who would combine together and treat the consumers of the products they manufacture as this outfit has treated its consumers.

Mr. SMOOT. The Senator must know that the greatest trusts in all the world are in Germany. They absolutely control not only the output but the price of most of the manufactured articles. They control the distribution of such goods as well as the division of the profits.

Mr. HUGHES. I understand that, and I understand, too, that they operate as the result of a definite governmental policy. They are not stockholders in corporations who by their machinations put burdens on the backs of the workmen and make a hypocritical plea that the tariff exactions are made for the benefit of those who pay them, and that they are simply trustees in the form of a monopoly for the benefit of those who work.

That is one of the distinctions between monopolies in this country and monopolies elsewhere. Abroad they are permitted to monopolize certain industries, and they are permitted to

monopolize them for the general good. I think it is a mistaken governmental policy, but at least it is a governmental policy.

Mr. SMOOT. I wish to say to the Senator that I have noticed from expressions made during the discussion of this bill that foreign trusts are looked upon as a blessing.

Mr. GALLINGER. They are all good trusts.

Mr. SMOOT. And they are all good trusts, as the Senator suggests, but if a company is large enough to control a fair percentage of the goods made in the United States they are bad, and all such are very wicked, indeed.

Mr. HUGHES. The Senator can make that statement—

Mr. SMOOT. Of course I do not intend to take the time of the Senator further. I know he does not want me to do so.

Mr. HUGHES. Probably we will not agree on that subject any more than on the infinite variety of tariff subjects, but I will frankly say I am glad we will have a chance to experiment with this proposition, because I am convinced—

Mr. SMOOT. That is a good confession.

Mr. HUGHES. Yes; in my opinion. And while I see Senators smile and shake their heads sagaciously and they are amused at the statement I make, I am absolutely satisfied that the makers of this particular kind of paper in the United States can make it as cheaply as it can be made anywhere in the world. I am satisfied that no labor conditions or the fact that different wages are paid in another country and this country will in any way affect this test that we are going to make, and it will be very interesting to discover whether in opening up this trust to a fair and even competition it will not have the effect we all hope, to compel them to compete in the markets of this country upon merit and efficiency and sell their product for what it is worth.

Mr. President, I ask permission to submit in connection with these somewhat disjointed remarks certain figures with reference to imports from Canada.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and permission is granted.

The matter referred to is as follows:

IN THE MATTER OF PARAGRAPHS 330 AND 651 OF THE TARIFF BILL RELATING TO A RETALIATORY DUTY UPON PAPER AND PULP.

The senior Senator from Massachusetts proposes that the retaliatory policy against Canadian pulp wood be continued. The information furnished to the Subcommittee on Finance showed that that policy of retaliation was started in the Dingley bill of 1897. Its continuance during 16 years has tended to aggravate conditions instead of composing them. In all that period the retaliatory duties have been maintained at the expense of the consumers and for the profit of speculative holders of spruce lands in the United States. The American newspapers, which use \$60,000,000 worth of paper per annum, paid in 1912-13 a direct tax of \$278,186 because there was not enough available freehold goods in Canada or in the United States to supply their immediate needs. The details follow:

An additional duty of \$5.75 per ton upon 28,725 tons of paper.....	\$165,168
An additional duty of \$1.67 per ton upon 19,886 tons of mechanical pulp.....	33,209
An additional duty of \$3.33 per ton upon 23,941 tons of chemical pulp, unbleached.....	79,804
An additional duty of \$5 per ton upon 1 ton of chemical pulp, bleached.....	5
Total.....	278,186

All the burdens of these retaliations must be borne by the American newspaper publishers who, in 1912, paid indirectly a penalty of more than \$3,000,000 in addition to the amount of retaliatory duties paid directly. This indirect tax was due to the uniform and agreed and artificial prices which the combination of the American paper makers has continuously maintained. No print paper can be bought in the open market. American mills will not sell news print paper unless they know the destination of the paper, the purpose for which it is to be used, and the name of the buyer. They starve the market by restricting production, as is shown by their monthly reports to the Bureau of Corporations. They have kept down the stock of paper on hand at the mills to an eight-day supply for all the newspapers of the country. They have dumped paper into Great Britain at lower prices than they sell to the American consumer. The policy of retaliation against Canada fosters and helps that arrangement.

Our stores of pulp wood outside of the State of Maine have been substantially exhausted. The subcommittee believes that as the duties on manufactured paper have been lowered by the proposed bill, the duties on mechanical and chemical wood pulp entering into this paper should be removed, in order that the American news print paper makers may be better equipped for competition. During the last fiscal year, 1912-13, the American paper makers paid \$29,520,000 for pulp wood and wood pulps from abroad to make their paper. These figures were approximately as follows:

Pulp wood from Canada, 1,036,000 cords.....	\$6,954,952
Transportation of wood, \$3.50 per cord.....	3,626,000
Mechanical wood pulp from Canada, 173,000 tons delivered, at \$20 per ton.....	3,460,000
Chemical wood pulp from Canada, 45,000 tons, at \$40 per ton.....	1,800,000
Total from Canada.....	15,840,952
Chemical pulps from elsewhere, 342,000 tons, at \$40 per ton.....	13,680,000
Total.....	29,520,952

The senior Senator from Massachusetts is proposing that we try to force terms from a customer ranking next to the United Kingdom in value of goods bought from us. The Dominion of Canada has doubled its purchases from us within three years. Its gain last year over the previous year was \$86,000,000, a larger increase than in any earlier year. Canada paid us last year over \$415,000,000 for materials as compared with \$216,000,000 in 1910. It bought from the United States 63 per cent of all the materials it imported, taking only 37 per cent of its importations from the rest of the world. It sold to us \$120,000,000 of materials. Why should we attempt to provoke reprisals from a customer whose trade interchanges with us exceed \$535,000,000 per annum? Why punish our own consumers in order that we may make a futile effort to continue a policy that has failed after a test of 16 years? If, as is not at all probable, Canada should resent the retaliatory policy proposed by the senior Senator from Massachusetts and should cut off all our supplies of wood and pulps, amounting to 30 per cent of all the raw material of our paper manufacture, the paper industry of the United States would be prostrated. The owners of 52 paper mills are inviting this sort of warfare because they pass the burden of its cost along to the consumers, who are helpless. The price of a newspaper is fixed like that of a postage stamp, so that 22,000 publishers who use the paper can not pass it along to the reader. They must carry that burden.

Canada cut last year 1,800,000 cords of pulp wood, of which the United States took 1,036,000 cords as pulp wood and 427,000 cords as pulp, a total of 1,463,000 cords, or 80 per cent of Canada's entire cut, leaving only 20 per cent of that cut for its own paper consumption and for its exportations of pulp and paper to other countries. The fact that the paper industry of the United States had its banner year in 1912 will indicate that the American paper makers are thriving under competition, thus justifying the underlying theory of this tariff bill.

The entire area of Quebec's pulp-wood supply is 208,000 square miles, of which 200,000 square miles is Crown land, or restricted land, and 8,000 square miles, or 4 per cent of the area, has freehold wood, which may now enter the United States without restriction. Because of that limited area of freehold wood an addition of from \$2 to \$3 per cord has been made within two years to the price which American paper makers must pay for Canadian freehold wood. At the present rate of consumption by American paper makers that supply from Canadian freehold land will soon be exhausted, and as the supply diminishes there will be corresponding increases every year in the cost of that wood.

The senior Senator from Massachusetts proposes that we tax all wood pulp produced from Crown lands of the Canadian Provinces. It is obvious that our spruce forests are nearing depletion and that our water powers, which would be necessary for grinding wood into pulp cheaply, are more profitably employed in other industrial ventures. Our paper mills must buy their raw materials of pulp and wood from Canada regardless of restrictions. The fact that \$278,186 was paid last year in retaliatory duties because the wood pulp could not be obtained otherwise emphasizes the fact of our absolute dependence upon Canadian forests and upon Canadian water powers. The retaliatory duties increased the cost of materials used by the American paper maker and the consumers paid for it when the pulp was converted into paper.

With respect to the countervailing duty provided for in paragraphs 330 and 651, equaling any export tax that might be levied upon paper or pulp or wood, there is no serious objection from consumers to the continuance of that phraseology, because it applies only to Finland, which alone imposes an export tax. Neither Canada nor any of its Provinces imposes an export tax of any kind, and therefore the provision is negligible so far as it applies to them.

The American print-paper maker needs no protection. His labor cost is no greater than that of Canada. He has advantages in supplies and transportation which offset Canada's advantages on wood. The figures for each of the six years ending June 30, 1912, show that the American mills exported more than they imported. We sold more paper of all kinds to Canada than we bought from it. The figures for the fiscal year 1913 show an increase of importations from Canada because the American paper makers have refused to meet the increased demand of consumers. In the year 1911 they did not build a single paper machine, though the consumption in the United States shows an average increase of over 90,000 tons of newspaper print per annum. The largest paper maker, the International Paper Co., has built only two new paper machines in 15 years. Big mills curtailed production to allow weaker mills to get into the market.

The admission of news-print paper from the rest of the world, while helpful to consumers in serving as a slight check upon prices, would have very little influence upon the vast volume of print-paper consumption in the United States. The importation of newspaper print paper for the year 1912 from countries outside of Canada was approximately 1,000 tons, whereas the United States used 1,440,000 tons in that year. In other words, the countries outside of Canada did not furnish but seven-thousandths of 1 per cent. The newspaper print makers have used the tariff on paper as a shelter for extortion. In the six years during which publishers have been trying to free themselves from this burden they have paid approximately \$35,000,000 in excessive and artificial prices for their raw material. This calculation is based upon prices in excess of 2 cents per pound, or \$40 per ton, under normal conditions.

1908, \$10 per ton upon approximately 1,100,000 tons.....	\$11,000,000
1909, \$2.50 per ton upon approximately 1,180,000 tons.....	2,950,000
1910, \$5 per ton upon approximately 1,260,000 tons.....	6,300,000
1911, \$5 per ton upon approximately 1,350,000 tons.....	6,750,000
1912, \$3 per ton upon approximately 1,440,000 tons.....	4,320,000
1913, \$2.50 per ton upon approximately 1,500,000 tons.....	3,750,000

Total..... 35,070,000

It is time this oppression should be stopped.

The latest device of the paper manufacturers is to operate their mills for five days of the week in order that they may starve the market and maintain higher prices.

The American paper manufacturers have continued to operate their mills with antiquated machinery and upon primitive lines regardless of the fact that when the United States Government imposed a duty upon the manufactures of an industry under the Republican policy of protection the beneficiaries of that action were under an implied obligation to provide for the needs of the consumer by the installation of modern machinery and modern methods. The paper machines of the International Paper Co. average 21 tons per day, although modern machines are capable of producing 60 tons per day.

Mr. GALLINGER. Mr. President, I do not want to delay this discussion and am ready to vote on the amendment, but

I will venture to ask the Senator from New Jersey if it is not a fact that beyond possibly disturbing or destroying what he calls the American Paper Trust the only effect of this legislation, provided Canada does not raise the price of paper, which I think she will do, will be to benefit the great metropolitan dailies, and the ultimate consumer will get no benefit from it whatever.

Mr. HUGHES. The Senator and I differ as to what constitutes an ultimate consumer. I will say that my view on that line is somewhat peculiar, and I do not criticize the Senator for differing with me.

Mr. GALLINGER. What I meant was that in the testimony taken before the Finance Committee last year it was agreed on all hands that the newspapers would not be sold for anything less or that the advertisers would pay any less because of this legislation.

Mr. HUGHES. That may be. It is not necessarily so, I will say to the Senator. I will explain my view, if the Senator will permit me.

Mr. GALLINGER. It was admitted that Mr. Hearst would save, supposing printing paper was sold as cheaply as was expected it would be if placed on the free list, \$600,000 a year. A German newspaper proprietor also admitted that he would save \$200,000 a year. I do not think they will save it, but that is what they testified to.

Mr. HUGHES. If I am correctly informed, Mr. Hearst is opposed to this tariff bill and opposed to this free print-paper provision in the tariff bill. I am quite satisfied of that, if my memory serves me correctly. But if it be true that Mr. Hearst and his paper have taken that position, if it be true that Mr. Hearst is to save \$600,000 by the operation, that it permits Mr. Hearst to purchase news print paper for what it is worth, I am glad of it. That is my object, so far as I am concerned, in supporting this legislation. It is to compel these concerns to sell this product for what it is worth. As I said a minute ago, I am glad that there are no collateral questions, as the cost of labor, entering into this matter to any great extent.

Mr. GALLINGER. Mr. President, it is not well to reopen the general tariff discussion on this item, and I have no intention of doing it, but the same line of reasoning would lead us to the conclusion that if Americans can purchase goods of any kind cheaper abroad than here, therefore we ought to take down the bars, just as we are taking them down in this particular, and let in the foreign products.

Mr. HUGHES. The Senator himself said some time ago that he was a free trader, and I think he will agree that if free trade could be established with all the nations of the earth he would be glad to see it, and subscribe to that doctrine.

Mr. GALLINGER. Did the Senator suggest that I had ever said that I was a free trader?

Mr. HUGHES. Yes; and I myself was surprised at it.

Mr. GALLINGER. The Senator heard somebody else say that.

Mr. HUGHES. No; I heard the Senator from New Hampshire say it, and I will say that it startled me a little.

Mr. GALLINGER. The Senator surely misunderstood me, or he has confounded me with some other Senator.

Mr. HUGHES. I will say that the Senator qualified the statement.

Mr. GALLINGER. If the Senator will look at the language I used, he will find that I said that free trade is the ideal condition if it was possible to establish it, but I said it was utterly impracticable.

Mr. HUGHES. I understand the Senator; he did not leave himself in such a position that anybody could be justified in believing he was a free trader.

Mr. GALLINGER. Indeed I did not. What I meant to say, and what I said, was that if conditions were similar in this country with the conditions prevailing in all the other countries of the world as to wages and the standard of living, we would not need any tariff. That is my view, honestly held.

Mr. HUGHES. That is exactly it. But in reference to this proposition, I am assuming—and it may be a violent assumption—that those conditions are similar in reference to this particular commodity.

Mr. GALLINGER. Some of us do not agree to that. I certainly do not.

Mr. HUGHES. I say it is a disputed fact. I am not asserting it; I am just assuming it for the sake of the argument.

I will trespass upon the patience of the Senate for a minute more to define my notion of who the legitimate consumer is in various instances. We have been confronted frequently with the argument before the subcommittee that it would be useless to take 10 or 15 per cent off a certain commodity; that there

was not any reason to think that the lowering of the rate of duty would be reflected in the price to the consumer. But the ultimate consumer is not necessarily the man who buys a package of chewing gum or a package of cigarettes or a hat. For our purposes or from our standpoint, if a man gets his goods for a dollar less per dozen or per case, to that extent he is better able to carry on a profitable business. The boy who sells a box of chewing gum on the street is compelled to sell at a uniform price. If he is able to get it for less, he will make a greater profit. If he is compelled to pay a little bit more, he is affected to that extent. He may be regarded as an ultimate consumer. In this case the ultimate consumers are the newspapers of the country. Not only the great metropolitan dailies but the newspapers of the country are the ultimate consumers of free print paper. Nobody has complained that they are combined in a trust; at least I have never heard of anybody making that claim. The law of supply and demand operates on them as it will under this legislation operate upon the people from whom they buy their supplies. The law of supply and demand will operate upon them when they come to make their advertising contracts, and undoubtedly in the course of time one of the direct results of the lowering of the price of paper will be the lowering of the price for advertising.

Mr. GALLINGER. I will say to the Senator from New Jersey that I borrowed the term "ultimate consumer" from that side of the Chamber.

Mr. HUGHES. I understand. We borrowed it from your side.

Mr. GALLINGER. The term was not an invention of mine; but it is a rather startling proposition, as suggested by the Senator from New Jersey, that the merchant is the ultimate consumer.

Mr. HUGHES. In a sense he is the ultimate consumer. You may call him the penultimate consumer if you choose.

Mr. GALLINGER. That is better; but he certainly is not the ultimate consumer. I am willing that he should be called the "penultimate."

Mr. BACON. I think we can congratulate ourselves upon having at last something original in the tariff discussion.

The PRESIDING OFFICER. The question is on the amendment which will now be stated by the Secretary.

The SECRETARY. On page 157, paragraph 651, line 18, the Senator from Maine [Mr. JOHNSON] proposes on behalf of the committee the following amendment: After the words "and rag pulp," in the committee amendment just agreed to, strike out the colon, the remainder of the paragraph down to the period following the word "government," on page 158, line 16.

The amendment was agreed to.

Mr. SHIVELY. The Senator from Connecticut called the attention of the Senate a few minutes ago to page 192. I move an amendment at that point.

On page 192, line 8, I move to strike out the word "or" before the word "insurance," and in line 9, after the word "company," to insert "or any manufacturing concern."

The amendment was agreed to.

Mr. SHIVELY. On page 192, line 21, after the word "associations" and the comma, I move to strike out the word "and," and between the words "companies" and "subject," in the same line, to insert the words "and manufacturing concerns."

The amendment was agreed to.

Mr. McLEAN. I was not in when the first amendment was voted upon. Does that apply to line 9?

Mr. SHIVELY. To line 9.

Mr. McLEAN. On the same page?

Mr. SHIVELY. The same page and to the same subject matter.

Mr. THOMAS. If the Senator from Indiana is through, we can proceed with the paragraphs passed over.

Mr. GALLINGER rose.

Mr. HUGHES. I desire to inquire of the Senator from New Hampshire if he has any objection to taking up paragraph 534 at this time.

Mr. GALLINGER. That is the one I rose to ask might now be taken up and disposed of.

Mr. THOMAS. I think the senior Senator from Massachusetts [Mr. LODGE] would like to be present when it is considered.

Mr. HUGHES. It is the harness paragraph. The senior Senator from Massachusetts has no objection to the paragraph as I will propose it.

Mr. THOMAS. I merely made the suggestion because he is not present.

Mr. GALLINGER. I hope that paragraph will be proceeded with.

Mr. HUGHES. I am directed by the committee to move, on page 141, at the beginning of line 10, after the word "foregoing," in the committee amendment, to insert the words "and all other leather."

The amendment was agreed to.

Mr. HUGHES. In line 12, after the word "belting," I move to insert the word "leather" and a comma.

The amendment was agreed to.

Mr. HUGHES. In line 13, page 141, there has been a transposition in the print. I desire to have the words "tanned but not finished" transposed so that they will follow the words "skins for morocco."

The SECRETARY. On page 141, line 13, insert the last four words of the committee amendment after the word "morocco," in the same line, so as to read:

Skins for morocco, tanned but not finished, rough leather.

The amendment was agreed to.

Mr. HUGHES. I move to insert a semicolon after the word "finished."

The amendment was agreed to.

Mr. HUGHES. On page 153, line 12, I move to strike out the proviso and substitute the following—

Mr. GALLINGER. Would not the Senator yield until we complete the consideration of the leather paragraph?

Mr. HUGHES. Certainly. We have finished the leather paragraph.

Mr. GALLINGER. No; the Senator has finished, so far as he is concerned, but some of us on this side desire to be heard.

Mr. HUGHES. I meant so far as I am concerned. I will accommodate the Senator from New Hampshire. What does the Senator desire?

Mr. GALLINGER. Mr. President, I wish to call attention to a line or two in the paragraph with a view of making a suggestion concerning it. I think the Senator from Connecticut also wishes to make some observations along the same line.

Mr. HUGHES. Then I withhold the amendment on page 153.

Mr. GALLINGER. I will say, Mr. President, that I presume the amendments made on motion of the Senator from New Jersey are all proper amendments. It is proposed that leather products, including boots and shoes, shall be put on the free list, and while I shall vote against putting them on the free list, evidently they are going there. But I want to call attention to the words in line 16, on page 141, reading "and saddlery, in sets or in parts, finished or unfinished."

Mr. President, here is a metal production placed in the leather paragraph. Saddlery in sets or in parts, finished or unfinished, are not leather products, but metal products. In paragraph 376, which likewise includes harness, and so forth, saddlery in sets or parts, finished or unfinished, are evidently recognized as metals, and placed in the bill as it passed the House at 20 per cent ad valorem.

I wish to say very briefly that those words ought to be stricken from paragraph 534 and that saddlery hardware ought to be placed on the dutiable list at as high a rate, at least, as the House provided.

Mr. President, I do not know how extensive this industry is. The Senator from Connecticut probably has much more information than I have about it; but I am sincerely of opinion that the industry will go to the bad if it is placed on the free list.

I have an impression that there is only one concern in my State making saddlery in part or in whole, and the gentleman at the head of it chances to be a very warm friend of mine. Some time ago he wrote me about it, and I want the attention of the Senator from New Jersey to this letter which my friend inclosed. The letter is from Mr. H. P. Nicklin, of Persehouse Street, Walsall, England. It is dated May 3, 1913, and is addressed to the Nashua Saddlery Hardware Co., of New Hampshire. Mr. Nicklin, an enterprising Englishman, writes my friend, ex-Mayor Beason, as follows:

The proposed revision of the tariff, which, I understand, will place saddlery on the free list—

He seemed to have advance information, because it was placed on the dutiable list in the bill as it came from the House. Mr. Nicklin continues:

will doubtless lead to an increased import of English saddlery, and I take this opportunity of offering my services as buying agent, on a commission basis, in which capacity I have acted for more than 20 years for some of the most important wholesale saddlery houses in Australia and New Zealand.

Having a practical knowledge of the trade, and being intimately acquainted with all the sources of supply, both large and small, I am in a specially advantageous position to buy for you at rock-bottom prices.

I should invoice at manufacturers' prices, charging buying commission of 2½ per cent on cased goods and 5 per cent on goods which I

had to assemble and pack, and drawing on you at an agreed date, with exchange.

I shall be pleased to learn that you will give this proposal a trial, and I shall be happy to quote for any lines in which you are interested on receipt of your specification.

Mr. President, here is an industry in my State employing not a large number of men. I chance to know that the concern has made very little money; it has had a hard time to exist in competition with the English manufacturers of saddlery, notwithstanding it has had a duty under the existing law of 35 per cent. The House proposed to reduce the duty to 20 per cent, and the Senate committee proposes to put it on the free list. This enterprising Englishman sees his opportunity, and he, as I think rather arrogantly, writes to an American manufacturer that he—the American—is going to be put out of business because the product he manufactures is going to be put on the free list, and that he—the Englishman—would like to act as his agent to buy English goods, and send them to him to sell to his customers.

I do not know whether the attention of the Senator from New Jersey [Mr. HUGHES] or that of the other members of the majority of the committee has especially been called to the fact that this is not a leather product, but a metal product, and whether or not they have given any consideration to that fact.

Mr. HUGHES. Mr. President, I will say to the Senator from New Hampshire that we were confronted with this situation: Saddlery and harness are placed upon the free list. Our attention was called to the fact by an absolutely disinterested person. Nobody has taken the slightest interest in this item, so far as I have been able to discover; nobody, so far as I now recollect, has appeared before our subcommittee or before the full committee with reference to this particular item; but it was pointed out to us that even if we placed harness and saddlery upon the free list, the American manufacturer would be handicapped because in the language of the House bill placing harness upon the free list is contained the qualifying clause "wholly or in chief value of leather"; and that separate part composed of metal would have to come in under the metal schedule, thus handicapping the American manufacturer who wanted to import some part of an English harness and put it together in this country. That was the situation which confronted us.

Mr. GALLINGER. Well, Mr. President, the American manufacturer of saddles will have no difficulty in getting these parts from the American manufacturer of saddlery hardware. There will be no inhibition if the American manufacturer continues in business. What we contend for is, that it is better to protect this American industry rather than to turn the entire matter over to Great Britain, which, if this provision is to stand, is going to be the result. This intelligent Englishman sees that very clearly, and he is casting an anchor to windward, with a view to getting American trade, which he undoubtedly will get if this provision remains in the bill.

I want to express the hope that the Senator from New Jersey, if he is not prepared to expressly and definitely state his convictions at the present moment, will let this go over for the present, so that he may look into it a little further. Possibly both the Senator from Connecticut and the Senator from New Hampshire somewhat neglected their duty in not specifically calling the attention of the committee to this matter, but I thought I had done so.

Mr. HUGHES. Mr. President, I do not wish to be put in the attitude of criticizing either the Senator from New Hampshire or the Senator from Connecticut. They both spoke to me about this item at various times.

Mr. GALLINGER. In addition to that I recall that it was discussed in the Senate a few days ago.

Mr. HUGHES. I mean so far as individuals directly interested appearing, there were none that I recollect. I presume they may have communicated by mail. I do not want the Record to show that I said that these two interested Senators had not appealed to me on the subject, for they have done so a great many times.

Mr. GALLINGER. I did not so understand the Senator, and I am glad to be assured by the Senator from New Jersey that I did not neglect my duty.

Mr. President, the only point I can make now about this matter is to repeat that this is a metal product and not a product of leather. It ought to be placed somewhere in the metal schedule, and it ought to be given a duty of a greater or less amount. The other House placed the duty at 20 per cent, in contradistinction to the 35 per cent duty under the existing law. I will be glad to have that amount of protection accorded to the product, because I think that very likely that duty would

save the industry of my friend. It is not a very large industry, and I hope he may be saved the humiliation of writing to Mr. Nicklin that he will be glad to employ him at a commission to buy English saddlery hardware and send it to him to sell to his American customers.

That is all I care to say at this time, but I think the Senator from Connecticut [Mr. BRANDEGEE] has something to say on the subject.

Mr. BRANDEGEE. Mr. President, I called this matter to the attention of the Senator from New Jersey the other day when I offered an amendment, to be pending, and asked that it be considered in connection with the amendment which he said the subcommittee had under consideration in relation to the leather schedule. The amendment which I sent to the desk and had referred to the Senator's committee, to which I called his attention, I now offer.

In paragraph 534, on page 141, at the end of line 17, I move to insert the words "except harness and saddlery hardware," and on page 117, paragraph 376, to reinsert the language that has been stricken out or to insert "harness and saddlery hardware, 20 per cent ad valorem."

I do not care particularly whether the rate of 20 per cent ad valorem is distinctly mentioned there or whether it is left to come in under paragraph 169, referred to by the Senator from New Hampshire [Mr. GALLINGER] as being the paragraph putting 20 per cent ad valorem on articles or wares not specially provided for in this section, being composed of the enumerated list of metals; but I will simply offer it in the form in which I have proposed.

Mr. President, I wish the Senator from New Jersey would consider this amendment. I have no desire to force it to a vote now. I know perfectly well, as we all do, that as to any amendment that comes in here, if the Senator at the time in charge of the bill on the majority side calls upon his party friends to vote the amendment down, they will vote it down; and it is only when they agree to an amendment that we can hope to remedy the situation.

I want in the beginning to call attention to the fact that this is not a reduction in duty per se. This comes about by a reclassification or a transferring of an article from one schedule to another. This, as the Senator from New Hampshire has well said, is a metal product. It is harness and saddlery hardware. It has nothing whatever to do with leather. It is just as much entitled to a protective duty as is any one of the metals enumerated in paragraph 376. If the duties imposed in that paragraph upon metals are not imposed for purposes of protection, but for purposes of revenue, this is just as legitimate an article on which to raise revenue as any other. It is one of the metals indicated. There can be no difference between this metal product and the metal products upon which a duty of 20 per cent is imposed.

Mr. GALLINGER. Mr. President, will the Senator permit me to interrupt him?

The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from New Hampshire?

Mr. BRANDEGEE. Certainly.

Mr. GALLINGER. On yesterday I telegraphed my constituent, an ex-mayor of our second city, asking him precisely what the product was that he made. His telegram comes to me, "We make saddlery hardware only." So it has nothing whatever to do with leather.

Mr. BRANDEGEE. Yes; of course, these things depend upon technical definitions, anyway. Most people have a general idea of what the word "saddlery" means, but I doubt very much if many of us could define it accurately as known to the trade. Saddlery hardware is a different thing from saddlery. Saddlery is a more comprehensive term, but hardware that goes into saddles and hardware that goes into harness is nothing but the metal products, and should no more, in my opinion, be classified under the paragraph that controls the duty upon sole leather and leather goods than it should come in under the paragraph about earthenware or plain glass or anything of that kind. It is a perfectly irrelevant matter.

What called my attention to this subject was a letter which I received from a constituent of mine in New Britain, Conn., where almost every variety of hardware is made. This house has selling offices in New York, Chicago, St. Louis, and San Francisco, and I think is quite a large establishment known as the North & Judd Manufacturing Co. I see at the head of their paper that they make the Anchor brand of harness hardware. I want the Secretary to read the letter which the gentleman writes me.

The PRESIDING OFFICER. The Secretary will read as requested.

The Secretary read as follows:

NEW BRITAIN, CONN., August 6, 1913.

HON. FRANK B. BRANDEGEE,

United States Senate, Washington, D. C.

DEAR SIR: This to acknowledge and thank you for your favor July 26. I am pleased to note that you will prepare an amendment to be inserted at the end of paragraph 534 making an exception to harness and saddlery hardware which will take this product off the free list and throw it automatically into the basket clause of the metal schedule, paragraph 169, where it will carry a duty of 20 per cent ad valorem. This amendment would seem to provide reduction sufficient to satisfy the advocates of "downward revision," since the effect would be a reduction of over 40 per cent from the present duty of 35 per cent (1909 tariff, par. 461).

Very truly, yours,

NORTH & JUDD MANUFACTURING CO.
H. C. NOBLE, Treasurer.

Mr. BRANDEGEE. Mr. President, I wish to address my remarks particularly to the Senator from New Jersey [Mr. HUGHES], because I know there is no use of talking on this subject unless I have his ear.

It is evident from that letter that the company that makes this harness hardware has grown up in New Britain and has quite an extensive business. Under the existing law they have a duty of 35 per cent ad valorem. This proposition absolutely reduces that duty 100 per cent; it cuts it entirely off, and transfers the articles to the free list. Of course they can not compete with the British and German makers of metal saddlery and harness attachments, and it simply singles them out for discrimination.

The reason that I appeal with some hope to Senators on the other side of the Chamber upon this question is that it simply "makes a goat" of that metal industry as distinguished from other metal industries. I do not ask any better treatment for them than the committee has conceded to other similar manufacturing concerns; I do not ask the committee or the Democratic Party to give a protective duty to them if they do not believe in that principle, but they have placed upon exactly similar metal products a duty of 20 per cent, and I think they ought to be at least consistent in the raising of their revenue. They claim and admit that the duty of 20 per cent upon metal products is for revenue purposes, and why should they not raise revenue from the imported articles of harness and saddlery hardware?

I do not care to press the matter further. I can not say anything more than I have said, if the mere statement of the case does not impress the committee. If the Senator has made up his mind so that it can not be changed, I will ask for a vote upon the amendment now, just to make the record; but if the Senator would comply with my suggestion that he consider it, I should like to defer the vote upon it.

Mr. HUGHES. Mr. President, I should like to have the paragraph acted upon, and then I will be glad to take up the suggestion of the Senator from Connecticut with the other members of the committee who have been here listening to the debate, and we can recur to it if there is a disposition on our part to recede.

I will state to the Senator that the reason why it was deemed necessary to put harness hardware on the free list was that harness and saddlery were placed upon the free list and we were confronted with this difficulty. Every time you free list eo nomine a finished article, everything that enters into the making of that article has to be considered. Sometimes it is found possible to take all the duties off the various component materials, and sometimes it is not. Sometimes it seems not to matter much whether you do or not. All sorts of inconsistencies may be discovered in investigating a given proposition of that kind; but I think, in so far as possible, when you put a finished article on the free list eo nomine you ought also to put everything that enters into the making of that article on the free list.

Mr. GALLINGER. Mr. President, I quite agree with the Senator on the general proposition, but yet the articles that follow the transfer of a general product to the free list are similar productions, as a rule.

It pleases me to say that no Senator on the other side has been more kindly and considerate to those of us on this side who have had little matters we wanted adjusted than has the Senator from New Jersey, and I am gratified to learn that the Senator will talk with his associates upon this subject. I am hopeful that, if no change is made in the Senate, when the matter goes to conference it will be given consideration. The discussion has been had. We have presented our case as best we could; we have presented it fairly; and I am quite willing, if the Senator from Connecticut is, that the paragraph should now be agreed to, with the understanding that it will be given some further consideration by the Senator from New Jersey and his

associates; and I will indulge the hope that what the Senator from Connecticut and I ask will be granted.

Mr. HUGHES. I will be very glad to consider it, and I will be very happy to have that disposition made of it.

Mr. LODGE. Mr. President—

The PRESIDING OFFICER. Does the Senator from Connecticut yield to the Senator from Massachusetts?

Mr. LODGE. I desire to say a word about this paragraph before it is disposed of, but I do not care to interrupt the Senator from Connecticut.

Mr. BRANDEGEE. Then, I will complete my statement, although it makes no difference to me who proceeds at this time.

So far as I am concerned, I am willing to let this paragraph be agreed to, with the hope that the committee will consider it, and that possibly the conference committee, if we can not get relief here, will take it up. It is the best we can do, Mr. President.

Mr. HUGHES. Mr. President, I will say that I will make an investigation of the subject. The only interest that I have considered, so far as I am concerned in this matter—and the Senator from Maine [Mr. JOHNSON] and myself had considerable to do with it—is the interest of the manufacturers of harness and saddlery, who are placed in the position of having harness and saddlery put upon the free list and saddlery hardware put upon the dutiable list at 20 per cent. It may be that this is one of the cases where that does not make any particular difference. There are many cases of that kind. If competition is free and untrammelled in this country, it may be that the manufacturer can buy his metal here as cheaply, or practically as cheaply, so far as his purposes are concerned, as he can import it, or it may be, as in the case of boots and shoes, that, getting the leather free, he may be able to pay a tax upon some other material and still meet foreign competition; but that is the question, and the only question, which presented itself. As I have said, however, I shall be glad to consider the matter, and I hope that the disposition which has been suggested may be made of it at this time.

Mr. BRANDEGEE. Mr. President, in view of the last few words uttered by the Senator from New Jersey, I take the liberty of stating—and I think it is important—that as to the part which is allowed to be imported at the same rate of duty as the completed product, the part is of the same material and substance as the thing itself.

The peculiar language of this paragraph—"harness, saddles, and saddlery, in sets or in parts, finished or unfinished"—allows a man to import as parts of harness two or three tons of buckles and rings, which are entirely metal, but which are parts of harness and useful for no other purpose. It is not a question of bringing in the parts and assembling them into the completed product in this country. Under this language they can be imported free and sold separately to the people of the country, if the importer wants to do so, and he does not need to put them to harness at all. It affects an entirely separate factory. The factory which makes the leather harness does not make the metal parts at all. The latter is an entirely different business, located frequently in different parts of the country, and involving an entirely different process of manufacture; and yet by this language, which I do not think is intentional, but was simply inserted because the point had not been sufficiently emphasized to the committee in the hearings. Under this language the product of factories making metal parts of harness is put on the free list—the entire duty is cut off—while other factories right in the same town making similar articles out of the same metals are enjoying 20 per cent protection, as we regard it; or, as the Senator from New Jersey would regard it, they are collecting 20 per cent revenue from the competitive product of one and not collecting anything from the competitive product of the other.

Mr. LODGE. Mr. President, I believe the modifications, which I was shown I think this morning by the chairman of the subcommittee, have been adopted in the wording of the amendment, have they not; that is, inserting the words "tanned, but not finished skins for morocco"?

Mr. HUGHES. They have been adopted by the Senate, as I understand, so that the paragraph will stand as I showed it to the Senator from Massachusetts.

Mr. LODGE. Yes; the Senator showed it to me this morning. I think that is a great improvement in the wording and puts beyond doubt any question there might be as it now stands.

Mr. President, this paragraph involves the boot and shoe industry, which now and always has been one of the great industries of my State. We are the greatest producers of boots and shoes in the country, and the welfare of that industry is of the utmost importance to us.

I do not propose to discuss the question of a duty upon boots and shoes. The present tariff law imposes 10 per cent, which is no more than a revenue duty; and I do not know why this product, a finished product, should be selected to be placed on the free list, except with the idea that it may be a popular change. The duty certainly is very low. There are some of our manufacturers who believe that, with economies in various directions and with some reductions to be made, they can meet fair competition under the terms of absolute free trade. I think they are building too much on the old conditions which existed for so many years in the boot and shoe industry of the United States.

We made the great inventions in shoe machinery. When we operated them under patents through those machines and the skill of the American workman the boot and shoe industry of the United States needed no protection, and never asked for it. Its product went into all the markets of the world. Since then the patents have expired, and the shoe machinery invented in the United States is now made in Europe by an American company, is set up under American supervision, and European operatives are taught by the agents of the machinery company in its use.

Mr. SHIVELY. Mr. President—

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Indiana?

Mr. LODGE. Certainly.

Mr. SHIVELY. If the Senator will allow me just there, do not the statistics of our export trade in boots and shoes for the last year show a constant and growing increase in our export of boots and shoes, notwithstanding the use of American machinery abroad?

Mr. LODGE. That is perfectly true. I was coming to that point in a moment. The advantage we had through our machinery has gone; the advantage that we always possessed in the superior skill of our workmen remains in part; but the gap between our workmen and those of Europe is rapidly diminishing.

We still have certain marked advantages in the manufacture of the better grades of boots and shoes. Our shoes are better standardized. We have, perhaps, 150 shapes and sizes in certain lines of shoes where the foreign competitor will have only 5 or 10 or 20. We have an export trade in boots and shoes of the finer kinds, and it has been growing, not rapidly, but it has been growing steadily.

Where I fear competition is coming in our own market and where I think our shoe industry is going first to suffer by the removal of the duty is in the manufacture of the coarser grades of boots and shoes, the very cheapest, heaviest, and coarsest, such as are worn by the men who work and who buy a coarse, strong shoe. I may be mistaken; I hope I am; but I think that a great risk to the industry is being taken in removing what was merely a revenue duty.

I desired to make this statement simply because I wished it to be known to those who are interested in the subject why it was that I did not discuss at length and fully the paragraph affecting one of the three great industries of my State and one of the great industries of the country. It is for that reason that I make the explanation, not only on my own behalf, but on behalf of my colleague [Mr. WEEKS], who has, unfortunately, been called away by serious illness in his family.

Mr. GALLINGER. Mr. President, in behalf of a great industry in my own State—that of the manufacture of boots and shoes—I desire simply to say that I agree with what the Senator from Massachusetts [Mr. LODGE] has said. Much solicitude is felt as to the result of placing boots and shoes on the free list, but it is evident that any persistent opposition on our part to the decree of the committee would be fruitless, and so we yield to the inevitable.

Mr. CUMMINS. Mr. President, I offer the following amendment—

Mr. HUGHES. I should like first to have the committee amendment acted upon, if that is in order.

The PRESIDING OFFICER. That is the regular order.

Mr. CUMMINS. I am perfectly willing that that should be done. I had supposed that that had been done.

Mr. SHIVELY. Let us first dispose of the committee amendment.

The PRESIDING OFFICER. The committee amendment will be stated.

The SECRETARY. In paragraph 534, page 141, line 3, after the numerals "534," it is proposed to strike out, "All leather not specially provided for in this section and leather board or compressed leather; leather cut into shoe uppers or vamps or

other forms suitable for conversion into boots or shoes," and to insert:

Sole leather, leather board or compressed leather, grain, buff, and split leather, all dressed upper leather including patent, japanned, varnished or enameled upper leather and shoe-lining leather, all of the foregoing and all other leathers for boot and shoe manufacturing purposes; leather cut into vamps or other forms suitable for conversion into boots or shoes; belting leather, harness and saddle leather, leather waste, skins for morocco tanned but not finished, rough leather.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

Mr. POINDEXTER. As I followed the reading of the amendment by the Secretary, it is not the same as the amendment printed in the bill.

Mr. HUGHES. I will say to the Senator that there have been some amendments adopted to the committee amendment.

Mr. POINDEXTER. It is not the same as printed in the book, then?

Mr. HUGHES. No.

The amendment was agreed to.

The SECRETARY. On page 141, line 16, before the word "parts," it is proposed to insert the word "in."

The amendment was agreed to.

The SECRETARY. On line 17, after the word "unfinished," it is proposed to strike out the comma and the remainder of the paragraph and insert a period.

The amendment was agreed to.

Mr. HUGHES. As I understand, the Senator from Connecticut [Mr. BRANDEGEE] withholds his amendment?

Mr. GALLINGER. I will take the liberty of saying in behalf of the Senator that the amendment will be withheld.

Mr. SHIVELY. Mr. President, I am directed by the committee to submit an amendment, in line 21, page 109, by striking out "one-fourth" and inserting "three-eighths."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In paragraph 355, page 109, line 21, it is proposed to strike out "one-fourth" and insert "three-eighths."

The amendment was agreed to.

Mr. SMOOT. That raises the duty to 6.33 per cent; that is all?

Mr. SHIVELY. It will be not to exceed that.

Mr. SMOOT. Yes.

Mr. SHIVELY. If the Senator will observe, the present rate, which is three-fourths of 1 cent per 1,000 matches, amounted to an ad valorem rate of 10.27 per cent on the basis of the importations in 1912. This reduces that rate one-half, so that probably it will be less than 6 per cent ad valorem.

Mr. SMOOT. That is as I understand it. I asked that it be changed the other day.

Mr. WORKS. Mr. President, I offer an amendment—

Mr. HUGHES. If the Senator from California will permit me, I should like to call his attention to the fact that I have an amendment pending at the desk which I do not think it will take any time to act upon. Then I have another committee amendment which I am very anxious to dispose of, because I am holding up the income-tax provisions of the bill until that is done.

Mr. WORKS. I shall be very glad to give way to the Senator.

Mr. HUGHES. I thank the Senator very much for permitting me to get this off my mind.

The VICE PRESIDENT. The amendment submitted by the Senator from New Jersey on behalf of the committee will be stated.

The SECRETARY. In paragraph 629, page 153, it is proposed to strike out the first proviso, beginning in line 12, and to insert the following:

Provided, That the cans, boxes, or other containers of tea, lacquered or printed by any process of lithography whatever, packed in packages of less than 5 pounds each, shall be dutiable at the rate chargeable thereon if imported empty.

Mr. SMOOT. I should like to ask the Senator why he limits the particular coverings?

Mr. HUGHES. It has been brought to my attention, and has been stated, that a practice has grown up of bringing in fancy and valuable articles as alleged containers of tea and then throwing the tea away or paying no attention to it except using it for the purpose of enabling fancy containers to be brought into this country without paying the duty which otherwise would be levied upon them. The object of this amendment is to permit ordinary tea containers to come in without the payment of any duty, but lacquered or lithographed fancy tea containers will be dutiable at the same rate that would obtain if they were imported empty. That is the object.

Mr. SMOOT. I am fully aware of the evil practice that is spoken of by the Senator, and I fully agree with him as to the desirability of putting a stop to it; but what I thought as I

caught this amendment was that it was limited to just one class of coverings. I know of certain instances where tea has been imported here from Canada in the most valuable of cases, worth three or four times what the tea was worth. I know that the Senator desires that such cases should be covered, and I wondered whether the amendment really did cover them. For that reason I was going to ask that it be stated again.

Mr. HUGHES. I desire to call the Senator's attention to the fact that there is administrative language which deals with this subject generally.

Mr. SMOOT. Yes.

Mr. HUGHES. I feel quite satisfied that that, in conjunction with the language sent to the desk, will bring about the desired result.

Mr. SMOOT. May the Secretary read the amendment once more?

The VICE PRESIDENT. The amendment will be again stated.

The SECRETARY. On page 153, in line 12, it is proposed to strike out the first proviso in the House print and insert:

Provided, That the cans, boxes, or other containers of tea, lacquered or printed by any process of lithography whatever, packed in packages of less than 5 pounds each, shall be dutiable at the rate chargeable thereon if imported empty.

Mr. SMOOT. It seems to me that if that amendment is adopted it will apply only to containers of tea that are lacquered or printed, and I do not believe that is what the Senator really wants to do.

Mr. HUGHES. Yes; I will say to the Senator that that is just exactly what I want to do. I think the other language will prevent the free importation of containers which obviously are not intended for the transmission of tea. But there is a close line so far as lacquered and lithographed containers are concerned. A great many of them have been shipped in as tea containers, and it seems that the general administrative law is not strong enough to cover the matter.

Mr. SMOOT. I will look at the general administrative feature of the bill, and if that is the case I have no objection.

Mr. HUGHES. I should be very glad if the Senator would permit me to have this amendment agreed to, and I will take up the matter with him at any time.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

Mr. HUGHES. Just one further amendment, and then I will be through. I call up paragraph 358, on page 111—the fur paragraph.

I will say that I have given some attention to the suggestion made by the Senator from Utah [Mr. SMOOT]. I took up the question that he raised with reference to furs not further advanced than dyeing in order to discover what there might be in his suggestion. I am informed by the authorities at the port of New York that it has been held by the customs authorities that the language with reference to repairs, which, as I understand, is left out of the proposed law but is contained in the present law, is ignored by the customs authorities, on the ground that it seemed it was sought to apply it only to skins which had been injured in the operation of removing them from the animal. Even if repairs were made upon those skins, it was held that they were still not so valuable as perfect skins, and that they should not receive any additional or advanced classification of duty. I have been assured by the gentleman who handles these goods at the port of New York that the present language is amply sufficient for his purposes.

Mr. SMOOT. Mr. President, the trouble with that is that the practice at the port of entry has not been as suggested by the Senator. The Senator knows that there are furs dressed on the skin, not further advanced than dyeing, that get torn perhaps in the handling, and before they are shipped into this country they are repaired. If they were not repaired, of course they would not be received at the port of entry.

When a case of that kind was brought before the general appraisers they held that the repairing of the fur put it into the second bracket, as manufactures of fur; and they actually put upon fur of that kind a higher duty than they did upon perfect fur. It was for that purpose, and that purpose only, that I suggested adding the words "or repairing." I am quite sure that the words will not hurt anything.

Mr. HUGHES. Was it the Senator's suggestion to make it read "furs dressed on the skin or repaired, not advanced further than dyeing"?

Mr. SMOOT. I will read it to the Senator just as it will read if my amendment is adopted:

Furs dressed on the skin, not advanced further than dyeing or repairing.

Mr. HUGHES. I will say to the Senator that I misunderstood the purpose and object of his amendment.

Mr. SMOOT. That is all I desired to accomplish, and I cannot see that it will in any way affect the rate.

Mr. HUGHES. I will accept the Senator's amendment. I do not know where I got the other notion in my head.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 111, line 7, after the word "dyeing," it is proposed to insert "or repairing."

The amendment was agreed to.

Mr. HUGHES. Has the paragraph been read?

The VICE PRESIDENT. The paragraph has been read.

Mr. HUGHES. I have one further amendment to suggest. On page 111, line 23, by direction of the committee, I move to strike out the numerals "15" and insert the numerals "20."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In paragraph 358, page 111, line 23, it is proposed to strike out "15" and insert "20."

Mr. SMOOT. I understand this amendment places those particular fur skins at the same rate as the present law, 20 per cent?

Mr. HUGHES. Yes.

Mr. SMOOT. And that there will be no objection on the part of the hatters if that is done?

Mr. HUGHES. No; I understand it is satisfactory to everybody concerned. This item produces a revenue of about \$90,000 a year.

The amendment was agreed to.

Mr. WORKS. Mr. President, I offer an amendment, which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 277, after line 20, it is proposed to insert the following:

That a permanent commission is hereby created and shall be known as the Tariff Commission, to be composed of nine members, who shall be appointed by the President, by and with the advice and consent of the Senate. The commissioners first appointed under this act shall continue in office for the term of 3, 4, 5, 6, 7, 8, 9, 10, and 11 years, respectively, from the 1st day of January, A. D. 1914, the term of each to be designated by the President, but their successors shall be appointed for terms of 10 years, except that any person appointed to fill a vacancy shall be appointed only for the unexpired term of the commissioner whom he shall succeed. Any commissioner may be removed by the President for inefficiency, neglect of duty, or malfeasance in office. No person shall be eligible for appointment as a commissioner under this act who has been elected or served as a Senator or Representative of the United States. Not more than four of said commissioners shall be members of the same political party. Said commissioners shall be selected for their knowledge of the questions involved in the matter of arriving at and fixing just rates of tariff in its various branches and schedules. No vacancy in the commission shall impair the right of the remaining commissioners to exercise all of the powers of the commission.

Each commissioner shall receive a salary of \$10,000 per annum, payable in monthly installments. Said commission, as soon as qualified by taking the oath of office, shall without delay meet for organization in the city of Washington, in the District of Columbia, and shall elect one of its number to be chairman and one of its number to be vice chairman. It shall appoint a secretary and such other employees as it may find necessary to the proper performance of its duties and fix the compensation of each. Until otherwise provided by law the commission may select and rent suitable offices for its use, and shall have authority to procure all necessary office supplies. The expenses of the commission, including necessary expenses of transportation incurred by the commissioners or by their employees under their order in making any investigation or upon official business in any other place than the city of Washington, shall be allowed and paid upon presentation of vouchers therefor approved by the chairman of the commission. The principal office of the commission shall be in the city of Washington, where its general sessions shall be held, but whenever the convenience of the public or the commissioners may be promoted, or delay or expense prevented thereby, the commission may hold its sessions in any part of the United States; it may also, by one or more of the commissioners or its employees, prosecute any inquiry necessary to the performance of its duties in any part of the United States or in any foreign country: *Provided*, That not more than three members of said commission shall be absent from the United States at one time.

Said commission is authorized and directed to fully investigate and inquire into the rates of tariff now imposed by law and provided for in this act, the justice or injustice thereof, and the changes necessary to fairly adjust such tariff rates as hereinafter provided. Said commission shall divide the tariff into proper schedules covering articles of a like or similar kind, and shall so adjust the rates as to reasonably protect all legitimate industries of whatever kind in this country from unjust, oppressive, or injurious foreign competition and at the same time furnish the necessary revenue for carrying on the affairs of government and to prevent the imposition of such tariffs as will protect the industries in this country not needing protection or such as will destroy legitimate and fair competition on the part of products of foreign countries. To that end the commission shall as nearly as possible ascertain the difference in the cost of producing articles of the same or substantially the same quality and kind in this country and in competing foreign countries, and shall ascertain in connection with the several articles affected by the rates to be fixed the wages, the hours of service, the efficiency of labor employed, the standard of living of such laborers, and generally the cost of production of such articles in this country and abroad, and the cost of transportation, respectively, in this and foreign countries of such articles or products to the markets of this country. It shall also ascertain the cost of raw material, the cost of labor, the fixed charges, depreciation upon the true value of the capital invested, and all other items necessary to determine the true cost of the finished product, and also the market conditions and the prices at which protected productions of the United States are sold in

foreign countries as compared with the prices of products sold in the United States, and the effect of transportation rates upon the markets and prices of dutiable products, the relation between Government revenues and tariff schedules, and so far as practicable make an investigation of all questions and conditions relating to the agricultural, manufacturing, mining, commercial, and labor interests with reference to the tariff schedules and classifications of the United States and foreign countries. Said commission is authorized to call upon any department or officer of the Government for any information in the possession of such department or officer and relating to any subject matter under investigation by the commission, and it shall be the duty of such department or officer to furnish such information. It shall be the duty of said commission, upon petition or upon its own initiative by one or more of its members, from time to time to hold hearings at such places as it may designate to determine industrial, commercial, and labor conditions in relation to the tariff; and any person desiring to be heard before said commission shall upon proper notice and request therefor be fully heard upon any matter to be affected by the establishment or change of tariff rates. The commission shall, whenever practicable, give at least 10 days' public notice of any and all hearings; and at any such hearings, whether undertaken upon the initiative of the commission or upon petition or request, any person may appear before such commission and be heard or may be represented by attorney and may file any written statement or documentary evidence bearing upon any matter it may have under investigation; and all such hearings shall be public, except that in case of any witness examined as to any secret process used in the production of any article the commission may take the testimony in regard thereto in executive session, and the same shall not be reduced to writing nor made public. The commission shall, upon such investigations being made, present such tariff bills as it may agree upon, based upon the principles above set forth, to Congress for its action, and Congress shall take up and consider such bills as may be reported from said commission. The said commission shall accompany the bills proposed by it with a full transcript of the evidence taken by it at the hearings it may have held, and also a full report of its proceedings and conclusion with respect to the rates provided for in such bills. Congress may ratify or change the rates so fixed and agreed upon by said commission or reject the same in toto; and if the same shall be rejected, further investigation and report shall be made by said commission; and if any subsequent investigations are for any reason called for, the commission shall recommend to Congress from time to time any changes or additions that in its judgment should be made to any bill relating to the tariff that may have been enacted by Congress.

Said commission, for the purpose of determining what articles shall be placed upon the dutiable or free list and the rates of tariff to be established by law, or for any other purpose necessary to the proper carrying out of this act, is authorized to require of any person, firm, copartnership, corporation, or association producing any such article or articles, the production of the books, papers, contracts, agreements, invoices, inventories, bills, and documents of any such person, firm, copartnership, corporation, or association, and make any inquiry necessary to a determination of the value of such property or the proper rate of tariff to be fixed with reference thereto. It is also authorized to require by notice or subpoena the attendance and testimony of witnesses and the production of all books, papers, contracts, agreements, inventories, invoices, bills, and documents relating to any matter pertaining to any investigation it may make. Such attendance of witnesses and the production of documentary evidence may be required at any place in the United States, at any designated place of hearing, and witnesses shall receive the same fees as are paid in the Federal courts. In case of failure to comply with such a notice or subpoena, or in case any person, firm, copartnership, corporation, or association shall fail to comply with any of the requirements of this act the commission shall make a report to Congress of such failure, specifying the names of each person, the individual names of such firm or copartnership, and the names of the officers and directors of each such corporation or association guilty of such failure; and such report shall specify each particular in which said person, firm, copartnership, corporation, or association has failed to comply with such requirements, and shall also specify the article or articles on the dutiable list produced by such person, firm, copartnership, corporation, or association and the tariff schedule which belongs to each such article. The commission shall ascertain whether any persons, firms, copartnerships, corporations, or associations engaged in the production or sale of any dutiable article cooperate by agreement or other arrangement of any kind to control production, prices, or wages in the United States or to control prices in any foreign market, and whether any person, firm, copartnership, corporation, or association owns or controls such a proportion of any dutiable product as to enable such person, firm, copartnership, corporation, or association to control productions, prices, or wages in the United States or to control the price of such product in any foreign market.

Said commission shall provide rules and regulations for the conduct of its business. The testimony of any person taken before said commission shall be taken under oath, and each of the said commissioners is hereby authorized to administer oaths to such witnesses.

The commission shall make annual reports to Congress of its investigations and recommendations, together with the testimony and information on which such recommendations are based, and such special reports as it may deem advisable. The testimony and information so reported shall be accompanied by a complete topical digest or analysis and by a topical index of all the testimony taken during the period covered by the report. Said report, with the accompanying testimony, report, and digest, shall be printed as a public document. The annual report shall be published and ready for distribution on the first Monday in December of each year. At all times during the sessions of Congress said commission shall be on duty in the city of Washington for the purpose of furnishing information and advice to Congress.

Mr. WORKS. Mr. President, I am not going to take up the time of the Senate in making a speech in support of this amendment. It presents a question that is perfectly familiar to every Member of the Senate. It would be little better than a crime, it seems to me, to take up the time of the Senate under existing conditions in an effort to support an amendment without hope of accomplishing something in that way.

I only wish to say that for a long time I have been earnestly in favor of the establishment of a permanent tariff commission. I think it is absolutely necessary to the fair and just levying of tariff rates. If I had ever had any doubts on the subject, they would have been dispelled by the experiences we have had here

during this summer in the attempt to formulate the bill which is now before the Senate.

I am going to ask for a yea-and-nay vote upon the amendment without taking up the time of the Senate with discussion.

The yeas and nays were ordered.

Mr. SUTHERLAND. Mr. President, I am in entire sympathy with the proposed amendment. I think, as the Senator from California has said, that the debate on this bill has illustrated the absolute necessity of a tariff commission. I intend to vote for this amendment, but I desire to say before casting my vote that I do not wish to have it construed as an indorsement of the amendment in all its details. There are some details of the proposed amendment that I should want to change if I had any expectation that it would be agreed to.

Mr. THORNTON. Mr. President, I have always been intensely in favor of the principle of a tariff commission to assist Congress in getting the data that would provide for a more scientific tariff than I think we have ever yet had. I so stated to the Legislature of Louisiana at the time I was elected.

I voted for the tariff-commission bill that was offered here two years ago, being one of the five Democrats who voted for it. I am always ready to vote for a tariff commission, provided an opportunity has been given to provide for one in a bill that I consider properly drawn. I do not say that that has not been done in this case, but I do not think there has been proper time given for consideration of the matter.

For that reason, and for that reason only, while expressing my thorough sympathy with the proposal to create a tariff commission, I shall vote against the amendment.

Mr. LEWIS. Mr. President, before the roll call proceeds I should like to be indulged in this observation:

I do not assume to speak for the committee, to whose ability the eminence of its members certifies in this respect. But for those Democrats who live in the zone for which I do assume to speak, our vote against the proposition presented by the distinguished Senator from California is to indicate, not our objection or opposition to some such creation at a proper time, but that it shall be done by a separate bill, in a separate organization, and not encumber the tariff bill, which should be free from all encumbrance not necessary to its execution.

Mr. WILLIAMS. Mr. President, I wish to express briefly my objection to a tariff commission. I think, in short meter, it is simply protectionism reduced to a science. Therefore I do not see how Democrats can support it.

The VICE PRESIDENT. The Secretary will call the roll on agreeing to the amendment of the Senator from California [Mr. WORKS].

The Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. TOWNSEND], and therefore withhold my vote.

Mr. STERLING (when Mr. CRAWFORD's name was called). My colleague [Mr. CRAWFORD] is necessarily absent. He is paired with the senior Senator from Tennessee [Mr. LEA]. If my colleague were present and at liberty to vote, he would vote "yea."

Mr. LEWIS (when his name was called). I must again announce my pair with the junior Senator from North Dakota [Mr. GRONNA], and thereby am restrained from voting.

Mr. MARTIN of Virginia (after having voted in the negative, when Mr. PAGE's name was called). I desire to withdraw my vote. I voted inadvertently. I am paired with the Senator from Vermont [Mr. PAGE] on this vote.

Mr. THOMAS (when his name was called). I make the same transfer as heretofore announced, and vote "nay."

The roll call was concluded.

Mr. LANE. I desire to announce that my colleague [Mr. CHAMBERLAIN] is necessarily absent from the Senate and that he is paired with the junior Senator from Pennsylvania [Mr. OLIVER].

Mr. JAMES. I have a general pair with the Senator from Massachusetts [Mr. WEEKS]. I transfer that pair to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. McCUMBER. I have a general pair with the senior Senator from Nevada [Mr. NEWLANDS]. I understand that he has not voted. Therefore I transfer my pair to the junior Senator from Maine [Mr. BURLEIGH] and vote "yea."

Mr. TILLMAN (after having voted in the negative). I have a general pair with the Senator from Wisconsin [Mr. STEPHENSON]. He has not voted, and I withdraw my vote.

Mr. LEA. I am paired with the senior Senator from South Dakota [Mr. CRAWFORD]. If I were at liberty to vote I would vote "nay." I understood that the senior Senator from South

Dakota would not leave before to-night, but I am informed that he has already left the city.

Mr. REED. I am paired with the Senator from Michigan [Mr. SMITH]. I can not obtain a transfer and therefore withhold my vote.

Mr. BACON (after having voted in the negative). I am informed that the senior Senator from Minnesota [Mr. NELSON] has not voted.

The VICE PRESIDENT. He has not.

Mr. BACON. I withdraw my vote, for I have a general pair with him.

The result was announced—yeas 32, nays 37, as follows:

YEAS—32.

Borah	Colt	La Follette	Poindexter
Bradley	Cummins	Lippitt	Root
Brady	Dillingham	Lodge	Sherman
Brandeggee	Fall	McCumber	Smoot
Bristow	Gallinger	McLean	Sterling
Cañon	Jackson	Norris	Sutherland
Clapp	Jones	Penrose	Warren
Clark, Wyo.	Kenyon	Perkins	Works

NAYS—37.

Ashurst	Martine, N. J.	Shafroth	Swanson
Chilton	Myers	Sheppard	Thomas
Clarke, Ark.	O'Gorman	Shields	Thompson
Fletcher	Overman	Shively	Thornton
Hollis	Owen	Simmons	Vardaman
Hughes	Pittman	Smith, Ariz.	Walsh
James	Pomerene	Smith, Ga.	Williams
Johnson	Ransdell	Smith, Md.	
Kern	Robinson	Smith, S. C.	
Lane	Saulsbury	Stone	

NOT VOTING—26.

Bacon	Culberson	Lewis	Smith, Mich.
Bankhead	du Pont	Martine, Va.	Stephenson
Bryan	Goff	Nelson	Tillman
Burleigh	Gore	Newlands	Townsend
Burton	Gronna	Oliver	Weeks
Chamberlain	Hitchcock	Page	
Crawford	Lea	Reed	

So Mr. WORKS's amendment was rejected.

Mr. SIMMONS. Mr. President, we started out on a definite plan and we have deviated far from it. The amendment that we have just voted upon is an amendment to the end of the bill. The understanding upon which we started out was that we would take up first the paragraphs of the bill which had been passed over at the request of particular Senators and dispose of those paragraphs, and then, if there were any additional amendments proposed by the committee, we would consider those amendments.

I ask unanimous consent—and I hope it may be done; I think it is in the interest of time, certainly it is more orderly—that we now return to the practice we started out to follow and that we have deviated from.

Mr. WORKS rose.

Mr. SIMMONS. I see the Senator from California rising. He must not understand that I am criticizing him at all, because others have done it. He has not been the first one.

Mr. WILLIAMS. Does the Senator propose that we shall begin with the income-tax provision?

Mr. SIMMONS. No; when we drifted afield we had reached paragraph 654, which was passed over at the request of the senior Senator from Massachusetts [Mr. LODGE]. I ask that we begin there and take up in their order such paragraphs as have been passed over at the request of Senators. That is the regular order.

Mr. SUTHERLAND. Before that is done, will the Senator from North Carolina permit me to call his attention to a provision in the administrative part of the bill which I think ought to be considered by the committee? It will take only a moment.

Mr. SIMMONS. If it is something that the Senator desires to call the attention of the committee to, of course, I think it is proper to do it now, so that we may have the time to give it the consideration that he asks it should have.

Mr. SUTHERLAND. The provision to which I call attention is on page 274, subdivision T. That subdivision undertakes to repeal the act of August 5, 1909, being the Payne-Aldrich Act, and after doing that this proviso follows:

That nothing in this act shall be construed—

And I omit a portion—

Mr. SIMMONS. The Senator will pardon me; we have anticipated that and we will bring in an amendment to that provision which I think will probably meet the view he has.

Mr. SUTHERLAND. I do not know that the Senator knows what provision I am calling attention to.

Mr. WILLIAMS. The Cuban treaty provision?

Mr. SIMMONS. No; that is not the provision.

Mr. SUTHERLAND. Not at all.

Mr. SIMMONS. I beg the Senator's pardon for interrupting him. I will let him complete his statement.

Mr. SUTHERLAND (reading)—

Provided, That nothing in this act shall be construed to repeal or in any manner affect the following numbered sections of the aforesaid act approved August 5, 1909, viz: Subsection 29 of section 28 and subsequent provisions relating to the establishment and continuance of a Customs Court.

That is as far as I desire to read.

Mr. SIMMONS. What line did the Senator begin to read on?

Mr. SUTHERLAND. I began to read on line 22, and after omitting a phrase I concluded the reading on line 4 of page 275.

Mr. SIMMONS. I was about to state to the Senator that we are going to propose an amendment, after the word "act," in line 23, adding "or in section 2862 of the Revised Statutes."

Mr. SUTHERLAND. I am referring to the Customs Court, and if the Senator would hear me I think he would have a better understanding of what I am trying to get at.

Mr. SIMMONS. Very well.

Mr. SUTHERLAND. Rather than attempting to anticipate what I am going to say.

The provision of this section is first to repeal the whole of the Payne-Aldrich Act, which includes section 29. Section 29 of that act created the Customs Court, provided for its jurisdiction, fixed a salary of \$10,000 each for the members of it, and generally dealt with the subject matter.

Section 29 of that act was revised in the Judicial Code which was adopted in 1911 and became of force January 1, 1912. Section 29 above quoted was put into a chapter by itself, consisting of 12 sections—chapter 8.

In some particulars that I do not now recall section 29 was altered. For example, section 29 provides for a salary of \$10,000 a year for each of the members. The provision of the code is that they shall receive \$7,000 a year. The effect of chapter 8 of the code is to substitute its provisions in place of section 29, and this would operate as a repeal of section 29.

Now, this bill proceeds upon the theory that section 29 is still in force, and it amounts to an expression at least of an opinion upon the part of Congress that section 29 is still in force, and to that extent amounts to an expression of opinion that those provisions of section 29 which differ from the provisions later enacted in the code are still in force. It seems to me that all reference to section 29 ought to be omitted.

Mr. SIMMONS. Mr. President, I desire to apologize to the Senator. I think I owe it to him to do so. I thought when he began he had reference to a part of the section which related to oaths. I find he had reference to another part of it altogether. I will say to the Senator that the committee will take very great pleasure in looking into the matter which he has very kindly brought to our attention.

Mr. SHIVELY. Has the Senator from Utah [Mr. SUTHERLAND] an amendment to submit in relation to that matter?

Mr. SUTHERLAND. It occurred to me that the proper amendment would be to omit all reference to subsection 29.

Mr. SHIVELY. I only inquired whether the Senator would formally offer an amendment.

Mr. SIMMONS. I ask that the Secretary read paragraph 654 and that the committee's amendment be adopted.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 159, paragraph 654, the committee proposes to strike out all of that paragraph as printed in the House bill and to insert a new paragraph 654, reading as follows:

654. Paintings in oil or water colors, pastels, drawings, and sketches in pen and ink or pencil or water colors, etchings, engravings, lithographs, and sculptures which are proved to the satisfaction of the Secretary of the Treasury under rules prescribed by him to have been in existence more than 50 years prior to the date of the importation, but the term "sculptures" as herein used shall be understood to include professional productions of sculptors only, whether round or in relief, in bronze, marble, stone (terra cotta), ivory, wood, or metal; and the word "paintings" as used in this paragraph shall not be understood to include any article of utility nor such as are made wholly or in part by stenciling or any other mechanical process. And the words "etchings" and "engravings" as used in this paragraph shall be understood to include only such as are printed by hand from plates or blocks etched or engraved with hand tools, and not such as are printed from plates or blocks etched or engraved by photo-chemical or other mechanical processes.

Mr. LODGE. Mr. President, this paragraph should properly be considered in conjunction with paragraph 658, because those two paragraphs cover the whole subject of works of art and their introduction into this country without duty. In the last tariff bill, after a struggle which had lasted many years, we succeeded in embodying in the Payne-Aldrich Act a provision that paintings and sculptures should come in free if they were more than 20 years old. We also embodied a provision that other works

of art should come in free of duty if more than 100 years old. The second provision was a wholly new one. The House of Representatives have pursued the same enlightened policy, as I regard it, with reference to works of art. They took the provision in regard to works of art other than paintings and sculptures and reenacted it as it stood in the Payne-Aldrich law. They went even further than the Payne-Aldrich law in regard to paintings and sculptures, for they took off entirely the time limitation. I believe the attitude of the House of Representatives in these respects was in the highest degree to be commended; and I wish to say, in justice to the Democratic Party in the past, that such has been their uniform attitude.

I call attention to one or two statements on this subject. In 1857 Judah P. Benjamin, then a Senator from Louisiana, said in the Senate:

I think we ought by every means in our power to put before our people such objects of art as shall elevate their taste. So far as American artists are concerned, I have no doubt that the free introduction of articles of this kind will benefit the native artists by inducing a taste for articles of this kind which is now lamentably deficient in our country.

And free art was embodied in the act of 1857.

In 1861 Stephen A. Douglas said in the United States Senate:

I believe it is the policy of all nations to encourage the introduction of works of art. I wish we could get a model of every work of art, a cast of every piece of statuary, a copy of every valuable painting and rare picture, so that our artists might pursue their studies and exercise their skill at home.

Mr. Wilson, of West Virginia, the author of the tariff bill of 1894, embodied free art in his bill and spoke for it in the House of Representatives. Senator Vest, of Missouri, I think at that time, but certainly in a speech which I recall on this subject—and a very fine speech it was—said:

The greatest peoples of the whole world have been those who were practical and who at the same time were devoted to art and sculpture. I shall by every vote and word of mine encourage sculpture, painting, music, literature, and all that makes our human life better.

Senator Bayard also said in debate:

Nothing is so expensive to the people of the country as a revenue obtained at the loss of their intellectual advancement and education.

In April, 1906, ex-President Cleveland said:

On every ground the United States should not only permit but affirmatively encourage free art.

I make these quotations simply to show what has been the uniform attitude of the Democratic Party on this question; and I say without hesitation and with regret that the resistance to free art in the past has, in the main, come from the party to which I have always belonged. Personally, I have always labored to put all works of art upon the free list, and I confess that I was greatly gratified when I saw the position taken by the present House of Representatives. I was more than greatly astonished when I saw the amendment suggested by the committee of the Senate, for on this question the Senate hitherto has been, I think, more liberal and more civilized than has been the House of Representatives.

In this bill the Senate has raised the time limit on works of art. The House put no time limit; the Senate has put 50 years, which is 30 years more than the existing law. The Senate committee has also stricken out the clause providing that works of art other than paintings and sculptures shall come in free if more than 100 years old and has put in a provision which practically nullifies the intent of that section.

The objection that is always made to their free admission, Mr. President, is that these works of art are the purchases of rich men who can afford to pay the duty and who ought to be taxed on the enjoyment which they receive from the works of art which they buy; but it seems to me that in the interest of the public at large that is a very shortsighted policy. We ought to encourage the importation by individuals of works of art of all kinds. In the end they all find their way to the public museums. The statement which I understood the Senator from Colorado [Mr. THOMAS] to make the other day that our millionaires brought works of art from the museums of Europe, where the public could enjoy them, is a mistake. Works of art are never taken or bought from the public museums of Europe; they can not be. The works of art which have been brought here by our millionaires have been bought from private collections which have been occasionally opened on card to people who were interested, but they have all come from sources which were not within the public reach abroad; and sooner or later, as I have said, here, as in Europe, great paintings as well as statuary slowly find their way into the museums and become the property of the public.

I was interested not long ago in finding in a little publication which appears in Washington called Art and Progress a series of views and some account of the art museums that have been established in this country.

I was amazed at the number and at the distribution of these institutions. There was one, as I recall, at Fort Worth, Tex., certainly in one of the Texas cities. Not only was the building an extremely good one architecturally, but there were many interesting works of art in it. That is but an example of the art museums which are being started all over this country, not merely in the great cities, but in the smaller cities and towns. They absorb sooner or later, as do the greater museums, all the works of art that come within their reach.

In this country works of art find their way from private to public ownership much more rapidly than is the case in Europe, for the simple reason that we do not have, and never have had, in this country the large family estates, and the great houses which descend from generation to generation under the law of entail, and which carry with them all their contents. As a rule, here, on the death of any rich man who has made a collection of pictures, they may be divided among his children, but most of them find their way to the museum of some city.

I do not believe, Mr. President, that unless Senators have taken the trouble to go to some of these great museums, as I have done very frequently in New York and Boston and here, on the free days—and most of the days are free—and especially on Sunday, and looked not at the works of art there collected, but watched the people who come to those museums and pass hours there, they can appreciate the popular interest in this matter.

Take the great Metropolitan Museum of New York, of course the largest and finest in the country, and soon to equal, if it does not now, the best museums of the Old World. I have seen that museum on a Sunday afternoon filled with people, a large part of them people of the very poorest classes, families, including children, who would pass hours there, which might be spent in a much less desirable way. There is nothing, in my judgment, which affords such pleasure to the masses of the people as the great museums thrown open to them without money and without price.

I do not recall the number of people who visit the Metropolitan Museum of Art in New York in a year, but the Senator from New York [Mr. Root] tells me it is 800,000. I know in Boston the number is in the neighborhood of 600,000. To all those people museums of art are not only a pleasure and a gratification, but they are a means of instruction, of elevation, of improvement. Children can not be taken to these great museums and see the collections of the art of the world, beginning with the solemn and imposing figures of Egyptian sculpture, and coming down through all the perfect beauties of Greek sculpture and the sculpture, the paintings of Italy, of Holland, of Spain, and of France, without carrying away an education and an improvement and a joy in life which I believe nothing else can give.

At this moment a portion—a very small portion—of the collection of pictures of Mr. Morgan fills one room in the Metropolitan Art Museum. The whole of that great collection of pictures will be there in a short time. A wing is being built to cost, I believe, some \$700,000, which will contain not the great collections which Mr. Morgan had already given in his lifetime but the wonderful collection of pictures which now comes to the museum since his death. That wing is being built by the public money of the people of New York, so highly do they esteem the value of this great gift for the benefit of all the people of that city, and, indeed, of the whole country. In that single room which I have mentioned there are gathered now pictures which would be an honor to any museum in Europe, pictures of the very first order. They have been all bought by Mr. Morgan, a man of great wealth and great generosity and public spirit, and they have all passed into the possession of the people of the United States.

I think, Mr. President, that it is the greatest possible mistake to do anything to discourage the importation of works of art. In the second paragraph to which I have alluded, works of art which are not paintings and sculpture include tapestries, all over 100 years old, carvings in wood, and articles of household decoration, coming down from the past centuries, in which are innumerable lessons for our builders and our furniture makers to learn. It seems to me, as was so well said by Senator Vest, that—

The greatest peoples of the whole world have been those who were practical and who at the same time were devoted to art and sculpture.

We are an eminently practical people, and American art and architecture have advanced with enormous strides in the last 25 years. We should do everything to encourage it. I think the amendments proposed by the Senate committee are a distinct discouragement; I think they are a step backward, a retreat in what should be the onward march of civilization. I

wish that the Senate would consent to accept the provisions of the House bill.

Certainly, if it is conceivable that there should be party feeling on a question like this, the Democratic House can be trusted to sustain Democratic principles; but, Mr. President, this surely is something that rises far above politics and party lines. This is the cause of art, of beauty, of all that is most inspiring and best in our life on earth.

When we look back over the past and consider what has lived and what has died, what is it that remains to us from all those great civilizations which have gone before and grown dim among the shadows of the past? Their art and their literature. The battles and the wars of the Greeks are of no moment to-day except to the lover of history, but the thought, the literature, the poetry, the drama, and the art of Greece are the greatest inheritance of civilized man.

It is the same with the art of other people. The rich merchants of Venice have vanished forever, but the art of Titian remains to-day as beautiful and inspiring as ever. The works of material civilization perish and disappear, but the works of imagination, the works of beauty, remain. We are the heirs of that great inheritance. Surely we ought to carry it on and not barter it away for the sake of a few dollars at the custom-house.

Here we have this vast and growing people. I think it is our duty, looking not at to-day in the hope, perhaps, of gathering a little revenue—far more expensive than any expenditure we could make—but looking at it in the broad vista of time, in the interest of civilization and education, to open the doors to the gathering in this country of all the great monuments of art which we can possibly secure.

Mr. President, I have made this plea before. I have striven to make it for many years when my own party was charged with the work of preparing revenue bills. I make it again; and I sincerely hope that the Senate, which has almost always been in the advance and in the lead hitherto, will not now take a backward step, but will stand with the House in making an even more liberal provision, in opening the doors even wider to the works of art of the past and of the present than was done in the last act or in any previous act upon the statute books of the United States.

Mr. THOMAS. Mr. President, I do not care to take the time of the Senate in adding anything to what I said the other day upon this subject. It is proper, however, that before a vote is taken I should say that I cordially agree with every word that has just fallen from the lips of the distinguished Senator from Massachusetts; and I think every Senator in this body is at one with him as to the educational value of art, its great benefits to the general mass of the people, and the deplorable consequences of depriving them of the opportunity to see and drink in the beauties of these wondrous creations and to be elevated and idealized by their uplifting influences.

We are not interfering with that spirit or placing any embargo whatever upon its exercise. What we are seeking to do is to enlarge it and to make it universal, and enable every picture, every piece of statuary, every antique, and every tapestry, if you please, which has that educational value to contribute to that end.

We do propose, if we can, to place some limitation upon that modern spirit which finds ostentatious expression in gathering together for private collections these priceless heritages from the past, and not only to give the 800,000 men and women and children of New York the opportunity which they possess with the galleries which there are public and which they can visit, but to enlarge those galleries as far as possible.

When the multimillionaire of the land imports such objects for the purpose of gratifying his personal vanity, and simply ministering to the desire to obtain things of priceless value that he may exercise over them his own sovereign dominion, limiting the enjoyment of their beauties to the selected few from time to time and denying to the public the inestimable benefit of their presence, we say he should pay the Government something for it.

That is all there is about it; that is the only difference between us. I firmly believe that this measure, as we have prepared it, will serve to enlarge the collections of our public galleries and prove a benefit instead of a burden to the spirit of love of beauty which has been so eloquently voiced by the distinguished Senator from Massachusetts.

Mr. ROOT. Mr. President, I desire to add to the enumeration of distinguished Democrats who have spoken in the Senate in favor of most liberal treatment of art a reference to the admirable and noble speech made by the senior Senator from South Carolina [Mr. TILLMAN] during the debate upon this subject four years ago, an expression which, if I remember cor-

rectly, had the sympathy and the adherence of a majority of the Democrats of the Senate. I know he has not changed his view and I hope the majority of the Democratic Senators have not changed their views.

The Senator from Colorado agrees with the motive to which the Senator from Massachusetts has referred, but I do not think he appreciates how serious an obstacle to the fruition of that motive would be the provision he advocates. I look at it from the point of view of the museum, from many years of active interest in the conduct of the museum; and I know that the one way in which an American museum secures a great body of works of art for the education and the pleasure of the public is by having works of art come here.

We never get a picture or a statue or an engraving or any other object of art from anyone who has possessed it in Europe. So long as these articles remain on the other side of the Atlantic they never come to us. Once brought into our own country they soon find their way to the general public use.

The man who has made the collection, as a rule—not as an exception, but as a rule—when he comes to the close of his career finds that practically the only thing he can do with it to gratify his interest in the objects he has collected, to insure that the collection, for which he has the affection of a collector, shall be useful, shall be preserved, and perhaps his name continued with it, is to give it to the museum of his own city. It is in that way, sir, through the gifts of the paintings and the sculptures and the works of art generally which have been brought here by individual Americans, that the museums all along, from one ocean to the other, in all our considerable towns, have been built up and are being built up year by year.

It is not alone in the great cities that these museums are found. The museums in the cities of the second order of size—cities like Buffalo, Cleveland, Detroit, and Cincinnati—are worthy of the highest commendation and admiration; and they have grown up from the possession by Americans on this side of the Atlantic of the articles which make a museum.

While if you are going to look at the transaction with a microscope, the argument of my friend from Colorado [Mr. THOMAS] would be applicable, that when a particular man who has the means to buy some paintings brings them in he should pay a tax upon them, because they are for his benefit; still when you come to the large view of public policy the imposition of such a tax is a hindrance to the development of the art of America, and it is checking the stream that has been flowing into America for the benefit of all our people.

Mr. President, I should like to state definitely exactly what the situation is as to this legislation, comparing the present law, which was enacted four years ago, the Payne-Aldrich law, with the bill as it came from the House and the bill as it is reported by the committee of the Senate.

Under the Payne-Aldrich law paintings, sculptures, engravings, etchings, and similar articles which are more than 20 years old are admitted free. Other works of art more than 100 years old are admitted free. Under the pending bill as it came from the House paintings, sculptures, engravings, etchings, and so forth, are admitted free whether 20 years old or not—that is, the age limit is taken off—and other works of art are admitted free when more than 100 years old. That is to say, the House bill enlarged the provisions of the present law regarding paintings, sculptures, and so forth, and made them more liberal, and kept the provision as to other works of art. The bill as reported by the committee goes back, and instead of liberalizing the Payne-Aldrich provision as to paintings, sculptures, and so forth, it fixes the limit at 50 years instead of 20 years, and entirely repeals the provision regarding other works of art. So the House has liberalized the Payne-Aldrich bill, and the Senate committee has narrowed it and made it less liberal.

This is not a question of logical reasoning about what ought to be and what ought not to be. It is a question of the working of human nature. The House provision is going to contribute to the building up of our museums and put at the service of all our people, fully and freely, the inestimable privilege of seeing the works of art of all times and all lands. The provision reported by the committee is going to put a serious obstacle in the way of building up our museums and in the way of securing those benefits for our people.

Mr. President, I suppose we ought to think of something besides the merely material things which are necessary for life. I think we all recognize that. In all the wonderfully liberal provisions of our legislation in regard to education we realize it. It is certainly true that the happiness of a people does not depend merely upon having sufficient food and clothing and shelter. After all that, what is there to make a people happy? What can there be beyond the material things and beyond the con-

solutions of religion to make life more happy for the millions of people of slender means in our country than opportunity and encouragement for the cultivation of taste, than to enable them to bring up their children with capacity for receiving pleasure from the countless works of genius which it is possible for us to set before them?

Mr. President, I think no one can observe the poor people of some of the European countries—France, for instance, is a notable example—without realizing that the poor people are happy largely because they love everything beautiful, because in all about them in nature and in art they find the means to gratify their taste for beauty. The greatest happiness in life comes from things not material. It does not come from eating and drinking and wearing fine clothes; it comes from the elevation of character, from the love of beauty gratified, from the many influences that ennoble mankind.

I think we have no higher duty, sir, than by our legislation to promote the opening to Americans of every opportunity to secure these means of happiness. I feel certain that the narrowing of these provisions by the Senate committee will be an injury to the people of the United States and that the liberal policy of the House will be a great and lasting benefit to them.

Mr. LODGE. Mr. President, the Senator from New York referred to the speech made on the 12th of June, 1909, by the Senator from South Carolina [Mr. TILLMAN], who is still, I am glad to say, a Member of this body. It is very short, and I ask that the Secretary may be allowed to read it.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

Mr. TILLMAN. Mr. President, in this debate it has not been my good fortune to be very often found indorsing the views expressed by the Senators from New York and Massachusetts. But on this question I feel bound to say, in a humble and modest way, making no pretense whatever of being an art connoisseur, that if that poet who told us that "a thing of beauty is a joy forever" told the truth, this is not the place where the American Senate should display a niggardliness, a narrowness, and a penny-wise-and-pound-foolish policy.

The contemplation of beautiful paintings and statuary by even the most ignorant person must exert an elevating and refining influence. Many a boy has become inspired to do likewise, has had his soul enthused and his mind fired with the ambition to become a painter or a sculptor, by seeing great works of art.

I had the misfortune last year to become very ill, and I was ordered to Europe as a means of relaxation and rest. I had the opportunity to visit the great art galleries of Florence, Paris, and London, to say nothing of the smaller ones in other cities where I sojourned briefly. While I did not get as enthusiastic over some of those things as other people seemed to be, I saw enough to convince me that the American people can afford to encourage the importation of some of those masterpieces, something that we can get as a means of elevating the thought and inspiring the artistic genius of our people.

Therefore I for once in this debate, as I said, feel anxious to see the gates thrown wide open and every opportunity offered for wealthy Americans, who have been made rich as they are going to be made rich by this very bill, to bring in works of art. If you want to whack these multimillionaires, cut out some of the special privileges you are giving them elsewhere in the getting of money; but if they want to bring anything from abroad here which is worth while, let us let them do it. They will in time die out and an art gallery will become, in all probability, the legatee of their collections.

I noted in London that a half dozen of the finest collections were donated to the public by private individuals who had spent a lifetime and a fortune, or two or three fortunes, in collections such as are no more to be gathered together on the globe, because they have scoured the four corners of the earth almost to get these curios and artistic gems which have been given to those people; and they are the greatest treasures in London to-day.

When we consider that a painting is imperishable if it is cared for—that is, for several centuries at least, and no one hardly knows how long a well-cared-for painting will last—we can understand how it is impossible that these multimillionaires will not add to the stock of artistic wealth in this country, and in time they will increase the artistic genius of our people by merely having their galleries accessible. Many of these rich people are liberal enough to allow their art galleries to be visited by the public on given days, and others have loaned their masterpieces to this or that public gallery.

As I said, if you want to be hard on these rich people and want to make them do this, that, and the other, let us cut out some of the methods by which they get this money, but let us allow them to spend it to bring as many great and glorious works of art to America as possible.

Mr. LODGE. I also ask leave to print in my remarks a statement from the American Free Art League in regard to paragraph 658, showing what those who are most concerned with art think of the change proposed.

There being no objection, the matter referred to was ordered to be printed in the Record as follows:

THE TARIFF ON ANTIQUITIES A BLUNDER.

The conference committee on the tariff bill should not fail to correct the blunder which has been made in taking "artistic antiquities" and "collections in illustration of the progress of the arts" from the free list. This is equally important with restoring paintings and sculptures to the free list. In fact, the Senate itself might well make these changes without waiting for the conference committee. This would place the Senate in agreement with the House on the schedules and would also be a recognition of the universal demand throughout the country that these educational art objects should be free in the new tariff act.

No intelligent person can advocate a duty on artistic antiquities over 100 years old. They furnish models which are of great value to our designers and manufacturers and contribute directly to our business success and prosperity. An old Flemish sideboard, for instance, is full of suggestions for our designers of furniture; Gobelin tapestries, Belgian laces, and old embroideries are eagerly studied by the students of our industrial art schools, and old Chinese porcelains and Etruscan vases help our manufacturers of pottery to raise their standard of excellence.

The touch of art is to be seen all about us on almost every article of utility. Thus it is evident that art and industry are very closely related.

Moreover, as Samuel Isham says in his *History of American Painting*: "The tariffs which we have imposed upon art objects in the past at different periods have seriously diminished the beauty of the surroundings of the great body of the people. The carpets on their floors, the chairs in which they sit, the dishes from which they eat, and the ornaments on their walls are all uglier than they should be because the models which would have instructed both the people and the manufacturers have been kept out."

The countries of the Old World are full of these instructive models, and therefore their designers have a distinct advantage over Americans. In spite of this fact the Governments of Europe do everything possible to encourage art education, expending thousands of dollars upon art schools, art museums, and prizes. It goes without saying that as a part of this policy, with almost no exception, they make importations of art objects free. How much more necessary is it for our country, which has so few inherited art treasures, to encourage art education at least to the extent of making works of art duty free.

Former Commissioner of Education William T. Harris once said: "We must light our torches where art was a religion." We can not give our students the inspiration of the past if we build a tariff wall to shut out the art treasures of the older countries of the world.

Up to the present time the Democratic Party has a clean "free art" record. No tariff bill ever framed by the Democratic Party has ever placed an import duty upon either paintings, sculptures, or antiquities. It would be a grave mistake for the Democrats in the Senate in this twentieth century to smirch the record of their party by insisting upon any such taxes on knowledge and education. In a certain sense their action will be a test of our progress in civilization.

MR. THOMAS. Mr. President, I am more than ever convinced, after listening to the Senator from New York, that our only difference upon this subject is one of viewpoint. The Senator believes that works of art, all contributions of genius to the common stock of beauty and of artistic creation, should be permitted to come to our shores and be welcome, whether they after arrival are to form parts of a private collection or of a public one, because he believes that in the end the private collection will become a public one, since it is assumed that sooner or later all of these articles do find their place in public galleries.

Now, I am neither disputing nor asserting, because, in the first place, it does not, I think, concern the argument, because if it be true that these works and collections do ultimately become public property, then it makes little difference whether a duty is imposed upon their importation when designed for private collections or not. If, on the other hand, it is not true, then there is the greater argument, in my judgment, in favor of the imposition of the duty.

I quite agree, indeed the expression is so beautiful and so natural that it finds response in every human heart, that "a thing of beauty is a joy forever." But because it is a thing of joy forever, because it possesses an attribute which gives a sort of public proprietary interest in it, because every man and woman and child in existence should be privileged and permitted to see it, to drink in its beauty and to receive all the idealism and inspiration that can be obtained from it, because of that fact, I say, these works of genius should not be immured in the palaces and homes of the rich. I consider it a crime against the aesthetic taste of mankind, an offense against that love of beauty which has caused successive generations to preserve these wondrous creations and to hand them from the one to the other.

I believe therefore that every nation should frown upon the obtaining and holding of these treasures as private property for the enjoyment of the few or to satisfy the ostentatious vanity of those who may be able to afford them and make the practice as expensive as possible.

It was my privilege, not many years ago, to visit a private gallery of paintings. Occasionally I have been allowed a glimpse beyond the portals of the wealthy and powerful. I saw as attractive and beautiful and wondrous a collection of paintings as there is perhaps upon this continent outside the city of New York. As I enjoyed this splendid opportunity, which as a whole and in detail forms one of the happy experiences of my life, I felt that these beautiful, valuable, glorious paintings should belong to mankind and should not be in any private collection, accessible only to those whom the proprietor in his generosity or magnanimity might extend the privilege. When he confidently informed me of the enormous price which three or four of the gems in this collection had cost him, it instantly occurred to me that the amount which he had been required to pay, and which he willingly paid, rather than any desire to gratify himself or his

country after his death, constituted the chief motive which inspired the purchase and the collection.

Now, I believe it is wise to place a duty upon the importations of these invaluable treasures when they are acquired for private purposes and for such purposes alone, and this, Mr. President, whether ultimately or not these collections find repose in public galleries for the benefit of the high and the low and the rich and the poor.

I know, as was said by the distinguished Senator, that the poor are made happy because of the pleasure that they derive by coming into contact and association with the beautiful, and it is because I know it that I would require them all to be accessible to the multitude.

No one, I believe, appreciates a beautiful picture, a fine piece of statuary, more than the average man, woman, and child. The besotted and the ignorant, like the wise and the good, are lifted, temporarily at least, from the dull level of their monotonous and sordid lives by the ideals which they encounter in some of these priceless, wondrous collections.

Now, is it possible when a provision of the law requires that when these treasures are obtained merely to gratify a fad or the ostentatious fancy of a rich individual and segregated from the public and immured in their private residences, that for the privilege of doing so they should pay a duty thereon to the Government of the United States?

That is the theory of this bill upon this subject. If within five years after their acquisition they are given to the public, donated or sold to any gallery or other institution which allows the public for five days in a week, eight months in a year, access to them, the duties are refunded. An inducement is thus extended to the public spirit of the owners.

I think that a more judicious provision could not be made; and when it is further considered that these properties, when more than 50 years of age, are exempt from these duties entirely, and can be brought here absolutely free of duty, we have, in my judgment, framed a system as applicable to this sort of commodity, if that be a proper expression as applied to a work of art, that is as near just as it is possible to make it.

I referred the other day to the fact, Mr. President, that the widespread custom of investments in these expensive creations have resulted in the building up of a business of manufactured imitations, spurious creations, palmed off upon the unsuspecting or the careless or the ignorant as genuine, that has assumed very large proportions. Certainly the best lover of art is the identical one who frowns upon and would discourage as a general proposition, independent of its fraudulent and miserable character, the development or the continuation of such a pursuit.

I firmly believe, Mr. President, that this measure as it has been prepared and reported by the Senate Finance Committee will put a quietus, to a very large extent at least, upon this nefarious industry. Considered from that standpoint alone, every lover of art should applaud instead of condemning a policy that is designed for the real, the genuine protection of all works of art.

Now, my friends, the distinguished Senators from Massachusetts and New York, are earnestly desirous that the House instead of the Senate committee paragraphs relating to this subject should be adopted. But, Mr. President, would either of them vote for this bill if we should accede to their request and restore the House provisions? Do either of them expect to allow his love of beauty, his devotion to these splendid creations, the insistent desire that all sorts and conditions of men shall be permitted at all times to approach the altar and worship at the shrines of the public galleries and there obtain the full benefits of their valuable contributions—will they permit their exalted spirit of love and devotion to art to overcome their scruples concerning the paragraphs on print paper, and cotton, and bread, and meat, which they do not desire to see upon the free list, and vote for this bill?

I do not believe that any concessions which we may make upon this or any other subject, however dear to their hearts, will carry them across the line and give us the benefit of their support of this measure.

I hope, therefore, that the majority reporting these paragraphs will adopt them as they stand.

MR. LANE. Mr. President, I wish to say a word in explanation of my vote on this question. The Democratic Party will be criticized, and I expect it to be, and it would be subject to just criticism were it not for the fact that it is first attempting to place the necessities of life within the reach of the people of this country. It is necessary that the Government should raise a certain amount of revenue to carry on its affairs. In order to do that, it has seemed to be more wise to attempt to raise such

revenue from articles of luxury, leaving the necessities of life as near as may be within the reach of people who are poor.

Thirty-three and one-third per cent of all children born in the large cities die before they are 5 years of age for lack of proper nourishment, fresh air, sunlight, and the opportunity to receive the ordinary benefits which they would have under conditions where they had an equal opportunity to enjoy the gifts of nature. No painting executed by the greatest master of art will appeal to the eye of the mother of a child dying from lack of the necessities of life.

First, then, let us provide those necessities of life. Give the people an opportunity to get enough to properly raise their children and allow them to live. After we have accomplished that, I will join with my friends on the other side in placing works of art upon the free list and to pay a bounty to the man who will bring them in for the edification of the people of this country.

Mr. LODGE. I ask unanimous consent that the vote may be taken on the amendments to paragraphs 654 and 658 together.

Mr. THOMAS. We consent to that.

Mr. SIMMONS. There is no objection to that.

Mr. LODGE. That will save the calling of the roll twice.

Mr. THOMAS. Paragraph 658 will have first to be read.

Mr. LODGE. Paragraph 658 will have to be read. Then I ask for the yeas and nays on the two amendments at once. It will save calling the roll a second time.

The VICE PRESIDENT. Is there objection to the request of the Senator from Massachusetts? The Chair hears none. The Secretary will read paragraph 658.

The SECRETARY. The Committee on Finance proposes to strike out paragraph 658 as it appears in the House print of the bill and in lieu thereof to insert the following:

658. That when works of art, including paintings in oil and water colors, pastels, drawings and sketches in pen and ink, or pencil or water colors, etchings, engravings, lithographs, photographs, collections in illustration of the progress of the arts, works in bronze, marble, wood, terra cotta, parian, pottery, porcelain or glass, artistic antiquities, and objects of art of ornamental character or educational value on which duties shall have been paid under the provisions of the act, and shall within five years after the importation be purchased by or for, or presented to, and accepted in good faith, by a national institution or any State or municipal corporation or incorporated religious society, college, or other public institution, or any society or institution established for the encouragement of the arts, sciences, agriculture, or education, as its permanent property for permanent free exhibition at a fixed place for at least four days in each week, of at least eight months in each year, and not to be sold, there shall be paid by the Secretary of the Treasury to the purchaser or donor from any moneys in the Treasury not otherwise appropriated an amount equal to the amount of duties paid, upon production of evidence satisfactory to him of such purchase or donation and acceptance upon the terms and conditions herein prescribed.

The VICE PRESIDENT. The question is on agreeing to the committee amendments on which the yeas and nays have been asked for.

The yeas and nays were ordered.

Mr. BACON. Mr. President, is the question on the adoption of the amendments proposed by the Committee on Finance?

Mr. LODGE. Yes; on the adoption of the amendments proposed by the Committee on Finance.

The VICE PRESIDENT. That is correct.

The Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a general pair with the Senator from Michigan [Mr. TOWNSEND]. In his absence I transfer that pair to the Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

Mr. STERLING (when Mr. CRAWFORD's name was called). I wish to again state that my colleague [Mr. CRAWFORD] is necessarily absent and is paired with the senior Senator from Tennessee [Mr. LEA]. If my colleague were present and at liberty to vote, he would vote "nay."

Mr. JAMES (when his name was called). I transfer the pair I have with the junior Senator from Massachusetts [Mr. WEEKS] to the junior Senator from New Jersey [Mr. HUGHES] and vote "yea."

Mr. LEA (when his name was called). I have a pair with the Senator from South Dakota [Mr. CRAWFORD]. If I were at liberty to vote, I should vote "yea."

Mr. LEWIS (when his name was called). I announce my pair with the junior Senator from North Dakota [Mr. GRONNA]. If he were here, I should vote "yea."

Mr. SWANSON (when the name of Mr. MARTIN of Virginia was called). My colleague [Mr. MARTIN of Virginia] is paired with the junior Senator from Vermont [Mr. PAGE]. If he were present, my colleague would vote "yea."

Mr. DILLINGHAM (when Mr. PAGE's name was called). My colleague [Mr. PAGE] is necessarily absent this afternoon; but, as has been stated, he is paired with the Senator from Virginia [Mr. MARTIN].

Mr. THOMAS (when his name was called). I make the same transfer of my pair as heretofore announced, and vote "yea."

Mr. WILLIAMS (when his name was called). I notice the absence of the senior Senator from Pennsylvania [Mr. PENROSE]. I have a pair with that Senator, and therefore withhold my vote. The roll call was concluded.

Mr. GALLINGER (after having voted in the negative). I have a general pair with the Senator from New York [Mr. O'GORMAN], who has not voted. I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH], and will allow my vote to stand.

Mr. SUTHERLAND. I inquire whether the Senator from Arkansas [Mr. CLARKE] has voted?

The VICE PRESIDENT. He has not.

Mr. SUTHERLAND. I withhold my vote on account of my pair with that Senator.

Mr. REED. I have a pair with the Senator from Michigan [Mr. SMITH]. Being unable to arrange for the transfer of the pair, I withhold my vote. If permitted to vote, I should vote "yea."

Mr. MYERS. I announce my pair with the Senator from Connecticut [Mr. McLEAN] and withhold my vote.

Mr. CHAMBERLAIN. I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence I withhold my vote.

Mr. SUTHERLAND. I transfer my pair with the Senator from Arkansas [Mr. CLARKE] to the Senator from Idaho [Mr. BRADY] and vote "nay."

Mr. GALLINGER. I am requested to announce a pair between the Senator from Wisconsin [Mr. STEPHENSON] and the senior Senator from South Carolina [Mr. TILLMAN].

The result was announced—yeas 32, nays 27, as follows:

YEAS—32.

Ashurst	Kern	Saulsbury	Smith, Md.
Bacon	Lane	Shafroth	Smith, S. C.
Bryan	Overman	Sheppard	Stone
Chilton	Owen	Shields	Swanson
Fletcher	Pittman	Shively	Thomas
Hollis	Pomerene	Simmons	Thompson
James	Ransdell	Smith, Ariz.	Vardaman
Johnson	Robinson	Smith, Ga.	Walsh

NAYS—27.

Bradley	Cummins	La Follette	Sherman
Brandegge	Dillingham	Lippitt	Smoot
Bristow	Fall	Lodge	Sterling
Catron	Gallinger	Norris	Sutherland
Clapp	Jackson	Perkins	Thornton
Clark, Wyo.	Jones	Poindexter	Warren
Colt	Kenyon	Root	

NOT VOTING—36.

Bankhead	du Pont	McLean	Penrose
Borah	Goff	Martin, Va.	Reed

Clarke, Ark.	Lea	O'Gorman	Weeks
Crawford	Lewis	Oliver	Williams
Culberson	McCumber	Page	Works

So the committee amendments were agreed to.

Mr. THOMAS. Mr. President, I think that completes the schedules, with the exception of one or two matters which the Secretary has called to my attention, but which, I think, have also been disposed of. The first is paragraph 65. If it has not already been done the words "chlorate of," on page 16, line 24, of that paragraph, should be stricken out.

The VICE PRESIDENT. The Chair is informed they were stricken out, and the paragraph agreed to.

Mr. THOMAS. In paragraph 657, my recollection is that the amendments offered by the committee have been adopted; but there seems to be some difference about that.

The VICE PRESIDENT. The Chair is informed that the committee amendments to paragraph 657 have been agreed to. The Chair will state that paragraph 254, on page 70, stands recommitted to the committee.

Mr. SIMMONS. I desire to say that the subcommittee is considering some change in that paragraph, and I ask that it be temporarily passed over. I hope to be able to report it very soon.

The VICE PRESIDENT. It is already before the committee.

Mr. CUMMINS. Mr. President, if it is not a violation of the agreement made some time ago, I desire now to offer an amendment to follow paragraph 659. I send the amendment to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. At the end of section 1, page 164, it is proposed to add a new paragraph, as follows:

It shall be unlawful from and after January 1, 1914, for any common carrier to charge, collect, or receive a higher rate for the transporta-

tion of any of the articles or commodities hereinbefore mentioned, or of substantially similar articles and commodities having been grown, produced, or manufactured in the United States, over the same line in the same direction than it charges, collects, or receives for the transportation of such articles or commodities when imported into the United States from a foreign country.

No common carrier in conforming to the foregoing provision shall increase any rate without the approval of the Interstate Commerce Commission, entered after a full hearing upon an application for such increase.

Mr. CUMMINS. Mr. President, I regret that I feel compelled to propose an important question of this kind under the circumstances which now surround us. I do not know how other Members of the Senate feel, especially the Members on this side of the Chamber, but I feel that it is a farce through which we are passing, so far as argument is concerned, and nothing but the highest sense of duty impels me to consume the time of the Senate in the suggestions that I am about to make.

The question presented in this amendment has nothing whatever to do with percentages of duty levied upon imports, but it has a great deal to do with the tariff. It is a question that will be easily understood throughout the country, and, while I do not hope to reach the judgment of the majority at this time, I shall hope that there will appear for the proposition which I have now submitted more potent advocates than can be summoned at this moment. The question is intimately connected with the tariff duties that are here imposed.

We all understand, Mr. President, that in determining the rate of duty upon any particular commodity, whether we are speaking from a protection or a competitive standpoint, we must not forget the cost of transportation from the point of production to the point of consumption.

Every man who presumes to deal with the subject intelligently knows that we must give due consideration to the cost of transportation. The bill now before us reduces duties, and at this moment I am not complaining of that. Duties are reduced to a point much below the protective point, as admitted—indeed, as claimed—by those who are responsible for the bill. My amendment simply asks the Senate and asks the country whether, in view of this very material, very substantial, and, as I am bound to think, indefensible reduction of duties, we shall continue to give our rivals in other countries the added advantage of discrimination in rates of transportation.

These rivals have that advantage now. They have possessed it for a long time. Our own producers have been able to overcome the discrimination because there have been attached to most of these commodities duties that were sufficient and oftentimes more than sufficient to enable them to meet their competitors from abroad, notwithstanding the lower freight rates which these competitors have so long enjoyed.

I beg to restate my amendment in a simpler way than found in its phraseology.

I propose that hereafter the products of the United States shall be carried by our common carriers at no higher rate, over the same line, in the same direction, than products of similar character are so carried when imported from other countries. In view of the fact that upon many commodities the import freight rate is much lower than the domestic freight rate at this time, to avoid the increasing of all these rates I provide that the common carriers, in adjusting themselves to this amendment, if it shall become a law, shall not increase any rates without the approval of the Interstate Commerce Commission.

I shall be as brief as it is possible for a man to be in presenting this question, and I therefore proceed immediately to the facts. What are the facts with regard to the rates charged on imported products as compared with the rates charged upon domestic products?

Fortunately, we have before us the result of an investigation held by the Interstate Commerce Commission long ago. It was held under a resolution, which I intend to read in order that there may be in the RECORD the basis for the investigation made by the commission. The resolution was adopted by the Senate on the 24th of June, 1902, and it reads as follows:

Resolved, That the Interstate Commerce Commission be, and is hereby, directed to investigate and report to the Senate during the month of December next in such form and to such extent as may be practicable—

1. The rates filed with said commission by common carriers subject to the act to regulate commerce and now in force on import and domestic traffic of like kind carried from ports of entry in the United States to interior points of destination which show material differences, if any, in favor of through shipments of imported articles and against shipments of like articles originating at such ports of entry.

2. What, if any, kinds or classes of imported articles have actually been transported at any time between January 1 and July 1 of the present year by common carriers subject to the act to regulate commerce at rates from ports of entry in the United States to interior points of destination materially less than the rates contemporaneously charged

by such carriers upon the same kinds or classes of articles as domestic shipments from such ports of entry to the same interior points of destination; and whether, if it can be ascertained, the rates actually charged upon both the import and domestic traffic were in conformity with the rates in effect thereon, as shown in rate schedules filed with said commission.

3. Show in said report in connection with any such differences in schedule rates in favor of import and against domestic shipments the tariff or customs duties in force under the laws of Congress upon such import traffic carried at any time during the six months' period above specified; and to enable compliance with this requirement the Secretary of the Treasury is hereby directed to furnish the said commission, upon its application, a statement showing the tariff or customs duties applicable to such import traffic.

Under this comprehensive authority the Interstate Commerce Commission made an examination, and on the 28th day of February, 1903, it reported the results of its hearings to the Senate. I do not intend, of course, to read at length from the report, nor do I intend to embody it all in my observations, but it is a report which anyone who is at all interested in American industry as opposed to foreign industry, anyone who really desires the welfare of the people of his own country as distinguished from the welfare of the people of other countries, might well consult.

Among other things the commission says:

The following summary shows the import and domestic all-rail rates, in cents per 100 pounds, on the different classes from Newport News to Chicago:

I but repeat a fact known to every Senator, surely, when I say that in the territory of which I am about to speak there are six classes of commodities aside from the special commodity rates.

The import rate from Newport News to Chicago from November 15 to May 15 was, on the first class, 67 cents. The domestic rate upon the same class was 59 cents per hundred pounds. That is to say, an article in this class coming from abroad and shipped from the ocean at Newport News to Chicago was charged 67 cents per hundred pounds, but if it originated in the United States and was shipped from the same point to the same point the rate was 59 cents.

We now come to the second class. The second-class rates were 57 cents and 51 cents, respectively; the third-class rates, 47 and 43; the fourth-class rates, 32 and 29; the fifth-class rates, 27 and 25; and the sixth-class rates, 22 and 20.

I call attention to these things in order that you may mark the distinction which is made between class rates, upon which comparatively little of the traffic is carried, and commodity rates, upon which a large part of the traffic is carried. Commenting on this table, the commission says:

It thus appears that from Newport News to Chicago the import class rates are materially higher than the domestic class rates for half the year and nearly the same as the domestic class rates the other half of the year.

This is substantially the true theory of adjusting freight rates. There is no reason for any material difference between the import freight rate and the domestic freight rate. But let us pass on:

The domestic class rates from Montreal, Canada, to Chicago are, in cents per 100 pounds—

Now mark you and see where this difference and injustice arises—

The domestic class rates from Montreal, Canada, to Chicago are, in cents per 100 pounds, 66, 58, 45, 31, 26, and 22 cents on the six classes, respectively. The import class rates from Montreal to Chicago on the six classes are 54, 47, 37, 27, 23, and 20 cents, respectively.

Mr. POINDEXTER. Mr. President—

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Washington?

Mr. CUMMINS. I do.

Mr. POINDEXTER. The Senator stated the last paragraph in a little different way from his statement of the rates from Newport News. As I understood the first statement, from Newport News to Chicago the import rates were higher than the domestic class rates.

Mr. CUMMINS. They were.

Mr. POINDEXTER. Is that true as to the rates from Montreal?

Mr. CUMMINS. They were just the reverse. I will read them again.

Mr. POINDEXTER. I should like to have the Senator, if he will, when he reads the import rates for the first class, read next the domestic rates for the first class.

Mr. CUMMINS. I will reread the figures in that way, Mr. President.

The domestic class rate from Montreal, Canada, to Chicago, on first-class freight per hundred pounds, was 66 cents. The import rate on that class was 54 cents.

On second-class freight the domestic rate was 58 cents, and the import rate 47 cents.

On third-class freight the domestic rate was 45 cents, and the import rate was 37 cents.

On fourth-class freight the domestic rate was 31 cents, and the import rate was 27 cents.

On fifth-class freight the domestic rate was 26 cents, and the import rate 23 cents.

On sixth-class freight the domestic rate was 22 cents, and the import rate 20 cents.

I now pass over to the tables submitted by the commission upon commodity rates. With respect to the commodity rates, upon which a large part of the traffic of the country is carried, in many instances the import rate is less than the domestic rate.

For instance, taking the first table, which is a "statement showing import and domestic rates on various commodities from New York and other seaboard cities to the several points thereinafter shown, in effect June 24, 1902," the domestic rate from New York to Cleveland upon sulphate of ammonia was 18 cents. The import rate was 15 cents.

Upon bagging the domestic rate was 25 cents, and the import rate 18 cents.

Upon burlaps the domestic rate was 25 cents, and the import rate 18 cents.

Upon cement the domestic rate was 16 cents, and the import rate 13 cents.

Upon fuller's earth the domestic rate was 16 cents, and the import rate 15 cents, although that is not a very important matter so far as competition is concerned.

Upon carbonate of potash the domestic rate was 21 cents and the import rate 15 cents per hundred pounds.

I am reading the table which applies from New York to Cleveland, because it is typical of nearly all of them.

Upon salt the domestic rate was 16 cents and the import rate 13 cents per hundred pounds.

Upon crude sulphur the domestic rate was 18 cents and the import rate 16 cents.

I might read through these tables by the hour in showing these disparities in rates. Take the item of crockery: We have greatly reduced the rates on crockery. Whether that reduction is wise or not is not material to this argument. But upon crockery in crates from Portland, Me., to Cincinnati—this happens to be a table from Portland to Cincinnati—the domestic rate was 24 cents per hundred pounds and the import rate was 18 cents per hundred pounds. The class rates over the same distances show the same unfavorable comparison with the domestic rates.

Mr. STERLING. Mr. President—

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from South Dakota?

Mr. CUMMINS. I do.

Mr. STERLING. As I understand it, the Senator is reading now the rates in 1903 and prior to that date.

Mr. CUMMINS. These tables were compiled in the early part of 1903.

Mr. STERLING. I wish to have the Senator's opinion as to whether, under the enlarged powers of the Interstate Commerce Commission, that commission would have power to prevent this discrimination between domestic and import rates.

Mr. CUMMINS. I intend to refer to that in a few moments, if I may be permitted to defer my remarks upon it until I reach that phase of the case.

Mr. STERLING. Certainly.

Mr. CUMMINS. I ask that I may print as a part of my remarks the tables from page 12 to page 33, inclusive, contained in the report of the Interstate Commerce Commission, and from which I have read.

The VICE PRESIDENT. Is there objection? The Chair hears none.

The matter referred to is as follows:

TABLE I.—Statement showing import and domestic rates on various commodities from New York, N. Y., to the several points hereinafter shown, in effect June 24, 1902. (Rates in cents per 100 pounds, unless otherwise shown, c. l.)

NOTE.—Will include cheap tableware invoiced at prices not exceeding those of English crockery, in crates, although such shipments may be marked as china; also includes English crockery, in packages other than crates.

Domestic rate on crockery, in boxes or slatted boxes, l. c. l. from New York to Chicago, 65 cents per 100 pounds. Domestic rate on crockery in crates, barrels, tierces, casks, or hogsheads, l. c. l. from New York to Chicago, 40 cents per 100 pounds. Rates to other points, as shown above, are adjusted to the New York and Chicago basis.

TABLE 2.—Statement showing import and domestic rates on various commodities from Portland, Me. (via Grand Trunk Railway), to the several points hereinafter shown, in effect June 24, 1902.

TABLE NO. 11.—Customs duties upon articles mentioned in the commodity rate tables.

Ale, in casks, 20 cents per gallon; in bottles or jugs, 40 cents per gallon; nonalcoholic, unmalted, 20 per cent.
Ammonia, sulphate of, three-tenths of a cent a pound.
Asphaltum:
Manufactures of, 35 per cent.
Cells, 35 per cent.
Crude, not dried or advanced, \$1.50 a ton.
Dried or otherwise advanced, or treated, \$2 a ton.
Epure, \$3 a ton.
Ground or in leaves, 20 per cent.
Limestone rock, containing not over 15 per cent bitumen, 50 cents a ton.
Trinidad, \$1.50 a ton.
Bagging:
Dundee, not suitable for covering cotton, 45 per cent.
Fireproof, exported and returned, free.
For cotton, composed of single yarns of jute, jute butts or hemp, not bleached, dyed, or colored, not over 16 threads square inch, and weighing not less than 15 ounces square yard, six-tenths of a cent per square yard.
Jute for tailors' use, 45 per cent.
Jute press cloth, 45 per cent.
Waste, fit only for manufacture of paper, free.
Bags:
Made from plain woven fabrics of single jute yarns, not dyed, colored, stained, painted, printed, or bleached, and not exceeding 30 threads to the square inch, seven-eighths of a cent a pound and 15 per cent.
American, exported with allowance for drawback and reimported, subject to duty equal to drawback.
Beaded, 60 per cent.
Bead, 35 per cent.
Burlap, seven-eighths of a cent a pound and 15 per cent.
Burlaps, striped, 45 per cent.
Domestic, exported filled and returned empty, to exporter thereof, free.
Domestic, imported by agent of exporter, free.
Game—
Leather, 35 per cent.
Leather and flax, flax chief value, 45 per cent.
Hemp, manufactures of, 45 per cent.
India rubber—
For balloons, 30 per cent.
With tin whistles, 30 per cent.
Jute, striped, 45 per cent.
Paper, 35 per cent.
Silk, 50 per cent.
Beans, castor, 50 pounds to the bushel, 25 cents per bushel.
Bedsteads:
Iron, 45 per cent.
Brass, 45 per cent.
Beer:
In bottles or jugs, 40 cents a gallon, no additional duty on the bottles or jugs.
Otherwise, 20 cents a gallon.
Condensed, 40 per cent.
Peptonized (minimum, 25 per cent), 55 cents per pound.

Bleach:

Bleaching liquid, 25 per cent.
 Bleaching powder, one-fifth of a cent a pound, or 20 per cent.
 Brandy, \$2.25 a gallon.
 Brick, soft glazed, 45 per cent.
 Brimstone, crude, free.

Burlap:

Plain woven of single jute yarns, not exceeding 60 inches in width, weighing not less than 6 ounces per square yard and not exceeding 30 threads per square inch, five-eighths of a cent per pound and 15 per cent; exceeding 30 and not exceeding 55 threads per square inch, seven-eighths of a cent a pound and 15 per cent.
 Bags or sacks made from plain woven fabrics of single jute yarn not dyed, colored, stained, painted, printed, or bleached, and not exceeding 30 threads per square inch, seven-eighths of a cent a pound and 15 per cent.
 Bagging for cotton composed of single jute yarns not bleached, dyed, colored, stained, painted, or printed, not exceeding 16 threads per square inch and weighing not less than 15 ounces per square yard, six-tenths of a cent per square yard.
 Black, 45 per cent.
 Crash, 45 per cent.
 Jute press cloth, 45 per cent.
 Manufactured in part of flax, 45 per cent.
 Starched buckram, 45 per cent.
 Tubing, 45 per cent.

Cement:

Bicycle, 20 per cent.
 Fire, 20 per cent.
 Furnace, 20 per cent.
 India rubber, 20 per cent.
 Roman, Portland, and other hydraulic, in packages, including weight of package, 8 cents per 100 pounds.
 In bulk, 7 cents per 100 pounds.
 Not specifically provided for, 20 per cent.

Chicory, ground, 2½ cents per pound.

China:

Balls, for sign work, plain, 55 per cent.
 Clock cases, with or without movements, decorated, 60 per cent; plain white, 55 per cent.
 Dolls and doll heads, 35 per cent.
 Plaques—
 Decorated, 60 per cent.
 Plain white, 55 per cent.
 Toys and tea sets, decorated, 60 per cent.
 Toys and tea sets, plain white, 55 per cent.
 Vases, decorated, 60 per cent; plain white, 55 per cent.

Clay, including kaolin, \$1 to \$2.50 per ton; molding clay, 20 per cent; common blue clay, free.

Coal facings not specifically provided for.

Coal, anthracite, free.

Copper, sulphate, one-half of a cent per pound.

Cordials, \$2.25 a gallon.

Cotton piece goods, duty depends upon number of threads per square inch, whether bleached, dyed, colored, stained, painted, or printed, and also upon value.

Crockery, decorated, 60 per cent; plain, 55 per cent.
Denims, straight, as cotton cloth.

Duck:

Cotton, 35 per cent.

Crown cotton, not specifically provided for.

Earth, fullers', unwrought and unmanufactured, \$1.50 a ton; wrought and manufactured, \$3 a ton.

Earthenware, brown, common, 25 per cent. Articles not specifically provided for: Decorated, 60 per cent; plain, white, 55 per cent. Numerous other kinds of earthenware are specified.

Ferromanganese, \$4 a ton.

Glass:

Common window—

Not exceeding 10 by 15 inches square, 1½ cents a pound.

Exceeding 10 by 15, not exceeding 16 by 24 inches square, 1½ cents a pound.

Exceeding 16 by 24, not exceeding 24 by 30 inches square, 2½ cents a pound.

Exceeding 24 by 30, not exceeding 24 by 36 inches square, 2½ cents a pound.

Exceeding 24 by 36, not exceeding 30 by 40 inches square, 3½ cents a pound.

Exceeding 30 by 40, not exceeding 40 by 60 inches square, 3½ cents a pound.

Exceeding 40 by 60 inches square, 4½ cents a pound.

If imported in boxes, shall contain 50 square feet, as nearly as sizes will permit, and the duty shall be computed thereon according to the actual weight of glass.

Plate, fluted, rolled, ribbed, or rough, or the same containing a wire netting within itself—

Not exceeding 16 by 24 square inches, three-fourths of a cent a square foot.

Exceeding 16 by 24, not exceeding 24 by 30 inches square, 1½ cents a square foot.

Exceeding 24 by 30 inches square, 1½ cents a square foot.

If weighing over 100 pounds per 100 square feet, it shall pay an additional duty on the excess at the same rate herein imposed; if ground, smoothed, or otherwise obscured, pay same rate of duty as cast polished plate glass unsilvered.

Plate, cast, polished, finished, or unfinished, and unsilvered—

Not exceeding 16 by 24 inches square, 8 cents a square foot.

Exceeding 16 by 24, not exceeding 24 by 30 inches square, 10 cents a square foot.

Exceeding 24 by 30, not exceeding 24 by 60 inches square, 22½ cents a square foot.

Exceeding 24 by 60 inches square, 35 cents a square foot.

Plate, cast, polished, silvered, and looking-glass plates exceeding 144 square inches—

Not exceeding 16 by 24 inches square, 11 cents a square foot.

Exceeding 16 by 24, not exceeding 24 by 30 inches square, 13 cents a square foot.

Exceeding 24 by 30, not exceeding 24 by 60 inches square, 25 cents a square foot.

Exceeding 24 by 60 inches square, 38 cents a square foot.

Plate and looking-glass plate, silvered, when framed, shall not pay a less rate of duty than that imposed on similar glass not framed, but shall pay in addition the duty upon said frames.

Plate, cast, polished, silvered, or unsilvered, when bent, ground, obscured, frosted, sanded, enameled, beveled, etched, embossed, engraved, flashed, stained, colored, painted, or otherwise ornamented or decorated, shall pay in addition to the rates chargeable thereon 5 per cent.

Gunny bags, seven-eighths of a cent per pound and 15 per cent.

Gunny cloth, composed in whole or in part of hemp, flax, jute, or jute butts, not bleached, not exceeding 16 threads to the square inch, weighing not less than 15 ounces per square yard, six-tenths of a cent per square yard.

Iron:

Pig, \$4 a ton.

Boiler, plate, not thinner than No. 10 wire gauge, sheared or un-sheared—

Valued at 1 cent per pound or less, five-tenths of a cent per pound.

Above 1 cent and not above 2 cents, six-tenths of a cent per pound.

Above 2 cents and not above 4 cents per pound, 1 cent per pound.

Valued at over 4 cents per pound, 25 per cent.

Boiler, plate, thinner than No. 10 wire gauge shall pay as iron or steel sheets.

Scrap, \$4 a ton.

Russian sheet, no specific provision for.

Pyrites, containing in excess of 25 per cent sulphur, free.

Ironware, manufactures of iron, not otherwise provided for, 45 per cent.

Jute, free.

Jute, dyed, 45 per cent.

Kainit, free.

Kaolin:

Ball clay, as clay unwrought, \$1 per ton.

Cornish stone, as crude mineral, free.

Kiln dried, for clearing wines, 20 per cent.

China clay, \$2.50 per ton.

Magnesite, Grecian:

Magnesite—

Crude, free.

Calcined and ground as cement, 20 per cent.

Ore:

Iron, 40 cents a ton.

Chrome, free.

Manganese, free.

Paint:

Ocher and ochery earths, crude or not powdered, washed or pulverized, one-eighth of a cent per pound; if powdered, washed, or pulverized, three-eighths of a cent per pound; if ground in oil or water, 1½ cents per pound.

Sienna and sienna earths, crude, not powdered, washed, or pulverized, one-eighth of a cent per pound; if powdered, washed, or pulverized, three-eighths of a cent per pound; ground in oil or water, 1½ cents per pound.

Paint—Continued.

Umber and umber earths, crude, not powdered, washed, or pulverized, one-eighth of a cent a pound; if powdered, washed, or pulverized, three-eighths of a cent per pound; ground in oil or water, 1½ cents per pound.

Paper stock:

Fit only for such use, free.

Flax card waste, free.

Jute waste, free.

Linen thread waste, free.

Linen waste, free.

Rag pulp, cotton, chief value, 45 per cent.

Tow, free.

Spruce, cull deals, \$1 a thousand feet.

Wood, free.

Paper:

Wall, 25 per cent.

Surface coated, not specifically provided for, 2½ cents a pound and 15 per cent if printed, or wholly or partly covered with metal or its solution, or with gelatin or flock, 3 cents a pound and 20 per cent.

Phosphate, concentrated, not specifically provided for.

Pickles of all kinds, not specifically provided for, 40 per cent.

Plate:

Tin or sheets, iron or steel, or taggers' iron or steel, coated with tin or lead or with a mixture of which these metals or either of them is a component part, by the dipping or any other process, and commercially known as tin plates, terne plates, and taggers' tin, 1½ cents per pound.

Tin, nickel plated, 1½ cents per pound.

Porter, in bottles or jugs, 40 cents per gallon; no additional duty on coverings; otherwise than in bottles or jugs, 20 cents per gallon.

Potash:

Carbonate of, free.

Muriate of, free.

Sulphate of, free.

Potassium, cyanide, 12½ per cent.

Preserves, 1 cent per pound and 35 per cent.

Proofing, fire, not specifically provided for.

Rice, brewers'; no specific provision for.

Salt:

In bags, sacks, barrels, or other packages, 12 cents per 100 pounds.

In bulk, 8 cents per 100 pounds.

Salt cake, \$1.25 per ton.

Salt-peter:

Crude, free.

Refined or partly refined, ½ cent per pound.

Sauces:

Apple, 1 cent per pound and 35 per cent.

French mustard, 10 cents per pound.

Other sauces, 30 to 40 per cent.

Sheep dip, liquid, powdered, or paste, free.

Silicon, not specifically provided for.

Soda:

Ash, three-eighths of a cent per pound.

Bicarbonate of, three-fourths of a cent per pound.

Caustic, three-fourths of a cent per pound.

Nitrate, free.

Sal, two-tenths of a cent per pound.

Silicate, one-half cent per pound.

Sulphate, \$1.25 per ton.

Spiegeleisen, \$4 per ton.

Starch, 1½ cents per pound.

Stoneware:

Common brown, 25 per cent.

Decorated, 60 per cent.

Plain white, 55 per cent.

Sulphur, crude, free.

Tile:

Valued not over 40 cents per square foot, 8 cents per square foot. Over 40 cents per square foot, 10 cents per square foot and 25 per cent.

Hard bodied, plain, unglazed, 4 cents per square foot.

Slate, 20 per cent.

Toys:

Dolls, doll heads, toy marbles of whatever materials composed, and all other toys not composed of rubber, china, porcelain, parian, bisque, earthen or stone ware, and not specifically provided for, 35 per cent.

Composed of bisque, china, crockeryware, earthenware, parian, porcelain or stoneware, plain white, 55 per cent; if decorated, 60 per cent.

Waters, mineral, all imitations of natural mineral waters and all artificial mineral waters not specifically provided for in green or colored glass bottles:

Containing not more than 1 pint, 20 cents per dozen.

Containing over 1 pint, not over 1 quart, 30 cents per dozen.

No additional duty on the bottles.

Otherwise than as above specified, 24 cents per gallon. Additional duty on coverings.

Whisky, \$2.25 per gallon.

Wine:

Chinese, \$2.25 per gallon.

Champagne and all other sparkling wines, in bottles—

Containing each not more than 1 quart and more than 1 pint,

\$8 per dozen.

Containing not more than 1 pint and more than one-half pint,

\$4 a dozen.

Containing one-half pint each or less, \$2 a dozen.

In bottles or other vessels containing more than 1 quart each,

in addition to \$8 a dozen bottles on the quantity in excess of 1 quart, \$2.50 per gallon, but no additional duty on the bottles.

Yarn, jute, single, not finer than 5 lea or number, 1 cent per pound and 10 per cent; finer than 5 lea or number, 35 per cent.

Zinc, chloride, 1 cent per pound; in solution, 25 per cent.

TABLE 12.—Customs duties upon articles mentioned in testimony which take class rates, with the classification of such articles in less than carload and carload quantities under the official classification.

Articles.	Customs duties.	Classification.	
		L. C.	L. C.
Acid.....	Acetic, 1.047 specific gravity and under, three-fourths of a cent per hundred pounds; over 1.047 specific gravity, 2 cents per pound; boracic, 5 cents per pound; chromic, 3 cents per pound; citric, 7 cents per pound; gallic, 10 cents per pound; lactic, 3 cents per pound; salicylic, 10 cents per pound; n. s. p. l. or oil of vitrol, one-fourth cent per pound; tannic, 50 cents per pound; tartaric, 7 cents per pound.		
Acetic, liquid, in barrels or iron drums.....		3	5
Boracic, chromic, citric, gallic, salicylic, n. o. s.—

Smoothed only, not polished.....	As sheets, common or black, and in addition two-tenths of 1 cent per pound.....		5

Mr. CUMMINS. I desire now, in order to bring this subject to date, to say that some time ago I addressed a communication to the Interstate Commerce Commission asking them to give me some information with regard to the existing rate on certain things, and I hold in my hand the reply of the commission to that request.

The first sheet is thus described by the commission itself:

Rates on grain, c. l.—

Which means carload, I suppose—

from points in Canada to points in the United States, compared with the rates on grain, c. l., from points in the United States for like distances to same points of destination.

This, Mr. President, is peculiarly interesting because we have now established free trade between the United States and Canada, or free trade on our part in these grains, and it is of the highest importance, therefore, that railroads shall not discriminate against our own producers of wheat or of grain and in favor of Canadian producers of grain. Everyone who knows anything about the subject knows that the discrimination of a cent a bushel, or even less than that, will give Canada our market as against our own farmers.

Now, I want the chairman of the Finance Committee to listen while I read not what may be done, but what is being done now.

Canadian points by way of Canada Northern Railway:

To Duluth, Minn., that being a point at which comparison can be made, the freight rate on grain from Emerson, Manitoba, 370 miles from Duluth, is 12 cents per hundred. The freight rate upon the same grain from Fairdale, N. Dak., 368 miles from Duluth, is 13 cents per hundred. So the grain buyer or the grain producer who lives in or near Emerson, or any point that takes the same freight rate, is now enabled to bring his grain to an American market over a distance of 370 miles for 1 cent per hundred pounds less than can his American competitor.

Mr. CLAPP. Mr. President—

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Minnesota?

Mr. CUMMINS. I do.

Mr. CLAPP. Are both those points on the same road?

Mr. CUMMINS. They are not. That is, these rates are not given over the same road. The rate that I have read from Fairdale, N. Dak., to Duluth is given over the Soo Line.

Again, Boynton, N. Dak., is 371 miles away from Duluth, and it pays 14½ cents per hundred pounds in order to get its grain to Duluth, while Winnipeg, which is 376 miles away, gets the grain of that vicinity at 12 cents per hundred pounds, and these same disparities exist with regard to barley and rye and flaxseed, all of which are mentioned and collected in the sheet to which I refer.

It can not be that the American Congress is willing that a discrimination of this sort shall be practiced against our own people in view of the fact especially that we have now withdrawn from the American farmer the protection which he has hitherto enjoyed.

Mr. CLAPP. Mr. President—

Mr. CUMMINS. I yield to the Senator from Minnesota.

Mr. CLAPP. More to elicit information, if the Senator has it, has the Senator any comparison there on the same line of railway, as a rate from a Canadian point to Duluth and a rate from a State point to Duluth?

Mr. CUMMINS. No; I have not. I assume there is no opportunity to make that exact comparison. There may be, however, I am not familiar enough with the situation to know whether there is or not.

Mr. CLAPP. Let me say that I was curious to know, as I had not given any personal investigation to it of late, whether

under the existing conditions as to the regulation of freight that would apply with reference to the same railroad.

Mr. CUMMINS. I will presently show just how the commission looks at this matter. I do not think, however, that what I will present will be an answer to the question just propounded. I do not know whether it would be permitted or not by the commission. I want to make it impossible for the commission to permit it.

Mr. CLAPP. If the Senator will pardon a further interruption—

Mr. CUMMINS. Certainly.

Mr. CLAPP. I rose merely for the purpose of ascertaining whether the Senator had that information.

Mr. CUMMINS. From Saskatoon, Canada, to Duluth, \$93 miles, the rate is 22 cents per hundred. The domestic rate from Billings, Mont., which is the same distance from Duluth, is 28 cents per hundred pounds. On flaxseed from Saskatoon to Duluth the rate is 23 cents and from Billings 30 cents, the distance being within a mile of the same.

I ask, Mr. President, to print, in connection with what I am now saying, the two sheets which have been furnished me by the Interstate Commerce Commission, and to which I have referred.

The VICE PRESIDENT. Is there objection? The Chair hears none, and permission is granted.

The matter referred to is as follows:

INTERSTATE COMMERCE COMMISSION,
DIVISION OF TARIFFS,
Washington, August 26, 1913.

MEMORANDUM.

Rates on grain, c. l., from points in Canada to points in the United States, compared with the rates on grain, c. l., from points in the United States of like distances to same points of destination:

¹ L. c. l.

² Per 100 pounds.

Mr. CUMMINS. I have also, Mr. President, a sheet furnished by the commission showing the disparity in rates upon some commodities and some classes of goods from the eastern coast into the West. They are substantially different from those I have already indicated and which existed several years ago, but inasmuch as they are of recent date I ask that this sheet may also be inserted.

Mr. NORRIS. I wish to ask the Senator a question.

Mr. CUMMINS. I yield to the Senator.

Mr. NORRIS. In connection with the other rates the Senator gave from the eastern coast, I wish he would give us some rates that he has tabulated there.

Mr. CUMMINS. The first-class rate on domestic products from Boston to Cleveland is 53 cents per hundred. The import rate is 48 cents per hundred. On the second class the domestic rate is 46 cents and the import rate 42 cents.

On the sixth class the rates are the same. On band iron, for instance (and that covers a very large class of iron), the domestic rate from Boston to Cleveland is 21 cents and the import rate is 17½ cents.

In some of these they have not given the domestic rate. They have not given the domestic rate upon meat; I do not know why; but while there are some commodities upon which the rates are the same, in by far the greater number the rate upon the domestic product is greater than upon the imported article of like kind.

Mr. NORRIS. Is that the commodity rate?

Mr. CUMMINS. The last I gave was the commodity rate.

Mr. POINDEXTER. I suppose that the statistics which the Senator has are confined to import rates as compared with domestic rates.

Mr. CUMMINS. Entirely.

Mr. POINDEXTER. They do not deal with the discriminations in the export rate of the railroads.

Mr. CUMMINS. They do not. I have not sought to include export rates, because they are in no wise connected with the tariff. Whatever discriminations may exist is properly a discrimination in favor of our own people against some foreign country, and I am not half as solicitous about that as I am about the discrimination against our own people.

Mr. POINDEXTER. On the contrary, the kind of export rates which I have in mind are discriminations against our own people. The only difference is the character of the discrimination. What the Senator is now referring to is a discrimination against the domestic shipper, and the rates I refer to are discriminations against our consumers of domestic goods—in both cases in favor of the foreigner. For instance, the State of Washington pays higher rates from Minneapolis, Chicago, and other eastern points than the export rates to Yokohama and Hongkong from the same points. They catch us going and coming.

Mr. CUMMINS. My amendment covers the import rate, of course.

Mr. POINDEXTER. I am speaking of the exports. However, that is a different subject.

Mr. CUMMINS. It is a different subject. There are discriminations in export rates that are entirely indefensible, but

inasmuch as they do not pertain in any way to the protection of the American producer, which I think is unduly taken from him in this bill, I have not sought to incorporate that subject into the amendment.

Mr. NORRIS. I wish the Senator would give us the date of this table.

Mr. CUMMINS. The date of the table I now have is August 26, 1913. I will send it to the desk.

After I presented the amendment, Mr. President, some time ago, I received a letter from the Standard Rice Milling Co., of Austin, Tex. I will not read the letter, as the whole of it would not be material to the subject I am discussing, but I desire to read a part of it:

The following are the rates quoted us on domestic and imported brewers' rice by the railroads, applying from Galveston, Tex., to the points named below: To Chicago, Ill.,—domestic rate, 28 cents; imported rate, 15 cents.

I pause here to say that evidently the common carriers are given the same rate from the point of origin for this rice, whether Japan, China, Java, or wherever it may be grown, to the point of consumption as is given from Galveston to the point of consumption or to the market.

To La Crosse, Wis., the domestic rate is 29½ cents, and the imported rate 24½ cents.

To Milwaukee, Wis., domestic rate, 30; imported rate, 15.

To Minneapolis, Minn., domestic rate, 29½; imported rate, 24½.

To Quincy, Ill., domestic rate, 24; imported rate, 15.

To St. Louis, Mo., domestic rate, 20; imported rate, 15.

To St. Paul, Minn., domestic rate, 29½; imported rate, 24½.

To Cincinnati, Ohio, domestic rate, 26½; imported rate, 15.

To Peoria, Ill., domestic rate, 28; imported rate, 17.

And so on throughout the list, which means practically all the States in the northern part of our country. Mr. President, I ask that I may be permitted to insert this table as a part of my remarks.

The VICE PRESIDENT. It may be inserted.

The table referred to is as follows:

Following are the rates quoted on domestic and imported brewers' rice by the railroads applying from Galveston, Tex., to the points named below:

To Chicago, Ill., domestic rate, 28 cents; import rate, 15 cents.
To La Crosse, Wis., domestic rate, 29½ cents; import rate, 24½ cents.
To Milwaukee, Wis., domestic rate, 30 cents; import rate, 15 cents.
To Minneapolis, Minn., domestic rate, 29½ cents; import rate, 24½ cents.

To Quincy, Ill., domestic rate, 24 cents; import rate, 15 cents.
To St. Louis, Mo., domestic rate, 20 cents; import rate, 15 cents.
To St. Paul, Minn., domestic rate, 29½ cents; import rate, 24½ cents.
To Des Moines, Iowa, domestic rate, 28 cents; import rate, 28½ cents.
To Cincinnati, Ohio, domestic rate, 26½ cents; import rate, 15 cents.
To Peoria, Ill., domestic rate, 28 cents; import rate, 17 cents.
To Council Bluffs, Iowa, domestic rate, 28 cents; import rate, 15 cents.
To Omaha, Nebr., domestic rate, 28 cents; import rate, 23 cents.
To Fort Dodge, Iowa, domestic rate, 39 cents; import rate, 23 cents.
To Fort Scott, Kans., domestic rate, 32 cents; import rate, 20 cents.
To Dubuque, Iowa, domestic rate, 35 cents; import rate, 22 cents.
To Leavenworth, Kans., domestic rate, 32 cents; import rate, 20 cents.
To Alton, Ill., domestic rate, 35 cents; import rate, 15 cents.
To Cedar Rapids, Iowa, domestic rate, 38 cents; import rate, 25.0 cents.

To Jefferson City, Mo., domestic rate, 25 cents; import rate, 20 cents.
To Lincoln, Nebr., domestic rate, 37 cents; import rate, 26 cents.
To Ogden, Utah, domestic rate, \$1.04; import rate, 68 cents.
To Salt Lake City, Utah, domestic rate, \$1.04; import rate, 68 cents.
To St. Joseph, Mo., domestic rate, 32 cents; import rate, 20 cents.
To Atchison, Kans., domestic rate, 32 cents; import rate, 20 cents.
To Sioux City, Iowa, domestic rate, 37 cents; import rate, 25 cents.
To Springfield, Mo., domestic rate, 32 cents; import rate, 20 cents.

Mr. CUMMINS. I need not go further with regard to the facts which are known to everybody. I have read these illustrations that it might be known that I am not trying to legislate against a phantom. It is a real condition and it is a serious one to the American producer.

I now refer to the law of the matter, and that I can do very briefly. When the interstate-commerce act was passed in 1887 most people believed that it prohibited, as a matter of law, just such discriminations as I have cited, just as most people believed that it conferred upon the commission the power to fix a rate after it had condemned a rate that had been established by the railway company.

I have now no doubt, speaking for myself alone, that the original act prohibited just such disparities as I have been reciting.

Any fair, reasonable interpretation of the law must reach that result, and so thought the commission and so ruled the commission for years. One of their very luminous decisions upon this question occurred in 1891, in the case of the Commercial Exchange of Philadelphia and the San Francisco Chamber of Commerce against the Pennsylvania Railroad Co. and a great many other railroad companies, practically all the railroad companies in the United States.

The very question I am now discussing arose before the commission, namely, whether an imported commodity should be carried from New York to Chicago at a lower rate than a simi-

lar commodity produced in the United States and given to the railroad company or the common carrier at that point for the first time.

The Interstate Commerce Commission upon that hearing—and it was a very extensive and careful hearing—ruled that the law of 1887 required the railroad companies of this country to carry freight under those conditions for a like rate, and that any difference between the rates brought about by the fact that one article may have been imported from abroad and the other article produced in the United States was an unfair and an unjust and an unreasonable discrimination against the domestic producer.

That remained for some time the accepted law of the country; it remained for some time the rule of the Interstate Commerce Commission; but in 1896 a case reached the Supreme Court involving that construction of the law. Indeed the case was one brought to enforce the very order to which I have referred, to carry out the ruling that had been made in the case which I have already mentioned. Then the Supreme Court of the United States held that, as a matter of law, there was no discrimination by allowing different rates upon like commodities, one being shipped from abroad and one having originated in the United States.

Senators will remember that this was about the time that the Supreme Court of the United States seemed to be industriously engaged in limiting the powers of the Interstate Commerce Commission. It was just before we entered upon that era when real life was given to the commission; it was just a year later, as Senators will remember, that the Supreme Court held that the act of 1887 did not give to the commission the power to fix a rate for the future after it had rejected one that had been established by the railway company on account of its unreasonableness or on account of its discrimination; but, at any rate, the court held in the case to which I have referred—it being the case of the Texas Pacific Railway against the Interstate Commerce Commission, in one hundred and sixty-second United States Reports, page 197—that the shipment from abroad must be examined from exactly the same standpoint as the shipment at home, and that the same rule that permitted the commission to authorize or to approve a regulation to charge a less rate per ton per mile for a long haul than for a short haul permitted a lesser rate proportionately to be charged upon freight shipped from a foreign country; and it remitted the whole subject to the commission with the direction that in each case the commission must determine, as a matter of fact, whether a discrimination existed. Since that time these discriminations have been permitted. It is to change the law that I introduced this amendment.

Without any censure or criticism of the Supreme Court, I find an interpretation of the law of 1887 that is not in accordance with the intent of its authors; that is not in accordance with the best thought of the American people; that is not just. Therefore I desire to change it and treat shipments coming from abroad a little differently from the way in which we treat shipments originating in our own country.

Just a moment with regard to the long and short haul idea.

Mr. GALLINGER. Mr. President—

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from New Hampshire?

Mr. CUMMINS. I do.

Mr. GALLINGER. Before the Senator reaches that point in his argument, will the Senator tell me, if he can, why it is that these arrangements are made with the shipper of foreign goods that their shipments shall be carried over the American railroads at a less rate than the products of our own people are carried?

Mr. CUMMINS. I do not know why the Interstate Commerce Commission permits it. I do know that the Supreme Court has held that the law does not require foreign products to be carried at the same rate that domestic products are carried; and the Interstate Commerce Commission, looking at a shipment originating in Liverpool and ending in Chicago, treats the shipment as one covering 4,000 miles and, therefore, entitled to be carried at a less rate per ton per mile than in case the shipment were only a thousand miles. Of course, after reaching that kind of result, the proportion which the American railroad receives from the entire haul must be less than is charged to the domestic shipper.

Mr. GALLINGER. That is, they count the water transportation as a part of the haul?

Mr. CUMMINS. They do. That is the very theory upon which the Supreme Court proceeded in its construction of the act of 1887.

Mr. WARREN. And the object, of course, of those interested in the merchandise is to get it delivered to the destination at a

lower price than the local home product could be delivered at the same place?

Mr. CUMMINS. Precisely. One of the instances which appeared in the case to which I refer before the Interstate Commerce Commission was this: The rate on dry goods from Liverpool to San Francisco through New Orleans was \$1.17 a hundred, and the rate on dry goods from New Orleans to San Francisco was \$3.74 a hundred. The whole traffic at that time was full of such glaring instances of discrimination.

Mr. GALLINGER. It would seem that it comes pretty near nullifying any advantage that might arise from the tariff duties.

Mr. CUMMINS. The Senator from New Hampshire was not here, I think, when I put into the Record a report of the Interstate Commerce Commission made in 1903 under a resolution of the Senate, which was intended to discover to what extent this discrimination had nullified the protection that had been given to our own industries. In one of the tables that will be printed it will be found just how far this discrimination invaded the protection that had been given by the law. In many of the commodities the difference in the transportation charge between domestic products and foreign products over our own soil was more than the duty itself.

Mr. GALLINGER. Mr. President, I regret that I was unavoidably kept out of the Chamber when the Senator discussed that feature of this most interesting question. I am very glad that it has gone into the Record, and I will now take the liberty of saying, if the Senator will permit me one moment, that I am in profound sympathy with the effort the Senator is making to remedy this very flagrant evil, as I regard it.

Mr. CUMMINS. Mr. President, I was about to comment upon the reason which does allow a lesser charge per ton per mile for a long haul than a short haul. It is said, first—and it is true probably—that the cost of service per ton per mile is slightly less. Why? Because the terminal expense is distributed over a longer distance and results, therefore, in a lesser cost per mile. The second reason—and I desire Senators to mark that, because it is a part of the history of the development of this science in America—the second reason is to bring every part of the United States as closely together as possible, to bring the producing regions close to the consuming regions, to annihilate distance, in other words, because it is believed that it results in the welfare of all the people. For that reason the rate of freight on butter from my own State to Boston is not much greater than the rate on butter from New Hampshire to Boston.

Whether or not that can be defended I will not pause to inquire. I only know that it is inspired and founded upon the patriotic sentiment that we are one country, that we ought to bring ourselves as close together as it is possible to do, and therefore, we do permit, in many instances, the carriage of freight over long distances at a greatly disproportionate rate as compared with a shorter distance.

But I beg you to reflect and to ask yourselves whether that should apply to the foreign producer? Is it our purpose to apply that same patriotic sentiment to the development of foreign enterprises? Do we desire by the application of this rule to bring the foreign producer, our competitor, into our market upon the application of the same principle? I disclaim it. I want to do our rivals abroad justice, but I am not willing to confer upon them the same privileges that we are willing to confer upon our own distant producers. If we waive what might be called the strict rule of transportation in favor of an American, we are not compelled to waive it in favor of those across the sea.

Mr. BRANDEGEE. Mr. President—

Mr. CUMMINS. I yield to the Senator from Connecticut.

Mr. BRANDEGEE. I wanted to ask the Senator, who evidently has given a great deal of attention to this matter, whether it is his idea that unless this cheaper rate were given to the product of the foreign country the railroad would not get the business?

Mr. CUMMINS. The railroad would get the business. If the foreign product comes to the United States, it has to employ a railroad to get very far into the United States after it reaches our ports.

Mr. BRANDEGEE. Certainly; but the object of my inquiry is to find out if the foreign producer knew that he would have to pay the same rate as is charged to our domestic producer in the limits of our country, whether the market would sustain him in shipping his product to this country?

Mr. CUMMINS. Mr. President, that question can not be answered generally and with either yes or no; but under the bill which we are about to pass, with its greatly reduced duties,

I think the foreign producer will be able to enter our markets with a great many articles and take our markets, even though he is compelled to pay the same freight rate as his domestic competitor. There may be some articles of which it would be true that, with the enforcement of a reasonable freight rate, he would not be able to enter our markets; but that would not displease me. If, with a fair rate of duty and with a fair rate of transportation, the foreign producer can not compete in our markets with our own people, it is not an occasion, I think, for concern. They have hitherto enjoyed privileges that have not been accorded to our own people, and I now want to remit them to their proper position in the commercial world. Then, if they can compete with us, well and good; but, if they can not, they must suffer the consequences.

Going back for a moment to the rule that controls the lesser charge per ton per mile for the longer distance, allow me to say that there is no difference between foreign freight and home freight so far as the expense of handling it is concerned. If I ship a carload of merchandise from New York to Denver and it passes over the New York Central to Chicago and is there transferred to the Chicago, Rock Island & Pacific and is carried to Denver, there is no terminal charge or cost save that which attaches either to its beginning or to its end; but if I load a carload of freight at a point 300 miles away from Denver and consign it to that city, there is practically the same terminal charge that was incurred in the shipment of 2,000 miles. When freight comes from abroad it is not transferred upon our shores by switching a car and putting it into a train; it is transferred by picking it up and loading it into a car, and it bears no other relation to the transportation of the country than though the same freight were loaded into the car at the initial point.

There is no reason in the through rate or the single charge for freight from points in other countries to points in our own country, because it all comes here on shipboard—that is, I am now speaking of the freight that involves water carriage. It must all be moved from the hold of the ship to the car that is to transport it, and therefore there is no expense saved on the part of a common carrier in taking its freight from the ship as compared with taking its freight from the warehouse of the domestic producer or the domestic shipper. I challenge the citation of any reason whatever, either from the standpoint of the cost of the service or the standpoint of the good of the country, that will lead to a lower charge for a carload of merchandise that comes to America from other countries than for a carload of merchandise that is given to the carrier within the borders of our own country.

Mr. BRANDEGEE. Mr. President, that recurs again to the topic about which I interrogated the Senator a few moments ago. I trust the Senator does not think that in asking these questions I am disagreeing with him. I am inclined to agree with him as at present advised, but I am wondering why this discrimination is granted.

I assume that the railroad would like to get a higher rate, and charges all it can get. The Senator says it does give to the foreign product a lower rate, considering the joint rate covering rail and water transportation. Does the Senator know whether or not under the present tariff schedules the roads could get the business if his amendment prevailed?

Mr. CUMMINS. I do know that there is a great deal that comes from abroad under the present tariff schedule. The proposed tariff schedule is very much lower than the present one; and if anything can come in from abroad under the present tariff schedule more will come in from abroad under the proposed tariff schedule, even though the importer is required to pay a higher freight rate into the interior.

Mr. BRANDEGEE. But still I do not arrive at an answer to the question which I asked, which is, What is the Senator's opinion as to why the railroads give this lower rate now under the proposed tariff or irrespective of the tariff? Why do they discriminate in favor of the foreign producer?

Mr. CUMMINS. Simply for this reason: They make a rate from the foreign country to the interior point in our country. That rate is ordinarily higher, of course, than any local rate in our own country; but in dividing that rate the railroad company is willing to take, and does take, less than the rate which the law has established, or which it has established for a like carriage within our own country.

I can not answer whether or not a particular foreign importer will be able to do business here, if my amendment prevails, without first inquiring into the reduction that is made in the duty upon the article, and comparing that with the disparity in the freight rates.

For instance, I suggested a few moments ago the fact that a crate of crockery, as I remember, coming from abroad through one of our ports to Chicago, had an inland rate of 15 cents a hundred pounds; but if a domestic pottery made the shipment and put it in a car it had to pay 18 cents a hundred pounds for carriage over the same distance to the same point. Baltimore, with its pottery, has to pay a good deal more to get its product to Cincinnati or to Chicago or anywhere in the West than the importer of crockery at Baltimore has to pay when his material comes in.

I have not inquired in each particular instance what effect it would have upon imports. I want to apply a rule which is just and fair and allow the consequences to be whatever they may be. It matters not to me whether or not the foreign manufacturer or producer can endure the change. If he has to have a bounty to do business in America, I do not want him to do business here.

Mr. BRANDEGEE. Mr. President, if the Senator will allow me, I assume that even the preferential rate which the Senator states is now given to the foreigner is a profitable rate to the railroad or else it would not give that rate.

Mr. CUMMINS. I believe it is. Therefore I have provided that in adjusting themselves to this amendment, if it shall become a law, the railroads shall not be permitted to raise the import rate to the domestic rate without the approval of the Interstate Commerce Commission. The rates are not to be raised unless application is made to the commission and approval is given for the increase. I assume that these rates are remunerative; and therefore, until the commission acts, the domestic rates must be reduced to the foreign or import rates.

Mr. President, as usual, I have discussed this matter at much greater length than I had originally intended. I believe it involves a most important question. I believe it is intimately connected with the tariff law. My friends on the other side may reject it with the scorn that was intimated by the Senator from Mississippi [Mr. WILLIAMS] a day or two ago. He may treat it lightly; but there will come a time when the American people will insist upon fair and decent justice in this regard, and it will not be sufficient to say to them that the amendment has no home in a tariff bill. Its very purpose is to repair, in some degree, the losses that may be sustained through undue reductions in import duties. But whatever the purpose may be, I can not conceive of any sufficient answer save the answer the amendment proposes, namely, to take away from foreign countries the unjust advantages they now enjoy.

I ask for the yeas and nays on the amendment.

Mr. SIMMONS. Mr. President, I do not desire to enter upon any discussion of the amendment proposed by the Senator from Iowa, and I do not wish to deny that his amendment has merit in it. It will be observed, however, that the amendment deals only with rates upon articles imported into this country, and seeks to prevent a discrimination in freight rates in favor of those articles as against articles produced in this country. It does not apply in its terms—it does not pretend to so apply—to any discriminations that are made by the railroads in favor of articles exported from this country to foreign countries.

Of course it would be very easy for the Senator to say that the committee might have amended his amendment so as to extend the principle of it to articles exported as well as to those imported. We have not done this, because we did not deem it expedient to undertake to deal with the question of railroad rates in this bill. The Senator has described the gross discrimination practiced by the railroads with reference to transportation charges upon articles of import as compared with rates charged upon articles of domestic consumption. The Senator could have found just as striking cases of discrimination in rates on different articles transported from one section to another section of this country as he has presented to the Senate upon articles imported from abroad into this country.

It is evident that there is something radically wrong in our legislation with reference to railroad rates. In recent years a good deal of the time of the Senate and the House has been occupied in efforts to remedy these evils; but up to this time we have not succeeded in getting at the root of the evil.

Everybody knows that if justice is to be done to the shippers of this country there must be radical reformations in our railroad legislation, and that the powers of the Interstate Commerce Commission must be greatly enlarged in order to enable that body to deal effectively with this great and vital question.

How that is to be done I will not now attempt to discuss. Heretofore I have been rather disposed to support a proposition to eliminate from our legislation the troublesome clause, "under similar conditions and circumstances," which so greatly circumscribes to the powers of the commission and out of which I think much of the trouble has originated. It may be that we shall

in the end find that the Interstate Commerce Commission can not adequately deal with this situation without eliminating that clause and giving it plenary powers to deal with each situation. The question is a large one, and one to which we should give thorough investigation and consideration before action.

I do wish to say, without any reference to the merits of the amendment proposed by the Senator from Iowa, the committee thought, after consideration, that it was best not to undertake in the tariff bill to deal with the railroad question. We thought it was best, in dealing with the tariff, to confine ourselves to the single proposition of reforming and revising the tariff, and in dealing with the currency question we should confine ourselves to reforming and revising our currency legislation. When we shall have settled these great questions, as we hope to do at this session, we will take up the trust and the railroad questions and deal with them as broadly and as comprehensively as we are now dealing with the tariff and the financial questions.

Mr. President, I arose only to give expression to the opinion of the committee that it was not expedient to encumber this bill with the subject matter of the amendment of the Senator from Iowa. I wish we had the time, before the special session ends, to remedy the admitted evils in our railroad legislation. But I think we all feel that when we shall have dealt with the tariff and with the currency we shall be entitled to a little vacation before the next session. At the next session I assure the Senator it is the purpose of the Democratic Party to take up the trust question and the railroad question, and to consider both in an effective and comprehensive way.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Iowa [Mr. CUMMINS], upon which the yeas and nays have been demanded.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I am paired with the junior Senator from Michigan [Mr. TOWNSEND], and therefore withhold my vote. If I were at liberty to vote, I would vote "nay."

Mr. CHAMBERLAIN (when his name was called). I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence I withhold my vote.

Mr. STERLING (when Mr. CRAWFORD's name was called). I again announce the necessary absence of my colleague [Mr. CRAWFORD]. He is paired with the senior Senator from Tennessee [Mr. LEA]. If present and at liberty to vote, my colleague would vote "yea."

Mr. LEA (when his name was called). I again announce my pair with the Senator from South Dakota [Mr. CRAWFORD]. If I were at liberty to vote, I would vote "nay."

Mr. MARTIN of Virginia (when his name was called). I will state that I am paired with the Senator from Vermont [Mr. PAGE], and therefore refrain from voting. If at liberty to vote, I would vote "nay."

Mr. MYERS (when his name was called). I am paired with the Senator from Connecticut [Mr. McLEAN], and on account of his absence I withhold my vote. If at liberty to vote, I would vote "nay."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from California [Mr. PERKINS]. He being absent, I will withhold my vote. If at liberty to vote, I would vote "nay."

Mr. THOMAS (when his name was called). I make the same transfer as heretofore announced, and vote "nay."

The roll call was concluded.

Mr. CHILTON. I wish to inquire whether the junior Senator from Maryland [Mr. JACKSON] has voted?

The VICE PRESIDENT. He has not voted.

Mr. CHILTON. I have a pair with that Senator, and can not vote for that reason.

Mr. JAMES. I am paired with the junior Senator from Massachusetts [Mr. WEEKS], and therefore withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. REED. I have a pair with the Senator from Michigan [Mr. SMITH]. I transfer that pair to the Senator from Arizona [Mr. ASHURST] and vote "nay."

Mr. CLARKE of Arkansas (after having voted in the negative). I desire to ask whether the junior Senator from Utah [Mr. SUTHERLAND] has voted?

The VICE PRESIDENT. He has not.

Mr. CLARKE of Arkansas. I withdraw my vote.

Mr. DILLINGHAM. I wish to announce that my colleague [Mr. PAGE] is paired with the senior Senator from Virginia [Mr. MARTIN].

Mr. SMOOT. I desire to announce that the junior Senator from Idaho [Mr. BRADY] was called from the Chamber. If he were here, he would vote "yea."

Mr. SMITH of Georgia (after having voted in the negative). I wish to withdraw my vote. I am paired with the senior Senator from Massachusetts [Mr. LODGE], and he has not voted.

The result was announced—yeas 24, nays 33, as follows:

YEAS—24.			
Borah	Colt	Kenyon	Poin Dexter
Bradley	Cummins	La Follette	Root
Brandegee	Dillingham	Lippitt	Sherman
Bristow	Fall	Nelson	Smoot
Cañon	Gallinger	Norris	Sterling
Clapp	Jones	Penrose	Warren
NAYS—33.			
Bacon	O'Gorman	Sheppard	Thomas
Fletcher	Owen	Shields	Thompson
Hitchcock	Pittman	Shively	Thornton
Hollis	Pomerene	Simmons	Vardaman
Hughes	Ransdell	Smith, Ariz.	Walsh
Johnson	Reed	Smith, Md.	Williams
Kern	Robinson	Smith, S. C.	
Lane	Saulsbury	Stone	
Martine, N. J.	Shafroth	Swanson	
NOT VOTING—33.			
Ashurst	Crawford	Lodge	Smith, Ga.
Bankhead	Culberson	McCumber	Smith, Mich.
Brady	du Pont	McLean	Stephenson
Bryan	Goff	Martin, Va.	Sutherland
Burleigh	Gore	Myers	Tillman
Burton	Gronna	Newlands	Townsend
Chamberlain	Jackson	Oliver	Weeks
Chilton	James	Overman	Works
Clark, Wyo.	Lea	Page	
Clarke, Ark.	Lewis	Perkins	

So Mr. CUMMINS's amendment was rejected.

Mr. PENROSE. Mr. President, I desire to offer an amendment to come in at the end of the free list. I should like to have the amendment read.

The VICE PRESIDENT. It will be read.

The SECRETARY. On page 164, after line 5, at the end of section 1, insert:

That whenever articles are exported to the United States of a class or kind made or produced in the United States, if the export or actual selling price to an importer in the United States or the price at which such goods are consigned is less than the actual market value or wholesale price of the same article when sold for home consumption in the usual and ordinary course in the country whence exported to the United States at the time of its exportation to the United States, there shall, in addition to the duties otherwise established, be levied, collected, and paid on such article on its importation into the United States a special duty (or dumping duty) equal to the difference between the said export or actual selling price of the article for export or the price at which such goods are consigned and the said actual market value or wholesale price thereof for home consumption in the country of exportation, and such special duty (or dumping duty) shall be levied, collected, and paid on such article although it is not otherwise dutiable: *Provided*, That the said special duty shall not exceed 15 per cent ad valorem in any case, and that goods whereon the duties otherwise established are equal to 50 per cent ad valorem shall be exempt from such special duty.

"Export price" or "selling price" or "price at which such goods are consigned" in this section shall be held to mean and include the exporter's price for the goods, exclusive of all charges thereon after their shipment from the place whence exported directly to the United States.

Invoices of such goods shall show in parallel columns the export or selling price or price at which the goods are consigned and the actual market value or wholesale price thereof for home consumption in the country of exportation, and the Secretary of the Treasury shall make such rules and regulations as are necessary for the carrying out of the provisions of this section and for the enforcement thereof.

Mr. WILLIAMS. I wish to ask the Senator from Pennsylvania a question. Is not this the dumping clause as it came over from the House?

Mr. PENROSE. No; it goes much further. I was going to explain it briefly to the Senate.

Mr. WILLIAMS. In what part of the bill does the Senator propose to insert it?

Mr. PENROSE. The dumping clause as it came from the House applied only to dutiable articles. This applies also to the free list. Therefore I thought it might come in here. It also could come in after the administrative clause. But I do not think the Senator need raise that point. We might as well dispose of it now as at any other time.

Mr. WILLIAMS. I was going to suggest to the Senator that it had better come in in its regular place.

Mr. PENROSE. As the amendment is not expected to get very far, I hope it may come up now.

Mr. WILLIAMS. All right. I am willing to consider it now.

Mr. PENROSE. Mr. President, this amendment has been drawn with very great care. It goes considerably further than the House provision. In my opinion, there is nothing more desired by the manufacturers of the country than some kind of a dumping clause to be embodied in our tariff law. It is surprising to me that we have not heretofore had some kind of a provision in the protective tariff acts that have been passed during the last 16 years.

Many duties in the pending bill are greatly reduced. The chief use of the duties in a great many cases under the protective system has been to act as a dumping barrier. With the reduction in duties it becomes all the more important to have some kind of a dumping clause in the present bill.

In the pending tariff bill as it passed the House of Representatives there was embodied in the then section 4, now section 5, a subdivision lettered R, which has become somewhat well known under the colloquial designation of the "anti-dumping clause." Briefly stated, it was a statutory provision relating to imported goods which were sold or consigned to the United States at prices lower than at the prices at which such goods were sold for home consumption in the country of exportation. It imposed upon such goods, in addition to the regular duty thereon, a special duty, or dumping duty, equal to the difference between the special export price and the fair market price thereof for home consumption. It extended only to dutiable goods, provided that in no case should it exceed 15 per centum ad valorem, and did not apply at all to goods on which the regular duty equaled 50 per cent. This was new legislation, and in reporting it to the House the chairman of the Ways and Means Committee and his associates made the following remarks:

Paragraph R is new legislation and provides for a dumping duty to guard the producers of the United States against the demoralization of American markets caused by the exportation from foreign countries of articles into the United States at prices less than the fair market value of the same articles when sold for home consumption in the usual and ordinary course in the country from whence they are exported to the United States. We have endeavored to reduce the duties provided for in the present law to a revenue basis, expecting reasonable and fair competition at normal prices, and we are of the opinion that this paragraph will have a tendency to maintain steady and continuous importations all along the line and prevent the demoralization of American markets when abnormal conditions exist abroad, and at the same time have a tendency to maintain a continuous and normal flow of revenue into the Federal Treasury at all times.

This paragraph originated in a Democratic Ways and Means Committee. It was strongly supported on the floor of the House in speeches by two of the Democratic members of that committee, and it passed the House of Representatives by a unanimous vote. It would seem that a measure with such a legislative pedigree would have found favor with the majority members of the Senate Finance Committee as well, but when this bill was reported to the Senate this paragraph was found to have been stricken out entirely and it is no longer in the bill. The following explanation of this action was given by the Finance Committee majority in its report on the pending measure:

We struck out the dumping clause of the House provision, first, because it applied to only dutiable articles, and if to be applied to any articles at all it seemed to us it ought to apply to all; secondly, if it did apply to all it was capable, under an unfriendly administration, of being used as a means of increasing the duty upon dutiable articles 15 per cent, and of putting articles upon the free list under a duty of 15 per cent.

The provisions contained in the existing law with regard to under-valuations and the increasing tax because of it up to 70 per cent is a very good antidumping provision, and, as we are informed and believe, immediately stopped dumping in the American market, and this, too, without making it discretionary with any executive officer (to be exercised in a broad way) to raise the duty.

I shall refer to these objections later on and I hope to demonstrate that one of them has no basis in fact and that the other can be easily mended. They are cited at this point only because they are a part of the history up to the present time of the antidumping clause.

Mr. President, the amendment I have proposed, apart from some slight verbal changes, differs from the provision which came to the Senate in the important feature that its scope is extended so that it applies to free goods as well as to dutiable goods. The Finance Committee majority was of the opinion that if it applied to any articles at all it should apply to those that are free of duty as well as to articles that are dutiable, and I am glad to express my cordial concurrence with my brethren of the committee in this belief.

There is great intrinsic merit in this proposed provision, and in view of the extremely heavy reductions which the bill makes in tariff rates, the amendment is nothing more than common fairness to American growers, producers, and manufacturers. The oft-proclaimed purpose of the majority is to bring about a free and fair competition on even terms between the foreigner and the American, and this amendment is intended to and will have that effect and no other. It must be obvious that you can not have a fair competition unless the competitors are placed on even terms, and this is not the case if the foreigner is permitted to dump his surplus on our markets at prices that do not represent fair or normal conditions of trade and that sometimes are, in fact, below cost. It has been shown time and time again that it is quite common for foreign houses to sell their products for export to the United States at prices mate-

rially lower than they sell them for home consumption, and it has also been shown that in this practice they are not only encouraged but actually aided by their Governments in the way, for example, of preferential rates on State railways for goods intended for exportation. Now, what is this but a species of bounty on exported goods? And when you give the foreigner the privilege of doing this are you not in effect nullifying to an extent the terms of that other provision which you have retained in the law (par. E, sec. 5) and which directs that the amount of any bounty paid upon exportation shall be added to the duties otherwise imposed by this act? The foreign governmental approval and encouragement of the practice of selling goods cheaper abroad than at home is really a tax upon home consumption for the benefit of the export trade and is, in fact, a bounty upon exportation. Because it is not a direct payment it does not fall within the letter of the countervailing duty provision (par. E, sec. 5), and hence it can not be reached through that provision. This circumstance is another reason for the passage of this proposed amendment.

This practice on the part of European nations of dumping their surplus products into foreign markets—and into our markets in particular, for this country, with its vast population and buying power, is ideal for that purpose—has attained astounding proportions in these later days owing to two causes: First, the gigantic development of manufacturing industries in European countries, resulting in a production that can not possibly be absorbed by the home country and must be exported; and, second, the organization and maintenance in European countries of syndicates, conventions, or cartels, as they are variously called, the openly avowed, approved, and effectually accomplished purpose of which is to fix and maintain selling prices in the country of production, punishing any deviation from fixed prices by fines and penalties which are specified in and are part of the convention or agreement. These conventions or agreements sometimes include several European countries, but they always leave the members of the syndicate, convention, or cartel at perfect liberty to sell at whatever price they please in countries that are not included in the convention. Right here I should like to remind the Senate that agreements of this character, which would be made the subject of a criminal prosecution in this country, do not at all incur the disfavor of the Government in foreign countries, but, on the contrary, are actually fostered and encouraged by them. As a matter of fact, the Prussian Government is a partner in the great potash syndicate which controls the world's supply. A very interesting description and discussion of the great German syndicates in the chemical industry will be found in the "Report on Schedule A," made by the Ways and Means Committee of the Sixty-second Congress, second session, on House bill 20182, Report No. 326, page 378 et seq. I referred to it a day or two ago in this Chamber in the discussion of the chemical schedule.

It may be objected that such a provision as this is not in harmony with the general purpose of this bill in that it savors of protection and might deprive the ultimate consumer of the benefit of competition. To that I answer that it is strictly in accord with the repeatedly announced purpose of the pending bill for it does precisely what the bill aims at, namely, it preserves competition by preserving the competitors. It is better by far when there are two competitive groups that both groups shall continue to exist and compete rather than that competition should be wholly eliminated by the destruction of one of the groups of competitors. Such a consummation is not to the public benefit. Since we pass laws and create a commission for the purpose of preventing railroads from bankrupting themselves by cut-throat competition in rates, may we not in framing our tariff laws keep in mind the desirability of preserving competition by preventing the destruction at least of American competitors? This must appeal to all, whether of the high tariff, low tariff, or tariff for revenue persuasion.

I am not asking in the guise of this amendment for a tariff wall to protect American producers from fair competition. Expose them to the severest competition if you will—and you seem bound to do so—but at least be fair and give them an even chance. They do not get an even chance when we permit our markets to be glutted with foreign goods dumped here at prices with which it is hopeless to compete. No commercial or manufacturing enterprises can stand up against such a competition, and it is not an honest competition in the broad sense. The principle underlying my contention is the essential unfairness and the economic unsoundness of this abnormal cutthroat competition. Taking a broad view, this practice on the part of foreign manufacturers of dumping vast quantities of their products on the American market, often at an actual loss, in competition with domestic goods manufactured and sold at honest prices that are regulated by normal but active competi-

tion, is really against public policy. It is surely for the best interests of the State as well as of the individual citizen that workers should have at all times steady remunerative employment. But this is not possible when foreign goods are suddenly dumped into the market place where the products of the American workers must find sale at prices which make competition hopeless.

It seems to me that it is quite as desirable to avoid the great losses to producers and manufacturers, caused by the disturbing of values consequent upon the dumping of extraordinary and unusual quantities of foreign goods upon the American market, as it is to prevent an extraordinary and unusual boosting of prices consequent upon a cornering of said market. No permanent good comes from a ruinous competition that results in the elimination of all the competitors except one or a few. Somewhere, somehow, and sometime the community must make up those losses.

The merits of my amendment can not be set forth in better language than that chosen by one of the majority members of the Ways and Means Committee when the antidumping clause was under discussion on the floor of the House of Representatives. I quote from the speech of Mr. PETERS, which will be found in the CONGRESSIONAL RECORD of May 7, 1913, page 1365:

Another feature of this new provision is that there will be increased stability in prices. The dumping duty will discourage foreign countries from unloading a large temporary surplus on our markets, which tends for a period to disturb prices and to unsettle business. This provision, obviously, will be a great benefit to the American producer.

An indirect benefit, and a very important one, which arises from increased uniformity in prices and the absence of unnatural fluctuation in market values is that the revenue of the Government will be more dependable and more accurately estimated. This tariff bill has been drawn on a revenue basis. We wish to make sure that there will be sufficient funds available to run the Government. On the other hand, we do not wish an unwarranted surplus, which means excessive taxation. In order to determine with any exactness the amount of revenue to be expected from the different tariff schedules, we must have a definite basis for our calculations. The market values of articles in the country from whence exported are easy to ascertain, and will afford the assistance which is so essential to a satisfactory administration of our customs laws.

Mr. President, while such a provision as this is new in our tariff legislation, it has been thoroughly tried in the neighboring country of Canada under conditions of importation which closely approximate those of our own country. Since 1904 there has been in effect in Canada an antidumping clause, which was first enacted to save the wire-rod industry from extinction, threatened by extensive dumping of wire rods into Canada. This was found to be so satisfactory in operation that it was made a part of the Canadian customs act of 1907, and it was extended so as to apply to articles on the free list. I have information from gentlemen who have personally investigated the workings of the Canadian act that it has worked very satisfactorily there, and that it has accomplished the purpose for which it was devised, and that it has not resulted in imposing any oppressive duties.

On the point of free goods, it would seem that logically there is, if possible, more reason for extending the provisions of this amendment to free goods than there is to dutiable goods, for American manufacturers of dutiable goods have at least the benefit of whatever tariff is on them. The American manufacturers of goods which are on the free list ought to be protected, at least, against having unfair advantage taken of them by foreigners.

The extensive additions which have been made to the free list by the pending bill make the question raised by this amendment one of surpassing importance, and its passage or its failure may mean either life or death, perhaps, to a whole industry, but in any event to a large number of producers. Senators of the majority, while admitting the absolute certainty of the destruction of the Louisiana cane-sugar industry, have insisted that even with free sugar our beet-sugar industry will continue to thrive. Recalling to the minds of the Senators the well-known fact that many countries of the world pay bounties upon the exportation of sugar, I should like to ask how it can be expected that with this tremendous addition to the handicaps which will beset the beet-sugar industry it can still be expected to prosper or even exist. It should be remembered that the countervailing-duty provision (par. E, sec. 5) does not extend to goods that are on the free list. There can be no possible doubt of the propriety of making this amendment apply to all goods, whether dutiable or free.

As to the fear voiced by the Finance Committee majority that this amendment "was capable, under an unfriendly administration, of being used as a means of increasing the duty upon dutiable articles 15 per cent and of putting articles upon the free list under a duty of 15 per cent," I think I can assure them that, in view of the things that have been said by the spokesmen of the administration regarding American manu-

We note report in the press that you have introduced an amendment to the tariff bill providing for a "dumping duty" and would request you to kindly send us a copy of same.

The "dumping duty" clause in the bill as passed the House was not applicable to goods admitted free of duty; this provision is a wise one and in the interest of "fair" trade generally, without regard to the policy of high or low duty or free trade, as it prohibits unfair advantage of American business men being taken by foreigners and, if it is desirable in the case of dutiable goods, it is all the more necessary in the case of free goods—not only sugar, but all articles imported.

As a precedent in this regard we have the Canadian tariff which provides for a "dumping duty" not only on dutiable goods but on free goods, as specially provided; we inclose a copy of this clause in the Canadian tariff for your information in case of need.

The clause in the new tariff bill (sec. V, par. E) providing for a countervailing duty against export bounties is not applicable to free goods but should be made so as such countervailing duty will be needed more on imports of free goods than on dutiable goods; the principal should be applied equally to both classes of imports.

If sugar is made free of duty it will be specially necessary to apply a "dumping duty" against "unfair" practices of foreign cartels, exchanges, business organizations, governments, or individuals, and also to apply "countervailing duty" against foreign export bounties.

Russia produces enormous crops of sugar and pays an export bounty thereon of about 71 cents per 100 pounds, and other countries have in the past paid large export bounties to encourage home production, and the workings of cartels have enabled foreign exporters to ship sugars to the United States at very much below normal prices.

We beg to call attention to the wording of the reciprocity treaty with Cuba, which apparently prohibits any reduction in present rates of duty on sugar, although it is evident that such was not intended, and the question may not be raised officially, but as Congress is now passing a new tariff bill it would seem wise to make it plain that the intention is for Cuban sugar to be admitted at a concession of 20 per cent on the rates of duty provided in the bill and not leave the question in the least doubt.

Referring to the proposed date of effect of sugar schedule (Mar. 1, 1914), we beg to advise that date of effect should come at a time when the stocks in dealers' hands are the smallest, which will be during the three months from October 1 to January 1.

The Cuba crop is in full swing during January and February, receipts being very heavy, amounting to more than 400,000 tons in those months and, the necessities of the planters for funds are such that they will sell at best price obtainable; if therefore, the reduced duty is to become effective March 1, 1914, the reduction in duty will doubtless be discounted in the price of sugar sold in January and February because of the pressure to sell Cuban sugar and, the domestic sugar of Louisiana and western beet will be no better off than if the new tariff is put in force January 1, while trade generally will be much disturbed.

Louisiana cane and western beet crops begin in October and the bulk of those crops will come in before January 1, which date for change of duty would now seem to suit the majority of the sugar interests.

Yours, very truly,

WILLETT & GRAY.

Mr. PENROSE. I ask for the yeas and nays on the amendment.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Pennsylvania, on which he demands the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I again announce my pair and withhold my vote. If at liberty to vote, I should vote "nay."

Mr. CHAMBERLAIN (when his name was called). I again announce my pair with the junior Senator from Pennsylvania [Mr. OLIVER], and withhold my vote. If I were permitted to vote, I should vote "nay."

Mr. CHILTON (when his name was called). I again announce my pair, as on the previous vote.

Mr. MYERS (when his name was called). I announce my pair with the Senator from Connecticut [Mr. McLEAN] and the transfer of that pair to the Senator from Arizona [Mr. ASHURST] and vote "nay."

Mr. O'GORMAN (when his name was called). I have a general pair with the senior Senator from New Hampshire [Mr. GALLINGER]. In his absence, I withhold my vote.

The roll call was concluded.

Mr. JAMES. I transfer my pair with the Senator from Massachusetts [Mr. WEEKS] to the Senator from South Carolina [Mr. SMITH] and will vote. I vote "nay."

Mr. BRYAN. I transfer my pair with the junior Senator from Michigan [Mr. TOWNSEND] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. THOMAS. I make the same transfer of my pair as heretofore and vote "nay."

Mr. BACON. I inquire whether the Senator from Minnesota [Mr. NELSON] has voted?

The VICE PRESIDENT. The Chair is informed that he has not voted.

Mr. BACON. Then I withhold my vote, as I have a general pair with that Senator. If he were present, I should vote "nay."

Mr. OVERMAN. I have a general pair with the senior Senator from California [Mr. PERKINS], who is absent on account of sickness. If at liberty to vote, I should vote "nay." I withhold my vote on account of the pair.

Mr. KERN. On account of my pair with the Senator from Kentucky [Mr. BRADLEY], I withhold my vote.

Mr. LEA. I announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD]. If at liberty to vote, I should vote "nay."

Mr. CHILTON. I wish to announce the necessary absence of the Senator from Virginia [Mr. MARTIN] and his pair with the Senator from Vermont [Mr. PAGE].

Mr. REED. I have a pair with the Senator from Michigan [Mr. SMITH]. I am unable to arrange a transfer. I desire to inquire if a quorum has voted?

The VICE PRESIDENT. The Chair is informed that a quorum has not yet voted.

Mr. REED. My arrangement with the Senator from Michigan in regard to the pair is that I am at liberty to vote if necessary to make a quorum. I therefore vote "nay."

Mr. KERN. My pair with the Senator from Kentucky [Mr. BRADLEY] is so arranged that in case my vote is necessary for a quorum I shall have the right to vote. I therefore vote "nay."

Mr. CHILTON. I understand my arrangement with my pair has the same condition, enabling me to vote to make a quorum. I vote "nay."

Mr. OVERMAN. I am authorized by the Senator from California [Mr. PERKINS] to vote to make a quorum. I therefore vote "nay."

Mr. BRANDEGEE. The Senator from New Mexico [Mr. CATRON] is paired with the junior Senator from Arizona [Mr. SMITH].

The result was announced—yeas 15, nays 34, as follows:

YEAS—15.			
Brady	Cummins	Lodge	Sherman
Brandegee	Jones	Norris	Sterling
Bristow	Kenyon	Penrose	Warren
Colt	Lippitt	Root	
NAYS—34.			
Bryan	Martine, N. J.	Saulsbury	Swanson
Chilton	Myers	Shafroth	Thomas
Fletcher	Overman	Sheppard	Thompson
Hollis	Owen	Shields	Thornton
Hughes	Pittman	Shively	Vardaman
James	Pomerene	Simmons	Walsh
Johnson	Ransdell	Smith, Ga.	Williams
Kern	Reed	Smith, Md.	
Lane	Robinson	Stone	
NOT VOTING—46.			
Ashurst	Crawford	Lea	Smith, Ariz.
Bacon	Culberson	Lewis	Smith, Mich.
Bankhead	Dillingham	McCumber	Smith, S. C.
Borah	du Pont	McLean	Smoot
Bradley	Fall	Martin, Va.	Stephenson
Burleigh	Gallinger	Nelson	Sutherland
Burton	Goff	Newlands	Tillman
Catron	Gore	O'Gorman	Townsend
Chamberlain	Gronna	Oliver	Weeks
Clapp	Hitchcock	Page	Works
Clark, Wyo.	Jackson	Perkins	
Clarke, Ark.	La Follette	Poindexter	

So Mr. PENROSE's amendment was rejected.

Mr. BRANDEGEE. Mr. President, I have a few amendments that I have agreed in some cases to offer to the bill. I wish to do it at some time when it will be least inconvenient to Senators. I have some letters which I will submit in connection with them. If I may offer them now, if this is as good a time as any, I will offer them, and not ask for roll calls.

Mr. HUGHES. Mr. President, are they to the schedules, or are they to the administrative sections?

Mr. BRANDEGEE. No; they are to the sections.

Mr. SIMMONS. Mr. President—

Mr. BRANDEGEE. I yield to the Senator from North Carolina.

Mr. SIMMONS. We had an understanding, and really there was a unanimous-consent order, that we should go on and take up the sections or paragraphs that have been passed over at the request of Senators, and finish them, and then take up any amendments that might be offered to any schedule. I think the last vote was somewhat in violation of that; but the Senator from Pennsylvania obtained recognition, and nobody objected, and so we acted upon the amendment.

Mr. PENROSE. The Senator from Iowa rose—

Mr. SIMMONS. So I hope the Senator from Connecticut will let us go on, under the rule we have adopted, with the income-tax section, and as soon as we have finished that and the administrative sections, the Senator can offer his amendments.

Mr. BRANDEGEE. I said when I rose that I wanted to do it at the most convenient time. I did not know there was any such understanding as the Senator has spoken of, and I will wait until another time.

Mr. WILLIAMS. Mr. President, on behalf of the committee, I offer an amendment, which I send to the desk.

The PRESIDING OFFICER (Mr. LEA in the chair). The amendment will be stated.

The SECRETARY. On page 165, line 12, after the word "elsewhere," it is proposed to insert a colon and the following:

Provided, That the tax herein imposed upon individuals with respect to their incomes shall likewise be levied upon all interests as such which may be due or payable to any nonresident alien, subject to the exemptions and deductions provided for in this section, which shall be made at the source in his behalf.

The amendment was agreed to.

Mr. WILLIAMS. I now offer another amendment, on behalf of the committee, which I will send to the desk.

The PRESIDING OFFICER. The Secretary will state the amendment.

The SECRETARY. On page 166, line 1, after the word "exceed," it is proposed to strike out "\$100,000" and insert "\$75,000"; after the comma, in the same line, it is proposed to strike out the word "and"; in line 3, after the word "exceeds," it is proposed to insert "\$75,000 and does not exceed"; in line 3, after "\$100,000," it is proposed to insert "4 per cent per annum upon the amount by which the total net income exceeds \$100,000 and does not exceed \$250,000; 5 per cent per annum upon the amount by which the total net income exceeds \$250,000 and does not exceed \$500,000; and 6 per cent per annum upon the amount by which the total net income exceeds \$500,000."

Mr. BRISTOW. Mr. President, as I understand, that increases the tax on incomes from \$75,000 to \$100,000 per annum 1 per cent; on incomes from \$100,000 per annum to \$250,000 per annum 2 per cent—

Mr. WILLIAMS. No; 1 per cent.

Mr. BRISTOW. One per cent?

Mr. WILLIAMS. The increase of 1 per cent is kept up right to the end.

Mr. BRISTOW. Then from \$250,000 to \$500,000 there is an increase of 2 per cent, is there not?

Mr. WILLIAMS. No; there is an increase of 1 per cent each time—a jump of 1 per cent at each step.

Mr. BRISTOW. Yes; but I mean the increase over the existing bill.

Mr. WILLIAMS. I will explain it to the Senator.

First there is the normal tax up to 20 per cent. Then there is 1 per cent additional tax between \$20,000 and \$50,000, 2 per cent additional tax between \$50,000 and \$75,000—

Mr. BRISTOW. If the Senator will permit me just there, the tax up to \$75,000 is just the same as now exists in the bill?

Mr. WILLIAMS. Precisely. Then from there on it is increased 1 per cent until it gets to the last stage, which is \$500,000 or over. That is the maximum, and it carries an additional tax of 6 per cent, making a total, normal and additional, of 7 per cent.

Mr. BRISTOW. I desire to say that when the bill gets into the Senate I expect to offer the amendment which I offered the other day. I think this improves the bill somewhat, but not so much as I should like to see it improved. It is somewhat better, however. My objection is that the increases should have started lower down, because I do not think there will be many incomes reported exceeding \$500,000 per annum.

Mr. WILLIAMS. The Senator and I of course differ diametrically. I think the increases start too low down, and I think by the time we get to the maximum we have levied a sufficient maximum. When we get to the Senate of course the Senator will offer his amendment, and he can then discuss it.

The PRESIDING OFFICER. The question is on the amendment offered by the committee.

The amendment was agreed to.

Mr. WILLIAMS. I now offer another amendment on behalf of the committee; and I ask that in connection with that amendment, and as part of my remarks, a letter which I send to the desk may go into the Record and be printed.

The PRESIDING OFFICER. Without objection, it will be so ordered.

The letter referred to is as follows:

SOUTHERN RAILWAY CO.,
Washington, D. C., August 15, 1913.

In connection with the conference you were kind enough to have with me this morning in respect to lines 14 to 24 on page 166 of the tariff bill, H. R. 3321, I take the liberty of now handing you a succinct statement of certain considerations, which it seems to me present objections to the language as it now stands, to which I invite your careful attention.

It seems to me that the language of the bill as it now stands is not materially different in effect from the language as it was in the original draft of the bill in the Senate. The change now made substitutes for these words, "who would be entitled to the same," the words "who would be legally entitled to enforce the distribution or division of the same." Inasmuch as both expressions are qualified by the words "if divided or distributed, whether divided or distributed or otherwise," my legal judgment is that they mean exactly the same thing, as nobody would be entitled to enforce distribution or division of dividends which are not declared. The effect of the provision as it now stands in the bill would unquestionably be, as it seems to me, to tax the stockholder of the bank (who would be liable to an additional tax) on the undivided surplus of the bank, and to tax a stockholder in a railroad company on

his undivided share of the undivided earnings of the railroad; and yet it is manifestly in the public interest that both the bank and the railroad and, in fact, many other useful corporations should accumulate a proper surplus from their earnings in order to build up their credit and perform the service for which they were incorporated.

The suggestion which I have made would prevent a fraud upon the law through an undue accumulation of profit, and that is as far, I think, as it is the policy of your committee to go.

I noted this morning that you inserted after the word "not," in the ninth line from the bottom of my suggested draft, the words "of itself." I wish you would consider whether there is not serious objection to the insertion of these words. The object of requiring the certificate of the Secretary of the Treasury is to prevent unnecessary annoyance to business concerns, unreasonable demands, whether in court or otherwise, for this tax, and to prevent any suit lying on the subject at all, unless the Secretary of the Treasury shall certify that, in his opinion, such accumulation of gains and profits is unreasonable for the purposes of the business. If you now insert the words "of itself," that principal object of this provision is done away with, and suits might be brought, and the business corporation greatly inconvenienced and annoyed, even though the Secretary of the Treasury was of opinion that the accumulation of profits was proper for the legitimate purposes of the company. I think legitimate business is entitled to the protection of not having such demands made or suits brought against it, unless the Secretary of the Treasury shall be of opinion that such demands are legally justified. I would be glad to have you consider this view of the matter.

I have ventured to put this in written form so you may, in the multitude of matters pressing for your consideration, have it conveniently at hand for the consideration of your subcommittee.

Yours, very truly,

ALFRED P. THOM.

The provision that as to the additional taxes imposed upon individuals, their share of the undivided gains and profits of corporations in which they are stockholders shall be treated as a part of their income, was apparently adopted to prevent the possibility of a rich man forming a corporation to manage his property and to accumulate the profits therefrom without declaring dividends. Through such a device a rich man might escape paying the additional tax, since his corporation would pay only the 1 per cent.

Such cases would be exceedingly rare and could be adequately met by a special provision that in cases of that sort where the Secretary shall find that the corporation was organized or is being conducted for the purpose of evading the payment of the additional taxes by its stockholder or stockholders such stockholder or stockholders shall be charged, for the purposes of the additional taxes, with his or their share of the undistributed profits.

But the provision as it now stands is so broad as to prove exceedingly troublesome to legitimate corporations in the regular and proper conduct of their business.

To illustrate: For the fiscal year ending yesterday—June 30, 1913—the Atchafalaya will probably show that after paying operating expenses, taxes, and interest, and dividends on preferred stock, its remaining income is something over 8 per cent on the common stock. The dividend on the common stock for the year was 6 per cent. Theoretically, therefore, there was an undistributed gain or profit of a little over 2 per cent. Practically, however, that gain or profit will never be available and much of it will have to be spent for purposes which will never increase the earnings of the company, or at least not proportionately with the expenditures: such, for example, as removal of grade crossings, construction of steel underframe cars, steel cars, building of handsome passenger stations, etc. It would be very unfair to the company to make it go on record as stating that all of this surplus 2 per cent was a clear gain or profit, whereas little, if any, and perhaps none at all, would represent gain or profit in any sense.

Any effort to draw the line between the part of the surplus earnings devoted to these necessary purposes and the part, if any, which could fairly be regarded as a clear gain would be almost hopeless and would entail an immense accounting burden upon the corporations and upon the Treasury Department.

Moreover, as to railroad companies, it would seem necessary for the Interstate Commerce Commission to prescribe the rules by which such separation would be made, and then the commission would have to be bound by the rules which it prescribed.

Furthermore, if the Government adopts the principle of recognizing that as to all corporations all undivided profits belong to the stockholders, I do not see how the Government can thereafter dispute the right to issue to the stockholders stock representing the profits upon which the stockholders have already been taxed.

Furthermore, a corporation in one year may earn (at least theoretically) 9 per cent and pay a 6 per cent dividend; and the next year may earn 5 per cent and pay a 6 per cent dividend, the 1 per cent being out of the extra profit made the previous year. Under this provision as it stands the stockholder in the first year will pay his additional tax with respect to the 3 per cent of undivided profits, and the next year he will, as to one-third of this amount, pay the tax again because of his receipt of that amount as a part of his dividend.

In many cases corporations do not pay any dividends at all, and earn a very small surplus over their fixed charges. But this provision will necessitate the Treasury Department obtaining reports from all these corporations as to their dividends and also reports as to their entire list of stockholders. Besides this, of course, the Treasury Department will have to obtain lists of stockholders in all corporations which do pay dividends. Altogether there are over 300,000 corporations in the United States.

It seems to me this provision unduly burdens the corporations and unduly burdens the Treasury Department, and yet accomplishes no purpose in addition to what would be accomplished by a provision much more special and restricted in character.

Beyond all this is the very serious constitutional question. I believe the cases have settled it very clearly that the profits of a corporation do not belong to the stockholders until declared as dividends. Therefore the undivided profits of a corporation can not be regarded as income of the stockholders (except in cases where the corporation is a mere fraud on the law for the purpose of evading the tax). The constitutional amendment authorizes nothing but a tax on incomes. An effort to tax, to the individual, the undistributed profits of a legitimate corporation (as distinguished from a mere corporate device to defraud the law) is not a tax on income of the individual, and therefore seems to be a plain violation of the constitutional provision.

Another serious difficulty is that stock is constantly bought and sold. It is not feasible to apportion undivided profits among various owners during the year. The entire undivided profits should not be charged to the man owning the stock on the dividend date. The dividend is

announced and is taken into account in purchasing the stock, but the undivided profit can not be ascertained in advance, so a temporary owner might be charged with large undivided profits which he never counted on and, of course, never received.

The PRESIDING OFFICER. The Secretary will state the amendment.

The SECRETARY. At a previous session the Senator from Mississippi reported back a paragraph passed over, beginning on line 14, page 166, with the words "For the purpose of," and extending to the bottom of the page. In lieu of that paragraph the Senator from Mississippi now proposes to insert the following:

For the purpose of this additional tax the taxable income of any individual shall embrace the share to which he would be entitled of the gains and profits, if divided or distributed, whether divided or distributed or not, of all companies, whether incorporated or partnership, formed or fraudulently availed of for the purpose of preventing the imposition of such tax through the medium of permitting such gains and profits to accumulate instead of being divided or distributed; and the fact that any such company or partnership, or that the gains and profits are permitted to accumulate beyond the reasonable needs of the business, shall be prima facie evidence of a fraudulent purpose to escape such tax; but the fact that the gains and profits are in any case permitted to accumulate and become surplus shall not be construed as evidence of a purpose to escape the said tax in such case unless the Secretary of the Treasury shall certify that in his opinion such accumulation is unreasonable for the purposes of the business. When requested by the Commissioner of Internal Revenue, or any district collector of internal revenue, such company shall forward to him a correct statement of such profits and the names of the individuals who would be entitled to the same if distributed.

Mr. WARREN. Mr. President, may I ask the Senator a question? That alludes to profits in a corporation that are not divided?

Mr. WILLIAMS. Yes.

Mr. WARREN. What would be the construction where a business is of such a nature that the risks are such that they are in the habit of going along for two or three—

Mr. WILLIAMS. This does not apply to all profits that are not divided at all. It applies only to such profits and the heaping up of such surplus as shall justify the Secretary of the Treasury in concluding that it is done for the purpose of evading the tax. Its main purpose is to prevent the formation of holding companies.

Here is a man, for example, with an income as large as Mr. Carnegie's income, let us say. There would be nothing to prevent him from organizing a holding company and passing his income from year to year up to undivided profits. I think if the Senator will watch the reading of the amendment he will understand its object. I ask that it may be read again.

Mr. WARREN. I undertook to keep up with it, but I want a plain declaration about the intention of the proponent of the amendment, because it could be construed so as to prevent the necessary accumulation to cover risks.

Mr. WILLIAMS. If the Senator had read it, or had noticed the reading, he would have seen that it could not have been so construed.

Mr. WARREN. I understand, then, that the intention is to prevent fraud; but it is not the intention to take away from or divide or assess a stockholder for the necessary funds that are kept in surplus in order to protect and insure the business?

Mr. WILLIAMS. No. Here is the provision:

Unless the Secretary of the Treasury shall certify that in his opinion such accumulation is unreasonable for the purposes of the business.

It is only in that event that it applies.

Mr. BRANDEGEE. Of course that leaves it absolutely to the Secretary of the Treasury to decide whether a surplus is an evidence of fraud or not, and turning the matter over to the discretion of the Secretary of the Treasury as to exactly how much surplus—

Mr. WILLIAMS. It is only prima facie.

Mr. BRANDEGEE. If the Senator will allow me to finish my sentence—

The PRESIDING OFFICER. The Senator from Connecticut has the floor.

Mr. BRANDEGEE. It gives the Secretary of the Treasury absolute power to say exactly what surplus shall be in his opinion proper for the conduct of any business, and if the views of the managers of the business do not coincide with his views they are guilty of a fraud.

Mr. WILLIAMS. Somebody has to sit in judgment as to whether there is a fraud or not.

Mr. BRANDEGEE. I should think that it is a very dangerous amendment.

Mr. PENROSE. You might associate the Secretary of Agriculture with him.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Mississippi.

The amendment was agreed to.

Mr. SHIVELY. On page 185, line 11, after the word "system" I move to insert:

or for the exclusive benefit of the members of a fraternity itself operating under the lodge system.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Indiana.

The amendment was agreed to.

The SECRETARY. On page 187 the proviso was recommitted to the committee beginning with the words "That mutual life insurance companies"—

Mr. O'GORMAN. In what line?

The SECRETARY. The proviso on page 187, beginning in line 6 and extending down to line 13.

Mr. WILLIAMS. Strike out the language.

The PRESIDING OFFICER. The Secretary will read the amendment.

The SECRETARY. The amendment as printed in the bill reads as follows:

Provided, That mutual life insurance companies shall not be required to return as a part of their income any portion of premium deposits actually returned to their policyholders within the year for which the income tax return is made, nor any portion actually credited to the policyholders by being applied as a deduction from the amount of the premium otherwise due to the company within the year for which the income tax is returned.

Mr. WILLIAMS. I want to have the committee amendment disagreed to.

The amendment was rejected.

The SECRETARY. In line 13, after the word "*Provided*," the Senator from Mississippi proposes to strike out the word "*further*."

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. SIMMONS. On page 186, at the end of line 9, on behalf of the committee I offer the following amendment.

The SECRETARY. On page 186, line 9, after the words "Porto Rico" and before the period, insert:

Provided, That whenever any State, Territory, or the District of Columbia, or a political subdivision of a State or Territory, shall have entered in good faith into a contract with any person or corporation, the object and purpose of which is to acquire, construct, operate, or maintain a public utility, no tax shall be levied under the provisions of this act upon the income derived from the operation of such public utility so far as the payment thereof will impose a loss or burden upon such State, Territory, or the District of Columbia, or a political subdivision of a State or Territory; but this provision is not intended to confer upon such person or corporation any financial gain or exemption or to relieve such person or corporation from the payment of a tax as provided for in this section upon the part or portion of the said income to which such person or corporation shall be entitled under such contract.

The amendment was agreed to.

The SECRETARY. On page 187 the proviso beginning at line 21 was recommitted on the 29th of August. It reads:

Provided further, That mutual marine insurance companies—

Mr. WILLIAMS. The committee ask the Senate to disagree to the committee amendment.

The amendment was rejected.

Mr. WILLIAMS. Let the amendment sent up be stated.

The SECRETARY. On page 188, line 3, before the word "interest," insert the words "the amount of"; in line 4, after the word "its," insert the words "bonded or other"; in line 5, after the word "indebtedness," strike out "to an amount of such indebtedness"; and in line 8, before the word "capital," insert the words "amount of interest paid within the year on an amount of its indebtedness not exceeding the amount of."

The amendment was agreed to.

The SECRETARY. In the proviso on page 190 insert, in line 1—

Mr. WILLIAMS. Wait a minute. The Secretary is going very fast.

Mr. SHIVELY. What is the amendment just read from the desk?

The SECRETARY. On page 188, line 3, before the word "interest"—

Mr. SHIVELY. That has been adopted.

The PRESIDING OFFICER. It has been adopted.

Mr. SHIVELY. What is the next amendment?

The SECRETARY. The proviso at the top of page 190 was recommitted to the committee.

Mr. WILLIAMS. I send this amendment to the desk.

The PRESIDING OFFICER. The Secretary will read the amendment.

The SECRETARY. On page 190, line 1, beginning with the word "*Provided*," strike out all the language down to and including the word "returned," on line 8.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee inserting those words.

The amendment was rejected.

The SECRETARY. On page 190, the provision beginning in line 16, after the word "reserves," down to and including the word "thereof," in line 3, was recommitted to the committee.

The PRESIDING OFFICER. Has the committee a report?

Mr. WILLIAMS. I thought I just sent up that amendment.

Mr. SHIVELY. It ought to be disagreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

The PRESIDING OFFICER. The two committee amendments have been disagreed to upon that page.

Mr. WILLIAMS. The first one has and the second one has not. I move to disagree to the Senate committee amendment beginning on line 1 and running down to and including the word "returns" in line 8.

The PRESIDING OFFICER. That amendment has been disagreed to.

Mr. WILLIAMS. Now I ask the Senate to agree to the committee amendment beginning in line 16, page 190, with the word "Provided," and running down to the word "thereof" in line 23.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

Mr. SMOOT. Can the Senator tell me why that is to be agreed to and the same provision on page 187, in virtually the same words, was disagreed to?

Mr. WILLIAMS. It ought not to have been disagreed to. The Secretary was reading so rapidly that my colleague and I were dividing out the words, and we did not keep up with him. I am informed by the Senator from Utah that the Senate committee amendment beginning in line 21, on page 187, and including the word "thereof" in line 3, on page 188, was disagreed to. I move to reconsider the vote and ask that the amendment be agreed to.

The PRESIDING OFFICER. Without objection, the vote will be reconsidered, and, without objection, the amendment is agreed to.

The SECRETARY. On page 187, line 21, after the word "reserves," insert the proviso running down to and including the word "thereof," in line 3, page 188, just agreed to.

On page 190, the proviso in line 16, after the word "reserves," down to and including the word "thereof," in line 23, was recommitted.

Mr. WILLIAMS. That we wish to have agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendment was agreed to.

Mr. WILLIAMS. The amendment beginning with line 1, on page 190, including the word "returned," in line 8, I believe was disagreed to. Is that correct?

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was rejected.

The PRESIDING OFFICER. The next section will be read by the Secretary.

Mr. SMOOT. I should like to ask the Senator from Mississippi if, on page 190, line 23, after the word "(third)" and before the word "interest," the words "the amount of" should not be included there to conform with the amendment the Senator made on page 188, line 3, before the word "interest."

Mr. WILLIAMS. I do not think it makes any difference, but we might just as well insert it.

The PRESIDING OFFICER. The amendment proposed by the Senator from Utah will be stated.

The SECRETARY. On page 190, line 24, before the word "interest," insert the words "the amount of."

The amendment was agreed to.

The SECRETARY. On page 194 the proviso in line 25, ending with the word "thereof," on line 14, page 195, was recommitted to the committee.

Mr. SHIVELY. I offer an amendment there.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

Mr. SHIVELY. That is striking out the amendment beginning in line 25, page 194, with reference to mutual life insurance companies.

Mr. WILLIAMS. And ending with the word "returned," in line 7, page 195. That is to be disagreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed to that portion of the committee amendment.

The amendment was rejected.

The SECRETARY. The remaining portion of the committee amendment, beginning in line 7, on page 195, reads as follows:

Provided further, That mutual marine insurance companies shall include in their returns of gross income gross premiums collected and received by them less amounts paid for reinsurance, but shall be en-

titled to include in deductions from gross income amounts repaid to policyholders on account of premiums previously paid by them, and interest paid upon such amounts between the ascertainment thereof and the payment thereof.

Mr. WILLIAMS. We ask that that committee amendment be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The SECRETARY. On page 196, the proviso beginning in line 8 and ending with the word "thereof" was recommitted to the committee.

Mr. SHIVELY. I ask that it be disagreed to. I move as an amendment to strike out that part of the committee amendment.

The SECRETARY. On page 196, line 8, beginning with the word "Provided," strike out all the language down to and including the semicolon in line 16, as follows.

Mr. SHIVELY. I ask that it be stricken out.

Mr. GALLINGER. The question is on agreeing to it.

The PRESIDING OFFICER. The Chair is under the impression that the motion can be put in the affirmative.

Mr. LODGE. Certainly.

The SECRETARY. The following language was proposed to be inserted by the committee:

Provided further, That mutual life insurance companies shall not be required to return as a part of their income any portion of premium deposits actually returned to their policyholders within the year for which the income tax return is made, nor any portion actually credited to the policyholders by being applied as a deduction from the amount of premium otherwise due to the company within the year for which the income tax is returned.

Mr. LODGE. Merely on the matter of procedure, if that is an independent amendment, the proper thing to do is to disagree to it. The Chair is quite right in putting the question on agreeing to it, because that is the form. If it is part of the amendment, then we amend it by striking it out.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee striking out the part of the committee amendment which has been read. [Putting the question.] The ayes have it, and the amendment striking out this part is agreed to.

The SECRETARY. On page 196, line 16, after the word "returned," just stricken out, insert the following proviso:

Provided further, That mutual marine insurance companies shall include in their return of gross income gross premiums collected and received by them less amounts paid for reinsurance, but shall be entitled to include in deductions from gross income amounts repaid to policyholders on account of premiums previously paid by them and interest paid upon such amounts between the ascertainment thereof and the payment thereof.

Mr. SHIVELY. I ask that the amendment be agreed to.

The amendment was agreed to.

Mr. GALLINGER. Now, Mr. President, I will ask the Senator from Mississippi as to the precise shape the amendments that are agreed to leave this matter concerning life insurance companies. Of course, we could not understand it from simply hearing it read. Will the Senator state it in a few words?

Mr. WILLIAMS. In every case we have stricken out the Senate committee amendments providing for mutual life insurance companies to be exempt. In every case we have kept in the bill the committee amendment providing for marine insurance companies to be exempt.

Mr. GALLINGER. That, I should think, would meet the contention that has been made.

Mr. WILLIAMS. I think so. I can not hear the conversation going on between the Senator from New Hampshire and the Senator from Utah.

Mr. GALLINGER. The Senator from Utah suggested to me that mutual insurance companies had insisted they ought to have the exemption, and the committee has recommended that that should be stricken out, so they are not exempted.

Mr. WILLIAMS. They are not exempted. Under the present law they are not exempted and we found out if we undertook to exempt so-called mutual life insurance companies, in order to do complete justice we would have to exempt all life insurance companies that issued a mutual participating policy. We concluded that that was losing entirely too much revenue, and as they were already taxed under the present excise law we said we would continue it.

Now mutual marine insurance companies are upon a different footing. They do not make any profit at all. The only thing they make is enough money to pay the officers who manage the business.

Mr. GALLINGER. I appreciate the difficulty that confronted the committee, because it has been urged very vigorously that if mutual companies were exempt all the companies that issue mutual policies ought to be exempt.

Mr. WILLIAMS. We finally came to that conclusion.

Mr. GALLINGER. I presume the committee took a very wise course.

Mr. WILLIAMS. Now I offer an amendment on page 213.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. Amend by adding as a new provision on page 213—

Mr. WILLIAMS. By the way, section 3 was passed over and has not been adopted. I ask for the adoption of section 3 first.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee to insert as section 3 what will be read.

The SECRETARY. It is proposed to insert as section 3, beginning at page 210, the following:

SECTION III.

That upon each sale, agreement of sale, or agreement to sell, any cotton for future delivery at or on any cotton exchange, or board of trade, or other similar place, or by any person acting in substantial conformity to the rules and regulations or market quotations of any such cotton exchange, board of trade, or other similar place, there is hereby levied a tax equal to one-tenth of 1 cent per pound on the quantity of cotton mentioned and described in any such contract: *Provided*, That in all cases where the quantity and kind of cotton mentioned and described in such contract is actually delivered, in compliance in good faith therewith, by the seller to the buyer therein respectively named, the tax levied by this section shall be refunded to the party paying the same in such manner and under such regulations as the Secretary of the Treasury shall prescribe. Any sale, agreement of sale, or agreement to sell, any cotton for future delivery, at or on any cotton exchange, board of trade, or other similar place, or by any person acting in conformity to the rules and regulations of any such cotton exchange, board of trade, or other similar place, in any foreign country, where the order for such sale has been transmitted from the United States to such foreign country and either the buyer or the seller described in such contract of sale is at the time of the execution thereof a resident of the United States, shall be deemed and considered in all respects a sale, agreement of sale, or agreement to sell, for future delivery, of the cotton described therein within the meaning of this section. A corporation organized under the laws of any State or country shall be deemed for all purposes a person within the meaning of this section. All contracts for the sale as aforesaid of cotton for future delivery at the places and by the persons herein mentioned shall be in writing, plainly stating the terms of such contract and indicating the parties thereto and signed by the party to be charged, by himself or his agent. The said tax shall be paid by means of stamps affixed to such written contract and shall be paid by the party named as buyer therein.

That the Secretary of the Treasury is hereby authorized and empowered to make, prescribe, and publish all rules and regulations necessary to the enforcement of the foregoing section and to the collection of the tax thereby imposed. To further effect this purpose, he is hereby authorized to require all persons coming within its provisions to keep such records and systems of accounting as will fully and correctly disclose the transactions in connection with which the said tax is authorized; and he may appoint such agents as he may deem necessary to conduct the inspection necessary to collect the tax herein authorized and otherwise to enforce this statute and all rules and regulations lawfully made in pursuance thereof, as in his judgment may be required, and to fix the compensation of such agents.

That any cotton exchange, board of trade, or other similar place, its officers and agents, or persons acting in substantial conformity with the rules and regulations or market quotations of any such cotton exchange, board of trade, or other similar place where contracts for the sale of cotton for future delivery are made in violation of this statute, and every person who is made liable for the tax thereby imposed who shall fail to pay, or shall evade, or attempt to evade, the payment of the tax levied by this section, or shall otherwise violate this statute, or any rule or regulation lawfully made by the Secretary of the Treasury in pursuance thereof, shall be guilty of a misdemeanor, and upon conviction thereof shall pay a fine in any sum not less than \$100 nor more than \$20,000; and in case of natural persons or unincorporated associations of persons violating this act an additional punishment by imprisonment for not less than one year nor more than three years may be imposed, at the discretion of the court.

In addition to the foregoing punishment, there is hereby imposed a penalty of \$2,000 on each separate sale made in violation of this statute, to be recovered in an action founded on this statute in the name of the United States as plaintiff, and when so recovered one-half of said amount shall be paid over to the person giving the information upon which such recovery is based.

That no person whose evidence is deemed material by the officer prosecuting on behalf of the United States shall withhold his testimony because of complicity by him in any violation of this statute, but any such person so required to give evidence as a witness shall be exempt from prosecution in any court of the United States for the particular offense in connection with the prosecution whereof such testimony was given.

That the payment of the tax levied under authority of this section shall not exempt any person from any penalty or punishment now or hereafter provided by the laws of any State for entering into contracts for the future delivery of cotton; nor shall the payment of taxes imposed by this section be held to prohibit any State or municipality from imposing a tax on the same transaction.

The amendment was agreed to.

Mr. WILLIAMS. Now, I move as an amendment what I have sent to the desk.

Mr. NORRIS. We have passed over some amendments that I think the RECORD shows were offered. As to page 209, I simply wish to announce that I have offered an amendment to provide for an inheritance tax. In order that the committee may get the bill out of Committee of the Whole and into the Senate, after consulting with others who are interested in this amendment, we have decided not to press the amendment until the bill gets into the Senate.

Mr. WILLIAMS. All right.

Mr. SIMMONS. That is the inheritance tax amendment?

Mr. NORRIS. Yes. The same thing can be said in regard to another amendment on page 250 of the bill providing for including some provision against the so-called Brazilian valorization of coffee proposition. Both those amendments will take considerable time, and understanding the purpose we did not want to hinder the committee from getting the bill out of committee into the Senate. So we will not offer the amendments until Monday.

Mr. WILLIAMS. I do not know that that will help us particularly. They might just as well be considered now as then.

Mr. NORRIS. I do not know either.

Mr. WILLIAMS. Still the Senator has the right to offer the amendments when he chooses.

Mr. NORRIS. I will state to the Senator from Mississippi that I adopted that course after consulting with the chairman of the committee and with other Members on this side who are interested in the amendments.

Mr. JONES. In that connection I desire to say that I had an inheritance tax amendment that I had offered and expected it to follow the amendment of the Senator from Nebraska. If that is not adopted, I am going to follow the same course as he and wait until we get the bill into the Senate before presenting the amendment.

The PRESIDING OFFICER. The next amendment will be stated.

The SECRETARY. The next amendment proposed by Mr. WILLIAMS is on page 213, after line 20, to insert:

The provisions of the foregoing section shall take effect and be in force from and after the first day of September, 1914.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Mississippi.

Mr. NORRIS. Mr. President, I notice that the senior Senator from Iowa [Mr. CUMMINS] is not in the Chamber. He has an amendment, I believe, as a substitute for this section, which was referred to the committee.

Mr. WILLIAMS. Though the Senator from Iowa is not in the Chamber, we can not stop the whole bill.

Mr. KENYON. The substitute can be offered in the Senate.

Mr. WILLIAMS. Well, we passed this over once. The Senator from Iowa can offer his substitute in the Senate.

Mr. SIMMONS. He can offer it to-night if he gets back in time.

Mr. WILLIAMS. Oh, yes; if he gets back in time he can offer it to-night. I ask unanimous consent that the section may be returned to for the purpose of the senior Senator from Iowa [Mr. CUMMINS] offering a substitute therefor, if he returns to-night.

The PRESIDING OFFICER. Without objection, it is so ordered. The question is on agreeing to the amendment offered by the Senator from Mississippi.

The amendment was agreed to.

The SECRETARY. In section 4, on page 219, beginning with line 4, the amendment was recommitted down to and including the word "article," in line 7, on page 220.

Mr. WILLIAMS. I move to disagree to the Senate committee amendment and leave the language in the bill as it came from the House.

The PRESIDING OFFICER. The amendment proposed by the committee will be stated.

The SECRETARY. In section 4, page 219, line 21, after the word "subsequently," the Committee on Finance propose to insert:

That the Secretary of the Treasury and the Secretary of Commerce are hereby authorized and directed to establish from time to time for statistical purposes a list or enumeration of articles in such detail as in their judgment may be necessary comprehending all goods, wares, and merchandise imported into the United States, and that as a part of the declaration herein provided there shall be either attached thereto or included therein an accurate statement specifying, in the terms of the said detailed list or enumeration, the kinds and quantities of all merchandise imported, and the value of the total quantity of each kind of article.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was rejected.

The PRESIDING OFFICER. The Secretary informs the Chair that the amendment was agreed to on August 30. Therefore a motion to reconsider the vote by which the amendment was agreed to will have to be made.

Mr. WILLIAMS. Very well. If that is the case, I move that the vote by which the amendment was agreed to be reconsidered.

The PRESIDING OFFICER. Without objection, the vote by which the amendment was agreed to will be reconsidered. The question now is on the motion of the Senator from Mississippi [Mr. WILLIAMS] to disagree to the amendment of the committee.

The motion was agreed to.

Mr. WILLIAMS. On page 248, line 19, before the word "earthen," I move to insert the word "lime" and a semicolon. The amendment was agreed to.

Mr. WILLIAMS. On page 249, line 13, before the word "cheese," I move to insert the word "lime" and a semicolon.

Mr. JONES. I want to ask the Senator from Mississippi what real rates the committee intend to make on lime in the case provided by the amendment?

Mr. WILLIAMS. It is the rate named here. It is now 5 per cent.

Mr. JONES. Yes.

Mr. WILLIAMS. Is that right?

Mr. JONES. Is it the intention of the committee to make the rate 6½ per cent? That is what one and one-half times the rate means. I can not believe that the committee intended that. That only permits the President to make an increase of 1½ per cent.

Mr. WILLIAMS. The committee agreed that it should be put at 10 per cent.

Mr. JONES. Then, that would be twice the rate.

Mr. WILLIAMS. Yes.

Mr. JONES. It would be twice the rate, instead of one and one-half times.

Mr. WILLIAMS. Yes.

Mr. JONES. Then, the Senator from Mississippi should offer such an amendment.

Mr. SIMMONS. It ought to go right there, in line 10, "lime, 10 per cent."

Mr. WILLIAMS. I was mistaken.

Mr. SIMMONS. If the Senator from Mississippi will permit, I have looked into this matter somewhat, and the insertion ought to be immediately after the retaliatory duty imposed on tea, in line 10. Add there, "lime, 10 per cent ad valorem."

Mr. WILLIAMS. Mr. President, the Senator from North Carolina will disarrange the paragraph if his suggestion is followed, because it now reads, "On the following articles one and one-fourth times the rate specified in section 1 of this act." If the Senator from North Carolina should insert the word "lime" there, then we should have to change all of the succeeding language.

Mr. SIMMONS. That refers to the articles mentioned after "tea."

Mr. JONES. The Senator from North Carolina suggests to make the insertion before that.

Mr. WILLIAMS. If the Senator from North Carolina will listen to me, I will read the language. It is as follows:

On the following articles one and one-fourth times the rate specified in section 1 of this act, namely, on earthen, stone, and china ware; expressed oils; lemons; cheese; wines of all kinds; malt liquors; knitted goods; silk dresses and silk goods; leather gloves; laces and embroideries of whatever material composed and articles made wholly or in part of the same; toys; jewelry and precious, semiprecious, and imitation precious stones suitable for use in the manufacture of jewelry.

Mr. SIMMONS. I propose to put it right there before the beginning of what the Senator has read—immediately after the words "tea, 10 cents per pound."

Mr. WILLIAMS. Very well. Then I move to reconsider the vote whereby the amendment putting the word "lime" just before the word "cheese," in line 13, was adopted, and then I will move to insert the word "lime," in line 10, just after the word "tea."

Mr. JONES. It ought to be after the word "pound."

The PRESIDING OFFICER. The first question is on reconsidering the amendment just adopted.

Mr. JONES. That amendment was not adopted, because I had risen and addressed the Chair with reference to the proposition. It was simply proposed.

Mr. WILLIAMS. It should read, "tea and lime, 10 cents a pound."

Mr. JONES. I should like to have it that way, but that is not the way the Senator from North Carolina wants it.

Mr. SIMMONS. The retaliatory duty on tea is 10 cents a pound, and on lime it should be 10 per cent ad valorem.

The PRESIDING OFFICER. The Senator from Washington [Mr. Jones] is correct. The amendment was not agreed to.

Mr. WILLIAMS. The Senator from North Carolina insists that the word "lime" should come immediately after the word "tea." It ought to come right after the word "pound," in line 10, so as to read, "lime, 10 per cent."

Mr. SIMMONS. The Senator from Mississippi is entirely mistaken when he says I insisted on putting it immediately after the word "tea." I did nothing of the kind.

Mr. WILLIAMS. I thought the Senator did.

Mr. SIMMONS. I insisted on putting it immediately after the retaliatory duty imposed on tea, which is 10 cents per pound.

Mr. WILLIAMS. I understood the Senator the other way.

Mr. SIMMONS. I did not say anything of the sort.

The PRESIDING OFFICER. The Secretary will state the amendment proposed by the Senator from Mississippi.

The SECRETARY. On page 249, in line 10, after the word "pound" and the semicolon, it is proposed to insert "lime, 10 per cent ad valorem."

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Mississippi.

The amendment was agreed to.

The SECRETARY. The next amendment passed over is on page 262, J, subsection 5, line 19, passed over on the request of Mr. GALLINGER.

Mr. GALLINGER. Mr. President, I have looked into the matter, and am quite willing that the amendment shall be agreed to.

The PRESIDING OFFICER. The amendment will be stated with the committee amendment.

The SECRETARY. In paragraph J, subsection 5, page 262, line 19, after the word "of," it is proposed to insert "naval vessels of the United States," so as to make the subsection read:

J. Subsection 5. That all materials of foreign production which may be necessary for the construction of naval vessels of the United States, vessels built in the United States for foreign account and ownership, or for the purpose of being employed in the foreign or domestic trade, and all such materials necessary for the building of their machinery, and all articles necessary for their outfit and equipment, may be imported in bond under such regulations as the Secretary of the Treasury may prescribe; and upon proof that such materials have been used for such purposes no duties shall be paid thereon.

The amendment was agreed to.

The SECRETARY. In paragraph J, subsection 6, page 263, line 5, after the words "repair of," it is proposed by the committee to strike out "American vessels" and insert "naval vessels of, or other vessels owned or used by, the United States and vessels admitted to registration under the laws of the United States," so as to make the subsection read:

J. Subsection 6. That all articles of foreign production needed for the repair of naval vessels of, or other vessels owned or used by, the United States and vessels admitted to registration under the laws of the United States may be withdrawn from bonded warehouses free of duty under such regulations as the Secretary of the Treasury may prescribe.

The amendment was agreed to.

Mr. WILLIAMS. On page 250, line 20, I move the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 250, line 20, after the word "same," it is proposed to insert "except in so far as paragraph 179 of Schedule E, section I, may be determined to be in conflict with the proviso to article 8 of said treaty."

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Mississippi.

The amendment was agreed to.

Mr. WARREN. Mr. President, I should like to recur to page 262 for a moment. I desire to ask a question. At the top of page 262 there seems to have been an amendment put in by the Senate, reading as follows:

Models of women's wearing apparel imported by manufacturers for use as models in their own establishments.

Of course the articles referred to in that provision are dresses or gowns, wraps, and so forth, and they are sold as such. Is it the idea to bring them in free while other articles of dress are made dutiable?

Mr. WILLIAMS. When they come here in this way they are imported by manufacturers and are used as models in their own establishments and not for sale.

Mr. WARREN. But they are invariably sold, I think; in fact, it is quite the thing for ladies to buy models. They buy them in large numbers, and pay high prices for them.

Mr. WILLIAMS. There were several people who came before the subcommittee and urged that, while they were allowed to bring in samples solely for use in taking orders for merchandise and various other things, amongst others model patterns for use in manufacturing casts, and so forth, there was no such provision in regard to models of women's wearing apparel.

Mr. WARREN. Mr. President, that may be the intention, and I do not know that I object to bringing in ladies' wardrobes untaxed, but the fact is that dozens, yes, scores and scores, of dresses are brought over as models, sold as models, and called "models." This provision, of course, will allow them to come in by the hundred.

Mr. WILLIAMS. I do not think so, because it says "imported by manufacturers for use as models in their own establishments."

Mr. WARREN. That is true, but—

Mr. WILLIAMS. If the models go out of their own establishments they would be subject to the tax.

Mr. WARREN. Every dressmaking establishment brings over models and sometimes makes one or two dresses like the models and only that number, because the purchasing public like to have but very few of a kind, perhaps one of a kind.

Mr. WILLIAMS. So as to clear up that ambiguity, if it exists, I suggest to the Senator whether or not it would be satisfactory to insert after the word "establishments" the words "and not for sale."

Mr. WARREN. That is satisfactory.

Mr. WILLIAMS. I move, then, to insert those words in line 3, after the word "establishments."

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 262, line 3, after the word "establishments," it is proposed to insert the words "not for sale."

Mr. SMOOT. Mr. President, I think if the Senator will read the subsection, he will not ask that those words be put in, either. This is what it says:

That machinery or other articles to be altered or repaired, molders' patterns for use in the manufacture of castings intended to be and actually exported within six months from the date of importation thereof.

Of course, it does not hurt if you want to put in those words.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Mississippi.

The amendment was agreed to.

Mr. WILLIAMS. I offer an amendment to come in on page 267, line 12.

The PRESIDING OFFICER. The attention of the Senator from Mississippi is called to the fact that there is something passed over on a preceding page which the Secretary will state.

The SECRETARY. On page 263 the committee amendment proposes to strike out lines 11 to 14, both inclusive. That paragraph was passed over at the request of the senior Senator from Washington [Mr. JONES].

Mr. JONES. I simply desire to say that on account of the small attendance here I am not going to oppose adoption of the committee amendment to-night. I desire to say, however, that I shall ask for a separate vote on the committee amendment when the bill comes into the Senate, and shall have an amendment to propose to it, and shall then oppose the adoption of the committee amendment.

Mr. WILLIAMS. Very well.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will now report the amendment of the Senator from Mississippi.

The SECRETARY. On page 267, line 12, after the word "and," it is proposed to insert the words "boxes or packages containing."

The PRESIDING OFFICER. The amendment just offered by the Senator from Mississippi was agreed to on the 30th day of August.

Mr. WILLIAMS. The committee amendment there in the bill has been already adopted, I think.

The PRESIDING OFFICER. Yes.

Mr. WILLIAMS. Now, I have offered an amendment to that amendment, after the word "and," in line 12, to insert "boxes or packages containing."

Mr. GALLINGER. That was agreed to.

The PRESIDING OFFICER. That amendment was inserted on the 30th day of August, and agreed to.

Mr. WILLIAMS. Oh, it was?

Mr. GALLINGER. Yes.

The SECRETARY. On page 267, subdivision N, beginning "That the works of manufacturers engaged in smelting or refining, or both, of ores and crude metals," etc., running over to and including line 16, on page 268, was recommitted to the committee on the 30th day of August.

Mr. WILLIAMS. At whose request was that done?

The PRESIDING OFFICER. At the request of the Senator from Mississippi.

Mr. WILLIAMS. I have no note of its having been recommitted. Oh, I remember now, Mr. President. It was recommended that in place of paragraph N there should be inserted a substitute in the language I will send to the desk. By my neglect this matter was not submitted to the committee. It was accompanied by a letter, I will state, to the chairman of the committee from the Secretary of the Treasury, accompanied by a letter from James L. Gerry, of New York, and a communication recommending the insertion of the matter which I will send up as a substitute. I read it over, and I think it ought to be substituted for the paragraph.

Mr. SIMMONS. Mr. President, I think that is all right. I have been over it, and I think it is satisfactory.

The PRESIDING OFFICER. The Senator from Mississippi reports back the amendment from the committee with an amendment, which the Secretary will read.

The SECRETARY. On page 267, it is proposed to strike out paragraph N and insert the following in lieu thereof:

N. That the works of manufacturers engaged in smelting or refining, or both, of ores and crude metals, may, upon the giving of satisfactory bonds, be designated as bonded smelting warehouses. Ores or crude metals may be removed from the vessel or other vehicle in which imported, or from a bonded warehouse, into a bonded smelting warehouse without the payment of duties thereon and there smelted or refined, or both, together with other ores or crude metals of home or foreign production: *Provided*, That the bonds shall be charged with the amount of duties payable upon such ores and crude metals at the time of their importation, and the several charges against such bonds may be canceled upon the exportation or delivery to a bonded manufacturing warehouse established under paragraph M of this section of an amount of the same kind of metal equal to the actual amount of dutiable metal producible from the smelting or refining, or both, of such ores or crude metals, as determined from time to time by the Secretary of the Treasury: *Provided further*, That the said metals so producible, or any portion thereof, may be withdrawn for domestic consumption or transferred to a bonded customs warehouse and withdrawn therefrom and the several charges against the bonds canceled upon the payment of the duties chargeable against an equivalent amount of ores or crude metals from which said metal would be producible in their condition as imported: *Provided further*, That on the arrival of the ores and crude metals at such establishments they shall be sampled and assayed according to commercial methods, under the supervision of the Government officers to be appointed by the Secretary of the Treasury and at the expense of the manufacturer: *Provided further*, That antimonial lead produced in said establishments may be withdrawn for consumption upon the payment of the duties chargeable against it as type metal under existing law and the charges against the bonds canceled in a similar sum: *Provided further*, That all labor performed and services rendered pursuant to this section shall be under the supervision of an officer of the customs, to be appointed by the Secretary of the Treasury, and at the expense of the manufacturer: *Provided further*, That all regulations for the carrying out of this section shall be prescribed by the Secretary of the Treasury.

The amendment was agreed to.

Mr. SIMMONS. Mr. President, with the consent of the Senator from Mississippi, if it does not interfere with him, there is an amendment which I wish to offer for the committee on page 67, in line 12, after the word "spirits." It is the amendment recommended by the department.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 67, line 12, after the word "spirits" and before the period, it is proposed to insert the following:

Except that when written protest is filed with the collector of customs by the importer before he accepts the goods, reciting that a cask or package has been broken or otherwise injured in transit from a foreign port, and that as a result a part of the contents thereof, amounting to 10 per cent or more of the value of the contents of said cask or package in the condition as exported from said foreign port before such breakage or injury occurred, has been lost, particularly specifying and identifying the package, consignment, and invoice from which the loss has occurred, it shall be the duty of the collector to separate said package or packages so alleged to have been broken or injured, or the consignment from which a portion thereof is alleged to have been lost, and to cause a separate inventory and appraisal thereof to be made, and duties shall be collected only upon the balance remaining in said cask or package, less normal outage or wantage, as determined by the official gauger.

Mr. SMOOT. Mr. President, there was so much noise in the Chamber that I could hardly hear the amendment, but I should like to ask the Senator from North Carolina a question.

Mr. SIMMONS. Mr. President, I withdraw the amendment until we get into the Senate.

Mr. SMOOT. No; the Senator need not withdraw it. I am in favor of the amendment if I understand it correctly. I just wish to ask the Senator a question. That applies only in a case where 10 per cent of the contents of the cask has leaked out?

Mr. SIMMONS. Yes.

Mr. SMOOT. Anything less than 10 per cent it would not apply to?

Mr. SIMMONS. It would not apply to anything less than 10 per cent.

Mr. SMOOT. I have no objection to the amendment.

Mr. SIMMONS. I submitted the amendment to the department, and they said it ought to be adopted.

Mr. SMOOT. There is not any question about it.

Mr. SIMMONS. It is an amendment offered by the Senator from Ohio [Mr. POMERENE].

Mr. SMOOT. We had a similar bill before the Senate, and tried to pass it, once. I think it is a very just provision.

Mr. POMERENE. I have been advised that where there has been an accident to a cask, and part of its contents has leaked out, the Government will not allow a rebate under the present law.

Mr. SMOOT. The Government can not allow a rebate under the present law.

Mr. POMERENE. That has been held; and it is to remedy that that this amendment is offered.

Mr. SMOOT. I think it is a very proper measure.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from North Carolina.

The amendment was agreed to.

Mr. WILLIAMS. I wish to ask whether, when we went over the bill before, the matter on page 273 beginning with line 11 and ending with line 17 was stricken out or not?

The PRESIDING OFFICER. The amendment was disagreed to on the 30th day of August.

Mr. WILLIAMS. That is right, then. On page 274, line 23, after the word "act," I wish to insert the matter which I send to the desk.

The PRESIDING OFFICER. The Secretary will state the amendment.

The SECRETARY. On page 274, on August 30, the amendment of the committee was recommitted to the committee.

Mr. WILLIAMS. Now the committee is ready to report it with an amendment. I have just sent the amendment to the Secretary.

The PRESIDING OFFICER. The Senator from Mississippi reports back the committee amendment with an amendment, which will be stated.

The SECRETARY. In lieu of the committee amendment as reported it is proposed to insert the following:

To permit any oaths to be demanded or fees to be charged except as provided in this act or in section 2862 of the Revised Statutes of the United States, nor.

Mr. WILLIAMS. Some Senator on the other side called attention to that, and there was fear expressed that the bill as worded now might dispense with the consular oaths demanded by the Department of State. Section 2862 is the section of the Revised Statutes which requires consular oaths; so I provided for it in this way, to continue the consular oaths.

Mr. CLARK of Wyoming. Mr. President, I wish to call the attention of the Senator from Mississippi to the fact that in that same subdivision T occurs the matter that was again taken under consideration by the committee to-day, at the suggestion of the junior Senator from Utah [Mr. SUTHERLAND], in relation to providing for the Customs Court. It is in the same section.

Mr. WILLIAMS. That can be very easily cured.

Mr. CLARK of Wyoming. It will require some change of language in order to cure it.

Mr. WILLIAMS. I do not know that it will. It reads:

Subsection 29 of section 28 and subsequent provisions relating to the establishment and continuance of a Customs Court.

The contention of the Senator from Utah was that the words "subsequent provisions" necessarily referred to subsequent provisions in that subsection, but after we finish a subsection there can be no subsequent provision.

Mr. CLARK of Wyoming. If the Senator from Mississippi is satisfied, very well. I merely wanted to call his attention to the fact that the Senator from Utah, who is not at present in his seat, called attention to it to-day.

Mr. WILLIAMS. I suggested to the Senator this morning, though he had not time to reply to me and look into it, that perhaps it would be well to strike out the word "provision" and say "subsequent enactments," or "subsequent laws," or "subsequent amendments." In order to get the opportunity to amend the matter in conference, at any rate, I move to strike out the word "provision" and substitute "laws and amendments."

The PRESIDING OFFICER. There is an amendment already pending. The question is on the former amendment.

The amendment was agreed to.

The PRESIDING OFFICER. Now the Senator from Mississippi offers an amendment, which will be stated.

Mr. WILLIAMS. In line 2, page 275, I move to strike out the word "provisions" and insert "laws and amendments."

The PRESIDING OFFICER. The Secretary will state the amendment.

The SECRETARY. On August 30 the committee amendment at the bottom of page 275 was agreed to. All the matter commencing with the word "Subsection," on line 1, down to and including the word "act," in line 18, page 276, was recommitted to the committee.

Mr. WILLIAMS. Now, Mr. President, I wish to call the attention of the Senator from Connecticut [Mr. BRANDEGEE] to the fact that at his request we took back the proviso beginning in line 21 so that we might use the precise language of the excise tax.

Mr. CLARK of Wyoming. I will suggest to the Senator that the amendment which he proposed to the word "provisions" has not yet been acted upon.

Mr. WILLIAMS. I thought it had been.

The PRESIDING OFFICER. No; it has not. The question is on agreeing to the amendment offered by the Senator from Mississippi, which the Secretary will state.

The SECRETARY. On page 275, line 2, it is proposed to strike out the word "provisions" and insert the words "laws and amendments."

The amendment was agreed to.

Mr. WILLIAMS. Now, Mr. President, in lines 21 and 22, page 275, following the amendment—and I call the attention of the Senator from Connecticut [Mr. BRANDEGEE] to this—I have gone back and gotten the precise language of the excise law, and have substituted it for the language of the amendment.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 275, line 21, after the word "that"—

The PRESIDING OFFICER. That amendment has already been agreed to. Does the Senator from Mississippi move to reconsider the action of the Senate in agreeing to the amendment on August 30?

Mr. WILLIAMS. The amendment has already been agreed to, and I am now amending the amendment as agreed to.

The PRESIDING OFFICER. The Senator from Mississippi offers an amendment to the amendment of the committee as agreed to. The Secretary will report the amendment to the amendment.

The SECRETARY. On page 275, line 21, after the word "that," it is proposed to insert the words "a special"—

Mr. WILLIAMS. Strike out the indefinite article "an" and substitute the words "a special."

Mr. SMOOT. If that is the case, this will have to be reconsidered.

The PRESIDING OFFICER. The Chair is of that opinion. The Chair is of opinion that a motion to reconsider will have to be made by the Senator from Mississippi.

Mr. WILLIAMS. I differ with the Chair; but, as the court said to the young man, "Your opinion goes right now, and we won't stop to argue it."

The PRESIDING OFFICER. Does the Senator from Mississippi move to reconsider?

Mr. WILLIAMS. I move, then, to reconsider.

The motion to reconsider was agreed to.

The PRESIDING OFFICER. The Secretary will now state the amendment.

The SECRETARY. On page 275, line 21, after the word "That," it is proposed to strike out "an" and insert "a special."

The amendment was agreed to.

The SECRETARY. In line 22, after the word "tax," strike out the words "upon the" and insert the words "with respect to the carrying on or."

Mr. WILLIAMS. So as to read:

That a special excise tax with respect to the carrying on or doing of business.

That is the exact language of the old bill. It is not very good grammatically, but I thought it safer to follow it.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. WILLIAMS. I took notes, and I think we have covered everything that was passed over. Is there anything else at the clerks' desk passed over which has been omitted?

Mr. SMOOT. Paragraph 254½ was passed over.

Mr. SIMMONS. I think I will be ready to deal with that in a few minutes. The Senator from Georgia [Mr. SMITH] desires to submit some remarks. I wish to ask the Senator from Iowa [Mr. CUMMINS] if he desires to submit his amendment?

Mr. JOHNSON. I wish to recur to paragraph 328, on page 97, for the purpose of offering an amendment.

The PRESIDING OFFICER. The amendment will be stated.

The SECRETARY. On page 97, paragraph 328—

Mr. JOHNSON. In behalf of the committee, I move to insert, after the word "felt," in the eleventh line, the words "common paper-box board, not coated, lined, embossed, printed, or decorated in any manner, nor cut into shapes for boxes or other articles."

Mr. SMOOT. Let it be read.

The PRESIDING OFFICER. The amendment will be read.

The SECRETARY. On page 97, line 11, after the word "felt" and the comma, insert the following:

Common paper-box board, not coated, lined, embossed, printed, or decorated in any manner, nor cut into shapes for boxes or other articles.

Mr. SMOOT. Let me suggest to the Senator that he ought to strike out the word "and" before "roofing," so that the paragraph will read:

328. Sheathing paper, pulpboard in rolls, not laminated, roofing felt, and common paper-box board, not coated, lined, embossed, printed, or

decorated in any manner, nor cut into shapes for boxes or other articles, 5 per cent ad valorem.

Mr. JOHNSON. I think the Senator from Utah is correct. I also move to strike out the word "and" before "roofing," on page 97, the first word in line 11.

The PRESIDING OFFICER. The Senator from Maine modifies his amendment. The question is on agreeing to the amendment as modified.

The amendment as modified was agreed to.

Mr. CUMMINS. A few days ago I presented an amendment suggesting that I would offer it as a substitute for the committee amendment found on pages 210 to 213, being section 3 of the bill. In my absence the amendment of the committee was adopted, and I do not care to have the action of the Senate reconsidered. In fact, upon reflection—

The PRESIDING OFFICER. The Chair will state to the Senator from Iowa that it was agreed by unanimous consent that it could be recurred to.

Mr. CUMMINS. I so understood; but upon reflection I have reached the conclusion that I would prefer to offer the amendment as an addition to the bill rather than as a substitute to the amendment proposed by the Senator from Arkansas [Mr. CLARKE] that came through the committee. Therefore I shall offer the following as an amendment to follow line 20, on page 213.

Mr. CLARKE of Arkansas. There has been an amendment to that paragraph added after line 20 by the committee. It would follow that.

Mr. CUMMINS. Very well; it is to follow the amendment that has now been adopted by the Senate.

Mr. SIMMONS. I think the amendment has been read once. Does the Senator from Iowa desire to have it read again?

Mr. CUMMINS. I stated what the amendment is the other day.

Mr. SIMMONS. The Senator can restate it.

Mr. CUMMINS. I do not ask that it be read, but I do desire the opportunity of restating what it provides. It proposes to levy a tax of 10 per cent upon all sales made on stock exchanges, boards of trade, and other like institutions wherein the seller is not the owner of the things sold at the time the transaction takes place. Whatever may be its revenue-producing quality, the uppermost thought in my mind is to restrict if not to entirely abolish what is known as short sales upon exchanges and boards of trade. I speak of them as short sales. I am very moderate and polite when I so describe them. If I were to be entirely accurate in describing these transactions, I would call them speculative gambling.

I regard these transactions as one of the great evils of our modern commercial system, an evil that has wrought a more serious effect not only upon the stability of business but upon the morality of those who engage in the business than any other phase of our State or interstate commerce. I believe that we ought to put this limitation upon them, knowing that it will very greatly reduce the extent of the gambling and hoping and believing that it will entirely exterminate that method of doing business. I presented the subject at a good deal of length the other day. I have not the heart to impose further upon an already overworked and wearied Senate. Therefore, I do nothing more at this time than to ask for the yeas and nays upon my amendment.

Mr. CLARKE of Arkansas. Mr. President, I shall not be able to vote at this time for the amendment offered by the Senator from Iowa. I do not refrain from voting for it, however, because I do not approve of the general principle upon which it is cast. I most heartily agree with him, and on some appropriate occasion I hope to serve in cooperation with the Senator in putting upon the statute books just such legislation. I believe that the gambling carried on by the exchanges of this country is a most demoralizing force in our commercial life. I believe it is doing more to disturb the lines of legitimate commerce than everything else combined.

I shall not, however, be able to vote for the amendment because of the lateness of the hour and because of the fact that this bill has been practically matured under supervision that did not involve consultation with the distinguished Senator from Iowa. I am sure that many features of it must have been improved had we had that opportunity, but the conditions under which we were called upon to act deprived us of it. I am committed absolutely and unconditionally to the exertion of every power at the command of this Government to suppress gambling upon the organized exchanges of the country.

Mr. BRISTOW. Mr. President, I am in hearty accord with the amendment that is contained in the bill as section 3, so far as it goes. I regret that it does not include gambling in grain as well as cotton. I believe the amendment proposed by the Senator from Iowa would accomplish the result as to grain that is sought to be accomplished by the amendment in the bill

as it relates to cotton. I can not see why gambling in cotton should be prohibited and then permitted in other farm products. The demoralization so far as it relates to cotton is just as bad in regard to wheat and other farm products.

I hope that those who believe that this form of gambling should be stopped will vote for the amendment which the Senator from Iowa has offered. It is the most corrupting influence to-day in American business life. It is worse than the Louisiana lottery ever was. It has destroyed the fortunes of more men and destroyed more people, morally and financially, ten to one than the Louisiana lottery ever did. Still we permit it to go on year after year.

I do hope that the Democratic Members will consent to extend this prohibition so as to include these stocks.

Mr. NORRIS. Mr. President, I listened the other day with a great deal of interest to the argument which was made by the Senator from Arkansas [Mr. CLARKE] in favor of the provision in the bill as it now stands. The speech that he delivered made an impression upon me. I was pleased to see the position he had taken. I was struck with the wonderful ability that he showed on that occasion and the broad comprehension that he had of the subject he was discussing. I am satisfied that what he said made a deep and lasting impression upon all those who listened to him with open minds.

I believe that I listened with an open mind, as I think I have at least tried to do with every argument that has been made upon every provision in the bill. But everything that he said seemed to me to be an argument not only for his amendment but for the broader and more comprehensive amendment offered by the Senator from Iowa [Mr. CUMMINS]. I will not detract one single iota from what the Senator from Arkansas said when I say that the good which would come from his amendment would all be reached and accomplished, and much more of the same kind, if we could adopt the amendment proposed by the Senator from Iowa.

I am struck with the remarkable proposition that the Senator from Arkansas has just announced in saying that practically he agreed with all the Senator from Iowa had said in favor of his amendment. I regret that such able Senators as the Senator from Arkansas and many others on the other side feel that under the circumstances they can not vote for an amendment which appeals so conclusively to their consciences.

I believe that the amendment proposed by the Senator from Iowa would do a wonderful lot of good to the country. The evil which exists in the cotton exchange exists in all the other exchanges, either to a greater or less degree. The same principle, it seems to me, applies to all. For one, I should like to strike this evil now, when we have an appropriate occasion to do it, and do it in such a way that it would be effective not only against the gambling in cotton but against the gambling on all other exchanges, in all the products of the farm and the necessities of life that pass through such boards of trade and exchanges.

The Senator from Arkansas said that at some future time he would be glad to cooperate with the Senator from Iowa to have this provision enacted into law. The same thing has been said in regard to several other amendments. I think the same thing will be said in regard to several amendments that are yet to be offered. It can not be said that the amendment of the Senator from Iowa is not in order, that it is not appropriate, because we had just passed an amendment proposed by the Democratic caucus that prohibits gambling in cotton futures, and yet we stop at that and do not take any steps to prohibit it in wheat and in corn and in the other products of the country.

There never was a more appropriate time and a more appropriate place, it seems to me, to put this law into effect than right now and right here. If we wait for other opportunities, I am afraid many of them will never come. We all know the difficulty that a measure of this kind must encounter before it gets to the point in parliamentary procedure we have now reached where the amendment is applicable. We may favor a great many other amendments and on account of caucus or other party considerations vote against them, believing that we are right, wishing for the opportunity to come when we are not surrounded by such conditions, when we are not compelled to vote against them, wishing that we might support them. But I want to say to you that in most instances those opportunities will not be presented, at least not for a long time. Before the Senator from Iowa can get his amendment in the shape of an independent bill as far along as it is now he will have many serious obstacles to contend with.

Mr. CUMMINS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Iowa?

Mr. NORRIS. I do.

Mr. CUMMINS. At this point I wish to remind the Senator from Nebraska, emphasizing what he has just said, that a bill of this character can not originate in the Senate of the United States, that we must await the pleasure of the House before we can ever consider it.

Mr. NORRIS. I thank the Senator for the suggestion. The Constitution of the United States provides that bills for raising revenue must originate in the House of Representatives. While the object of this particular amendment, as I presume was the object of the amendment of the Senator from Arkansas, is to prevent gambling in futures, the constitutional reason why it is in order here is because the taxing power of the Government is being exercised as is provided in the amendment. Some such bill must originate and pass through the other House, and we will never have an opportunity in this body to vote for it unless it is put on as an amendment to some bill similar to the one now pending.

I say in all seriousness, Mr. President, I regret more than I am able to express in words that an amendment like this and an amendment like the Senator from Iowa offered earlier in the evening, which appeals, I believe, to a vast majority of the Members of this body, must, on account of partisan considerations, be voted down by many Senators who would like to see it enacted into law.

The PRESIDING OFFICER. The Senator from Iowa requests the yeas and nays on agreeing to his amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. STERLING (when Mr. CRAWFORD's name was called). My colleague [Mr. CRAWFORD] is necessarily absent. He is paired with the senior Senator from Tennessee [Mr. LEA]. If here and at liberty to vote, my colleague would vote "yea" on this proposition.

The PRESIDING OFFICER (when Mr. LEA's name was called). The occupant of the chair again announces his pair with the senior Senator from South Dakota [Mr. CRAWFORD]. If the occupant of the chair were at liberty to vote he would vote "nay."

Mr. MYERS (when his name was called). I transfer my pair with the Senator from Connecticut [Mr. MCLEAN] to the Senator from Arizona [Mr. ASHURST] and vote "nay."

Mr. OVERMAN (when his name was called). I have a general pair with the Senator from California [Mr. PERKINS]. If the Senator from California were present I should vote "nay." In his absence I withhold my vote.

Mr. REED (when his name was called). I transfer my pair with the senior Senator from Michigan [Mr. SMITH] to the Senator from Ohio [Mr. POMERENE] and vote. I vote "nay."

Mr. SAULSBURY (when his name was called). I have a pair with the junior Senator from Rhode Island [Mr. COLT], and therefore withhold my vote. If at liberty to vote, I should vote "nay."

Mr. THOMAS (when his name was called). I make the same transfer as announced heretofore and vote "nay."

The roll call was concluded.

Mr. JAMES. I have a general pair with the Senator from Massachusetts [Mr. WEEKS]. I transfer that pair to the Senator from Mississippi [Mr. VARDAMAN] and vote "nay."

Mr. BRYAN. I have a pair with the junior Senator from Michigan [Mr. TOWNSEND], which I will transfer to the senior Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. KERN. I transfer my pair with the Senator from Kentucky [Mr. BRADLEY] to the Senator from New Jersey [Mr. HUGHES] and vote "nay."

Mr. CHAMBERLAIN. I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence I withhold my vote.

Mr. GALLINGER. I have been requested to announce that the Senator from New Mexico [Mr. CATRON] is paired with the Senator from Arizona [Mr. SMITH] and that the Senator from Wisconsin [Mr. STEPHENSON] is paired with the Senator from South Carolina [Mr. TILLMAN].

The result was announced—yeas 16, nays 35, as follows:

YEAS—16.

Brady	Clark, Wyo.	Kenyon	Smoot
Brandegge	Cummins	La Follette	Sterling
Bristow	Gallinger	Norris	Warren
Clapp	Jones	Poindexter	Works
NAYS—35.			
Bryan	Lane	Robinson	Smith, S. C.
Chilton	Martin, Va.	Shafroth	Stone
Clarke, Ark.	Martine, N. J.	Sheppard	Swanson
Fletcher	Myers	Sherman	Thomas
Hollis	O'Gorman	Shields	Thompson
Jackson	Owen	Shively	Thornton
James	Pittman	Simmons	Walsh
Johnson	Ransdell	Smith, Ga.	Williams
Kern	Reed	Smith, Md.	

NOT VOTING—44.

Ashurst	Culberson	Lippitt	Pomerene
Bacon	Dillingham	Lodge	Root
Bankhead	du Pont	McCumber	Saulsbury
Borah	Fall	McLean	Smith, Ariz.
Bradley	Goff	Nelson	Smith, Mich.
Burleigh	Gore	Newlands	Stephenson
Burton	Gronna	Oliver	Sutherland
Catron	Hitchcock	Overman	Tillman
Chamberlain	Hughes	Page	Townsend
Colt	Lea	Penrose	Vardaman
Crawford	Lewis	Perkins	Weeks

So the amendment of Mr. CUMMINS was rejected.

Mr. SMITH of Georgia. Mr. President, many times during this debate Senators upon the Republican side of the Chamber have made the claim that the passage of this tariff bill will probably bring the country to financial distress. They have appealed to the history of tariff legislation to sustain the claim. They have sought to show that the reduction of tariff taxes will flood this country with foreign products, and they have cited the panic during the last administration of President Cleveland to support their suggestions of hard times as the result of tariff reduction.

As this bill is to pass substantially in its present shape, it is well for the public to understand that the historical references made by Senators on the Republican side are inaccurate and their fears utterly without foundation.

Before dealing with the panic from which this country suffered during the last administration of President Cleveland let me call attention to the fact that the tariff legislation of 1846 can justly be compared to the present bill. The reduction of the tariff taxes in 1846 was followed by unprecedented prosperity. So that we have a record of substantial tariff-tax reductions accompanied with improvement and progress upon all lines of activities.

One of the severest panics from which this country ever suffered was in 1873. At that time we had a high protective tariff with no suggestion of its reduction, so that we have had a severe panic under a protective tariff. In all the woeful speeches made during this debate especial stress has been placed upon the panic during the last administration of President Cleveland, and with general terms, but without logic or reason, the effort has been made to connect the tariff legislation passed during his administration with the panic and to charge tariff-tax reductions as the cause of the panic.

Mr. Cleveland was inaugurated the second time on March 4, 1893. The panic was already in progress before his inauguration and before his election. The extreme period of the panic was during the year 1893, and the Wilson bill reducing tariff taxes was not passed until during the last half of the year 1894. No great increase of importation followed the tariff reductions of 1894. Our tariff importations were less in 1895 than they were in 1893, and less in 1896 than they were in 1892. The total importations for those four years were as follows:

1893	\$844,454,000
1895	731,162,000
1892	813,601,000
1896	759,694,000

The panic of 1893, which began, as I have already stated, prior to that time, took place under a high protective tariff. If it is urged that in 1893 it was known that the Democrats contemplated reducing the tariff and that this brought on the panic, we may well reply that a majority of the Senate was opposed in 1893 to tariff legislation in full compliance with Democratic principles, and this fact was generally known. To-day a majority of both Houses of Congress are known to be thoroughly in accord with the Democratic principle of tariff reduction. They are on the point of passing legislation, yet the business record of our country for the past 12 months has been one of prosperity and progress.

Our imports for the past fiscal year amounted in value to \$1,803,622,000 and our exports to \$2,477,514,000.

It is true that just at this time business halts. Merchants are waiting for the passage of this bill to know just what decreases of prices will be made on account of relief from tariff taxes. Barring this, the country is prosperous. By the 1st of September, 1893, the severest part of the panic of that period was passing.

It is easy to find causes for the panic of 1893. Those causes and the conditions of 1893 should be presented that all doubt, due to protestations of fear on the other side of this Chamber, may be removed from the public mind and evil consequences which might otherwise be caused from the doleful speeches we have heard be prevented.

The panic of 1893 was due to a number of causes. The large failure of Barring Bros. took place on November 20, 1890, and was followed with world-wide financial disturbance. The disturbance was so great in New York City that the banks were

forced to issue fifteen millions in clearing-house loan certificates, and loan rates rose in New York City at times to over 100 per cent, accompanied by numerous banking failures. This in itself affected conditions throughout the United States. There were, however, other agencies at work here that necessitated serious trouble.

Mr. Cleveland closed his first term as President on March 4, 1889. During the first four years of his service the country enjoyed unprecedented prosperity. The Government, financially, was strong. The revenues largely exceeded the appropriations. The surplus in the Treasury was so great that not only were those Government bonds retired which the law required, but Government bonds were bought upon the market, reducing the national debt, to prevent an excessive accumulation of money in the National Treasury. At the close of the administration of Mr. Cleveland on March 4, 1889, all liabilities had been paid and there was in the Treasury a surplus of \$180,000,000 and the gold reserve was ample. No Secretary of the Treasury ever turned over to his successor a Treasury more fully supplied or a national credit more absolutely established.

Under President Harrison, who followed President Cleveland, Mr. Windom became Secretary of the Treasury, and the measures which were then adopted wiped out the surplus in the Treasury and seriously affected the credit of the Government. In 1890-91 the tariff was revised upward. It was increased 10 per cent, not for the purposes of raising revenue, but for the purpose of excluding importations of foreign goods. Appropriations were also largely increased. The revenue was decreased over \$50,000,000 annually, while the appropriations were increased over a hundred million dollars annually. These two pieces of legislation changed the net balance in the Treasury annually over one hundred and fifty millions of dollars. The surplus from Mr. Cleveland's administration was rapidly wiped out, and by the 4th of March, 1893, the Treasury was reduced to the lowest state that it had been in for many years.

But the attack upon the national credit was not limited to emptying the Treasury. Secretary Windom recommended that all silver bullion offered to the Treasury should be bought and Treasury notes issued in payment. The House of Representatives did not accept his view, but it did pass a bill providing for the issuance of \$4,500,000 Treasury notes each month with which to purchase silver bullion. When this bill reached the Senate that body promptly substituted for it a bill providing for the free coinage of silver at the ratio of 16 to 1. This was done without regard to the fact that President Harrison had declared that a "free-coinage bill would be discreditable to our financial management and disastrous to all business interests." As a compromise a bill was passed providing for the purchase monthly of 4,500,000 ounces of silver bullion and the payment therefor with Treasury notes.

In the midst of a world-wide financial distrust the United States began issuing over fifty millions annually of Treasury notes, with nothing back of them but silver, and that, too, under a statute which required this continued increase of paper money with no provision for its absorption.

To quote from a subsequent report of a Republican Treasurer:

The people who had demanded this hundred million of ready cash made their use of it and were willing to part with it, but the Treasury which had found a means of paying it out could not call it back.

Foreign exchange began to rise and gold bars began to be taken from the Treasury for shipment abroad. By the end of June, 1891, the exports of gold had reached the unexampled figure of \$70,000,000 for the six months.

The big wheat crop of 1891, with the short crop abroad, checked the trouble, only to begin again in the early part of 1892. In the first six months of 1892, \$41,500,000 in gold was shipped abroad. In July and August gold was going out at the rate of two to seven millions weekly. Gold began to be so short that it ceased to enter into commerce, and the fear of a depreciated currency caused gold to be hoarded.

By the middle of July, 1892, both the Treasury and the banks ceased to pay gold through the clearing house. Up to this time the demand for gold for exportation had been obtained through the clearing house. During the latter part of the month of July, 1892, Government legal tenders were again carried to the Treasury and redemption in gold was demanded. This was the first demand for redemptions of Government legal tenders in gold of any large quantities since 1879.

Appropriations were still exceeding revenue, the gold reserve in the Treasury was depleted, and the Secretary of the Treasury, Mr. Foster, stated in December, 1892, that a heavy deficit in revenue was impending and that the whole machinery of the Government was imperiled.

In December, 1892, and January, 1893, upward of twenty-five millions of gold was withdrawn from the Treasury for export.

The gold reserve had fallen to only a few millions more than the legal minimum, and in February, 1893, before the inauguration of Mr. Cleveland, Secretary Foster gave orders to prepare the engraving plates for a bond issue under the Republican act to provide gold to meet legal-tender notes presented at the Treasury. He avoided the actual issue of these bonds in February by appealing to the New York banks to furnish him gold to prevent a panic. To his successors in the Treasury, on March 4, 1893, Mr. Foster left less than a million dollars in excess of the required gold reserve of one hundred millions and only twenty-five millions of available cash.

Referring to the situation on March 4, 1893, Noyes, in his *Thirty Years of American Finance*, declares:

Probably no financial administration in our history has entered office under such disturbing conditions. The Treasury was empty and public credit shaken.

The same author states, speaking of this period in March and April, 1893:

The very sight of this desperate struggle going on to maintain the public credit was sufficient to alarm both home and foreign interests, and this alarm was now reflected everywhere. The feverish money market, the disordered and uneasy market for securities, and the renewed advance in foreign exchange, combined to bring matters to a head.

In the meantime the reserve against the legal tenders had fallen below the statutory minimum. The same author states, referring to the same period:

The public mind was on the verge of panic. During a year or more it had been continuously disturbed by the undermining of the Treasury, a process visible to all observers. In all probability the crash of 1893 would have come 12 months before had it not been for the accident of the great harvest in 1891 in the face of European famine.

In 1893 the panic in the West had reached the stage which seemed to foreshadow general bankruptcy. During the summer of 1893 clearing-house certificates were issued against the assets of the banks and were used nearly everywhere instead of cash. Many banks adopted the extreme measure of refusing to pay cash for the checks of their own depositors. Certified bank checks upon perfectly solvent banks could not obtain money on presentation and were sold by brokers at a discount.

Mr. Cleveland called Congress together on August 7, 1893, to repeal the silver-purchase law of 1890, and Mr. Noyes, in his work already quoted, declares:

In the popular discussion of the day entire responsibility was laid on this law for the existing distress. * * * Repeal of the silver-purchase law stopped future mischief of inflation, but it could not change the mischief already done.

It is true that Coxey's army marched to Washington in the spring of 1894. It is true that many labor troubles existed during the spring and summer of 1894, but I have presented the facts sufficiently to show that most of these troubles—certainly the worst of them—and the causes which produced them preceded tariff legislation. The causes which brought on the panic of 1893 were entirely disconnected with the tariff bill of 1894.

I long for the prosperity of our entire country—for a prosperity which will bring wealth not alone to a few, but furnish a broad opportunity to the great masses of the people. The doleful misrepresentation of the panic of 1893 should cease. It has no bearing upon the present. To-day the Treasury of the United States contains \$1,250,000,000 in gold. It is amply supplied with funds to meet the wants of the Government. The Treasury is so strong that it is able to furnish a hundred millions of dollars to move the crops in the West and the South. Conditions are reassuring in all parts of the country.

Splendid crops are being gathered, the exportation of which, in part, will bring additional wealth to our people and add to our gold supply. Doleful countenances should give way to smiles. The time has passed when the people of this country will submit to the inexcusably high protective tariff, which even President McKinley condemned.

We believe in this bill, the passage of which we are pressing. It is an honest revision of the tariff downward, free from all favoritism. The bill is framed primarily to procure revenue, but at the same time we seek to attain this end in a way that will not injure legitimate industries. It is constructed not only to free the consumer from unjust burdens, but to place the manufacturing industries where they will not be confined to American markets. It is built upon the competitive theory, to the end that revenue may be raised and no concern be able to feel that it has a monopoly of the home market gained other than through the fact that it is able to furnish better goods at lower prices than others.

It is true that some of our manufacturing industries will feel the spur of competition where heretofore they have been without it, but there is no reason why they should fail to continue in lines of prosperity with broader trade. Given no longer the privilege of arbitrarily taking the dollars of their neighbors,

they will reach still further into the markets of the world for the sale of their commodities. The great body of consumers will feel a lightening of their burdens. A wider opportunity will be given for individual effort. The average man will have a better chance. I do not mean that these changes will come instantly. They will come gradually and be more and more perceptible each year for several years.

We may turn to the future with confidence. The wrangling over the bill is practically ended, and the business of the country will resume normal conditions with the passage of this measure.

Mr. STONE. Mr. President, I will ask the Secretary to read paragraph 254½.

The PRESIDING OFFICER. The Secretary will read as requested.

The SECRETARY. On page 70, after line 2, the amendment heretofore agreed to, it is proposed to insert the following:

254½. Every producer of pure sweet wines, other than those actually exported, is hereby required to pay to the Government as a revenue tax the sum of \$1.10 per proof gallon for the wine spirits or grape brandy or pure neutral alcohol used by him in the fortification of said wine, the same to be paid upon the removal thereof from the distillery or from any special bonded warehouse: *Provided, however*, That the time of the payment of said tax upon such wine spirits or grape brandy or pure neutral alcohol used in fortifying pure sweet wines may be extended not exceeding two years upon the producer of such pure sweet wine giving bond in a penal sum of not less than double the amount of said tax with sureties to the satisfaction of the collector of internal revenue of the district and the Commissioner of Internal Revenue conditioned upon the payment of said tax within said two years.

That so much of the act entitled "An act to reduce the revenue and equalize duties on imports, and for other purposes," approved October 1, 1890, as relates to the use, free of tax, of wine spirits or grape brandy in the fortifying of pure sweet wine, and all acts amendatory thereof, so far as they relate to the fortification of such wines and the charge therefor, which may be inconsistent with this paragraph are hereby to that extent repealed.

That upon all wines or liquors known or denominated as wines (other than distilled spirits) not made exclusively from fresh grapes, berries, or fruits, and upon all wines to which have been added spirits distilled from any material other than grapes, berries, or fruits exclusively, except pure neutral alcohol, there shall be levied, collected, and paid before removal from the place of manufacture a tax of 25 cents on each and every wine gallon where the alcoholic strength of such wine does not exceed 24 per cent, by volume, and upon all such wines or liquors containing an alcoholic strength of over 24 per cent, by volume, there shall be levied, collected, and paid a tax at the same rate as is imposed by law on distilled spirits: *Provided*, That the tax herein imposed shall not be held to apply to pure sweet wine made exclusively from fresh grapes, berries, or other fruits to which has been added before or during fermentation sugar, pure boiled or condensed grape must, or water not exceeding in either case 20 per cent of the weight of such wine.

That every person before producing any wine or liquor subject to tax under the provisions of this paragraph shall file with the collector of the district in which such wine or liquor is to be produced such notice and bond, and shall comply with such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may from time to time prescribe; and all provisions of law relating to the assessment and collection of internal-revenue taxes and to the preparation, issuing, use, and accounting of tax-paid stamps, so far as applicable, are hereby extended and made applicable to the tax imposed by this paragraph.

Any person who shall sell or dispose of any wine or liquor subject to the tax herein imposed without such tax being first paid, or who shall produce, sell, or dispose of any such wine or liquor contrary to any of the provisions of this paragraph, or to any regulation issued pursuant thereto, shall for each such offense be fined not less than \$1,000 nor more than \$5,000, and shall be imprisoned not more than two years; and all wines or liquors upon which the tax herein imposed has not been paid before removal from the place of manufacture and within one year from the date of such manufacture shall be forfeited to the United States.

That all containers of wines, or liquors known or denominated as wines, which contain benzoic acid, benzoate of soda, salicylic acid, or fluorides, shall be labeled plainly with the per cent of such contents, under such rules and regulations as shall be prescribed by the Commissioner of Internal Revenue and approved by the Secretary of the Treasury. Any person knowingly or willfully selling, or exposing for sale, any such wines or liquors without such label or with a false label shall be guilty of a misdemeanor, and upon conviction shall be fined not less than \$50 nor more than \$2,000 or imprisoned not more than one year, or both, in the discretion of the court.

The provisions of this paragraph (254½) shall be effective on and after January 1, 1914.

Mr. STONE. Mr. President, in line 6, page 70, after the word "neutral," I move to strike out the word "alcohol" and insert the word "spirits."

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. On page 70, line 6, after the word "neutral," it is proposed to strike out the word "alcohol" and insert the word "spirits."

The amendment to the amendment was agreed in.

Mr. STONE. In line 11, on the same page, I move to strike out "alcohol" and insert "spirits."

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. On the same page, line 11, it is proposed to strike out the word "alcohol" and insert the word "spirits."

The amendment to the amendment was agreed to.

Mr. STONE. In line 6, page 71, after the word "neutral," I move to strike out the word "alcohol" and insert the word "spirits."

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. On page 71, line 6, it is proposed to strike out the word "alcohol" and insert the word "spirits."

The amendment to the amendment was agreed to.

Mr. STONE. On line 18, page 71, between the word "case" and the numerals "20," I move to insert the words "in the aggregate."

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. On page 71, line 18, after the word "case," it is proposed to insert the words "in the aggregate."

The amendment to the amendment was agreed to.

Mr. STONE. On page 73, in the committee amendment, I move to strike out lines 4 to 6, inclusive.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. On page 73, it is proposed to strike out of the committee amendment the following words:

The provisions of this paragraph (254½) shall be effective on and after January 1, 1914.

The amendment to the amendment was agreed to.

Mr. STONE. Mr. President, I should state to the Senate that since this amendment was adopted by the committee hearings have been had that have somewhat shaken the confidence of some of the members of the committee in the wisdom of the action that was taken.

In the last two days, or parts of two days, as far as the pressing duties on the floor would permit, the members of the subcommittee have been looking into this matter and listening to gentlemen interested in opposition to each other in the questions involved and listening to the suggestions of the department officials.

I am frank to say that I am not by any means satisfied with this provision myself; but the subcommittee, because of the press of business here, desiring to get the bill into the Senate and into conference, determined that it would not take the time necessary to go into this matter thoroughly—which perhaps would require several days—and that this provision would be offered by the committee and agreed to by the Senate in order that it might go into conference. In the interval the subcommittee will thoroughly go into the subject.

I ask that the committee amendment as now amended be agreed to.

The PRESIDING OFFICER. The question is on the amendment of the committee as amended.

The amendment as amended was agreed to.

The PRESIDING OFFICER. If no further amendments be proposed, the bill will be reported to the Senate.

Mr. POINDEXTER. Mr. President, there is an amendment still pending not disposed of.

The PRESIDING OFFICER. The Secretary will state the amendment.

Mr. KERN. I desire to ask unanimous consent that when the Senate adjourns to-night it adjourn until Monday at 10 o'clock.

Mr. GALLINGER and others. That is right.

The PRESIDING OFFICER. Does the Senator from Washington yield for that purpose?

Mr. POINDEXTER. I do.

The PRESIDING OFFICER. The Senator from Indiana asks unanimous consent that when the Senate adjourns to-day it adjourn to meet at 10 o'clock on Monday. Is there objection? The Chair hears none, and it is so ordered. The Senator from Washington will proceed.

Mr. POINDEXTER. Mr. President, the amendment to which I refer provides for a tariff commission. The Senate this afternoon voted upon an amendment to come in at another place. The amendment upon which I am now speaking contains a different proposition entirely from that which the Senate acted upon this afternoon. Consequently, I desire to make a few observations upon it. I do not intend to detain the Senate to discuss at length the principles of a tariff commission.

The amendment which I have offered, Mr. President, confers upon a commission of five members, acting under a rule laid down by Congress, authority to fix a bill of rates in accordance with that rule. Before proceeding to state my reasons for believing that some such arrangement as this is absolutely essential if the question of the tariff is ever to be finally and permanently settled in this country, I will state that the terms of the members of the commission as proposed in the amendment are 15 years; that the salary provided for each member is

\$12,500; and that the term of one member of the commission expires each three years.

Mr. President, it is quite remarkable that in the century of discussion and division of political parties of the United States over the question of a protective tariff, or a tariff for revenue, or upon whatever differences the political parties may have been divided, with all the intelligence and capacity for self-government with which our people are blessed, the question is as far from being settled to-day as it was a hundred years ago. It seems to me that fact would cause intelligent people and those who represent them in the Government to inquire the cause of that condition. It does not exist in any other country in the world. Different countries have different policies and theories as to a tariff. At least one great country has established its system upon a basis of free trade. A number of the great nations of the world have adopted the system of protection. But whatever system may have been adopted as applicable to the conditions of their countries, the system which has been adopted has been put in operation, and their political parties are not divided upon that issue, however they may be divided upon others.

My explanation of this difference between the United States and foreign countries is not that we have been unable to agree upon a tariff policy, because I think it can be demonstrated that there is an American policy very well agreed upon and almost generally conceded by all great political parties and by the vast majority of the people of this country, but the reason why the tariff is still unsettled is because of our system of making schedules. The tariff bills which have been turned out have not accorded with the principle which the country has agreed upon. There has been no machinery by which a scientific tariff bill could be evolved.

In order to satisfy ourselves of the truth of that proposition it is only necessary for those of us who have been here during the making of several tariff bills to revert to what has occurred under our eyes. I recollect very distinctly—for while I was not a Member of this body at that time, I was a Member of the other body of Congress—the manner in which the existing law was produced. It did not represent the result of painstaking and impartial investigation of facts or of conclusions drawn without partisan prejudice for the purpose of arriving at a correct answer to the proposition which they were attempting to solve. It was the result, in the first place, of secret committee meetings with experts, or so-called experts, representing the protected industries, and these experts instructing the members of the committee as to the proper rates to be placed in the bill as to various items which they and their employers were interested in.

When the bill came before the two Houses of Congress the form and structure of those two bodies in itself rendered it impossible for any investigation to take place or any conclusion to be arrived at based upon scientific principles, or correctly carrying out the policy which the party in power was committed to; but even if the structure of the House of Representatives or of the Senate was such as to make it possible to do that, the party management in both branches of Congress was such that that machinery could not operate.

The same thing was true when the Wilson bill, which preceded the Dingley Act, was enacted. Hundreds of paragraphs amending the bill as it originated in the House of Representatives were attached to it in the Senate, and went back to the House of Representatives presumably to be deliberated upon and to get the consensus of the opinion of that body by the votes of a majority of it; yet there was no opportunity for the expression of an opinion, much less a scientific investigation. That was under the reign of the Democratic Party.

When the Payne bill came before the Senate it was generally assumed by his party that the chairman of the Finance Committee, Senator Aldrich, of Rhode Island, was better informed as to just rates and of the theory upon which the tariff bill was supposed to be framed than other Members of the Senate. Whether he was or not, no evidence has ever been given, and there has been no opportunity for anyone to judge; but that was the assumption; and upon that assumption the general spirit of the Senate during the final perfection of the bill was that other Senators, not knowing anything about the various schedules, should follow the lead of the chairman of the Finance Committee. This was the famous "bellwether" system of making tariffs. The chairman of the Finance Committee, in his turn, as is well known, was guided by a number of experts employed by the committee or by the Senate, as I have said, most of them being interested parties or representing interested parties.

That is the system upon which tariff bills have been framed heretofore. That is the system upon which this bill is being

framed, although the representatives of the chief beneficiaries of the tariff are less in evidence as the confidential advisers of the committee. There has been no difference between the Republican and Democratic Parties in the general manner of arriving at particular rates. We have heard discussion over different items here, and, as a rule, the general result was a eulogy of the two sides upon their respective experts. A very fair sample of the manner in which this bill has been considered in the Senate was the debate on acetic ether as to what percentage of alcohol it contains, the tariff rate depending upon its percentage of alcohol. For the purpose of illustrating the manner in which this bill has been considered and the manner in which the existing law was considered, and in which a tariff bill necessarily must be considered so long as the present system continues, I ask leave to print as a part of my remarks a portion of the CONGRESSIONAL RECORD of July 23, 1913, beginning at page 2650, containing a portion of the debate upon acetic ether. It is quite illuminating as to method and as representing a Senate in the very act of framing a tariff bill.

The PRESIDING OFFICER (Mr. LEA in the chair). Without objection, permission is granted.

The matter referred to is as follows:

Mr. BRISTOW. I call the attention of the chairman of the committee to the figures on this paragraph as to the value of the average unit. The whole paragraph in 1896 under the Wilson Act was valued at 15 cents per pound. In 1905, under the Dingley Act, it was valued at 36.3 cents per pound; in 1910, under the Payne Act, at 29.1 cents; in 1912, under the Payne Act, at 90 cents. Its estimated value under this bill is 30 cents. With a duty of 10 cents a pound imposed on an article that has been on the free list, how do you get an average reduction in the value per unit from 90 cents to 30 cents?

Mr. JOHNSON of Maine. Mr. President, it seems to me there must be a misprint there. It must be that instead of 90 it should be 30. I can not see any other explanation. Being only 29.1 cents for 1910, of course there could not be such a rise in the value as that.

Mr. BRISTOW. That probably may be true, but I am afraid this is not of as much value to us as it might be, because of the many errors it seems to contain.

The reading of the bill was continued.

The next amendment was, in paragraph 30, page 8, line 12, after the word "containing," to insert "more than 5 per centum of."

Mr. SMOOT. Mr. President, I wish to offer an amendment to that amendment by making it "10 per centum of." I wish to call the attention of the Senate to the reason why I offer the amendment. If it is not 10 per cent, ethyl acetate or acetic ether will fall back into paragraph 17 and take the extreme high rate provided for articles manufactured and containing 20 per cent of alcohol or less. The 5 per cent takes care of sulphuric ether, which is, of course, the great anesthetic that is prepared from ethyl alcohol with sulphuric acid, but ethyl acetate or acetic ether is prepared from alcohol with acetic acid and contains about 10 per cent of alcohol. Unless we increase 5 per cent to 10 per cent, ethyl acetate and acetic ether will fall back into paragraph 17 and take the higher rate. If you leave it at 5 per cent, it takes care only of the sulphuric ether, which is the anesthetic.

Mr. President, I sincerely hope that the Senate will agree to this amendment, at least, and not allow those articles to take an extremely high rate, and that is what they will do if the bill passes as reported.

Mr. JOHNSON of Maine. Mr. President, the reason why the committee used that percentage was because the expert upon whom we relied stated, and he now states, that 5 per cent of alcohol is sufficient; that beyond that they should pay the duty which articles containing alcohol pay; but so far as sulphuric ether is concerned, the expert informs us that 5 per cent is sufficient.

Mr. SMOOT. Five per cent on sulphuric acid is sufficient. There is only 4 per cent of alcohol used in the compounding of sulphuric acid. That is the great anesthetic. But 5 per cent will not take care of the ethyl acetate or the acetic ether, because about 10 per cent of alcohol is used in the ethers I have mentioned. If you leave the rate at 5 per cent, then those two ethers will fall into paragraph 17 and take the rate that is provided for compounds containing not more than 20 per cent of alcohol.

Mr. BRISTOW. Let me ask the Senator, if I may interrupt him, what will be the specific difference in the rate? How much higher than this rate will that make it?

Mr. SMOOT. I will tell the Senator in a moment. On all alcohol compounds not specifically provided for in this section, if containing 20 per cent of alcohol or less, it would be 10 cents per pound and 20 per cent ad valorem. That is where it would fall, because that is the least that is provided for in that paragraph. I have not figured as to the equivalent ad valorem, but I will assure the Senator that it will be a very high rate.

Mr. BRISTOW. The rate in this paragraph is 5 cents per pound.

Mr. SMOOT. It is the proviso that I am speaking of now.

Mr. BRISTOW. Oh, the proviso.

Mr. SMOOT (reading).—

"Provided, That no article containing more than 5 per cent of alcohol shall be classified for duty under this paragraph."

Therefore, if the ethers contain more than 5 per cent of alcohol they are not assessed under this paragraph, but fall under paragraph 17.

Mr. BRISTOW. And under paragraph 17, as I understand it, the rate is 10 cents per pound and 20 per cent ad valorem.

Mr. SMOOT. Yes; 10 cents per pound and 20 per cent ad valorem, which would be an exceedingly high rate on those ethers.

Mr. BRISTOW. It is 10 cents a pound more, this duty.

Mr. CRAWFORD. What will be the amount of those articles in commerce as to the volume of importations?

Mr. SMOOT. I have not.

Mr. CRAWFORD. I mean the two ethers that the Senator claims will not be within the 5 per cent limit.

Mr. SMOOT. I will see if the figures are here.

Mr. CUMMINS. While the Senator from Utah is preparing to answer the question of the Senator from South Dakota, I should like to ask the Senator from Maine whether he disputes the statement made by the Senator from Utah in regard to some of the articles here in their

ordinary form, that they would fall under another paragraph with a higher duty.

Mr. JOHNSON of Maine. I, of course, have no special knowledge of my own about it. I do not pretend to have; but we had an expert upon whom we relied, and the expert now states to me that that percentage is sufficient, notwithstanding the statement made by the Senator from Utah.

Mr. SMOOT. I will say to the Senator from Iowa that I am perfectly aware that it is sufficient for the sulphuric ether.

Mr. JOHNSON of Maine. I have called the expert's attention particularly to the other articles. He is here present. He says it is sufficient for them. I know nothing except what he says.

Mr. SMOOT. I say it is not sufficient for them; manufacturers of those ethers say they do contain more than 5 per cent of alcohol.

Mr. LANE. I should like to ask the Senator from Utah why they do?

Mr. WILLIAMS. I wish to ask the Senator—

Mr. SMOOT. Because it requires that quantity of alcohol to produce them.

Mr. WILLIAMS. Where does the Senator get his information?

Mr. LANE. What is the reason?

Mr. SMOOT. They can not be prepared in any other way.

Mr. LANE. Then the Senator says that acetic acid is not as good a solvent as sulphuric acid. Acetic acid is one of the most perfect solvents known by chemists. I should like to know the reason why it will not dissolve as much alcohol as sulphuric acid.

Mr. SMOOT. It takes more alcohol.

Mr. KERN. Mr. President, I rise to a point of order.

The VICE PRESIDENT. The Senator from Indiana will state his point of order.

Mr. KERN. The point of order is that we do not hear a word said by the Senators engaged in the colloquy, and we would like to hear.

Mr. WILLIAMS. Before the Senator from Utah takes his seat, he has made the assertion that it will take 10 per cent. May I ask the Senator whence he obtains his information?

Mr. SMOOT. I obtain my information not only from men who pass upon the rate of duty levied at the port of New York, but from the manufacturers themselves.

Mr. WILLIAMS. You have obtained your information from the manufacturers?

Mr. SMOOT. Yes; from the manufacturers.

Mr. WILLIAMS. Have you obtained your information from any men who are experts with regard to these particular matters and found that amount of alcohol to be necessary?

Mr. SMOOT. I have.

Mr. WILLIAMS. So it is a difference of opinion between your expert and the expert who serves the Senator from Maine, is it?

Mr. SMOOT. I have not confined my investigation of this question to one man. I have gone further than that, and I am fully convinced that the ethers spoken of by me contain about 10 per cent alcohol.

Mr. CRAWFORD. Is the Senator prepared to give an answer to my interrogatory a moment ago as to the amount of importation of these classes of ether and what—

Mr. SMOOT. The importations even under the present rate are very, very small. In fact, I will say that the specific duties do not amount to 25 per cent, as shown by the Democratic handbook. The value of imports in 1905 was \$3,485; in 1910, \$3,656.

Mr. CRAWFORD. To what extent are they manufactured in this country? To what extent are they articles of commerce?

Mr. SMOOT. A large quantity of them are manufactured here.

Mr. CRAWFORD. Of these particular classes of ether?

Mr. SMOOT. Yes.

Mr. CRAWFORD. Has the Senator any figures on that?

Mr. SMOOT. Not as to the production in this country, but even with the rate to-day there is very little importation of those ethers.

Mr. CRAWFORD. What I want to find out is whether we are spending time over some technical classification of ether which may not be in general significance or general use or whether it is something of more consequence. I am sure I do not know.

Mr. SMOOT. They are used very extensively.

Mr. BRISTOW. Mr. President, I should like to ask the Senator from Utah what is the present duty, and whether the proposed duty as he estimates increases or decreases the rate of the present law?

Mr. SMOOT. If they fall into paragraph 17, as the wording of the paragraph will take them, then they will carry an increased percentage.

Mr. LANE. Mr. President, I should like to say, for the information of Senators who are not familiar with this subject, that it does not require a particle of alcohol to make acetic ether, for the reason that acetic acid and alcohol are made by the same process. Just one particle more of oxygen converts alcohol into ether. Stopping just short of that process in distilling it, the ether, with the alcohol which goes on into ether, will be converted into acetic ether. I do not know of any reason, physical or chemical, why it would require or would take a larger proportion of alcohol than do the other ethers. That is not known to us who use the article.

Mr. SMOOT. Those who make it know, and they say that it does take about 10 per cent of alcohol.

Mr. STONE. Mr. President, while I do not want to be offensive—far from it—I should like to inquire again of the Senator from Utah [Mr. SMOOT] just upon what information he bases this positive assertion of his about a technical matter of this kind?

Mr. SMOOT. Mr. President, the information upon which I base my statement is obtained from an expert who has given me the information and also from the manufacturers of ether.

Mr. STONE. The expert who gave the information! I am curious, if I may venture the inquiry, to know who this expert is. Whom does he serve—the Government or some private interest?

Mr. SMOOT. He serves the Government; but any Senator has a perfect right to write to New York to find out exactly how these articles enter into this country, the classifications under which they come, and the rates that are imposed upon them, or for any other information connected therewith.

Mr. STONE. But the committee can not write to the expert unless we know who he is. If he is a Government official, we would like to communicate with him and see whether the other expert furnished by the Government of the United States, in the employ of the United States, and supposed to be thoroughly competent in matters of this particular kind, tells the committee what has been related here in the hearing of the Senate. This expert is here at the call this moment of Senators. He states one thing. The Senator from Utah assumes to contradict him and assumes to have some special scientific knowledge of this matter, but when we ask him about it it seems he quotes from some mysterious man off in New York, who, he says, is in the Government employ. Of course, I accept his statement that the man is in

the Government employ; and if so, I should like to question him and the committee would like to question him. Who is he?

Mr. SMOOT. Well, Mr. President, so far as that is concerned, I am not compelled to tell the Senator to whom I write or where I get my information.

Mr. STONE. No; the Senator is not compelled to do so.

Mr. SMOOT. I want to say that if the Senator really desires to know, and is interested in finding out, I can tell the Senator and will tell him.

Mr. WILLIAMS. I will tell the Senator from Missouri. I have the information here.

Mr. STONE. Very well.

Mr. WILLIAMS. The expert the committee had was an expert chemist who happens to have a German name, and I find that this language occurs in some notes and observations compiled by Thomas J. Doherty, Esq., who is a special attorney of the Customs Division. He seems evidently to have been the expert who gave the Senator from Utah his information.

Now, we will put the chemical expert whom the committee had against the legal expert whom the Senator had, and try it out anyhow in the shape of the law as we have drawn it.

Mr. POINDEXTER. Mr. President, in 1882 a tariff commission was created with rather peculiar jurisdiction, a tariff commission without any limitation of policy as to protection or tariff for revenue to guide it in making a tariff bill and without any power to put its findings into effect. It was given the power to frame a tariff bill, although the law did not provide that the bill which was framed should become a law. The act provided that the rates fixed by the commission should be submitted to Congress for its instruction and guidance and action before they should become effective.

The same principle has been involved in all amendments that have been offered here for a tariff commission. The one that was voted on this afternoon provided for a commission practically without any limitation as to the policy or rule which was to guide the commission in framing schedules and fixing the rates of the bill, leaving it to the sense of justice—I think that word was used—of the commission as to what the rates should be. But at the same time, while giving it universal discretion as to what the rates should be, giving it no power whatever to put any rates at all into effect.

It seems to me that there are two fatal primary defects in the provision for the tariff commission of 1882 and of every effort to get a tariff board or a tariff commission which Congress has considered. On the one hand, their power was unlimited in that they were guided by no rule or policy; there was no limitation laid down by Congress for their strict guidance in arriving at a conclusion as to proper rates; and, on the other hand, they were given no power at all to put into effect any conclusion at which they arrived.

Mr. SHIVELY. What does the Senator mean by putting into effect any conclusion at which they arrived?

Mr. POINDEXTER. I mean that when upon investigation, in pursuance of a tariff policy declared by Congress, they arrived at a conclusion they should have the power to fix the rate upon a basis which they consider to be in accordance with the rule laid down by Congress.

Mr. SHIVELY. That is, the commission itself should have that power?

Mr. POINDEXTER. Yes. I will discuss very briefly in a moment the question as to the power of Congress to adopt such a policy with reference to a tariff commission. I know it has been objected to as being a delegation of the legislative power. It is not a delegation of legislative power in any sense except that it delegates to an administrative body the duty of administering a policy which the legislature itself has laid down. The same thing is true of the entire administrative branch of the Government, so far as that objection is concerned, with the exception of that portion which is specifically provided in the Constitution. Every other function of the Government is operated upon that principle except those parts of it which are set up in the fundamental law.

So, Mr. President—and I shall be very brief—the two main considerations which seem to me will compel us eventually, and I think before a very long time, to establish a tariff commission, with such power as I have mentioned, strictly limited by a rule laid down by Congress, but with ample powers within that rule, are, in the first place, that this great body, with its numerous membership, is incapable of arriving at the necessary facts or of obtaining the necessary information; and, in the second place, under our system of party government, is incapable, by reason of the condition which necessarily exists, of applying the facts to the proposition so as to arrive at an accurate or scientific conclusion—that is, so far as the making of the bill is concerned.

The second main reason is that after the bill has been made, after we have enacted a tariff law, there should be machinery framed by which that law can adjust itself to the changing conditions of business from year to year. Business is not fixed. Tariff rates ought to be proportionate to the needs of

the business of the country and to the condition of that business, so as to measure up at all times to the rule on which the bill is framed in the first instance, to carry out the object which the Government has in view; and if business changes the law should be elastic, so that it could adjust itself to the changing conditions and circumstances of business. The difference in the cost of production here and abroad is one thing to-day and another next month; the difference in wages varies from year to year; weak concerns grow great and strong, and the rate which would put them on a fair competitive basis is a variable quantity.

Before passing on to discuss the question which the Senator from Indiana [Mr. SHIVELY] suggested in his remark, I want to call attention to the amendment which I have offered to the bill as to the structure and constitution of this commission, with the object in view which I have just mentioned, in the first place, of having a set policy laid down by Congress for its guidance, and, in the second place, giving the commission such power that by their action, within the rule so declared, the law would be elastic and would adjust itself to the changing cost of production in the various countries of the world, including our own, as they are constantly changing through the decades. The amendment I have offered contains this provision:

It shall be the duty of the tariff commission to ascertain as nearly as possible such facts and information concerning the production and manufacture of articles of trade and commerce in this country and foreign countries as will enable said commission to determine the comparative cost of production and manufacture of the same in this country and abroad; and shall also ascertain as nearly as possible all other facts, circumstances, and conditions of production and manufacture, including the amount consumed, the amount produced, and the amount imported into this country of the several articles under investigation as will enable said commission to decide approximately what rate of duty upon the several articles would place the domestic and foreign producer and manufacturer upon an equal and fair competitive basis in our home market: *Provided*, That the cost of transporting the several articles from the foreign country to the United States shall not be taken into account, but a rate shall be ascertained which will give our domestic producers or manufacturers any natural advantage which they may have by reason of such cost of transportation.

When said commission shall have decided upon such rate in any particular case or item it shall have power to issue an order changing the existing rate so as to make it conform or more nearly conform to such fair competitive rate mentioned above; but in making such changes the commission shall avoid such sudden and extensive changes as will, in the opinion of the commission, unsettle the general business of the country, it being the intention of this act that such changes shall be made by degrees if necessary, but at the same time as speedily as possible, so as to adjust tariff rates to the principle of just protection and fair competition stated above, and to keep the same so adjusted from time to time according to changing conditions of trade and industry. Every rate so adjusted by the commission shall at all times be subject to change or modification by Congress.

It is proposed by the amendment that the members of the commission shall be subject to removal by a majority vote of Congress at any time, and that the commission be required to report annually to Congress as to all the matters within its jurisdiction, as specified in the amendment.

Now, Mr. President, it provides for a competitive tariff, so called. I have heard that word used in debate by members of the Finance Committee during the pendency of this bill. I heard it used to-day by a Senator upon this side. What do you mean by a competitive tariff? My understanding of a competitive tariff is that it is a protective tariff, and, as I shall show by citation of recognized authorities of both the great political parties which have dominated this country during the last 50 years, that has been the accepted policy of this country—of all political parties and of the great mass of the people.

I know there have been extremists upon this side and upon the other side. There are those who are opposed to any tariff at all. I have heard men say they would take down the custom-houses. There are those on this side who would have no trouble whatever about writing a tariff bill, because, to quote a distinguished gentleman whom I heard characterizing one of his associates in that regard upon one occasion, if they had the power to draft a tariff law they would write it in one line, and that would be that no article which could be manufactured in the United States should be imported from abroad. There are advocates of that policy. But neither of these extremes is the consensus of American public opinion.

As I understand the political platforms, and I think I do, which the great political parties of this country have enunciated during the last half a century, both the Democratic and Republican Parties have declared in favor of a tariff which shall be guided in its formation, to some extent at least, by the difference in the cost of production at home and abroad of the article to be taxed; and when that is done we arrive at the thing that is called a competitive tariff, where the foreign manufacturer and the American manufacturer will be upon a somewhat near equal footing in the American market, giving the American manufacturer the benefit, as this amendment says, of the difference in the cost of transportation, which is usually

against the foreign manufacturer and which is a natural advantage. I am not in favor myself of the Government guaranteeing a profit to manufacturing, but am in favor of leaving to our domestic industries natural advantages, such as the larger cost of transportation which the foreign manufacturer is compelled to undergo, an advantage the domestic manufacturer is entitled to in our home market because of his more favorable location, just as the foreign manufacturer has a similar advantage in the foreign market.

It is said, Mr. President, that Congress has no power to delegate the right to frame schedules. It has done that for generations. It is doing it under existing law, and it proposes to do it under the pending bill. If it can do it under one set of circumstances, it has the power to do so under others. The existing tariff is a changeable one.

The rates itemized in the law now in force are not regular rates, but 25 per cent ad valorem additional are the regular tariff rates under the existing law, and Congress has delegated to the President of the United States power to investigate certain facts, namely, as to whether or not foreign countries discriminate against the United States. If he finds that there is no such discrimination, then he can by proclamation establish a certain set of rates which otherwise would not be applicable. That is the application of variable rates through an administrative or executive branch of the Government on authority conferred by Congress.

Mr. SHIVELY. Mr. President—

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Indiana?

Mr. POINDEXTER. I yield to the Senator from Indiana.

Mr. SHIVELY. The Senator does not contend that that involves any discretion in the President of the United States when he enforces those rates? Is it not a fact that he only ascertains a particular fact and that he issues a proclamation by which the law enacted by Congress goes into effect?

Mr. POINDEXTER. Exactly. There is a kind of discretion vested in the President to determine whether or not there is discrimination by a foreign country against us. Somebody must judge whether there is discrimination. It is a similar class of facts to be investigated and the same kind of power which this amendment proposes to confer upon a tariff commission. It is not different in principle at all. They are to investigate certain facts; they have to ascertain within a well-defined rule laid down by Congress what is the difference in the cost of production here and abroad and other circumstances attending the manufacture and sale of articles of commerce; and they are to ascertain as a matter of fact, not as a matter of discretion, what tariff rates would put the American manufacturer upon an equal footing with his foreign competitor, making allowance for the difference in the cost of production here and abroad. It is no more discretion, so far as the principle is concerned, than the duty which is imposed by the bill now pending upon the President of the United States to ascertain whether or not certain bounties are bestowed or duties are levied upon exports by foreign countries, and it is certainly not any more than is vested in the President under the existing law.

But, Mr. President, we are not confined to that illustration. We can go outside of tariff making and find examples by the score where Congress has laid down a policy and delegated to an Executive or to an administrative body a power to carry that policy into effect. We do not have to go any further than the example of the Postmaster General a few days ago, when he changed the classification and rates of articles to be shipped in the parcel post. He is doing that under the authority vested in him by Congress.

I will say in passing that while he has incurred apparently a great deal of criticism from his own party he has received a great deal of credit for his action from the country in general. My opinion is that it is one of the best things that this administration has done, and I am perfectly willing to give the administration credit for those things for which, in my opinion, it is entitled to credit. The Postmaster General is doing that under the same kind of authority that a tariff commission would exercise under the proposition which I am now discussing. It is not different in principle; in fact, the Postmaster General has far more discretion than such a tariff commission would have, for he is not limited by such a distinct rule as that proposed in this amendment.

The greatest object lesson, however, of the exercise of this sort of administrative power is the Interstate Commerce Commission. Congress has power to fix railroad rates, and it could fix railroad rates almost as easily as it can fix tariff rates. It is almost as well adapted in its structure and constitution to sit here and determine a fair railroad rate between New York and San Francisco, or Chicago and Spokane, as it is to ascertain what

tariff upon cloth with a certain number of threads to the square inch will give the American manufacturer a fair amount of protection within the policy which it has accepted. It is not qualified in either case to arrive at a scientific result as to details.

I think the institution of recent creation by Congress which has given the greatest satisfaction to this country is the Interstate Commerce Commission. It has accomplished what it was intended to accomplish, so much so that it is now in universal favor. Nobody proposes to limit its powers; it is universally claimed that its powers ought to be extended. The same thing would result, Mr. President, with a tariff commission once it was created and the country got the benefit of a careful, painstaking, scientific reclassification and rescheduling of the tariff rates.

There has been no effort, or but a very feeble one, in the first place, to make any scientific classification of the thousands of articles which are subject to customs duties under tariff bills. In some instances, as in china and earthen ware, for the first time, so far as I know, in the history of tariff bills, the Senate has made a new classification, making in the instance cited two classes of china where formerly there was but one. There are, in fact, perhaps hundreds of different classes of china and earthen ware. As to some of those our manufacturers need a certain rate of duty for their protection; as to others they need a different rate; as to some they need none at all. There has been no effort to ascertain what particular rate in each of the varied classes of the several manufactures would serve the purpose of protecting the American producer.

If the Senate Committee on Finance—of course I do not expect the Finance Committee is going to heed this in any way at all, but I hope that this matter is going to come up hereafter and that the continual agitation of it will, at least, have some effect—if the Finance Committee had no other things to occupy its attention it could not in a session of Congress, if it devoted itself exclusively to the task, inform itself so as to legislate efficiently upon a single schedule in the tariff bill. A tribunal which undertakes to fix specific rates or percentages to classify a vast multitude of articles upon a scientific basis and to give American manufacturers such protection as they need, and no more, will have to devote their lives to the work. That is the only way that we shall ever develop in this country a body of high-class experts who will be competent to report a tariff law which will really accomplish the purposes which Congress has in view.

Mr. PITTMAN. Mr. President—

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Nevada?

Mr. POINDEXTER. I yield to the Senator.

Mr. PITTMAN. Did I understand the Senator to say that he believed in giving an advantage to the American manufacturer?

Mr. POINDEXTER. Yes.

Mr. PITTMAN. Is it possible for a producer—

Mr. POINDEXTER. I will say, for fear that it might escape attention, that the advantage which I said I believed in giving him was a natural advantage. Such natural advantages as he has by reason of his situation I do not believe in taking away from him.

Mr. PITTMAN. If it costs one person more to place a certain article on the market than another, and there is competition in such market, does not the one who can place an article on the market at the cheapest price drive the other out of competition?

Mr. POINDEXTER. That is true as the Senator states it, but it does not always follow that the competitor who has the advantage can put the article in the market at the cheapest price.

Mr. PITTMAN. As I understood the Senator, he desires to give an advantage to the local producer equal to the difference in transportation. Is that true?

Mr. POINDEXTER. I desire him to have the benefit of the situation which nature gives him, so far as transportation is concerned.

Mr. PITTMAN. As I understand the Senator, he wishes to make the cost of production equal by virtue of a tariff?

Mr. POINDEXTER. I believe myself—I think I have stated my position here clearly—in a protective tariff which will protect the American manufacturer from unfair competition by reason of cheaper labor or other cheaper circumstances of production in the foreign country; and I think that that tariff should be fixed at such a rate that the American manufacturer and the foreign manufacturer will be upon an equal footing.

Mr. PITTMAN. That means an equal cost of production.

Mr. POINDEXTER. Not altogether.

Mr. PITTMAN. If the cost of production is equal, and there is an advantage in favor of the local production due to the difference in freight rates, is not the local producer, then, able to drive the foreign producer out of competition?

Mr. POINDEXTER. Not at all.

Mr. PITTMAN. Why not?

Mr. POINDEXTER. Because there are a thousand and one other circumstances that enter into it—enterprise, activity—

Mr. PITTMAN. Is it not the Senator's intention to equalize those conditions, with the exception of freight rates?

Mr. POINDEXTER. It is.

Mr. PITTMAN. Then the home producer has the advantage of the freight rates.

Mr. POINDEXTER. Not at all. If you insist on voting the way you voted this evening upon an amendment to this bill offered by the Senator from Iowa [Mr. CUMMINS], the foreign producer has the advantage in freight rates.

Mr. PITTMAN. But the Senator's object is to give the advantage to the local producer, is it not?

Mr. POINDEXTER. My object is to allow him to retain any advantage which he already has.

Mr. PITTMAN. The Senator would so regulate the tariff as to put the foreign and domestic manufacturer on an equality, with the exception of freight rates—I believe the Senator so stated his policy—so he would give the advantage of the freight rate to the local producer. Then, that is an advantage, is it not?

Mr. POINDEXTER. Wherever the local producer had that advantage that would be a natural advantage. However, there are many places where the foreign producer would have less rates to pay than the local producer. It depends altogether upon their situation in reference to that, and—

Mr. PITTMAN. The Senator desires—

Mr. POINDEXTER. If the Senator will allow me to finish, the same difference exists between our domestic manufacturers. One has a certain freight transportation to reach his customers, and another has another. All those are natural conditions that international lines do not so much affect as do the tables of distances.

Mr. PITTMAN. Then, in other words, the Senator desires so to arrange the tariff that the local producer will have a natural advantage. If the Senator prefers that language?

Mr. POINDEXTER. Oh, no.

Mr. PITTMAN. But he has an advantage under the tariff, has he not?

Mr. POINDEXTER. Not at all. I never did propose a thing which was obviously, to me at least, impossible. You can not arrange a tariff so as to change natural advantages, such as transportation costs, which depend largely on location, either to deprive a man of them or to give them to him.

Mr. PITTMAN. Then, if that be the case, why have any protection at all?

Mr. POINDEXTER. Principally on account of the advantages which I do not consider natural advantages; at least I do not include them in that class. Advantages in cost of production on account of the different modes of life, different wages, and considerations of that kind are in quite a different class, in my judgment, from the distance which goods have to be shipped.

Mr. PITTMAN. Well, does the Senator desire to make the opportunities in the American market equal or not?

Mr. POINDEXTER. I do.

Mr. PITTMAN. The Senator desires them to be equal?

Mr. POINDEXTER. Why, Mr. President, I think I will have to decline to continue to answer these questions over and over again. I have answered the same question a number of times. If the Senator has anything new to ask, I will be glad to answer, but I have stated very concisely, I think, what I did believe in that regard.

Mr. PITTMAN. I will not ask any further questions if they are objectionable to the Senator.

Mr. POINDEXTER. Not at all.

Mr. PITTMAN. I was trying to ascertain whether or not I understood the Senator. What occurred to me was simply this: I heard him say that there would be an advantage in freight rates given to the home producer.

I believe that such policy would enable the home producer to eliminate competition. It occurs to me that the only difference between the Senator's views and the views of others on his side of the Chamber are differences as to the height of a wall, both walls being impassable to competition.

Mr. POINDEXTER. Well, that certainly is not the case, Mr. President, even under a much higher tariff than I advocate. There has been more or less importation and more or less

competition even under the Payne-Aldrich law. I think I can illustrate the error of the Senator's position with reference to the effect of freight rates. As I understand, he claims that they would always be in favor of the domestic producer. I naturally recur to some of the great products in my section of the country. Take wheat, for instance, or take lumber. In both cases the place of production of those great staples is much closer to the western American market and to the cities on the Pacific coast from the foreign producer in Canada than from the domestic producer in the eastern part of the United States. There are great lumber districts in the eastern part of the United States which, even if other things were equal, could not possibly compete with British Columbia lumber in the markets on the Pacific coast merely on the question of freight rates. British Columbia has water transportation; it has a shorter distance; while our domestic manufacturers in the Eastern States have rail transportation across the continent. Those are natural conditions which I do not propose to undertake to offset or to consider in any way at all in fixing a tariff.

I did not say, as the Senator undertook to quote me as saying, that I believed in offsetting by the tariff the advantage which the foreign manufacturer had by reason of freight rates, wherever he had it. What I did say was that any advantage of freight rates should not be taken into account in framing a tariff—just the reverse of what the Senator stated.

Mr. PITTMAN. If the Senator will permit me a moment, Mr. President, I understood him to say—and I think I am right in my understanding—that the tariff would equalize the different costs of production, leaving the home producer the advantage of transportation charges.

Mr. POINDEXTER. The amendment which I have introduced provides that "the cost of transporting the several articles from the foreign country to the United States shall not be taken into account."

Now, Mr. President, to pass on, without occupying too much of the time of the Senate, to another phase of our system of tariff making—and I think that this is a question, undoubtedly, which the American people are going to consider—it is not only a question of what you have enacted, but how it was enacted. It does not lie entirely in the difficulty in a body like this of giving careful examination to the facts and weighing those facts so as to arrive at a scientific conclusion, but it lies perhaps more in the system of party government under which we are operating.

I do not say this in any spirit of hostility to the Democratic Party, because, for various reasons which ought to be obvious to everyone, I am very much in sympathy with much that the Democratic Party is trying to do just at this particular time. I am not any more in sympathy with the system of party government under which this bill has been produced in the Democratic Party than I was in sympathy with the same system, perhaps in a little different degree, in the Republican Party four years ago.

I hear it said constantly by Senators who are interested in passing this bill that it was necessary, in order to pass a tariff bill at all, that the members of the party should be absolutely governed by the caucus which framed the bill. I deny that, Mr. President. It is not necessary in order to pass a bill that any Senator here should surrender his judgment upon any vote which comes before him. You might get a somewhat different bill from the bill which you are going to get, but you would get a bill which represented the opinions and judgment of a majority of this body.

Why could not the Senate pass a tariff bill if every member of the Democratic Party exercised his judgment in voting upon every question which came up? It would be settled one way or the other. You may say you could not get free wool, or you could not get free sugar, if you did not have caucus rule and if every member of the party was not subservient to caucus dictation. If you could not get it, you ought not to have it. If free wool and free sugar do not represent the opinion of a majority of the Senate, the Senate ought not to vote for free wool and free sugar. The bill ought to represent the consensus of opinion of the Senators from all the States, their opinions presumably more or less representing the interests of their constituents.

Mr. SHIVELY. Mr. President—

Mr. POINDEXTER. Just a moment, if the Senator please. A bill framed upon the system upon which this bill is being framed and upon which all previous tariff acts have been framed does not represent the wishes or the interests of a majority of the people or the judgment of a majority of the Senators.

I now yield to the Senator.

Mr. SHIVELY. From a statement just made by the Senator I infer that he feels that the provision in regard to a tariff board in the act of 1909 was not sufficient.

Mr. POINDEXTER. I do. I do not think that was in any sense at all an adequate tariff commission.

Mr. SHIVELY. Why?

Mr. POINDEXTER. Why, in the first place it did not even have power under the law to investigate the facts as to the difference in cost of production at home and abroad. It did not have authority under the law to investigate the facts upon which any principle or policy of tariff legislation was to be based. The fact of the matter is that it was a special board, created for a special purpose, limited by law, to an agency to aid the President in determining whether or not a foreign country discriminated against this country in its tariff. That was the limit of its power.

Mr. SHIVELY. But whatever was the limit of its power under the statute, the Senator knows that that board went to the extent of actually investigating the question of relative costs at home and abroad.

Mr. POINDEXTER. Yes; I think it exceeded any authority that was conferred upon it by the law. It did that as to some schedules.

Mr. SHIVELY. I think the Senator is right in that respect. I question whether the board did not go beyond its powers. But does not the Senator feel that there may be established here in Washington a consolidation of the various bureaus of statistics we have that will have power to go into all these questions, secure all this information, and equip Congress, so far as the executive departments of government can, with the necessary facts on which to legislate intelligently on the tariff question as well as on all other questions that involve statistics?

Mr. POINDEXTER. Undoubtedly, Mr. President, that could be done. There are hundreds of different forms, of varying degrees of merit, in which this policy could be carried out. I think such a proposition as the Senator has just stated, if we could get nothing else, would be a very meritorious piece of legislation. But it would not be efficient; it would not be sufficient. It would be simply the application of some of the petty bureaus, with which we have so much difficulty now in their administration, to the great question of tariff information and tariff rate making.

A tariff commission ought to be a great body. It ought to be composed of men of the highest class. They ought to be independent. They ought to be above suspicion, just as much so as the members of the Supreme Court of the United States.

Mr. SHIVELY. Will the Senator yield just there?

Mr. POINDEXTER. Yes.

Mr. SHIVELY. Of course the statute that we enact can not give high class to these appointees or separate them from the usual passions and prejudices of human nature. These appointees are bound to be men. They are not going to be arch-angels. The probabilities are that they will all come to their task with certain prejudices, with certain predilections, with certain views upon the tariff question. I assume that what the Senator wants, after all, is not conclusions, not opinions, not doctrines, not policies, not maxims, to be disclosed and presented by some tariff board, but simply the naked facts, so far as they can be presented by statistics. In that respect and to that extent I am thoroughly in sympathy with the Senator's ideas on this question.

We have been going forward here and establishing this bureau of statistics and the other bureau of statistics and still another bureau of statistics. I observe that within the last few months one of these bureaus reported the number of sheep in the United States at 40,000,000, and another bureau reported the number of sheep in the United States at 61,000,000. It seems to me that what we need is not new boards or new commissions, that we do not require a new symposium of tax eaters in the Treasury of the United States so much as we do a little more coordination and efficiency in the departments we now have.

Mr. POINDEXTER. It would undoubtedly require a good deal more coordination and efficiency in the departments than we now have to properly perform the duties of tariff administration. I am very much in sympathy with the statements that have been made here by distinguished Senators to the effect that millions and hundreds of millions of expense could be saved yearly in the administration of the Government by greater efficiency in the departments we already have. I have not the slightest doubt of that.

There are some departments of the Government, however, which are extremely efficient. There are many officials in the executive departments of the Government who are efficient.

Some of the bureaus of the Government which the Senator has in mind, those which have been engaged in scientific work, have been especially efficient. If the Senator chose to establish them upon a basis of sufficient jurisdiction, it would answer the purposes of the amendment.

The amendment does not undertake to say who shall compose the commission. If the commission is to be appointed, it will be appointed by the Democratic President. I am willing to leave it to him, to his honor and integrity, to appoint men who will carry out the rules laid down by Congress. We shall have to leave it to somebody.

I heard a gentleman suggest the other evening that he was opposed to a tariff commission because its members would be partisans; they would be prejudiced; and they would not carry out the rule laid down by Congress. If we are so pessimistic as that, we ought to stop the effort of self-government. There is not any function of government that does not have to be executed by some one. You have to trust somebody.

It seems to me that with a commission whose members draw good salaries and have long terms of office, and who are appointed by the President with the advice and consent of the Senate, we ought to be able to trust them to carry out honestly the instructions of Congress within the limits of their powers, just as we can trust the members of the Supreme Court of the United States, regardless of their predilections—I hope we can trust them; I am willing to trust them; the country does—to decide the law, not their wishes or predilections upon the great questions of public policy which come before them. There is no reason why we can not appoint a commission to deal with the tariff, by means of which we collect and have collected for years some \$300,000,000 or more of revenue each year.

The Senator talks about "tax eaters." The comparatively small cost of this commission would be a mere bagatelle if they did the work well that would be expected of them.

Mr. SHIVELY. Mr. President, will the Senator yield to me again?

Mr. POINDEXTER. I yield.

Mr. SHIVELY. If the Senator thinks for a moment that I do not sympathize with his view of adopting the best means of securing reliable information on which Congress shall act with regard to the tariff, as well as with regard to other matters, he is entirely mistaken.

Mr. POINDEXTER. I am satisfied that the Senator does.

Mr. SHIVELY. But what any agency that is employed should be required to do is simply to report the facts, to give us the facts. What do we care about its conclusions as to this or that? If the Senator will permit me, of course there is a fundamental difference of view at the bottom of this question.

Mr. POINDEXTER. If the Senator is going down to the fundamentals, there is just one other matter that I wish to present, and then I shall be through.

Mr. SHIVELY. No; I am not going to do that; but I was going to suggest to the Senator that one of the difficulties of this whole matter is that he would require statistics and information in regard to subjects that it seems absolutely, or at least approximately, beyond the power of the Government to get.

Under our present statutes we have a bureau in the Department of Commerce that has the power to enlist the entire consular service of the United States in securing and laying before us the statistics with reference to commerce abroad as it may affect the business and commerce of the United States. Whatever might be adopted in the way of any commission you might establish, you would at last have to rely upon those agencies to secure that information and to lay it before Congress. The Senator knows full well that Congress has no power by which it can compel a foreign manufacturer, miner, or producer in any other department of industry to open up his books and exhibit his costs. Any tariff board that you might establish would at last have to rely upon the reports that were made by the consular agents of the United States, who hold their positions in substantially every town and city of any importance in the whole world. So I suggest that the Senator is magnifying the importance of the agency that is to be called a tariff board or a tariff commission.

Mr. WARREN. Mr. President—

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Wyoming?

Mr. POINDEXTER. I yield to the Senator.

Mr. WARREN. I take it that the Senator from Washington wants a tariff board or commission of a higher character than the one we formerly had, and one in which Congress can feel more confidence, because they will collect, collate, and edit. If I may so term it, the information from all these bureaus and lay it before Congress for its use.

The Senator from Indiana [Mr. SHIVELY] alluded to the difference in one particular, in the matter of sheep, one au-

thority placing the number at 40,000,000 and the other at 60,000,000. Both were correct. One was taking the sheep of shearing age, the other was taking all of the sheep. Reports of that kind, although they may appear to be imperfect and heterogeneous, may come before a commission such as the Senator from Washington proposes, of high class, and out of all that and what they may get in the first instance we will have less to do and can do it better, as I understand what the Senator is proposing by his amendment.

Mr. POINDEXTER. That was the intention.

Mr. SHIVELY. Mr. President, that suggests precisely the question. If we had one bureau of statistics, equipped and qualified to assemble all these statistics, to make these investigations, and to present this information, that kind of misunderstanding and conflict would not occur.

Mr. POINDEXTER. Mr. President, at different times both branches of Congress have voted in favor of a tariff commission. In 1911 a tariff commission was provided in a bill which passed the House of Representatives and passed the Senate. Undoubtedly the people of this country desire the tariff to be put upon a permanent basis. It is not the wish of any political party, I imagine, that it shall be continually engaged in campaigns over the tariff, and that the business of the country shall be in a state of uncertainty as to what tariff rates are going to be. They want the matter to be settled. It was not settled when the last tariff bill was passed. It was not settled when the Dingley bill was passed. It was not settled when the Wilson Act was passed. It will not be settled when this bill is passed. You will go from this Congress into the next political campaign to defend what? To defend not so much a tariff policy, but a schedule of rates which you have framed here. You can not defend them, however, because they are not scientifically framed. There is not any machinery for doing it.

Mr. SHIVELY. Mr. President, will the Senator yield for a moment?

Mr. POINDEXTER. I will yield for a question, but I should like to conclude what I have to say.

Mr. SHIVELY. If the Senator yields only for a question, I must admit that it was a suggestion I had to make, and not merely a question.

Mr. POINDEXTER. I shall be through in just a moment, if the Senator will pardon me.

The tariff-commission bill in 1911 came to the point of having a final vote taken upon the Senate amendments to the House bill. In the House of Representatives it is the rule to have two roll calls. One roll call was completed as the hands of the clock in the Hall of the House of Representatives approached the hour which marked the end of the Sixty-first Congress. As the Clerk announced the result of the first roll call in the midst of this significant proceeding the following remarkable interruption occurred, which I read from the CONGRESSIONAL RECORD:

GENERAL DEFICIENCY APPROPRIATION BILL.

Mr. TAWNEY. Mr. Speaker, I submit the conference report on the general deficiency appropriation bill, H. R. 32957. There is only one amendment in disagreement, and that is 108. I move that the House recede and concur.

The SPEAKER. The gentleman from Minnesota submits a conference report on the general deficiency appropriation bill, which the Clerk will read.

This was in the middle of a roll call on a tariff commission bill. One call had been made, and they were proceeding to make the other one when these proceedings took place:

Mr. HARDWICK. Mr. Speaker, a question of order.

Mr. TAWNEY. I move that the House recede and concur.

Mr. HARDWICK. Mr. Speaker, I rise to a point of order.

The SPEAKER. The gentleman will be in order.

Mr. HARDWICK. I am in order. I rise to make—

The SPEAKER. The gentleman is not in order.

Mr. HARDWICK. A parliamentary inquiry, Mr. Speaker.

The SPEAKER. What motion does the gentleman make?

Mr. TAWNEY. I move that the House recede and concur in the Senate amendments.

The SPEAKER. The gentleman moves, then, that the House agree to the conference report?

Mr. TAWNEY. Yes.

Mr. FITZGERALD. Mr. Speaker—

The SPEAKER. As many as favor the motion will say aye.

The affirmative vote was taken.

Mr. FITZGERALD. Mr. Speaker, I rise to a question of order.

Mr. HARDWICK. A point of order, Mr. Speaker.

The SPEAKER. The House is dividing.

Mr. FITZGERALD. No; the House was not dividing.

The SPEAKER. The House is dividing.

Mr. FITZGERALD. But, Mr. Speaker, I am entitled to recognition—

The SPEAKER. The House is dividing.

Mr. FITZGERALD. Mr. Speaker, the Chair can not divide the House—

The SPEAKER. The gentleman will be in order.

And so forth.

This is interesting both as a specimen of the parliamentary procedure under which tariff schedules, as well as other laws, have heretofore been framed, and also as a unique incident in the struggle to provide a scientific method of perfecting the mere details of customs rates.

That was the end of the effort to obtain a tariff commission in 1911.

Mr. President, I judge from the questions of the Senator from Nevada [Mr. PITTMAN] that he objects to the rule which is laid down in this proposed amendment for the guidance of a tariff commission, and the Senator from Indiana [Mr. SHIVELY] objects to the tariff commission having any authority to fix rates at all. However the Senator from Nevada or other Democratic Senators may regard it, it is in strict accordance with Democratic tariff doctrine, and, strange to say, and I say it with perfect deliberation, it is also in accordance with Republican tariff doctrine. The difference between the two parties in this country, if you read their platforms, has not been a difference on tariff policy, but the difference has been in the schedules of rates which the two parties have framed when they were in power. We have advanced also in the matter of the tariff, and what the Democratic Party declared in 1884 the Republican Party promulgated in 1908.

I read the other day into the RECORD, and without reading them again I will simply refer to the Democratic platform declarations in 1872, in 1884, and in 1888, when the Democratic Party declared in favor of tariff rates which would represent the difference in the cost of production, or the difference in wages, at home and abroad. The Republican Party has made the same declaration a great many times. In 1880 the Republican platform declared:

We reaffirm the belief avowed in 1876 that the duties levied for the purpose of revenue should so discriminate as to favor American labor.

Many times the Democratic platform has contained precisely the same declaration. In 1884 the Republican platform said:

The Republican Party pledges itself to correct the inequalities of the tariff and to reduce the surplus.

That was a declaration in favor of tariff reform. In 1888 the Democratic platform was as follows:

Our established domestic industries and enterprises should not and need not be endangered by the reduction and correction of the burdens of taxation. On the contrary, a fair and careful revision of our tax laws, with due allowance for the difference between the wages of American and foreign labor, must promote and encourage every branch of such industries and enterprises.

That is the Democratic platform of 1888. In 1892, and that is some time ago, the Republican Party declared:

We believe that all articles which can not be produced in the United States, except luxuries, should be admitted free of duty, and that on all imports coming into competition with the products of American labor there should be levied duties equal to the difference between wages abroad and at home.

Those were practically the same words that were used in the Democratic platform in 1888. So far as giving a tariff commission the power to frame a bill within the limitation of a fixed rule laid down by Congress, let us see the Republican declaration that the party is not committed to any set schedules. In 1896 the Republican Party declared expressly:

We are not pledged to any particular schedules. The question of rates is a practical question to be governed by the conditions of time and of production; the ruling and uncompromising principle is the protection and development of American labor and industry. The country demands a right settlement, and then it wants rest.

In 1908 the Republican Party declared unequivocally for a revision of the tariff. In 1912 it declared that the rates of the existing law should be reduced. Both parties periodically have declared in favor of a revision. Both have declared in favor of protection. The Progressive platform in 1912 contained these words:

We believe in a protective tariff which shall equalize conditions of competition between the United States and foreign countries, both for the farmer and the manufacturer, and which shall maintain for labor an adequate standard of living. We pledge ourselves to the establishment of a nonpartisan scientific tariff commission.

The leaders of the Democratic Party in this debate have admitted that they are in favor of the protection of American industries, but at other times disclaim it.

Let me turn just for a moment, Mr. President, to the declaration of the chairman of the House committee. My only purpose in referring to this declaration is to show that the work of a tariff commission with such powers as are specified in the amendment which I have offered will be but carrying out the policy of the Democratic Party, and at the same time the policy of the Republican Party, and that those policies, so far as platform declarations are concerned, are substantially the same. In certain parts of his report the chairman of the Ways and Means Committee of the House denounces the Republican doctrine of protection, but when he comes down to specific statements as to what he believes in, he says as follows, on page 18 of his report:

The dividing line between the positions of the two great parties on this question is very clear and easily ascertained in theory. Where the tariff rates balance the difference in cost at home and abroad, including an allowance for the difference in freight rates, the tariff

must be competitive, and from that point downward to the lowest tariff that can be levied it will continue to be competitive to a greater or less extent.

I fail to see how he can reconcile the latter part of that statement with the first part; but he declares that a competitive tariff—and that is the kind of tariff which Democrats say they propose to frame—is a tariff where the rates balance the difference in the cost of production at home and abroad, including an allowance for the difference in freight rates.

During this debate the chairman of the Finance Committee of the Senate said:

I will state to the Senator—

I am reading from page 2639 of the RECORD—

that it is exceedingly difficult to get figures showing the domestic production of many articles manufactured or produced in this country. None of the departments has had any systematic scheme for making these estimates. We have to rely altogether almost upon the census estimates, and, as the Senator very well knows, the Census Office groups the separate articles under some general head. Therefore we are not able through that source to secure the production except as to all the numerous articles embraced in the schedules.

There is the express declaration from the chairman of the Finance Committee of two things; first, that the committee made the effort to obtain this information as a factor, evidently, to be considered in fixing rates upon manufactured articles, and, in the second place, that there was no adequate source of information.

The Senator from Maine [Mr. JOHNSON], a member of the Finance Committee, made a similar declaration:

So far as I am concerned—

He says on page 2643 of the RECORD—

I think I have already stated my belief in regard to these estimates, that they are merely speculations, and I think the Senate so understands.

That admission was made by a number of Senators.

They may be made by the experts on some basis, but I think they are not to be depended on and are simply approximations or estimates.

He proceeds to state:

I shall be very glad to have the Senator suggest any better method than has been adopted and has been followed in this bill, of taking the imports under the rates which have existed and making an approximation as to what, in the opinion of the experts, the imports may be under new conditions. I know of no way in which one can look into the future and determine what it is to bring forth.

Further on he says:

My only source of information was the glossary prepared by the expert of the Tariff Board, who stated that there is no supply of chalk of good quality in this country.

The report submitted by the Finance Committee when this bill was submitted to the Senate declares on the first page of the report:

Following the lead of the House, your committee has sought in the amendments it now proposes to the House bill to further carry out and perfect the theory of establishing a revenue-producing tariff—

Now mark these words. Upon what basis?—

upon the basis of competitive rates as a just and fair interpretation in the light of existing conditions of the latest authoritative utterances of the party in power upon that subject.

But, Mr. President, we do not have to rely upon general declarations of the chairman of the Finance Committee that he and his committee attempted to protect American industry in this bill.

In regard to the tariff on lead, one of the important schedules in the bill, I read from the report of the Finance Committee the admission and the declaration that the Senate committee raised the House rate upon lead and zinc ore for the purpose of giving a protective rate. On page 12 it says:

The reductions made in the House bill on lead ore, zinc ore, and zinc appealed to the Finance Committee as too radical and below the point of competition. In the interest of the industry, a continuation of which is absolutely essential for the welfare of the mining interests, the Senate committee raised the duty from one-half cent per pound to three-fourths of 1 cent per pound on lead ores, which was also the rate of the Wilson law.

So, Mr. President, the Democratic Party and the Republican Party, in numerous platforms, as well as the Progressive Party, have declared in favor of protecting American industry by putting it upon an equal footing with foreign competitors, and the declaration is contained here that in a specific case the rate was raised for that purpose. The rule laid down in the proposition which I have submitted for the guidance of the tariff commission is that same rule. There is nothing in the platforms or the principles of either of the political parties of this country which would prevent them from submitting the question to such a commission upon the basis specified, that the difference in cost of production at home and abroad, with all other circumstances considered, so as to ascertain the true competitive rate, should control the findings and the rates fixed by the commission.

Some have objected to a tariff commission for the reason that it would leave the tariff unsettled. It could not be any more unsettled than it has been ever since I can recollect. It has been unsettled, and the prospect is that it will continue to be unsettled as long as the present system is continued.

The Republic may well say, having in mind the perennial horrors of tariff campaigns:

Myself, when young, did eagerly frequent
Doctor and saint, and heard great argument
About it and about, but evermore
Came out by the same door that in I went.

My judgment is that if a tariff commission should be established with the powers which I have advocated the tariff question would be settled at least for a long period of time. It would be settled if the commission performed the duties imposed upon it under this amendment, because without disturbing the general business of the country, the rates which they would fix would be subject to constant revision, item by item, to meet new conditions of manufacture and distribution constantly arising as the years go by.

Mr. President, I ask for a yea-and-nay vote on the amendment.

Mr. SHIVELY. Mr. President, I have no wish to prolong this debate, but I am unwilling that the proposed amendment go to a vote without reply to certain contentions in its behalf. Senators on this side of the Chamber are quite as solicitous as any Senator on the other side can be that Congress shall be equipped with the widest, most accurate, and reliable information obtainable, not only on the tariff question but on all other questions which become the subjects of congressional action. In the next place, we are quite as solicitous as the junior Senator from Washington [Mr. POINDEXTER] can be that the tariff question shall be settled; that the tariff shall cease to be a vexing business question; that it shall cease to be a sectional question, a class question, or a partisan question. To place the tariff question in process of such settlement and remove it from the domain of disturbing agitation is the central purpose of the tariff measure now before the Senate.

I ask Senators to keep this declaration in mind while I briefly recall an instructive chapter in the tariff history of the country bearing directly on the point. For the past eight weeks we have been regaled with gloomy prophecy as to the calamities that are to smite the country if this bill is enacted into law. If the Senators who have uttered these melancholy predictions will open the old Congressional Globe at the pages reciting the proceedings in the Senate on the passage of the Walker tariff of 1846, they will find themselves novices in the art of prophecy.

That bill was not referred to the Finance Committee of the Senate. Vice President Dallas delivered the casting vote that prevented its reference to the committee. The reference was refused by the friends of the bill because of their conviction that a majority of the committee was hostile to the measure. As the time for the final vote approached the opponents of the bill redoubled the fury of their denunciation of it, both on the ground of its adoption of ad valorem rates and the marked reduction of duties. Senator Simmons, of Rhode Island, the remote predecessor of the man whose name is inseparably associated with the act of 1909, vehemently prophesied that only calamitous results would follow its enactment. Senator Cameron, of Pennsylvania, who was then a Democrat and afterwards served in this body as a Republican, joined in the chorus of dark prophecy. These and others confidently predicted that the act would be repealed by the next Congress. But Daniel Webster was not satisfied with these predictions. They were not strong enough, and he insisted that so overwhelmingly disastrous on all lines of industry and so universal would be the devastating effect of the legislation that the country would not tolerate postponement of repeal to the next Congress, but would demand and secure its repeal at the ensuing short session of the same Congress.

Despite the clamor, the denunciations, and the dark forebodings, the bill was passed and became a law. In 1848, two years after its enactment, so completely had the legislation vindicated itself in practice within the intervening months that no political party in its national platform dared utter a protest against it. In 1852, when the Whig Party was exhausting every resource to raise an issue on which to escape the slavery question, it dared not assail the tariff of 1846. In 1856, when the new Republican Party was attempting to weld all elements of discontent into a force to expel the Democracy from power, not a word of protest was uttered against that tariff.

Mr. GALLINGER. But, Mr. President, Buchanan, a Democrat, declared against it in 1857.

Mr. SHIVELY. Does the Senator from New Hampshire desire that I yield to him?

Mr. GALLINGER. Just for a moment. President Buchanan, a Democrat, declared against it in 1857 very vigorously.

Mr. SHIVELY. On the contrary, not only did President Buchanan not declare against the act of 1846 in 1857, but he declared in his message to Congress in 1857 that the panic of 1857 was not caused by and had no connection with the tariff act of 1857.

Now I come to the crux of this matter. Here we had the gloomiest prophecies ever conceived by the minds of men of the frightful disaster that was to follow the act of 1846. Not a single one of all these lurid prophecies came true. Every one of them was falsified by the general prosperity enjoyed by the country under the act. This alone accounts for the general acquiescence by all parties, all sections, and all interests in that tariff through a long term of years.

Mr. WARREN. May I ask the Senator from Indiana a question there?

Mr. SHIVELY. Certainly.

Mr. WARREN. My understanding of the Walker Tariff Act is that it was one providing a revenue tariff on raw materials, and it differed from the present bill, did it not, in that respect?

Mr. SHIVELY. It is not contended that the pending bill is a reenactment of the act of 1846.

Mr. WARREN. Is it not almost distinctly contrary?

Mr. SHIVELY. No; not contrary; in the main, in harmony with the revenue principle of that act. We have put a number of articles on the free list that were dutiable under the Walker tariff, and this has been done in the light of conditions as they exist to-day.

Mr. WARREN. But the policy of that law was to tax raw materials, while the policy of the pending bill is not to tax them. Is not that true?

Mr. SHIVELY. The policy of that law was to raise the necessary revenue with as light taxation as possible except as to luxuries. In the case of every article importable at all there is what is known as a maximum revenue point. To reduce the rates below this point is to reduce both taxation and revenue. To raise the duty above this point is to increase taxation and reduce revenue. The prohibitive duty is all taxation and no revenue. The effort in the Walker Act was to approximate as nearly as possible to the maximum revenue line of rates, and, like the pending bill, wherever practicable, prefer ad valorem to specific duties. These were distinctive features of policy of the Walker tariff. There were dutiable articles in that act which are free listed in the pending bill; but nothing in the philosophy of the Walker tariff precludes free listing either raw materials or finished products where taxation is not necessary for the purposes of revenue.

In 1857 the Walker tariff had been in force 11 years. What had become of the gloomy prophecies of ruin and desolation made in 1846? The answer was overwhelming in the high tide of prosperity which the country had enjoyed through all those years. The prediction that the act would not produce sufficient revenue, like the prophecies of its effect on industry, had failed to come true. The income was ample, the public debt had been met, the public credit had reached the highest point in our history up to that time, and an excess of revenue was flowing into the Federal Treasury. Because of this excessive revenue, it became necessary in 1857 to review and revise the rates. Then came the supreme test of public opinion on the question of so-called protection as a principle of customhouse taxation. Where were the voices to proclaim then the doctrine of feebleness and to insist on a recurrence to the higher rates of the act of 1842?

The House of Representatives was controlled by Republicans and Free Soil Democrats, who joined in the election of Nathaniel P. Banks as Speaker. The Committee on Ways and Means was Republican. So far from recurring to the discarded and discredited dogmas of the early protectionist, the House passed and sent to the Senate a bill reducing the rates one-fourth below the rates in the act of 1846. What had become of the protective economist? What had become of the manufacturer who once trembled lest a revision of the tariff would spell his ruin?

Mr. KERN. Mr. President—

The VICE PRESIDENT. Does the Senator from Indiana yield to his colleague?

Mr. SHIVELY. I do.

Mr. KERN. I desire to ask my colleague if it is not true that every Republican Member of Congress from New England present at the time when the vote was taken on the tariff of 1857 voted for it?

Mr. SHIVELY. That is my recollection. When the bill came to the Senate it was passed by an overwhelming majority. Not all Members of both branches of Congress voted for it. There will always be differences of opinion as to reductions and increases advisable even when the rule of duties exclusively for revenue is conceded. But such differences are not on principle,

and on that vote involved no partisan division. If the principle of protection is vital to the life of our industries, if it be true that our industrial enterprises are so parliamentary in character as to depend on the yeas and nays of Congress, why was there no loud clamor then against the reduction of the rates below those which 11 years before had been denounced as ruinously low and certain to strew the country with the wrecks of disrupted and expiring enterprises?

The reason is plain. The act of 1846 had taught its lesson and the country refused to become alarmed. When the time for that vote arrived the tariff question had ceased to be a vital business question. It had ceased to be a sectional question. It had ceased to be a class question. It had ceased to be the subject of struggle by private interests for advantages in the taxing power of the Government. It had ceased to be a party question. When the roll was called Henry Wilson, of Massachusetts, and William H. Seward and Hamilton Fish, of New York, all Republicans, voted for the lower duties along with Robert Toombs, of Georgia, and Judah P. Benjamin, of Louisiana.

The country had learned the wholesome lesson of self-confidence and self-respect. The manufacturer had learned that his enterprise rested not on the yeas or nays of Congress or the whimsicalities of politics, but on the solid natural resources of the country and his energy and capacity in the development of them. And make no mistake about it, this lesson is being learned again. The delirium of wealth by taxation is passing away. Men everywhere are recovering from the paralysis of dependence on tariffs for their success. We were producers and exporters of iron before the American Revolution. We were producers and exporters of window glass before the American Revolution. We were producers and exporters of fabrications of wool before the American Revolution. The doctrine of feebleness, helplessness, and incapacity has been badly overworked through the last 50 years. It has had its effect on the temper of millions of people, but the delusion is bound to pass away.

It is bound to pass and is now passing, and all because there is a point beyond which human credulity declines to go. Imagine an agent of American enterprise meeting his foreign rival in one of the world's neutral markets. His rival says, "You certainly can not hope to compete with us in this market. I have with me copies of the messages to your Congress by Republican Presidents through the past 40 years, copies of the reports of your Republican Committees on Ways and Means and on Finance, copies of your Republican national platforms, speeches of the great leaders of the party dominant, with slight interruption, in the politics of your country through the past half century, and, finally, the act of your Congress of 1909, all solemnly and unitedly proclaiming your inability to hold your own market at home without a tariff wall 40 cubits high against us, to say nothing of your coming outside your wall and contesting with us in open competition for the world trade."

The American appreciates both the exigencies and the humors of American politics. I fancy him replying, "You need not exhibit your documents. On your paper case, the proof is conclusive that we are an exquisite collection of industrial paralytics, but my answer to it all is the cargoes of American goods down at the wharf, and the \$2,300,000,000 worth of the products of American labor and capital sent out last year, not only into the neutral markets, but often taking the hostile market right in the shadow of the foreign factory, and this in spite of domestic tariffs which hamper and handicap domestic production for the foreign trade."

And now, Mr. President, is it necessary to set up a new agency of Government to adjust private enterprise on the subjects of standards of wages, standards of living, and differences of costs of production with which a vicious principle in custom-house taxation has entangled it? When the Mexican Central Railroad was in process of construction the contractor found it cheaper to pay workmen from the United States \$1.50 a day and board them than to employ native Mexican labor at 37½ cents a day. When building railroads in India, Lord Brassey found it cheaper to employ workmen from England and Ireland at \$1.50 per day than to employ native labor at 12½ cents a day. The standard of wages and the standard of living are in the day's work. If the day's work produces large product, both the standard of wages and the standard of living may be high. Whether because of mechanical inefficiency, manual inefficiency, or adverse natural conditions in the industry, if the product of the day's work is small the standard of wages and the standard of living are bound to be low. No tariff board can change the fundamental facts of production, distribution, and consumption, and to balance a tariff on a difference of cost, even if ascertainable, is to attempt to economically abolish the only inducement to trade that ever has existed or ever can exist.

While conceding their entire good faith, I submit that the appeals of Senators to the functions of the Interstate Commerce Commission as parallel and illustrative of the functions of the proposed tariff commission or board bring into notice the very vice that distinguishes the latter from the former. The transportation companies of the country are public utilities, operated for private profit. Whatever taxes in the way of rates are charged the public go into private hands. It is the function of the Interstate Commerce Commission, within the power conferred, to conserve equitable relations between charges made and the service rendered. Is the customhouse also an agency of private enterprise? Is the proposed commission to study conditions of production and trade with a view to apportioning and distributing the usufruct of tariff taxation among private beneficiaries? If not, then is it pretended that the Government needs this agency to inform it how much revenue is required to meet its necessary annual expenditure?

No, Mr. President; I see no useful function that the proposed tariff board can serve that may not be as well or better served by agencies already available to the Government. It is no purpose of the pending tariff bill to magnify the customhouse as a factor in industrial enterprise. We do not propose to treat as permanent a principle in custom taxation which contemplates the use of the taxing power as an instrument of private profit. Yet all the projects for a tariff commission relate back to this principle and revolve around the theory of wealth by statute and prosperity by taxation.

The proposed board would not take the tariff question out of politics or out of business. The appointees would be human beings. Angels are not available. It can not be assumed that the men appointed would come to their tasks with minds white blanks on the subject of the tariff. Each would approach his work with his own bias, prejudices, and predilections. The theory of protection offers the widest latitude and the greatest temptation to include in the consideration of the tariff all manner of collateral and even unrelated subjects. Like every new bureau, the commission would at once become an appetite that grows with what it feeds on. It would feed on the Federal Treasury. Every temptation would confront it to broaden its power, magnify its function, augment its patronage, and to perpetuate its existence. It would mean no settlement of the tariff question, but rather a constant agitation and clamor for favor, first before the commission and then before Congress.

Mr. President, do Senators want information as to cost of production in this country? In the Department of Commerce and in the Department of Labor are forces of experts, maintained at great expense, and on whose cooperation to secure this information the proposed commission would expect to rely. Do Senators want information as to cost of production abroad? The organic act creating the Department of Commerce expressly places the whole Consular Service of the United States at the command of that department to procure such information in so far as it is procurable at all, and the proposed commission itself would expect to rely on the same sources of information. Do Senators want accurate information as to the status of the tariff laws and regulations in foreign countries? Our Diplomatic Service, represented at every seat of government in the world, is available to supply this information, and this is the source from whence the proposed commission would secure it.

We have departments, bureaus, and divisions now maintained at enormous expense that should be available to supply every variety of information desired by Senators on the tariff or on any other question of legislation. We have too many bureaus of statistics. These should be brought together in a single bureau, with their work organized, coordinated, standardized, and the organization equipped to the highest efficiency. We should have no further duplication and triplication of statistics and other information and none of the conflict of returns that casts suspicion on the accuracy and reliability of official reports.

I oppose the creation of the proposed commission because it is not needed and is, I fear, more promising of mischief than of good. The pending tariff bill contemplates a reduction both in rates and in the number of dutiable articles. The disentangling process is already on. When it became certain that this measure or one approximating to it is to become law, thousands of business men reexamined the relation of tariffs to their enterprises only to be convinced that they have been the victims rather than the beneficiaries of the rates in the existing law. As this conviction grows under the operation of the new act all clamor for a tariff board will cease. When moderate rates are in force, changes with reference to revenue occasion no industrial disturbance. The fate of industry is no longer affected by the vicissitudes of politics. Less and less consequence attaches to customhouse taxation as an economic force. The habit of self-reliance displaces the sense of dependence and the steadiness of normal conditions succeeds to the eccentricities

attending artificial expedients. While denying to no one any necessary source of information on all public questions, I am opposed to the creation of a special agency on the tariff question.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Washington [Mr. POINDEXTER], on which the yeas and nays have been ordered. The Secretary will call the roll.

The Secretary proceeded to call the roll, and Mr. ASHURST voted "nay."

Mr. BRISTOW. I should like to inquire on what amendment we are voting?

Mr. THORNTON. Mr. President—

The VICE PRESIDENT. The roll call has been started on the amendment proposed by the Senator from Washington.

Mr. THORNTON. Did the Chair recognize me?

The VICE PRESIDENT. The Chair understands that the roll call has begun.

Mr. THORNTON. I did not know that the first name had been called.

The VICE PRESIDENT. The Senator from Arizona [Mr. ASHURST] has responded to his name.

The Secretary resumed the calling of the roll.

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the senior Senator from Nebraska [Mr. HITCHCOCK] and will vote. I vote "nay."

Mr. CHAMBERLAIN (when his name was called). I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence, I withhold my vote.

Mr. STERLING (when Mr. CRAWFORD's name was called). I announce the necessary absence of my colleague [Mr. CRAWFORD], also his pair, and state that if present he would vote "yea."

Mr. KERN (when his name was called). In the absence of the senior Senator from Kentucky [Mr. BRADLEY], with whom I am paired, I withhold my vote.

Mr. MYERS (when his name was called). I announce my pair with the junior Senator from Connecticut [Mr. McLEAN], and on account of his absence I refrain from voting.

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from California [Mr. PERKINS], and therefore withhold my vote.

Mr. DILLINGHAM (when Mr. PAGE's name was called). My colleague [Mr. PAGE] is necessarily detained from the Senate tonight. He is paired with the senior Senator from Virginia [Mr. MARTIN].

Mr. SMITH of Arizona (when his name was called). I am paired for this evening with the junior Senator from New Mexico [Mr. CATRON], and therefore withhold my vote.

Mr. THOMAS (when his name was called). I make the same transfer of my pair as heretofore, and will vote. I vote "nay." The roll call was concluded.

Mr. LEA. I announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD], and withhold my vote.

Mr. JAMES. I announce my pair with the junior Senator from Massachusetts [Mr. WEEKS], and in his absence withhold my vote. If permitted to vote, I should vote "nay."

Mr. REED. I am paired with the senior Senator from Michigan [Mr. SMITH], and therefore withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. GALLINGER. I have been requested to announce the following pairs: The senior Senator from Delaware [Mr. DU PONT] with the senior Senator from Texas [Mr. CULBERSON]; the junior Senator from West Virginia [Mr. GOFF] with the Senator from Alabama [Mr. BANKHEAD]; the junior Senator from North Dakota [Mr. GROONNA] with the junior Senator from Illinois [Mr. LEWIS]; the junior Senator from Pennsylvania [Mr. OLIVER] with the senior Senator from Oregon [Mr. CHAMBERLAIN]; the junior Senator from Vermont [Mr. PAGE] with the senior Senator from Virginia [Mr. MARTIN]; the junior Senator from Michigan [Mr. TOWNSEND] with the junior Senator from Florida [Mr. BRYAN]; the junior Senator from Wisconsin [Mr. STEPHENSON] with the senior Senator from South Carolina [Mr. TILLMAN]; and the senior Senator from North Dakota [Mr. McCUMBER] with the senior Senator from Nevada [Mr. NEWLANDS].

Mr. MARTIN of Virginia (after having voted in the negative). I desire to withdraw my vote. While there was no pair between myself and the junior Senator from Vermont [Mr. PAGE], yet, as there was an impression to that effect, I am very willing to stand paired with him on this vote, and do so by withdrawing my vote.

Mr. BACON. I inquire whether the senior Senator from Minnesota [Mr. NELSON] has voted?

The VICE PRESIDENT. He has not.

Mr. BACON. I have a general pair with that Senator and therefore withhold my vote. If he were present, I should vote "nay."

The result was announced—yeas 22, nays 33, as follows:

YEAS—22.

Brady	Dillingham	La Follette	Root

So Mr. POINDEXTER's amendment was rejected.

The VICE PRESIDENT. If there are no further amendments as in Committee of the Whole the bill will be reported to the Senate.

The bill was reported to the Senate as amended.

Mr. SIMMONS. Mr. President, I ask that the bill as amended in Committee of the Whole may be printed for the use of the Senate. I move, then, that the bill be laid aside for the day.

The VICE PRESIDENT. Is there any objection?

Mr. SIMMONS. I understand the bill has been reported to the Senate.

Mr. LODGE. The bill is in the Senate now, and open to amendment.

The VICE PRESIDENT. Is there any objection to the printing of the bill showing the amendments made as in Committee of the Whole? The Chair hears none, and it is so ordered.

Mr. SIMMONS. Mr. President, I wish to say further that I understand we have agreed, when we do adjourn, to adjourn until 10 o'clock on Monday. I hope that when we meet on Monday at 10 o'clock we shall not adjourn until we shall have passed the bill.

Mr. GALLINGER. Mr. President, I desire to express the same hope that we may conclude the consideration of the bill on Monday next before adjournment.

Mr. KERN. I move that the Senate adjourn.

The motion was agreed to, and (at 10 o'clock and 50 minutes p. m.) the Senate adjourned until Monday, September 8, 1913, at 10 o'clock a. m.

HOUSE OF REPRESENTATIVES.

SATURDAY, September 6, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Father Almighty, as years come and go and time sweeps on with ceaseless flow, what has it brought to us as individuals, substance or show, false or true, strength or weakness, honor or dishonor, eternal or transient? Thine all-seeing eye can penetrate the inmost depth. "Now we see through a glass, darkly; but then face to face: now I know in part; but then shall I know even as also I am known." Show us our self now, O Father, and help us to cleanse ourselves from guile that we may be true to Thee, ourselves, and our fellow men after the manner of the Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

ELECTION OF MEMBERS TO FILL COMMITTEE VACANCIES.

Mr. UNDERWOOD. Mr. Speaker, I move the election of the following Members to committees which I send to the Clerk's desk. They were selected by the Democratic caucus.

The Clerk read as follows:

NOMINATIONS FOR DEMOCRATIC VACANCIES.

Hon. A. C. HART, of New Jersey, to be a member of the Committees on Invalid Pensions and Expenditures in the Department of Justice.

Hon. HORATIO C. CLAYPOOL, of Ohio, to be a member of the Committee on the District of Columbia.

Mr. UNDERWOOD. Mr. Speaker, I move the previous question on the nominations.

The previous question was ordered.

The SPEAKER. The question is on the election of the Members nominated.

The question was taken, and the Members were elected.

THE SEATTLE RIOTS.

Mr. BRYAN. Mr. Speaker, I have a privileged motion. I ask that the Naval Affairs Committee be discharged from further consideration of House resolution 211, and that it be taken up immediately.

Mr. FITZGERALD. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7898, the urgent deficiency bill.

Mr. BRYAN. I ask that my motion be considered, Mr. Speaker, for I claim it is privileged.

The SPEAKER. Both are privileged motions.

Mr. MANN. I think, Mr. Speaker, that the rulings have always been that where a resolution of inquiry has been before the committee for the requisite time a motion to discharge the committee is more highly privileged than a motion to go into Committee of the Whole House on the state of the Union.

Mr. FITZGERALD. The motion I have submitted is in order at any time after the reading of the Journal. The only motion of a higher privilege would be a motion affecting a Member's right to his seat.

Mr. MANN. Under a ruling of that sort you could keep out a motion to discharge a committee forever, because there is always an appropriation bill up.

Mr. FITZGERALD. I hope to finish this bill very speedily, with the assistance of gentlemen on the other side.

Mr. MANN. Then we had better dispose of this matter first.

The SPEAKER. Has the gentleman any authority to submit?

Mr. FITZGERALD. My authority is the rule that provides that at any time after the reading of the Journal it shall be in order, by direction of the proper committee, to move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of bills raising revenue or general appropriation bills.

Mr. MANN. The gentleman from New York would not claim that the Committee on Appropriations has any higher privilege than any other committee that has an appropriation bill?

Mr. FITZGERALD. Not at all.

Mr. MANN. And it has always been held that this motion is highly privileged.

The SPEAKER. If that is so, where is the gentleman's authority?

Mr. MANN. The Speaker himself has so held.

The SPEAKER. That is good authority. [Laughter.]

Mr. MANN. The Speaker can recollect of no case in the 18 years he has served where a gentleman calling up a resolution of inquiry and moving to discharge the committee was held out of order on the ground that another motion was privileged.

Mr. FITZGERALD. I do not ask that the gentleman from Washington be held out of order. I ask the Speaker to recognize me on my motion.

Mr. MANN. Or where a Member was taken off the floor by another motion to go into Committee of the Whole House on the state of the Union. The Speaker will recall that there is always some motion which is privileged, except in those rare cases where there is a call of committees, which does not happen on an average once a month, or late in the session once in three months, except on Calendar Wednesday by special order.

The SPEAKER. The Chair is inclined to think, without ruling finally, that the resolution should have precedence.

Mr. HARDWICK. Mr. Speaker, I reserve a point of order on the resolution which the gentleman from Washington presents.

The SPEAKER. The gentleman will state his point of order.

Mr. HARDWICK. The point of order is the concluding sentence of the resolution, which takes it out of the rule.

Mr. BRYAN. I ask that the resolution be reported.

Mr. MURDOCK. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MURDOCK. Did the Chair rule that the gentleman from Washington was in order?

The SPEAKER. Of course the gentleman would be in order, and so would the gentleman from New York. Both are privileged motions. The Chair has not passed on which one has precedence, but the gentleman from Georgia raises a point of

order against the resolution being privileged, and the Clerk will report it.

The Clerk read as follows:

House resolution 211.

Whereas it is widely reported in the public press that certain enlisted men of the United States Navy did on Friday, July 18, 1913, at Seattle, Wash., engage in a riot and in wanton destruction of private property: Therefore be it

Resolved, That the Secretary of the Navy be, and he is hereby, requested and directed to give to the House full details and particulars of the said occurrence, together with the names of all enlisted men who participated, and a full record of any and all proceedings had to investigate the said lawlessness and punish the guilty parties.

Resolved further, That the Secretary of the Navy be, and he is hereby, directed to furnish a detailed statement of the losses incurred, to the end that full reparation may be made to such persons as may be found to be entitled thereto.

Mr. HARDWICK. Mr. Speaker, the point of order I make is twofold; first, that the resolution contains a preamble, and under repeated rulings of this House that destroys its privileged character, and, second, the concluding sentence of the resolution commits the House to make reparation, and that is something different and beyond a mere resolution of inquiry.

The SPEAKER. It is unnecessary to bother about the second point, because the first point is well taken. The Chair sustains the point of order.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. BRYAN, for six weeks, on account of important business.

URGENT DEFICIENCY APPROPRIATION BILL.

Mr. FITZGERALD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 7898, the urgent deficiency appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the urgent deficiency appropriation bill, with Mr. FLOOD of Virginia in the chair.

Mr. FITZGERALD. Mr. Chairman, when the committee rose yesterday there was under consideration an amendment offered by the gentleman from Illinois [Mr. MANN] to appropriate \$25,000 to enable the Interstate Commerce Commission to continue the investigation of block signal apparatus. This morning, in company with Judge BARTLETT, of Georgia, I called at the office of the Interstate Commerce Commission, and called the attention of Judge Prouty, who was present, to the amendment of the gentleman from Illinois, and stated that the disposition of Congress had always been to give the Interstate Commerce Commission such appropriations as it desired to carry on the work imposed upon it under the various statutes; that I believed that if the commission expressed the belief that it were wise or desirable to make this appropriation, the amendment would be adopted by the House. Judge Prouty stated—and he said that he had no objection to this statement being made as coming from him—that under the law under which the tests were made, the work was never satisfactory; that he did not believe that the appropriation would be of any value at this time, and that in his opinion it would be better to defer the matter until the next session of Congress, at which time he believed the commission would be prepared to submit recommendations for certain legislation, which would enable it to conduct tests along lines and in connection with the various railroads of the country that would result beneficially in the improvement of the various block systems; that he did not think that the authority conferred upon the commission under the existing law made the expenditure of money under it of any value. Under these circumstances I wish to suggest to the gentleman from Illinois the desirability of not pressing the amendment at this time.

Mr. MURDOCK rose.

Mr. FITZGERALD. Does the gentleman from Kansas wish to ask a question?

Mr. MURDOCK. Mr. Chairman, I desire to call the attention of the gentleman from New York to the fact that in its last report the Interstate Commerce Commission makes specific mention of the desirability of the investigation of automatic-stop devices, which seems to be in contradiction of the statement made by Commissioner Prouty.

Mr. FITZGERALD. Mr. Chairman, there is no contradiction. The commissioner states that the law at present is such that they are unable to make the character of tests and investigation that is necessary in order to be of any value. Under the joint resolution of 1906, if I recall it correctly, the Interstate Commerce Commission established a board, and under that law there was submitted to this board block-signal devices which the inventors believed would be serviceable, and the

board tested them; but he said the work of the board was wholly unsatisfactory, and the authority under which the commission acted was insufficient to enable them to do what in their opinion was important and desirable. He expressed the belief that it would not be of any particular value to appropriate under that former provision, and said that the commission would be prepared to submit to Congress at the next session a recommendation for legislation which would confer these powers they believed should be given to them, and then they would be glad to have an appropriation to carry on the work in the manner they would suggest.

Mr. MURDOCK. I read the report of the commission otherwise.

Mr. FITZGERALD. The report of the commission speaks for itself. I am repeating the statement made by Commissioner Prouty in response to a request as to whether he believed it was desirable to make this appropriation. I said that if that were his opinion I should favor the appropriation.

Mr. MANN. Mr. Chairman, of course I was well aware yesterday when this item went over until to-day that if the distinguished gentleman from New York [Mr. FITZGERALD], accompanied by his equally distinguished colleague from Georgia [Mr. BARTLETT], waited upon the Interstate Commerce Commission, the Interstate Commerce Commission or some member would say that the proposition was useless. That is what they are there for when the Committee on Appropriations are not for and do not want to make the appropriation. But what are the facts? The law provides:

That the Interstate Commerce Commission be, and it is hereby, directed to investigate and report on the use of the necessity for block-signal systems and appliances for the automatic control of railway trains in the United States.

No legislation could be broader or of far greater effect. The absolute authority to make the investigation is given:

And to carry out and give effect to the provisions of this resolution the commission shall have power to issue subpoenas, administer oaths, examine witnesses, require the production of books and papers and receive depositions taken before any proper officer in any State or Territory of the United States.

Absolute full authority is given the commission to make the investigation. Now, the gentleman says that Commissioner Prouty says that this legislation is not ample enough and they are going to recommend some legislation which will be ample. Why, this resolution is as broad as the world. It is complete and full authority. Any addition to it would necessarily be a restriction, not an extension of authority. I grant you that the investigation so far carried on is not entirely satisfactory. A board of block signal and train control was appointed of men of eminence and high character which met occasionally in the city of Washington and made some investigation. I have no criticism of the commission for making the investigation in this way, but I think it was a mistake. The commission ought to have some one employed under it who understands in reference to the operation of railroads and who gives his exclusive attention and time to this investigation. The question is not whether you can increase the authority by postponing consideration. The question is whether it is the intention of Congress to make the investigation by which we can control when we obtain the knowledge of the use of automatic appliances upon railroads which will absolutely prevent collisions between trains, and I assure the gentleman from New York [Mr. FITZGERALD] that so far from withdrawing the proposition that if it shall be voted down in the Committee of the Whole and I have the opportunity I will see to it that there will be a roll call upon the proposition in the House to recommend, unless I am cut off from that right, which I hope I will not be.

Mr. FOSTER. Will the gentleman permit?

Mr. MANN. Certainly.

Mr. FOSTER. Was the matter which the gentleman read to the committee a little while ago an act of Congress?

Mr. MANN. It is an act of Congress.

Mr. FITZGERALD. What is the act?

Mr. MANN. A joint resolution approved June 30, 1906.

Mr. FOSTER. By that provision they had the power to compel railroads to put into operation—

Mr. MANN. No; that gave them the right to investigate and report to Congress.

Mr. FOSTER. I misunderstood the last part.

Mr. BARTLETT. May I interrupt the gentleman?

Mr. MANN. Certainly.

Mr. BARTLETT. They did that and made a report in 1910, did not they?

Mr. MANN. Oh, they have made several reports.

Mr. BARTLETT. But the last report they made.

Mr. MANN. The board of block signal and train control has made, I think, three reports.

Mr. BARTLETT. And spent \$50,000?

Mr. MANN. They have spent \$50,000; but I take it that the expenditure of \$50,000, or a greater sum, is inconsiderable as compared with safety on the railways.

Mr. BARTLETT. May I again interrupt the gentleman?

Mr. MANN. Certainly.

Mr. BARTLETT. I thoroughly agree with the gentleman—

Mr. MANN. I understand that.

Mr. BARTLETT. I thoroughly agree with him—

Mr. MANN. But I am afraid that my friend from Georgia has been slightly misled temporarily by my distinguished friend from New York [Mr. FITZGERALD].

Mr. BARTLETT. No, indeed.

Mr. FITZGERALD. The gentleman from Illinois is absolutely in error when he charges me with visiting the Interstate Commerce Commission for the purpose of persuading them that they do not need this money.

Mr. MANN. Oh, Mr. Chairman, I do not think the gentleman from New York [Mr. FITZGERALD] would go there for the purpose of persuading them. But the gentleman from New York is the chairman of the Committee on Appropriations, and he is so constituted that he attends diligently to the duties of his office, and one of the duties of that office is to prevent the item going into an appropriation bill reported from his committee which he does not himself report—

Mr. FITZGERALD. The gentleman is mistaken. The Interstate Commerce Commission—

Mr. MANN (continuing). And he very seldom falls down in attending to that duty.

Mr. FITZGERALD. The Interstate Commerce Commission has the confidence of everybody who has ever had any dealings with it or any knowledge of it.

Mr. MANN. Then let us give them this money and it will not hurt.

Mr. FITZGERALD. Commissioner Prouty, who is one of the best members of the commission, said that to appropriate the money would be useless. They could not use it to any useful purpose under the law. And he said that when his colleagues—

The CHAIRMAN. The time of the gentleman from Illinois [Mr. MANN] has expired.

Mr. FITZGERALD. Mr. Chairman, I ask that the time of the gentleman from Illinois be extended five minutes.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. FITZGERALD. He said that when his colleagues would return to the city they would be prepared to recommend certain legislation. The mere authority to investigate does not help them. What they want is some authority which will compel the railroads to do certain things and the commission to do certain things. They have investigated. They can not originate these devices. The various inventors have submitted to them various devices that in their opinion were satisfactory. They have tested numbers of them, and they approved of some.

But what they desire is some different arrangement so that they can utilize money that will be given in some manner that will be of some benefit. No request came from the commission for this money. In good faith I went to the commission to ask whether it would be desirable or beneficial to make this appropriation, and I said to the commissioner that regardless of the opinion of any Member of the House as to the desirability of the matter, in view of the recent New Haven disaster, if the commission intimated that this appropriation was desirable there would be no doubt that it would be granted. He repeated that there was no value, so far as he could see, in making the appropriation, but preferred that the commission would have the opportunity to recommend at the next session legislation that they believed should be enacted, and would then be pleased to get an appropriation to carry out the work. I said to the commissioner that in all my experience Congress had uniformly granted the Interstate Commerce Commission all of the money it requested for every duty imposed upon it by law. He made the statement that in his opinion Congress had treated the Interstate Commerce Commission better than any other department of the Government, and there is no question but that statement is accurate. There has never been any argument or dispute as to the amount of money given to the Interstate Commerce Commission.

Mr. MANN. Except once.

Mr. FITZGERALD. Well, I do not know of any. Nothing they have ever asked for, in my recollection, has been refused.

Mr. MANN. The gentleman will remember one very hot dispute, but that is neither here nor there.

Mr. FITZGERALD. As I say, according to my recollection. However, I think the gentleman recollects that the one he

speaks of was not exactly a request of the commission. It was at the request of somebody else, and in that instance—

Mr. MANN. That is not in point.

Mr. FITZGERALD. The commission was justified, because, as was then demonstrated, the commission could not expend all the money that the committee recommended it should have.

Mr. MANN. Now, if the gentleman will permit, I drew the provision that went into the appropriation bill extending the authority. I have kept track of its investigations from the start. I have read every report of the block-signal and train-control board, and I am willing to wager my life that Mr. Prouty has never read any of them. I doubt whether any other Member of the House has read them, unless he be a member of the Committee on Interstate and Foreign Commerce. I do not claim that I have read them intelligently, because much of them was technical and beyond my comprehension. They have never made a report yet upon which Congress was justified really in passing legislation.

Mr. FITZGERALD. They have never been able to determine the devices which they were satisfied should be reported.

Mr. MANN. I have introduced several times bills requiring the use of automatic appliances on railroads, in order to prevent collisions. I have no complaint that the committee has not reported them. Such a bill was before the last Committee on Interstate and Foreign Commerce and probably is before the present one.

The commission has never made, up to this time, a definite recommendation in regard to the matter, except a general recommendation that block signals ought to be installed. That recommendation they made many years ago, and the installation of the block-signal system which the commission originally started for would not prevent collisions.

Now, here is a proposition to permit them to go ahead with the authority already conferred upon them. Commissioner Prouty is a good commissioner. He is giving special attention to the physical valuation of railroads. He is not especially attentive to the subject of railway collisions. He can not be, because he can not take the time for it. We are charged with that responsibility. Why not let them proceed with the investigation that they are carrying on? I hope, if it is done, they will not again appoint a board, but will have somebody investigate the subject. There ought to be some of those appliances which will be capable of being put into use.

Mr. ADAMSON. Mr. Chairman, if I correctly understand the trend of the statement of the gentleman from New York [Mr. FITZGERALD], it amounts to this, that the commission, according to Mr. Commissioner Prouty, has already satisfied itself with information on the subject, and will be prepared to make definite recommendations to Congress at the next session without further investigation.

Mr. FITZGERALD. No. The gentleman misunderstands me. The commissioner said that under the authority they now have they can not make that character of investigation or do the things they think should be done in order to determine these devices, and that they wish to submit to Congress recommendations for legislation that will clothe them with certain powers—he did not outline them—that would enable them to work in connection with the railroads so as to develop these devices.

Mr. ADAMSON. Then do I correctly understand the gentleman to say that the commission intends to recommend legislation that will enable them to put in force their ideas as developed by investigation?

Mr. FITZGERALD. They have not acquired any valuable ideas. They wish legislation that will put them in a position so to expend the money that they can make recommendations that will be of some value.

Mr. ADAMSON. Now, it is true that we all have great confidence in the Interstate Commerce Commission. We have already derived great benefit from its work, and we expect a great deal more, immensely more, in the future. It is the duty of Congress to legislate. There are two functions with which we charge the Interstate Commerce Commission. One of them is to seek information and report to us, to aid us in enacting necessary legislation. The other is, when we determine upon the proper legislation, to delegate to the commission the power to enforce the provisions of that legislation.

Now, it is not proper when we authorize the commission to make an investigation for them to halt and say, "We want power to enforce our ideas after we have formed them." Many bills have been introduced. The gentleman from Illinois [Mr. MANN] is correct. Not only he, but many other Members have introduced innumerable bills on various phases of this subject. We have not enacted them into law, we have not reported them, because our minds have not concurred with that degree of cer-

tainty which would justify us in recommending legislation that would force upon the railroads and upon the country also any particular things and devices. We have in the past year or two had some investigations referred to that commission. There are bills now for the same purpose that we expect to refer to them, and new bills introduced now for specific legislation are referred to them, and they are again questioned as to the propriety and efficiency of the proposed legislation.

Now, a great many people make inventions, and they wisely opine that if they can just get Congress to order all the railroads to adopt their particular devices they will have a Golconda; it will not be a mint, but it will just be a regular Golconda. They are correct in that view, but they are not correct in assuming that Congress will ever be foolish enough to enact any such personal legislation.

We want this commission, if it can help us, to help us by securing information as to these devices, as to the effectiveness of these devices; to report to us; and then we shall be glad to report to this House proper legislation. Not that any man may be made rich by the legislative adoption of his device, but that the railroads shall be required to place in operation such devices as shall be approved by the commission, if that be the authority to which we delegate the duty of approval as will effect the purposes of that legislation. I believe the Interstate Commerce Commission ought to go on and make further investigations, for there are new devices constantly being presented, new inventions constantly being made, all of them claimed to be the best. They are certainly entitled to have trials and investigations made of them, not only for their own benefit, but also for the common good. If they are beneficial to the country we want it known.

Mr. ESCH. Mr. Chairman, under a law which I had the honor to introduce and have passed in 1910, Commissioner McChord, of the Interstate Commerce Commission, is to-day conducting an inquiry into the recent wreck on the New Haven road. In the course of that inquiry he will doubtless make a thorough investigation of the block-signal system adopted by that road, and also an investigation of all other safety devices in connection with the operation of the two trains the collision of which resulted in such a loss of life. Under that law the commission, through its officials, has made an investigation of every wreck resulting in serious loss of life or property in the United States since its enactment in 1910, and the recommendations based on such investigations are of great interest and value.

The object we had in mind in introducing that bill was to enable the commission to lay before Congress the data upon which Congress could base wise and salutary legislation. Now, if we had—in the commission or outside of it, but under its control—authority to investigate all safety appliances and make recommendations thereon we would supplement the act of 1910. The work that the block-signal and train-control board has thus far done is of great value in backing up the recommendations of the Interstate Commerce Commission. That board has passed on no less than half a dozen safety devices known as the automatic stop, and also automatic block-signaling systems. It has, in effect, given its approval to those systems, and they had met its requirements, and hence any road that would put them in use would be promoting the safety of the traveling public. Why can we not pass this appropriation, continue that good work, and thus permit recommendations to be made of all safety devices which could be put upon railroads on recommendation of the Interstate Commerce Commission, acting under the law of 1910?

The information which will be secured under this appropriation, for the benefit of Congress and the commission, will be of great value in promoting the safety of travel on the railways of the United States. This act of 1910 has shown us defects in the block-signal system, in the interlocking system, in the management of railroads through train dispatching, in systems of timing trains, in the examination of watches of men engaged in train operation, in telegraphic devices, in the protection of drawbridges and dangerous crossings and other places where danger might be expected. Now, if we had this appropriation to carry on an investigation of patented safety devices, it would enable the commission to indicate some standard devices which a railroad could install and thus meet the requirements of safety. I sincerely trust that this appropriation may be passed.

Mr. BARTLETT. May I ask the gentleman a question?

Mr. ESCH. Certainly.

Mr. BARTLETT. Under authority granted by Congress the Interstate Commerce Commission had what they called the safety appliance board, which conducted enough investigations to expend \$50,000?

Mr. ESCH. Yes.

Mr. BARTLETT. I do not mean to intimate that the amount is too large for the purpose. I would be in favor of the expenditure of any reasonable amount of money for the prevention of accidents by the investigation of safety appliances; but so far as requiring the railroads to equip their tracks or their cars with safety appliances, what has been the practical result of this investigation?

Mr. ESCH. I have already stated that as a result of their examination they have approved some six or seven automatic stop devices, and they have also investigated the more approved systems of block signaling, and have also recommended interlocking devices.

Mr. BARTLETT. The gentleman did not quite catch my question, or I did not make myself plain.

The CHAIRMAN. The time of the gentleman from Wisconsin [Mr. Esch] has expired.

Mr. BARTLETT. I ask that the time of the gentleman may be extended.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent that the time of the gentleman from Wisconsin be extended. Is there objection?

There was no objection.

Mr. BARTLETT. Those reports have been made and certain devices have been approved. What more can be done, unless we give the commission or some one else authority to require the railroads to adopt the approved systems?

Mr. ESCH. I agree with the gentleman.

Mr. BARTLETT. That is what I mean by the question. The commission has done all it can. Now, ought not Congress to do something in the way of requiring these railroads to adopt some sort of safety appliances approved by the Interstate Commerce Commission to prevent these accidents?

Mr. ESCH. I agree with the gentleman that Congress should further supplement the act of 1910 so as to give the commission the power of ordering any common carrier engaged in interstate business to adopt approved safety devices.

Mr. BARTLETT. As we did the coupling provision.

Mr. ESCH. The block signal and automatic devices are to some extent still in an experimental stage, but great progress has been made. Great progress has been made since the commission made its last report and investigated the signal devices, and hence the necessity of continuing the investigation.

Mr. ADAMSON. Will the gentleman yield?

Mr. ESCH. Certainly.

Mr. ADAMSON. Mr. Speaker, if the gentleman will permit the suggestion, Congress can not be required to act on the recommendation until Congress is satisfied with its correctness and sufficiency. I protest against the commission saying that education is finished, all knowledge is exhausted, when inventions are constantly being made, and we are not satisfied that the best has been attained; and I insist that they shall go on with the investigation until we are satisfied with something that we ought to compel railroads to do.

Mr. ESCH. And for that reason we should give the money to such a body as will give us the information.

Mr. Chairman, in no particular have the investigations of the block signal and train control board been more definite or valuable than with reference to block-signal systems. Their efficiency and reliability, especially when automatically operated, are abundantly confirmed in the annual reports, and justify the recommendation that Congress enact the necessary legislation to make the installation of some form of block signaling compulsory on the part of the common carriers engaged in interstate commerce. Owing to the present widespread interest in the subject I wish to discuss the—

COMPULSORY BLOCK SYSTEM.

Among the rules for the operation of English railroads is the following:

The safety of the public must, under all circumstances, be the chief care of the servants of the company.

That this rule is substance and not mere form, their splendid record of immunity from injury and death from preventable accidents fully attests. This immunity in Great Britain, as well as in France, Germany, and other parts of the Continent, is the result of good roadbeds and block signals as well as of the rigid discipline of employees.

After making full allowances for our greater mileage, more rapid extension of lines, heavier freight traffic, and lack of public supervision, the record of accidents on American railroads is becoming more doleful and hence more humiliating and discreditable with each year.

During the fiscal year 1912, 318 passengers were killed and 16,386 injured; during 1911, 356 were killed and 13,433 injured. President Roosevelt, in his annual message of 1904, deemed the statistics of railroad casualties of such grave import that he

called them to the attention of Congress and recommended as a partial remedy the adoption of the block system, a system which has received the strong indorsement of the Interstate Commerce Commission in every annual report for the last 10 years.

I do not intend to enter into a discussion at this time of all the various remedies for preventable accidents. Concentration of effort upon one class of accidents and urgent appeal to support the remedy suggested for such class are my present objects. A careful study of the quarterly accident bulletins issued by the Interstate Commerce Commission discloses the fact that collisions of various kinds constitute the most prolific source of injuries to persons and property.

For the fiscal year 1912 there were 5,483 collisions resulting in death to 68 persons, injury to 4,716, and in a property loss of \$4,330,206, while for the fiscal year 1911 there were 5,605 collisions, 436 deaths, 6,994 injuries to person, and a property loss of over \$4,000,000.

As rear and butting collisions are preventable accidents, should the lives and limbs of passengers and trainmen be longer jeopardized if practicable devices to lessen or prevent them are available? Some progressive railroad managers, actuated by both pecuniary and humanitarian motives, have made answer by adopting the block system on a part or the whole of their lines. Their action is strong proof that such system is the most effective in preventing collisions, and that the increase of safety secured thereby justifies the cost of installation and maintenance. Commendable as this is, the public is not warranted in expecting that managers of passenger lines in this country will follow their example within a reasonable time, if ever. Experience has shown that even the coercion of a mandatory statute with penalties attached has been insufficient to secure from some railroads full compliance with the safety-appliance act of 1893, requiring air brakes and automatic couplers on all freight and passenger cars engaged in interstate traffic. This act, nevertheless, hastened a devout consummation and spurred the laggards to action. The question is, as recommended by President Roosevelt, the Interstate Commerce Commission, various railroad organizations, and numerous civic bodies, "Shall Congress make the adoption of the block system compulsory on the passenger lines of the United States?"

By block system, as defined by the Interstate Commerce Commission, is meant "the methods and rules by means of which the movement of railroad trains (cars and engines) may be regulated in such manner that an interval of space of absolute length may at all times be maintained between the rear end of a train and the forward end of the train next following." The system has been applied to single as well as multiple track roads. As to method of operation, it may be, as in Great Britain and on the Continent, manual, the signals at each end of a fixed length of track or block being operated by hand power upon telegraphic information; or controlled manual, as used on several of the leading roads in the country, requiring the cooperation of the signal man at both ends of the block to display a "clear signal"; or automatic, wherein the signals, whether disks or semaphores, are "actuated by the passage of the wheels of the cars and engines along the track or by certain conditions affecting the use of a block."

Our present purpose makes a discussion of the relative merits of the various kinds of block systems unnecessary further than to emphasize the fact that some approved and practical kind now exists, adaptable to every class of railroads in the United States.

The block system aims to secure and maintain between trains a space interval of sufficient length to prevent collisions. The present method of operation on most of our roads aims to secure at stations only a time interval, which may or may not continue to be maintained between stations. While the human factor, which enters so largely into all railroad accidents, can not be eliminated under either system, it can be and has been largely minimized, especially where the automatic block signals are used. When trains are run by time-tables and dispatcher's orders, the dispatcher himself may issue a wrong order or the trainmen may misread or forget the order or some one may sleep at his post. Granted that the manual block system where signals are operated as directed by telegraph is subject to but a part of this gantlet of possible dangers, the automatic system fails only when the mechanism fails or trainmen ignore the signals. As failures of the mechanism in most systems put the signals to "danger," delay, not disaster, is the usual result. So far have our American engineers developed the automatic principle that, as in the case of the New York subway, the brakes are set and the train brought to a standstill when the motorman carelessly or otherwise passes a "stop" signal. In the words of a signal expert:

The automatic block system is a mechanism that has neither the ability to go to sleep, get drunk, become insane, nor to lie; it speaks for itself.

To carry out the repeated recommendations of the Interstate Commerce Commission as to the efficacy and necessity of the block system, I introduced in the Fifty-eighth Congress, and each succeeding Congress including this, a bill "To promote the safety of employees and travelers upon railroads by requiring the use of the block system by common carriers engaged in interstate commerce, and for other purposes." By its terms the commission is given power to order the adoption of this system on such railroads, on one-fourth part (in length) of their lines, within a certain specified time, and during each succeeding year on another one-fourth part the system should be adopted, so that by January 1, 1917, all passenger lines should be fully supplied. Where the receipts for passenger and express traffic and carriage of the United States mails aggregate \$1,500 per annum per mile or more, the commission can order the system to be adopted by July 1, 1914. Where such receipts, together with those derived from freight traffic, aggregate \$3,000 per annum per mile or more, a like order can be issued. Provision is made for annual reports by the railroads affected by the bill showing receipts from various sources of traffic derived from the different divisions into which the road may be divided. Plans and sketches of all main and side tracks, switches, crossings, fixed signals, signal towers, and so forth, showing the length of each division, branch, and separate line, and what lines or parts of lines are worked by the block system, specifying the kind. Within three months after receiving an order, each carrier shall file with the commission a plan of the line or lines affected by the order, with a statement of the means and methods, including rules as to the block system intended to be used in carrying out the order, and in case the carrier does not select the part or parts of its line making up the fraction to be installed the commission may do so. For the purposes of the act a passenger line shall be deemed to be any railroad or part of a railroad on which one or more trains for the conveyance of passengers are regularly run in each direction each week day, and an engine or a car running by itself shall be deemed a train. No order for adoption of the block system as above provided shall be issued by the commission without due and full hearing having first been given to all persons and carriers interested. A penalty of \$1,000 per day for each day's failure to comply with the lawful orders of the commission shall be recoverable and obedience to such orders shall be enforced through writs of mandamus. Annual reports shall be filed with the commission. Finally, no order shall specify the kind of block system, or make or cause any discrimination between automatic, so called, and nonautomatic.

This measure by extending the adoption of the system over a series of years requiring installation first on those divisions of the line having densest traffic and allowing freedom of choice as to kind and cost is one in every way moderate and reasonable, but even such a measure will meet the strenuous opposition of the managers of some roads which can by no means be considered impecunious. Objection has already been made that it is unconstitutional in that it is an unwarranted interference with the rights of the States. Under the provisions of the Constitution, giving Congress the power to regulate commerce between the States, the act of 1893 was passed requiring railroads doing an interstate business to provide their cars with automatic couplers and air brakes, and this act, under a broadened interpretation of the above provision, has been held constitutional by the Supreme Court. There is no difference in principle between this act and the proposed measure which seeks to install the "greatest safety appliance" known to the railroad world. Objection is made that to compel the use of the block system would be inexpedient and unnecessary, the plea being that this is a matter which should be left to the initiative of the carriers; that they have already adopted the system as rapidly as their circumstances and the state of the art of signal apparatus will warrant; that compulsion would only lead to the use of much cheap and dangerous material. In answer it is proper to submit the experience of the Government in its administration of the safety-appliance act of 1893. That law was not enacted until long after the Janney coupler and the Westinghouse air brake had been proven practical property and life-saving devices by the railroads themselves. The railroads led the way and Congress followed by giving to a good thing a universal application. Prior to 1893 the voluntary adoption of the air brake and coupler was so slow that only 17 per cent of all freight cars had automatic couplers and 12 per cent had brakes, and even in 1898, after five years had been given to the railroads of the country within which to equip their cars, there were only 61 per cent with automatic couplers and 41 per cent with air brakes. Hard times may have furnished some excuse; nevertheless, upon the expiration of another extension

to August, 1900, there were 93 per cent with automatic couplers and only 64 per cent with air brakes.

If this be our experience with the compulsory use of such efficient life-savers as automatic couplers and air brakes, when would the passenger lines of the country be supplied with block systems without compulsion? If this system saves lives and property, why should safety be longer dependent upon the whim, prejudice, or selfishness of boards of directors? Managers and superintendents are not always responsible for delay in adopting the most modern and efficient equipment upon their respective lines. Often their recommendations are unheeded by directorates bent on increasing dividends and willing to run risks.

Further objection is made that the use of the block system on many of the roads of the country has not lessened accidents nor rendered them impossible. As already stated, this system was devised to prevent the class of accidents known as collisions, being the most frequent and disastrous form of railroad wrecks. With 84,000 miles supplied with some form of the block system in the United States on January 1, 1913, no one can tell how many more collisions would have occurred had such mileage not been so equipped. Great Britain, with the manual block system installed on all her railroads and carrying more passengers than our roads, had not a single passenger killed in 1901, only six in 1902, and none in 1908, only six employees being killed in the latter year. Apologists for the large number of casualties on our American lines deny the fairness of any such comparison, but conceding its inadequacy in some respects, the stubborn fact remains that the railroads of Great Britain, with but one-eighth of the mileage of our own, running many more fast trains and carrying almost twice as many passengers, have practically no death roll and but few casualties, being operated universally by the block system. The record of roads on the Continent is equally significant.

For the fiscal year ending June 30, 1912, as shown by the accident bulletins, there were 1,846 rear-end and butting collisions, resulting in a loss of 274 lives, injury to 5,155 persons, and in a property loss of two and a half million dollars. Most of these could have been prevented by the use of the approved block system.

Had there been a block system on the road running through Newmarket, Tenn., the killing of 63 and injuring of over 100 persons September 24, 1904, would not have happened. This collision occurred on a curve in daylight, the engineman and conductor of the west-bound train having forgotten a meeting order. Had this road been divided into blocks, two trains would not have been permitted to occupy the same block at the same time, and the place of meeting would have been at a convenient block station where advance, distance, home, or switch signals would have given the necessary warning. This is but a type of numerous similar accidents which in the light of present improved appliances makes their repetition not merely unnecessary, but in a sense criminal. It is further demonstrated that most accidents arising from misplaced switches, open drawbridges, railroad crossings, and such as result from errors in giving, receiving, and executing train orders are avoidable.

Objection is also made that the block system would breed dependence and carelessness in employees, in that enginemen especially, "accustomed to rely on signals, rely on them implicitly and get into habits of recklessness which lead inevitably to accidents, for which they contend the signals and not they themselves are responsible." This is an old and long-discredited argument. As long ago as 1872 Capt. Tyler, in his annual report to the British Board of Trade, answered it in these words: "Allowing to the utmost for these tendencies to confide too much in additional means of safety, the risk is proved by experience to be very much greater without them; and, in fact, the negligence and mistakes of servants are found to occur most frequently and generally with the most serious results, not when the men are overconfident in their appliances or apparatus, but when, in the absence of them, they are habituated to risk in the conduct of the traffic. * * * The more they are accustomed to incur risk in order to perform their duties, the less they think of it, and the more difficult it is to enforce discipline and obedience to regulations. * * * It is difficult to prevent men who are in constant danger themselves from doing things which may be a source of danger to others or to compel them to obey regulations for which they do not see altogether the necessity, and which impede them in their work." Proper means and appliances would diminish this difficulty and permit of stricter discipline.

This notion that devices for comfort and safety begot carelessness no doubt accounted for keeping the enginemen on

English roads exposed to the weather and without the protection of a cab up to a comparatively recent date.

It is true that engineers ignore block signals, but as each signal guides him on his way, observance of such signals becomes methodical. Under the dispatcher or time-interval system he goes on, unless stopped; under the space interval or block system he stops, unless signaled to go on.

A final and most common objection urged against the compulsory adoption of this system is its cost of installation. The proposed bill anticipating this argument provides for gradual adoption with an outside time limit of four years. Most of the leading roads have already equipped those portions having the densest traffic, and, as to them, the passage of the bill would incur no burden for one or two years, while those roads would not be affected at all which are now using a system which meets with the requirements.

That the cost is not prohibitive is shown by the fact that some roads with "far flung" but thin traffic lines have installed the telegraphic block system and have found the service so satisfactory that they advertise the fact as an inducement to increase their passenger trade. Under the proposed bill the carriers must file with the commission annual reports showing the location and amount of track supplied with block signals. These reports should then be made known to the end that the traveling public may be advised as to the safest lines of travel. The thinner the traffic, the less the number of blocks required to be established. On such roads the regular stations serve as block stations, and the agent attends to the signals in addition to his other duties. In order to avoid delay in the passage of trains from station to station, it may become necessary to add new signal stations and operators, but even here, if fewer trains are run by night than by day, night operators may be dispensed with.

On the main eastern trunk lines and at terminal points where trains run on intervals of two minutes or even less, more elaborate and expensive appliances are necessary, and where the blocks are reduced to intervals of 4,000 feet or less the cost may run from \$1,000 to \$4,000 per mile. Only great traffic would permit such expenditure, and yet the managers and directors of some trunk lines have so fully realized the value of the block system in expediting trains and saving lives and property that they have already equipped many thousand miles with the most approved apparatus and are making preparations to extend the service. Such managers and officials need no coercion from Congress to continue their laudable work.

The argument based on cost has been overworked. After reasonable dividends have been paid on actual valuation, the public has a right to expect that a part at least of the surplus should be invested in promoting the safety of travel. During recent years our railroads have been prosperous. Money invested in the block system is not dead capital, but yields large dividends in the way of fewer wrecks and damage suits. As already stated, during the fiscal years 1911 and 1912, the property loss resulting from collisions alone amounted to over \$8,000,000. Were this vast sum expended in a block-signal system, costing as high as \$1,000 per mile, three transcontinental lines extending from coast to coast could be equipped.

In meeting the various objections to the compulsory use of the block system the argument in its support has in part been already presented. Its universal use in Great Britain and voluntary adoption years ago on some of the leading roads in the United States is conclusive proof of its efficiency. No road that has given it a fair trial has abandoned it, and long lines with small traffic have not found its first cost and maintenance prohibitive. Its failures, few as they have been, were due more to the "human factor" than to defective mechanism. As with all other devices, dependent upon man's cooperation, mistakes will happen unless the man is subject to discipline and held to strict accountability. The proposed bill does not provide rules of operation or prescribe standards of efficiency. These may come through a gradual evolution. Let it suffice for the present that Congress require, in the interest of the public welfare, a system which the railroads themselves have shown to be safe and feasible. This proposed action by Congress is not hasty or ill considered. In the words of an editorial in a leading railroad journal:

The people of the country have a right to require of the railroads a reasonable assurance of safety, and the way to enforce this right is now plain. The railroads have had their chance to make a good showing; too many have neglected it, and their showing is appallingly bad. Unless the managers act of their own motion in adopting safety appliances, the only thing they have to expect is a mandatory law with heavy penalties for its violation.

I wish to close with a brief statement giving the mileage of railroads equipped with block signals in the United States Janu-

ary 1, 1913, as compiled by the Division of Safety Appliances of the Interstate Commerce Commission on that date:

The total length of road in the United States operated under the block system on January 1, 1913, was 83,949.8 miles. Of this total 22,218.8 miles were automatic, and 61,731 miles were nonautomatic. There was an increase of 1,883.9 miles in the length of road operated by the automatic block system, and an increase of 5,656.2 miles in the length of road operated by the nonautomatic block system over the figures shown in the bulletin of January 1, 1912. The total increase in the mileage of road operated by the block system, during the year, was 7,540.1 miles.

The total track mileage in the United States is about 250,000 miles.

Mr. FOSTER. Mr. Chairman, the question occurs to me in relation to the amendment of the gentleman from Illinois, that it is whether Congress shall ask the Interstate Commerce Commission to go out and make these investigations or not. The Interstate Commerce Commission, or at least one member of it, says in answer to the gentleman from New York [Mr. FITZGERALD] and the gentleman from Georgia, members of the Committee on Appropriations, that it is unnecessary, and that this money could not be used to any advantage at this particular time, or at least until Congress shall have passed such legislation as in its judgment will be necessary to carry out whatever recommendation they may make.

We are all of us inclined to go along in the even tenor of our way until some great catastrophe overtakes the country, and then we look about for some remedy that may prevent such disasters in the future. We remember that a short time ago, within the recollection of every Member of this House, when the great disaster occurred to the *Titanic*, that legislation was immediately put through Congress to safeguard the lives of those who travel by sea.

I believe when it comes to a question of safety of travel that there is not a Member of this House or a citizen of the United States who is not willing that any amount of money should be appropriated necessary to make travel safer and to save human life, whatever that amount may be. I would like to see a proper device whereby in the future we may prevent the accidents to trains and disasters like that in the last few days that occurred over on the New Haven Railroad may be prevented.

It is very evident from the discussion of the gentleman from Illinois [Mr. MANN] and the gentleman from New York [Mr. FITZGERALD] this morning that there is some legislation by Congress necessary in order to put into operation any regulations made by the Interstate Commerce Commission. If that commission says that it does not desire, does not want, and can not use this money, I do not know that it is necessary that Congress should make the appropriation, and yet I think that Congress has the absolute right to say to any officer of this Government that we expect you to go out and make certain investigations along the lines indicated under an appropriation, and when you make the investigation you shall report back to Congress the result of your investigations. Then it becomes the duty of Congress to put into operation such legislation as in its judgment will best carry out the recommendation made by the officers of the Government.

I am thoroughly in sympathy with the idea of studying these devices, that we may in the future prevent if possible this great loss of life to people traveling on railroads. If I believed for one minute that this appropriation recommended in the amendment offered by the gentleman from Illinois would help to accomplish this and bring it about one minute sooner, then I would be thoroughly for that appropriation and in favor of asking the Interstate Commerce Commission to go and make this investigation as soon as possible.

Mr. TAYLOR of Colorado. Will the gentleman yield?

Mr. FOSTER. Yes.

Mr. TAYLOR of Colorado. Does the gentleman agree with the statement made by the gentleman from Illinois that the Interstate Commerce Commission has now the authority to make recommendation concerning these life-saving devices?

Mr. FOSTER. I think under the act of 1906 the Interstate Commerce Commission has that power now if they have the appropriation, and it also gives them the right to use the regular employees of the office for that purpose. I believe they have that authority under the joint resolution.

Mr. TAYLOR of Colorado. If the Interstate Commerce Commission has that authority now, is it good policy for us here and now to admit they have not that authority and allow all of these railroads a loophole for escaping from adopting these appliances to save life? It seems to me they have the authority, and they ought to enforce it.

Mr. FOSTER. From reading this joint resolution it seems to me they have the authority to make the investigation, but no

power to put in operation what in their judgment is necessary to prevent these wrecks. The appropriation does not give them that power. It only gives them the power to make further investigation in reference to these appliances.

Mr. TAYLOR of Colorado. I want to suggest that if there is any more power necessary, we ought to give it to them. There is no sense in going ahead and repeating investigations. We are always investigating and not doing very much after we investigate.

Mr. FOSTER. The gentleman is right. One trouble with Congress is that we are too often investigating and not often enough putting into operation the laws that will do the very thing that we are trying to accomplish by investigation.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. FOSTER. Certainly.

Mr. MANN. Does my colleague think, after all, we ever learn too much?

Mr. FOSTER. No.

Mr. MANN. As a rule does the gentleman think that Congress is too well informed?

Mr. FOSTER. I think that when we do learn a thing we ought to put it in operation. Let me suggest to my colleague—and I know he was in thorough sympathy with this legislation—that when it was discovered that the vessels belonging to the United States were not equipped with sufficient life-saving boats Congress passed a bill appropriating \$300,000 with which to equip all the vessels of the United States with lifeboats. That condition of affairs was not called to our attention until the great disaster occurred to the *Titanic*, so that it is necessary when we get this information that we should put it in operation. I am thoroughly in accord with the gentleman from Illinois [Mr. MANN] upon the proposition that we should do these things. I know that his work in this House in reference to interstate commerce has been of great value to the country, and I am always glad to hear him upon any question of this kind when it comes before Congress.

Mr. MURDOCK. Mr. Chairman, I favor the amendment offered by the gentleman from Illinois [Mr. MANN] because I have a hope, although it is a faint hope, that it will do some good. The annual railroad casualties in this country have reached now the figure of 180,000, and 10,000 of those are deaths. The total is going up by leaps and bounds every year. We have passed safety-appliance acts, and, in a measure, I suppose, they have helped. We have limited hours of service. We have inaugurated block systems, and in a way they have helped; but block systems do not stop wrecks, for some of the worst wrecks we have had in the last year have occurred where the block systems were the most perfect. As long as the Pennsylvania Railroad and the New York Central Railroad run 18-hour trains between New York and Chicago and pay back to the passengers a rebate if the train does not make schedule time, just so long, block system or no block system, will there be wrecks on both of these roads, endangering not only the lives of the passengers on the fast trains but of the passengers on all of the other and slower traffic.

I have read very carefully the report of the Interstate Commerce Commission this last year on the question of accidents. The commission does make certain recommendations, and I call the attention of the gentleman from New York [Mr. FITZGERALD] to this paragraph in the recommendations of the commission:

With the facilities at its command it is manifestly impossible for the commission to investigate more than a comparatively small proportion of the accidents that occur.

It was that which I had in mind when I interrupted him a few moments ago. It may be that the commission does not need any more money—

Mr. FITZGERALD. This appropriation is not to investigate accidents.

Mr. MURDOCK. But the commission repeatedly does that. It says that it has not had all of the facilities necessary.

Mr. FITZGERALD. That may be, but it had all of the money that it ever asked for.

The CHAIRMAN (Mr. HARDWICK). The time of the gentleman from Kansas has expired.

Mr. MURDOCK. Mr. Chairman, I ask unanimous consent to continue for three minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FITZGERALD. It may be that the commission was unable to obtain the experts required to make the investigation, but the commission for this year requested \$50,000 less than it asked and was given last year.

Mr. MURDOCK. The natural inference is that it does not have the money.

Mr. FITZGERALD. It has gotten all the money it requested.

Mr. MURDOCK. The commission says, also:

It is probable that in many places the use of some form of an automatic stop device might properly be regarded as necessary to the safe operation of trains.

I confess that is rather a weak recommendation, and does not bind the commission as to what sort of recommendation it makes.

Mr. FITZGERALD. Commissioner Prouty stated that in Chicago some one had experimented with an automatic stop; but the trouble with that was it got out of order so often, particularly in cold weather, that it stopped everything, and stopped it effectively, for several hours at a time.

Mr. MURDOCK. It would be better for it to stop everything than to go on having wrecks.

Mr. FITZGERALD. That may be true, but the trouble was that the device was not sufficiently perfected to make it practicable. When it worked a certain way things stopped, but the unfortunate part of it was that it stopped the whole system most of the time.

Mr. MURDOCK. Even if it stopped the system it is better to have that than to continue having the wrecks.

Mr. FITZGERALD. I do not know—

Mr. MURDOCK. I desire to say this before my time expires, I am glad to be interrupted, but—

Mr. FITZGERALD. I think the gentleman thinks we ought not to stop all railroad operations because there are wrecks.

Mr. MURDOCK. At least we ought to minimize the wrecks which take place. Mr. Chairman, I want to say in conclusion—how much time have I left?

The CHAIRMAN. The gentleman has half a minute remaining.

Mr. MURDOCK. I would like to have an extension of two or three minutes more time.

Mr. MANN. Mr. Chairman, could not we reach some agreement as to how much more time will be spent on this? How many gentlemen want to be heard?

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. MANN. How much time does the gentleman from Kansas want?

Mr. MURDOCK. Three or four minutes more.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent—

Mr. MANN. The two gentlemen from Pennsylvania want to be heard.

Mr. MURDOCK. I will ask for five minutes.

Mr. FITZGERALD. Mr. Chairman, I will ask that all debate on the pending amendment and amendments thereto close in 25 minutes.

The CHAIRMAN. The gentleman from New York asks unanimous consent that all debate on the pending amendment and all amendments thereto be closed in 25 minutes.

Mr. MANN. The Chairman understands how that time is to be apportioned.

The CHAIRMAN. The Chair thinks so.

Mr. FITZGERALD. I ask that the time be made 30 minutes. I might possibly wish to reply.

The CHAIRMAN. Is there objection to the request? [After a pause.] The Chair hears none.

Mr. MANN. Now, Mr. Chairman, I ask that the gentleman from Kansas may have five minutes more.

The CHAIRMAN. The gentleman from Kansas is recognized under that understanding.

Mr. SHARP. Will the gentleman yield to me for a question?

Mr. MURDOCK. If the gentleman will not take up too much of my time. I yield to the gentleman from Ohio for a question.

Mr. SHARP. The gentleman states that this commission ought to have given greater attention to investigating these questions than they have done, but, in view of the demands made on the Interstate Commerce Commission recently, just recited by the gentleman, does not the gentleman think that the commission is already loaded down with so many different kinds of work that it can not properly discharge all its duties done, or supposed to be done, under the law, and if it is not time now for it to have more assistance, either by separate commissions or a limited division of its work?

Mr. MURDOCK. That might be; but I do not think there is any duty paramount to stopping this waste of human life and limb in wrecks.

Mr. SHARP. I quite agree with the gentleman.

Mr. MURDOCK. Now, the ordinary daily spectacle in this country is found in the morning papers carrying a story of a wreck, and a story following the wreck, which recounts the arrest, usually, of the driver of the locomotive. Now, the driver of a locomotive in this country, as a rule, lives in an atmos-

phere of caution. His daily vocation leads him to be careful. Everything is an admonition to him. He is intelligent, alert, skillful, and above all cautious. He does not willfully run into things. He does not collide with trains in front of him or ditch his own train. But he is driven by a system. And the first thing that occurs when a wreck happens is the arrest of the engineer. Now, what is the matter in this country? It is not with the train operatives. Why not face the truth? Why not read the reports of the Interstate Commerce Commission and accept the facts they set forth? The trouble in this country is with poor equipment, defective equipment, broken wheels, broken flanges, defective axles and journals, brake rigging, draft gear, failure of power brakes, failure of couplers, irregular roadbeds, broken rails, spread rails, soft track, bad ties, and irregular tracks. Why not face this proposition? Here is the report of the Interstate Commerce Commission. It is issued yearly. It is distributed to the Members of Congress. It is within the reach of everyone. The tables are full and complete, and those tables show that the chief trouble in this country in this toll on the traveling public is with the equipment of the railroads and with the roadbeds. And I say to the gentleman that the cause lies so deep that any mere appropriation of \$25,000 for further investigation will not reach it.

Mr. SHARP. Will the gentleman yield?

Mr. MURDOCK. Yes; I will.

Mr. SHARP. Has it not occurred to the gentleman that there is one further element that enters into this trouble, which is partly due to the American people traveling twice as fast as they used to travel, and that is the reason for the demand for these fast 18-hour trains?

Mr. MURDOCK. But the Interstate Commerce Commission shows in its report where there was one notable derailment of a train on a straight track where the speed was only 30 miles an hour. Investigation showed that most of the ties under the rails were poor, and that 12 of them under one rail were absolutely rotten. The fact is that in thousands of instances the equipment is poor, the roadbed is irregular. Of 31 derailments investigated by the commission, 14 were either directly or indirectly caused by bad track. What is the matter? Why, the gentlemen know what the matter is. Most of the alleged captains of industry in this country are stripping their roads in Wall Street gambling games and in speculative devices at the expense of the public service and at the cost of human lives. You will not reach this thing by passing an appropriation of \$25,000.

Mr. FITZGERALD. Will the gentleman answer a question?

Mr. MURDOCK. I will.

Mr. FITZGERALD. Does the gentleman blame me for all this?

Mr. MURDOCK. No; I do not. But I do blame it to the causes I have stated, and to the inaction of Congress in not going to the bottom of these national wrongs.

Mr. FITZGERALD. I thought he was blaming me.

Mr. HULINGS. Mr. Chairman, this debate, I think, has drifted along on about two lines, one of which is suggested by my friend from Kansas [Mr. MURDOCK], that there ought to be lodged in the Interstate Commerce Commission power authorizing it to compel the railroads to adopt the use of safety appliances which it has investigated and found to be useful. The other is, and that which is reached by the amendment itself, directed to the question of whether the Interstate Commerce Commission shall be supplied with additional money to make investigations of these safety inventions. Now, as I understand, the gentleman from New York [Mr. FITZGERALD] has stated that the commission say they have plenty of money, and therefore do not need any more now.

Mr. FITZGERALD. I did not say that, if the gentleman will permit me. I said that the commission stated it would be useless to appropriate this money, because they could not use it.

Mr. HULINGS. Have they money for this purpose that they do not use?

Mr. FITZGERALD. I do not know.

Mr. HULINGS. Mr. Chairman, the enormous increase in the weight of locomotives and rolling stock has made our rail systems the weak point in practical railroad operation. A short time ago a gentleman came to me who has made what he claims to be a very valuable invention in switches on railroads, or rail attachments, or something of that sort, that he claims will meet one of the hardest questions which railroad managers to-day go up against, namely, their rail attachments. He presented that invention to the Interstate Commerce Commission with a request that it be investigated under the power which Congress has given to that commission, but was met with the reply that they would like very much to investigate that invention but were precluded because there was no money available for the purpose.

That is the statement that comes to me from a reliable person, and at that time I introduced a bill into this Congress (H. R. 7294), which is substantially word for word with the amendment of the gentleman from Illinois [Mr. MANN]. I believe from the facts as I have ascertained them that the Interstate Commerce Commission ought to be required to continue the investigation of new safety appliances and be supplied with necessary money. It has the power, but it should be supplied with money to go on and make the investigations, and if for any reason it refuses to investigate it should be required to do so. For these reasons I am in favor of this amendment.

Mr. CULLOP. Mr. Chairman, I would like to ask the gentleman from Illinois [Mr. MANN] a question with regard to his resolution. I understood the gentleman to say that he introduced the resolution of June 30, 1906. Now, I find one provision in that resolution which reads as follows. It is the second paragraph of it, if it may be divided into paragraphs—

Mr. MANN. Probably the one the gentleman from New York referred to yesterday.

Mr. CULLOP. It says, in transmitting its report to Congress, the commission shall recommend such legislation as the commission shall deem advisable. This paragraph requires the commission to recommend legislation on this subject. It is mandatory.

I understood the gentleman from Illinois [Mr. MANN] to say that he had read all of the reports of the commission that had been made on this subject. Has it in any one of its reports recommended the enactment of legislation on this subject?

Mr. MANN. I think no definite legislation.

Mr. CULLOP. Do they give any reason as to why no legislation has been recommended on the subject?

Mr. MANN. I think on reading the reports and recommendations by the commission it will appear that they have not yet reached a conclusion that any device is sufficiently satisfactory to enforce its installation.

Mr. CULLOP. Is that because the inventions or discoveries up to date are in crude form and not perfected?

Mr. MANN. Probably they are not sufficiently perfected or not sufficiently experimented with to make it certain that they will work.

Mr. CULLOP. One requirement of this resolution of June 30, Mr. Chairman, was that the commission should not only investigate this subject but should report, recommending legislation.

Now, the claim is made here that such legislation has not been recommended yet. This sum is a very small sum compared with the great advantage and safety to human life that might be secured by the adoption of the amendment offered by the gentleman from Illinois [Mr. MANN]. This proposition, it seems to me, is apparent. It has been urged as an objection here that the Interstate Commerce Commission did not need this money—that it had no use for it at this time. Of course, if the commission does not expend the money it will revert to the Treasury.

But Congress, it seems to me, ought to put itself in a position where no blame can possibly be attached to it in not providing the necessary funds and have them available for use. Here is a great disaster that has happened only this week up here on the New York, New Haven & Hartford Railroad, and complaints are made that proper safeguards are not thrown around the protection of travelers—of human life and property. Now, if this appropriation is made that kind of complaint can not be made. In my judgment, the commission ought to have at all times ample funds on hand so that when an emergency arises it can immediately enter into these investigations. New discoveries and new inventions are constantly being made as to devices for the purpose of avoiding such a catastrophe as happened only this week on the New Haven road. This fund, if the appropriation were made, would enable the commission to investigate the subject and make recommendations to Congress.

Mr. COOPER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. CULLOP. Certainly.

Mr. COOPER. Does the gentleman think that the adoption of any sort of a device would prevent wrecks, in view of the testimony taken yesterday at that inquest to the effect that there were six trains running at speed on that road within 10 miles, which would make them within 2 miles of each other on the average? The men on the trains swore that it was customary to run by signals and not stop; and not only that, but some of them were incompetent and had not been examined, and that some of them did not have watches.

Mr. CULLOP. In answer to the gentleman I will say it might not, and yet it might. But I would further say it was the grossest carelessness to operate any railroad in the man-

ner in which the testimony shows yesterday that road was operated, and it was criminal negligence to do so. It seems to me such carelessness is in utter disregard of human life and property.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. CULLOP. I do.

Mr. MANN. The gentleman has given the subject study in his committee. Is it not a fact that these automatic appliances would stop the train, regardless of what the engineer or switchman or anybody else does? Unless the track is clear the train stops. It can not go ahead.

Mr. CULLOP. That is the purpose of them, and the claim made in their behalf. It is a regrettable fact that trains in too many instances are operated in total disregard of human safety. Both equipment and speed employed are against the safety of property and persons, and to their careless operation in this respect the injuries resulting may be attributed. In the strenuous endeavor to make large earnings, to pay dividends, and boost stocks life and property are both imperiled and the public suffers. Instances of this kind are too frequent, and the practice should not be tolerated. Every safeguard which can be devised should be employed to protect the traveling public, and if the roads do not willingly adopt them then by proper legislation they should be required to do so.

The CHAIRMAN. The time is controlled by agreement.

Mr. FARR rose.

The CHAIRMAN. The gentleman from Pennsylvania is recognized.

Mr. FARR. Mr. Chairman, I think we are losing sight of the real cause of the accident the other day. You may install all the safety appliances possible with the present knowledge, and yet you will not eliminate accidents resulting from the high speed and closeness at which these trains were going. The engineer stated that he was going so fast that although he saw the signal he could not stop his train in time to prevent the accident.

Mr. NORTON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Pennsylvania yield?

Mr. FARR. I do.

Mr. NORTON. Was not that due to the fact that it was not a proper kind of signal?

Mr. FARR. He saw the signal, but on seeing the signal he could not stop his train in time to prevent that accident, because that train could not have been stopped, even with the emergency brakes on, within 1,500 feet.

Mr. NORTON. Did he not state that the signal was of such a character that he did not see it until he was within 150 feet of it?

Mr. FARR. Even if he had seen it at a greater distance than that, three or four times that distance, there was no way in which that accident could have been prevented, except by lessening the speed of the train he was running, and he was going at that speed under orders. The dispatcher gave no instructions as to slowing down of these trains running so closely together, within a few minutes apart, in foggy weather, and stated that he had no instructions from the head office as to their regulation in bad weather, and that he acted on his own judgment, permitting six trains to pass by within 32 minutes.

The way to stop accidents on a road like that is to give the Interstate Commerce Commission the power to regulate train operations, particularly where wooden cars are used. Steel cars on this New Haven train undoubtedly would have saved some lives, but would not have eliminated the probability of fatalities. We can devise all the safety appliances we want to, but we are not going to get rid of the human element, and we want to put more power into the hands of the Interstate Commerce Commission, especially with reference to roads whose equipment is bad and whose roadbeds are not in good condition. That is the lesson to be learned from this latest and most sad disaster.

This country has made wonderful progress in the matter of safeguarding railway transportation. I make that statement on the authority of the block signal and train control board, who say:

Nowhere in the world have appliances for safeguarding railway transportation been so highly developed as within this country.

This significant statement is made by another authority:

In a sane analysis of railway casualties it is quickly apparent that less than one-twelfth are in any way due to causes that can be remedied by mechanical appliances for the protection of trains.

Mr. SHARP. From what report is the gentleman reading?

Mr. FARR. That is a quotation from the Railway Statistics of the United States, prepared by Slason Thompson:

Fast running of trains, encouraged and demanded by the traveling public, is responsible for many accidents. Excessive speed, necessary to maintain the schedules of fast trains, says the 1912 report of the

Interstate Commerce Commission, has been an important factor in many train accidents.

Continuing, this report says—

The conditions of safe operation are often ignored in the effort to bring these fast trains in on time. In connection with some of the fast excess-fare trains, a premium is placed on speed to the extent of returning to passengers a portion of the fare charged whenever schedules are not maintained. This is a bad practice, for which the traveling public is largely responsible, and it should be discontinued. The incentive should be to maintain safety rather than speed, and adequate measures should be taken to compel low speed wherever conditions require it, whether schedules are maintained or not.

So, I say to the Members of this House, if you want to stop these accidents, give the Interstate Commerce Commission some power relative to the operation of trains. Railroad men with whom I come in contact are in a state of nervous apprehension.

Their responsibilities have increased tremendously. The railroads are forced to meet the great and growing demands upon them. Competition is keen and the rivalry spirited, with the result that to-day freight trains are being run as fast as passenger trains were not many years ago.

[Mr. HOWARD addressed the committee. See Appendix.]

Mr. FITZGERALD. Mr. Chairman, how much time is left? The CHAIRMAN (Mr. HARDWICK). Eight minutes.

Mr. TALCOTT of New York. Mr. Chairman, it was said yesterday by the gentleman from Georgia, and this morning by the gentleman from Pennsylvania, that no matter what the mechanical devices are there will always be a human element in railroad operation, and that brings us back to the fact that there must be sufficient strength in the cars to withstand the strain and shock of collision. The increased speed and weight of trains make this necessary, and the superiority of the steel car over the wooden car is proved by the adoption of them by some of the most enterprising railroads in the country and by the reports of the Interstate Commerce Commission and the reports of experts in relation to the subject.

Reference was made yesterday to a bill I introduced for steel cars on railroads. I would like permission to include as a part of my remarks the text of that bill. Hearings are to be held by a subcommittee of the Committee on Interstate and Foreign Commerce upon the general subject of safety appliances; and, of course, it is very desirable that Members who have any suggestions to make along the line of that bill should have the opportunity of becoming familiar with its provisions.

The CHAIRMAN. The gentleman from New York asks unanimous consent to extend his remarks in the Record. Is there objection?

There was no objection.

The bill referred to is as follows:

A bill (H. R. 3374) to promote the safety of passengers and others upon railroads by compelling common carriers engaged in interstate commerce to use cars constructed of steel, and for other purposes.

Be it enacted, etc., That from and after the 1st day of January, 1918, it shall be unlawful for any common carrier engaged in carrying United States mails to use on its lines any mail car not constructed of steel, and that from and after the 1st day of January, 1918, it shall be unlawful for any common carrier engaged in interstate commerce to use on its lines in interstate traffic or in interstate transportation of passengers any express car, baggage car, or passenger car not constructed of steel.

Sec. 2. That from and after January 1, 1914, it shall be unlawful for any common carrier engaged in carrying United States mail to locate or run in any train between adjoining steel cars or between the engine and an adjoining steel car, any mail car not constructed of steel; and from and after the said 1st day of January, 1914, it shall be unlawful for any common carrier engaged in interstate commerce to locate or run in any train on its line in interstate traffic or in interstate transportation of passengers between adjoining steel cars, or between the engine and an adjoining steel car, any express car, baggage car, or passenger car not constructed of steel.

Sec. 3. That from and after January 1, 1914, any common carrier engaged in carrying United States mail is prohibited from bringing into use on its line any new mail car not constructed of steel; and that from and after January 1, 1914, any common carrier engaged in interstate commerce is prohibited from bringing into use on its line in interstate traffic or interstate transportation of passengers any new or additional express cars, baggage cars, or passenger cars unless constructed of steel in accordance with plans approved by the Interstate Commerce Commission.

Sec. 4. That any such common carrier using on its lines any mail car, express car, baggage car, or passenger car in violation of any of the provisions of this act shall be liable to a penalty of \$1,000 for each and every such violation, to be recovered in a suit or suits to be brought by the United States district attorney in the district court of the United States having jurisdiction in the locality where such violations shall have been committed; and it shall be the duty of such district attorney to bring such suits upon duly verified information of such violation being lodged with him; and it shall be the duty of the Interstate Commerce Commission to lodge with the proper district attorneys information of any such violations as may come to its knowledge. Every distinct violation shall be a separate offense, and in case of a continuing violation each day shall be deemed a separate offense.

Sec. 5. That the Interstate Commerce Commission may from time to time, upon full hearing and for good cause, extend the period within which any common carrier shall comply with the provisions of section 1 of this act, and the Interstate Commerce Commission may from time to time, after such investigation as may be necessary, permit any such common carrier to use particular mail cars, express cars, baggage cars, or passenger cars, the use of which shall be deemed by the commission to be reasonable and proper.

Mr. FITZGERALD. Mr. Chairman, this debate has taken a somewhat wide range, and as many Members have entered the Hall who were not present when it commenced, I desire to review the situation. Yesterday just before the committee rose the gentleman from Illinois [Mr. MANN] offered an amendment to appropriate \$25,000 to enable the Interstate Commerce Commission to continue investigations authorized under the joint resolution passed in 1906. I requested that the matter go over until to-day, until an opportunity had been offered to confer with the Interstate Commerce Commission. No estimate had been submitted for the money, no intimation had been given to the committee that such an appropriation was desirable.

Ever since I have been connected with the Committee on Appropriations the Interstate Commerce Commission has been given, in the annual appropriation bill, the various sums requested for the various purposes for which the commission required money to perform properly the duties imposed upon it under the law. This morning Judge Bartlett, of the committee, and myself called at the office of the Interstate Commerce Commission and inquired for various members of the commission. Finally we saw Judge Prouty whom I believe at this time alone is in the city. The statement was made as to the amendment which had been introduced and was pending. I stated to Judge Prouty that if the commission desired this money, or if it needed it to conduct its work there would be no opposition to it. Commissioner Prouty said that if the appropriation were made it would be practically useless, and he believed it would be much better not to appropriate in this way at this time, but to defer it until the next session of Congress.

In the meantime the commission would prepare and submit to the next session of Congress certain recommendations for legislation that would enable the commission to do certain things and to make investigations of a certain character in connection with railroads that they believed would result in enabling the commission to recommend legislation to compel the adoption of safety devices. Under these circumstances it seemed to me unwise to appropriate money for the purpose that the commission states can not be usefully expended.

So far as I am concerned, I desire to do everything possible to eliminate these great disasters upon the railroads of the country. I know of no one who does not wish to do everything possible to eliminate accidents and to prevent the tremendous destruction of life and injury to persons and property which is continually resulting from them, but it seems to be futile to appropriate money for the use of the commission when in its opinion it would be useless to appropriate it, and for that reason I hope the amendment will not be adopted.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

The question was taken; and on a division (demanded by Mr. MANN) there were—ayes 34, noes 30.

So the amendment was agreed to.

Mr. GILLET. Mr. Chairman, I offer the following amendment as a new section, and send the same to the desk and ask to have it read.

The Clerk read as follows:

Insert as a separate section the following:

"No money appropriated by this or any other act shall be used for the compensation of any publicity expert unless specifically appropriated for that purpose."

Mr. GILLET. Mr. Chairman, my attention was called—and that was the reason for my offering this amendment—to a recent circular issued by the Civil Service Commission. That circular, in its essential part, reads as follows:

(No. 878.)

UNITED STATES CIVIL-SERVICE EXAMINATION—PUBLICITY EXPERT
(MALE)—SEPTEMBER 15, 1913.

The United States Civil Service Commission announces an open competitive examination for publicity expert, for men only. From the register of eligibles resulting from this examination certification will be made to fill a vacancy in this position in the Office of Public Roads, Department of Agriculture, Washington, D. C., at \$8 a day, when employed, and vacancies as they may occur in positions requiring similar qualifications, unless it is found to be in the interest of the service to fill any vacancy by reinstatement, transfer, or promotion.

The duties of this position will consist of the preparation of news matter relating to the work of the Office of Public Roads and securing the publication of such items in various periodicals and newspapers, particularly in country newspapers. It is desired to secure the services of a man who has had wide experience in newspaper work and whose affiliations with newspaper publishers and writers is extensive enough to insure the publication of items prepared by him.

Competitors will not be assembled at any place for examination, but will be rated on the following subjects, which will have the relative weights indicated:

SUBJECTS.	Weights.
1. General education and training.....	25
2. Professional experience and fitness.....	45
3. Publications.....	30
Total.....	100

Not less than five years' practical experience in newspaper work is a prerequisite for consideration for this position. Publications relating to the subject of good roads will be given additional credit under subject 3.

Statements as to training, experience, and fitness are accepted subject to verification.

Age, 25 years or over on the date of the examination.

Under an act of Congress applicants for this examination must have been actually domiciled in the State or Territory in which they reside for at least one year previous to the date of the examination.

This examination is open to all men who are citizens of the United States and who meet the requirements.

Persons who meet the requirements and desire this examination should at once apply for Form 304 and special form to the United States Civil Service Commission, Washington, D. C.; the secretary of the board of examiners, post office, Boston, Mass.; Philadelphia, Pa.; Atlanta, Ga.; Cincinnati, Ohio; Chicago, Ill.; St. Paul, Minn.; Seattle, Wash.; San Francisco, Cal.; customhouse, New York, N. Y.; New Orleans, La.; Honolulu, Hawaii; old customhouse, St. Louis, Mo.; or to the chairman of the Porto Rican civil-service commission, San Juan, P. R. No application will be accepted unless properly executed and filed in complete form with the commission at Washington prior to the hour of closing business on September 15, 1913. In applying for this examination the exact title as given at the head of this announcement should be used.

Issued August 11, 1913.

Mr. MANN. Mr. Chairman, will the gentleman yield for a question?

Mr. GILLET. Certainly.

Mr. MANN. Some years ago when it was charged the Forestry Service was giving more attention to publishing items than to doing work, with which charge I did not agree, I thought Congress passed some legislation upon the subject of publicity agents in the Agricultural and other departments.

Mr. GILLET. I am not aware of such legislation.

Mr. FITZGERALD. It several times put limitations on the appropriations for the Forestry Service.

Mr. MONDELL. The provision to which the gentleman from Illinois refers, which was an amendment offered by myself, applied only to the Forestry Service. It is current law.

Mr. MANN. I was sure we did something, but I was thinking that it applied to the entire department.

Mr. GILLET. Mr. Chairman, the observations of the gentleman from Illinois [Mr. MANN] and the gentleman from Wyoming [Mr. MONDELL] indicate that the House has already expressed its opinion upon such employment as this. I do not think we can have any difference of opinion about it. The different departments of the administration certainly are not very modest in finding men and means to put before the country in the press the duties and purposes of their administration, and I think they can do so without the employment of a man like this who is avowedly simply a publicity agent. It does not seem to me that it is proper for any department of the Government to employ a person simply as a press agent to advertise the work and doings of that department, and it is to prevent that in any department that this amendment is offered. In the ordinary work of the department, anything which requires the knowledge of the public certainly finds its way into the press at this time, and I am surprised to find that apparently there is existing some such position as this. I think that it ought not to exist without, as my amendment suggests, a special appropriation by Congress or special recognition and approval by Congress of such an official. Therefore, I hope the amendment will be adopted.

Mr. FITZGERALD. Mr. Chairman, I should be very much surprised at any attempt to employ what is known as a publicity agent in any department of the Government. I recollect that some years ago I was somewhat instrumental in calling the attention of the House to the fact that a publicity agent had been employed in connection with one service of the Government at a compensation of \$10,000 a year, which resulted in very emphatic action by Congress to prevent such employment. At various times in consideration of the agricultural appropriation bill provisions have been inserted to prohibit the employment of publicity agents, not to prevent information about the work of the different services being made public, but because of the belief that there was no place in the Government service for an employee whose sole duty was to extol and to advertise the activities of any particular service of the Government. I have been informed that this examination to which reference has been made by the gentleman from Massachusetts [Mr. GILLET] for a publicity agent has been withdrawn by the Civil Service Commission.

Mr. GILLET. I will say I was not aware of that fact.

Mr. FITZGERALD. I was just informed this moment. I have such pronounced views about the impropriety of the employment of publicity experts in connection with any service of the Government that so far as I am concerned I shall be glad to see definite legislation enacted which will prevent the use of public moneys for any such purpose unless Congress specifically and deliberately authorizes such employments. I know of no appropriation made for any service of the Government wherein

it is contemplated that it shall be used for such a purpose, and I do not believe that any department or bureau or service should employ men to extol its virtues or its activities.

Mr. LEVER. Will the gentleman yield for a question?

Mr. FITZGERALD. I yield.

Mr. LEVER. I take it the gentleman from New York would not object to a department employing experts or editorial writers for the purpose of making our farm bulletins more readable to the public and more practical in their make-up.

Mr. FITZGERALD. That is an entirely different matter.

Mr. LEVER. The gentleman's purpose goes—

Mr. FITZGERALD. My purpose is that no service of the Government should employ a man whose duty is to prepare press matter in order to extol or to advertise the work of the service with which he is connected. That will be best advertised by the efficiency with which the work is performed.

Mr. LEVER. If the gentleman will permit—

Mr. FITZGERALD. This notice does not cover the character of the service to which reference is made by the gentleman from South Carolina. It is for a publicity expert—

Mr. LEVER. And I was about to say in so far as the gentleman says he is not in favor of employing press agents to extol the work of these departments, I agree with him; but I do believe we ought to have men in the various departments to make available the work of those departments, so as to reach the mind of the average reader, and particularly the Department of Agriculture.

Mr. FITZGERALD. If they are competent to do their work, they ought to be able to tell about it in plain, ordinary English.

Mr. AUSTIN. Mr. Chairman—

Mr. HELM. Mr. Chairman, the chairman of the Committee on Appropriations will recall that at the last session of Congress when the sundry civil bill was up for passage I directed the attention of the chairman to the fact that funds appropriated were used by the Army for the purpose of disseminating propaganda for the Army.

Mr. FITZGERALD. I recall the matter. I understand it was an argument on one side of a question that was then pending and in which certain officials of the War Department were interested which was published and circulated at public expense.

Mr. HELM. And paid out of appropriations which were made by Congress.

Mr. AUSTIN. I desire to ask the gentleman if this expert was not for the use of the Bureau of Good Roads?

Mr. FITZGERALD. I do not know what his employment was to be. I do not know whether he was to be used in connection with the Bureau of Good Roads or any other bureau, but I know of no reason why any bureau or any service of the Government should employ men to write newspaper articles extolling the work of the bureau and magnifying the importance of those connected with the work.

The CHAIRMAN. The time of the gentleman has expired. Mr. FOSTER. Mr. Chairman, I ask unanimous consent that the gentleman may have five minutes more.

Mr. FITZGERALD. I have said all I want to say.

Mr. BRYAN. Mr. Chairman—

Mr. CAMPBELL. I desire to ask the gentleman a question.

Mr. FITZGERALD. I will ask for one minute more.

Mr. BRYAN. Mr. Chairman, I will desist for that purpose.

Mr. CAMPBELL. Mr. Chairman, I simply desire to call the attention of the gentleman from New York to the further fact, to which he has not alluded, that there have been in the departments of this Government within recent months—I can not say just when—employees paid by the Government for making newspaper clippings and giving out interviews and gathering up things for the purpose of advertising the chiefs of bureaus and heads of departments.

Mr. FITZGERALD. Well, there are some practices, Mr. Chairman, that will hang over into a virtuous administration, but as speedily as possible we hope to eliminate all of those evil practices. This provision I am concerned will prevent the possibility of the development of what I would conceive to be a very unfortunate situation in the Government service.

The CHAIRMAN. The gentleman from Washington [Mr. BRYAN] is recognized.

Mr. BRYAN. Mr. Chairman, speaking to the subject of newspaper articles and publicity agents, it is very natural to revert to the subject that I had in my mind this morning when I called up the resolution that I had offered a short time ago in reference to certain riots at Seattle.

I desire now to present a few facts in connection with those matters. I feel it my duty to answer some of the statements that were made by my colleague yesterday or day before yesterday to this body. But more important than that, and, for that

reason, I am going to proceed first, is the presenting to this Congress and to the Members of the House certain facts that are not known in connection with that incident out there at Seattle.

Mr. MANN. Will the gentleman yield?

Mr. BRYAN. I will.

Mr. MANN. Of course the gentleman knows he would be out of order. At the first of next week the gentleman would have a chance to get into general debate and discuss this.

Mr. BRYAN. I am going to leave on the 6.45 train this afternoon for the Pacific coast.

Mr. FOSTER. I think the gentleman from Washington ought to have a chance.

Mr. MANN. If the gentleman is going away, then I shall make no objection.

Mr. ADAMSON. Mr. Chairman, I ask unanimous consent that the gentleman may proceed regardless of the rule.

The CHAIRMAN. For how long?

Mr. BRYAN. I would like to have 15 minutes, anyway.

Mr. FOSTER. How much time does the gentleman want?

Mr. BRYAN. At least 15 minutes.

Mr. THOMPSON of Oklahoma. I object, Mr. Chairman.

The CHAIRMAN. The gentleman from Washington [Mr. BRYAN] asks unanimous consent that he may be allowed to proceed for 15 minutes.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent that when the pending amendment is disposed of the gentleman may proceed.

Mr. BARTLETT. Mr. Chairman, I reserve the right to object.

Mr. THOMPSON of Oklahoma. I object.

Mr. ADAMSON. Mr. Chairman, I want to ask the gentleman from Washington [Mr. BRYAN], anyhow, in his remaining time—

Mr. THOMPSON of Oklahoma. Mr. Chairman, I withdraw my objection.

Mr. BARTLETT. Mr. Chairman, I will not withdraw my acquiescence to the suggestion of Mr. FITZGERALD until this proposition is over. After it is over I will not object to what is asked for. If the request is withdrawn now, and made after this amendment is voted on, I will not object now. If the request is that the gentleman shall have the time now, I want to reserve my right to object.

Mr. FITZGERALD. I ask the gentleman from Washington [Mr. BRYAN] to withdraw his request for the present and until after the amendment is disposed of.

Mr. ADAMSON. I would like to ask the gentleman from Washington a question.

Mr. BRYAN. I realize I am out of order. I am willing to yield, as suggested by the chairman of the Committee on Appropriations, for the present.

Mr. ADAMSON. I want to ask the gentleman something that is in order.

The CHAIRMAN. Does the gentleman from Washington [Mr. BRYAN] decline to yield?

Mr. ADAMSON. He is willing to yield. I want to ask him if he is the gentleman who secured six weeks' leave of absence this morning?

Mr. BRYAN. I am the gentleman.

Mr. ADAMSON. Does he not think it cruel sarcasm on the rest of us at this stage of the session to have that published?

Mr. BRYAN. The gentleman perhaps is aware that it takes me two weeks nearly to go and come. Considering the temperature as it stands to-day, I guess I am guilty of cruelty to animals.

Mr. AUSTIN. Mr. Chairman, in all seriousness I think the House ought to hesitate at the adoption of this amendment offered by the gentleman from Massachusetts [Mr. GILLET] until we know more of the merits contained in this circular calling for an expert for the Department of Agriculture. The Secretary of Agriculture ought to be consulted about the matter. We ought to know some of the reasons that prompt the department to ask for the service of a man of this character, and we ought not to permit this case to be prejudiced because there was an abuse of this privilege in connection with some other department of the Government. Now, just from scanning this circular, calling for the man, it is strictly in connection with the Good Roads Bureau of the Department of Agriculture.

This House has recently created a new committee—the Committee on Good Roads. The previous Congress created a Joint Commission on Good Roads. There is no subject now engaging the attention of the American people that is of more interest or more value, especially to the interior of the country, the agricultural sections in various parts of the country, than that

of national aid to good roads, and I doubt the wisdom of this House, on the mere discussion that we have had here this afternoon, voting this amendment into the appropriation bill.

My constituents—and I make the assertion from the standpoint of 75 per cent of the Members of this House—are vitally interested in the question of good roads, of national aid for good roads.

Mr. FITZGERALD. All the information available will be used anyway by all of the newspapers and magazines, and nobody will be given a monopoly of it and put on a salary at the expense of the Government to write newspaper stuff and advertisements.

Mr. AUSTIN. I contend, Mr. Chairman, that the Secretary of Agriculture and the Chief of the Bureau of Good Roads ought to have an opportunity to "come into court" and give us their reasons for this service. Otherwise our action here will be regarded as adverse on the part of the Members of this House to good roads—against the interest of good roads and against the movement in favor of national aid to good roads. We ought not to do it.

Mr. GILLETT. Mr. Chairman, my suggestion of this amendment was for no such purpose as the gentleman from Tennessee [Mr. AUSTIN] indicates. I care not what department it affects. I do not think any department of the Government, in the Bureau of Good Roads or any other, should be supplied with a publicity expert, a man on the salary roll, for the sole purpose of exploiting and advertising that department or bureau.

Mr. LEVER. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. GILLETT. Certainly.

Mr. LEVER. The gentleman has defined the publicity expert in his statement just now, to the effect that he is a man whose business it is to extol and exploit the virtues of this department. The gentleman does not undertake in this amendment to prevent some one employed in the Department of Agriculture, for instance, giving to the country information as to the work of the department?

Mr. GILLETT. Of course not. Of course, they are doing it all the time and have been. All the departments are doing it.

Mr. LEVER. I do not mean in the capacity of one of the regularly employed editors, but I mean a man employed to make more democratic the reports of the Department of Agriculture. I do not mean "Democratic" in the partisan sense.

Mr. GILLETT. I understand.

Mr. LEVER. I mean to put it in popular language.

Mr. GILLETT. Of course, I do not object to that at all.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Massachusetts [Mr. GILLETT].

Mr. AUSTIN. Mr. Chairman, I ask that the amendment be again reported.

The CHAIRMAN. Without objection, the amendment will again be reported.

The amendment was again read.

Mr. COOPER. Mr. Chairman, I would like to ask the gentleman from New York [Mr. FITZGERALD] a question. It would not in any wise affect the publication of the Panama Canal Record?

Mr. FITZGERALD. Oh, not in the slightest degree. The Panama Canal Record is published by the Panama Canal Commission and not by a publicity expert.

Mr. COOPER. But it is Government money that pays for it.

Mr. FITZGERALD. So is it with respect to the CONGRESSIONAL RECORD.

Mr. GILLETT. It would not apply to that at all.

Mr. COOPER. It says "No money appropriated by this or any other act shall be used for the compensation of any publicity expert," and so-and-so. I do not want a misinterpretation to be put upon it.

Mr. FITZGERALD. There is no doubt about that.

Mr. AUSTIN. The adoption of this amendment, Mr. Chairman, will prevent what the Secretary sets out in this letter:

The duties of this position will consist of the preparation of news matter referring to the Office of Public Roads.

It is for that purpose.

Mr. COOPER. Mr. Chairman, I ask unanimous consent to have the amendment offered by the gentleman from Massachusetts reported again.

The CHAIRMAN. Without objection, the Clerk will again report the amendment.

The amendment was again read.

The CHAIRMAN. The question is on the amendment.

The amendment was agreed to.

The Clerk read as follows:

DISTRICT OF COLUMBIA.

Excise Board: For three members of the Excise Board, at the rate of \$2,400 per annum each; clerk, at the rate of \$1,500 per annum; inspector, at the rate of \$1,500 per annum; in all, \$8,500, or so much thereof as may be necessary during the fiscal year 1914.

Mr. BRYAN. Mr. Chairman, I move to strike out the last word. I desire to proceed for at least 15 minutes, and I ask unanimous consent that I may do so without speaking to the provisions of this particular item.

The CHAIRMAN. The gentleman asks unanimous consent that he may be permitted to proceed for 15 minutes, without reference to the rule which requires Members, in the five-minute debate, to speak to the paragraph under consideration.

Mr. BARTLETT. Reserving the right to object, I desire to ask the gentleman is it his intention in any part of his speech to refer to any newspaper statements concerning the Secretary of the Navy in this matter?

Mr. BRYAN. I think it will be necessary for me to refer to the Secretary of the Navy in my remarks; but it is my theory of this case that the newspapers which gave to the people out there the alleged report of Secretary Daniels's speech deliberately falsified the report, and that the blame rests on the newspapers.

Mr. JOHNSON of Washington. I make the point of order that the gentleman is out of order.

Mr. FITZGERALD. He is not out of order.

The CHAIRMAN. The gentleman is not out of order. He is asking unanimous consent, and he is answering a question asked him by the gentleman from Georgia [Mr. BARTLETT]. The question is on the request of the gentleman.

Mr. BARTLETT. I have no objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

Mr. JOHNSON of Washington. Mr. Chairman, reserving the right to object, I want to ask my colleague if he proposes to criticize the Secretary of the Navy and then run away for six weeks?

Mr. BRYAN. I will not answer the gentleman's inquiry in the way I feel like answering it, and will simply say that I have no intention of running away or of escaping anything. I am going to leave on that train this afternoon, however.

Mr. JOHNSON of Washington. Still reserving the right to object, I should like to say that this dispute in Seattle has been running for six or seven years. I live in a neighboring district, and can look upon it with some fairness. I am inclined to believe that if we discuss and publish in the CONGRESSIONAL RECORD all that is printed in the Seattle newspapers concerning the newspaper fight in Seattle it will go on forever. Therefore I object.

The CHAIRMAN. The gentleman from Washington objects.

Mr. BRYAN. Mr. Chairman, I move to strike out the last word. I have nothing to say on the particular paragraph of the deficiency bill that is pending, but I believe that I may be permitted to proceed for at least five minutes without being considered out of order in discussing the subject that I mentioned a few moments ago. It is a subject on which a resolution was introduced here, and concerning which my colleague from Washington [Mr. HUMPHREY] addressed the House at some length a day or two ago. The gentleman was given the privilege of printing liberally in the RECORD, and he did print something like 8 or 10 pages in the RECORD, in reference to the matter, and I consider it important. Therefore I am proceeding on that line.

There was an investigation of this incident by the officers of the Navy. A report was made, and on that report a finding was given out to the country. I say that the Secretary of the Navy was misled by the report that was given to him and that the investigation was entirely insufficient. The investigation did not reach to the merits of the case and was conducted secretly and without due regard for the proprieties of the case. It was held on board ship. The mayor was not called. None of the city police were called. None of the civil authorities were called as witnesses. Yet, after listening to the testimony of an enlisted man or two and of one member of the board who was on the naval patrol force that should have maintained order the night before, the commission made their finding.

The result of these conclusions was to censure the city government of Seattle and its mayor. There is nothing in the facts of the case to warrant any such censure. There are no facts that can be adduced at a fair and impartial hearing or investigation of the case that will warrant the charges against the mayor and people of Seattle, which now stand practically confirmed by the Navy Department. There have been no such outbursts as have been claimed out there by alleged labor forces,

by the Industrial Workers of the World, or Socialists. There has been considerable talk, of course, as in all the cities of this country, but the flag has not been traduced, as the Seattle Times alleged. The flag has not been dragged in the streets, and the reports have been entirely diverted and falsified in order to advance local issues, local purposes, and local politics.

I want to call attention to the fact that in my remarks the other day there was only one man to whom I referred with any degree of censure. I called him by name—the editor of the Seattle Times. When my colleague [Mr. HUMPHREY] answered the other day, he referred to practically all the history of the State of Washington, the government, the judges, but he did not make any reference directly in defense of the editor of the Seattle Times. He did not say that the extreme statement I had given as to the partiality and unfairness of that man, his immorality, and the way it had shown up in this particular case, was not true; he did not attempt to show any facts to the contrary, but called the roll of the heroes of the State of Washington for times past.

In this statement he made on the floor of the House he did not challenge anything that I had presented in my speech the other day. He did not by anything he said controvert the fact that there had been an awful civil fight between various forces, and Editor Blethen had assumed the rôle of the defender of the flag in order to capitalize his own political ventures, and thus defeat his opponents.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. ADAMSON. Mr. Chairman, if the gentleman from Washington is going away and not to speak again soon, I hope there will be no objection to his continuing five minutes longer.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent that the time of the gentleman from Washington be extended five minutes. Is there objection?

Mr. JOHNSON of Washington. I object.

Mr. BRYAN. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. That is not in order.

Mr. DYER. Mr. Chairman, I offer the following amendment, which I send to the Clerk's desk.

The Clerk read as follows:

Page 8, line 26, after the word "fourteen," strike out the period, insert a colon, and add the following, to wit: "Provided, That hereafter no person shall be eligible for appointment as a member of the excise board or any employee thereof unless he or she shall be a bona fide resident of the District of Columbia and shall have actually resided in said District of Columbia for a period of two years prior to his or her appointment."

Mr. FITZGERALD. Mr. Chairman, I make the point of order that this is legislation.

Mr. DYER. I do not think it is subject to a point of order.

Mr. FITZGERALD. It is subject to a point of order.

Mr. DYER. Will the gentleman from New York withhold his point of order?

Mr. FITZGERALD. For how long?

Mr. DYER. For three minutes.

Mr. FITZGERALD. I will withhold the point of order for three minutes.

Mr. DYER. Mr. Chairman, the amendment I have offered is in no sense intended as a criticism upon the present administration or any of its officials. For some time past the custom has grown up in the city of Washington to appoint men to office here to administer purely local affairs who do not and have never claimed to be residents of this city.

Now, this provision here in the bill has reference to the excise board. It is a new law, put upon the statute books in the last session of the Sixty-second Congress. The money that comes for the support of this board is derived entirely from revenue collected from the citizens of Washington. It seems to me that not only in this matter but in other matters where people of Washington contribute all the money which goes to pay these officials—direct taxes, so to speak, as this is—that citizens should be appointed to administer these offices.

I can not see any excuse for bringing people here from other States and appointing them to places for the pure administration of local affairs. This is a city of several hundred thousand inhabitants, and is large enough to have people competent to exercise the functions that pertain to the administration of local matters.

There has been a great deal of criticism not only of this administration but of the administrations in the past in regard to this matter. I make no criticism of the present administration any more than I do of past administrations of the Government in this country in depriving the citizens of Washington of an opportunity to administer their own local affairs. I hope the time will come, Mr. Chairman, when the people of Washington will not be deprived of every opportunity to exercise the

functions and duties of citizens as other citizens of the United States do in the way of making laws under which they must live as well as the execution of them after they have been made. There is no place in this country, not even in Porto Rico, the Philippines, or Hawaii, wherein the people are deprived of these functions as much as the people of Washington are deprived of an opportunity to take part in the enactment of laws under which they must live and under which they pay taxes.

The CHAIRMAN. The time of the gentleman has expired. The point of order is sustained, and the Clerk will read.

The Clerk read as follows:

For 1912, \$50.

Mr. KINKEAD of New Jersey. Mr. Chairman, I move to strike out the last word. Of course one could not fail to notice that when addressing himself to the point of order the gentleman from Missouri [Mr. DYER] did not say a word about the parliamentary ruling which was invoked against his proposed amendment. It was merely a plea that future appointments to boards in the District of Columbia should be made from citizenship of the District. In the main, I have a great deal of sympathy with the gentleman's feeling toward the people of the District of Columbia. I think at times that they are entitled to more consideration than we are wont to give them in this Chamber. But now with regard to the question that he had in mind, let me say to him that the three members of the Board of Excise Commissioners of the District of Columbia are bona fide residents of the District.

Mr. DYER. Mr. Chairman, will the gentleman permit an interruption?

Mr. KINKEAD of New Jersey. Mr. Chairman, I refuse to be interrupted at this point. I want to continue and enlighten the gentleman about this matter. What the gentleman had in mind was that the commissioners showed the rare good judgment to go to the eighth district of New Jersey and select a thoroughly competent and capable young man, Edward J. Hart, to perform the duties of clerk to this commission.

Mr. DYER rose.

Mr. KINKEAD of New Jersey. Mr. Chairman, I can not yield to the gentleman at this time.

Mr. DYER. But the gentleman surely does not mean my district?

Mr. KINKEAD of New Jersey. No; I said New Jersey, and the gentleman, if I remember rightly, comes from Missouri, which is some distance from New Jersey. On other occasions the gentleman has taken opportunity to find fault. If my memory serves me well, in the last administration, when a man from his State was selected to come and perform duties here in Washington similar to the one he complains of at this time, the gentleman was not in any great hurry to rise from his seat and protest against the action of the former administration.

Mr. DYER. I think the gentleman ought to permit me to interrupt him—

Mr. KINKEAD of New Jersey. Mr. Chairman, I can not permit the gentleman to interrupt.

Mr. DYER. I do not know to whom the gentleman refers.

Mr. KINKEAD of New Jersey. The gentleman from Missouri knows that usually I am in accord with the reforms that he and some of the other members of the Committee on the District of Columbia are endeavoring to bring about here in the District; but it does not seem to me to be particularly proper for him, while he was addressing the House, to fail to bear testimony to the fact that he knew, as I believe he does, that this young man who is coming here to assume the duties of clerk of this board is eminently fitted for this position. If the commissioners went through the country from one end to the other, they would not be able to secure the services of a young man who is better fitted by education and training to perform the duties incumbent upon the clerk of the excise commission.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. DONOVAN. Mr. Chairman, I notice that the gentleman from Kansas [Mr. CAMPBELL] has returned to the room. I do not believe there is a more able or painstaking Member of this body than the gentleman from Kansas, but I fear he has done what a great many others have done, and that is to neglect his duty or, that is, he has been absent from duty. Attention was called to the fact that somebody had been earning a salary in Government employ by the mere cutting of clippings from newspapers, and if the gentleman had been present when the gentleman from Massachusetts [Mr. GILLET] was talking the other day he would have discovered that a man had been in the employ of the Government for two years, drawing a salary of \$3,000 a year, and not even cutting clippings. I merely suggest this to put my intelligent friend right

and call his attention to the fact that there are people in Government employ who do not do anything and who receive \$3,000 a year.

The Clerk read as follows:

Refund of erroneous collections: For amount required to refund certain erroneous collections on account of special assessments, charges, fees, etc., covered into the Treasury of the United States to the credit of the United States and the District of Columbia in equal parts, \$709.62.

Mr. BRYAN. Mr. Chairman, I move to strike out the last word. In reference to the matter that I was talking about a few moments ago, it has been asserted that in the city of Seattle the public—

Mr. JOHNSON of Washington. Mr. Chairman, I suggest that my colleague is out of order, and is not talking to his amendment.

The CHAIRMAN. The point of order is sustained.

Mr. BRYAN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD upon that subject, a privilege liberally granted to my colleague [Mr. HUMPHREY] yesterday.

The CHAIRMAN. The gentleman from Washington asks unanimous consent to extend his remarks in the RECORD upon the subject that he is discussing. Is there objection?

Mr. JOHNSON of Washington. Mr. Chairman, reserving the right to object, I desire to make it clear to the Members of this House that this matter of the Seattle riots was brought before the House and given great space in the CONGRESSIONAL RECORD first on one side by my colleague, Mr. BRYAN. That was answered by my colleague, Mr. HUMPHREY. Both sides have been carrying on this newspaper war. The question of the right of free speech or the violation of the right of free speech has gone on in Seattle for not less than seven years and has not ended yet. The speech of Secretary Daniels was a mere incident. My colleague, Mr. BRYAN, has proceeded to-day out of order for five minutes, and has stated the nub of his whole argument, and I did not object. There is no need to print more newspaper clippings and argument. It is not a matter that should be paraded in such length before this body, and I object to its continuance.

Mr. BRYAN. The interruptions and objections have prevented my answering my colleague [Mr. HUMPHREY].

Mr. MURDOCK. Will the gentleman withhold his objection?

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Militia: For pay of officers and enlisted men of the naval battalion for the annual cruise, June 28 to July 10, inclusive, 1913, \$2,774.11.

Mr. BRYAN. Mr. Chairman, I move to strike out the last word. While on this subject of the militia of this country, I desire to say that the Navy is an arm of the militia, and I have a few remarks to present on that subject. In the city of Seattle it is alleged that a couple of soldiers were walking the streets—

Mr. JOHNSON of Washington. Mr. Chairman, I object. The gentleman is out of order.

The CHAIRMAN. For what purpose does the gentleman from Washington rise?

Mr. JOHNSON of Washington. I suggest my colleague is out of order.

The CHAIRMAN. The point of order is sustained.

Mr. MURDOCK. Now, Mr. Chairman, will the Chairman permit me to say that I submit nothing has been said here that makes the gentleman's remarks out of order? The item relates—

Mr. FITZGERALD. It is an entire waste of time.

Mr. MURDOCK. The item relates to enlisted men—

Mr. FITZGERALD. It is very apparent—

Mr. MURDOCK. There is nothing apparent about the remarks of the gentleman, so far as he has made them, to show that they are out of order.

Mr. BRYAN. Mr. Chairman, I will not ask any further opportunity to debate the matter, but just to make this one statement.

The CHAIRMAN. The gentleman is not in order.

Mr. BRYAN. If the committee will permit me just to make this one statement, I will state, gentlemen, that I am going to leave for Seattle in about three hours, and I am going to speak next Saturday at the King County Fair, Seattle, where no one can stop me and where I do not have to proceed under the courtesy of my colleague, Mr. JOHNSON.

Mr. HUMPHREY of Washington. Mr. Chairman—

The CHAIRMAN. For what purpose does the gentleman rise?

Mr. HUMPHREY of Washington. Mr. Chairman, I ask just a moment.

Mr. MURDOCK. Mr. Chairman, now I object.

Mr. HUMPHREY of Washington. Now, if the gentleman will just wait a moment, he will not object.

Mr. MURDOCK. But I do object.

Mr. BRYAN. I object.

Mr. MANN. The gentleman is very quick to resent objection to himself and then would not let the gentleman try to help him out.

Mr. MURDOCK. The gentleman was not going to try to help him out.

Mr. BRYAN. Why did not he try long ago?

Mr. HUMPHREY of Washington. I had no objection.

Mr. MANN. The gentleman did not object.

Mr. HUMPHREY of Washington. What I was going to do was to ask my colleague, Mr. JOHNSON, to withdraw his objection and let my colleague, Mr. BRYAN, proceed.

The CHAIRMAN. The gentleman is out of order, and the Clerk will read.

The Clerk read as follows:

Subsistence of the Army, fiscal year 1913, \$229,625.16; water and sewers, fiscal year 1913, \$443.85; in all, \$654,448.49.

Mr. MURRAY of Oklahoma. Mr. Chairman, I move to strike out the last word. Mr. Chairman, possibly what I intend to say would have more bearing upon the general appropriation bill that will arise in the next Congress. Here is a large sum appropriated for Army purposes. I have a notion that the use of these Army purposes is not what ought to be made.

I am not ready to vote for a continuation of Army and Navy appropriations if they are not to be used for the purpose for which they are legitimately intended. The only arguments I know of that will sustain appropriations for the Army and Navy in time of peace are these: First, to repel an unexpected invasion; second, to suppress insurrection or riot; third, to enforce neutrality and treaty obligations; fourth, to protect our citizens in foreign lands and commerce on the high seas; and fifth, to form a nucleus around which an army may be organized and officered in case of war.

Mr. MANN. Mr. Chairman, I make the point of order that the gentleman is not in order. He is not discussing the matter before the committee.

Mr. MURRAY of Oklahoma. Now, the gentleman's imagination, he will find, is not true. I am discussing the propriety of making appropriations for the Army and Navy.

Mr. MANN. Yes; but that is not involved in these items.

Mr. MURRAY of Oklahoma. I am speaking of the whole paragraph. I perhaps might have put it in a little earlier, but I thought I would wait until the entire sums were reported.

Mr. MANN. The gentleman waited too long. I make the point of order—

The CHAIRMAN. The Chair thinks the gentleman from Oklahoma [Mr. MURRAY] is in order.

Mr. MANN. Very well. The Chairman is the chairman of the Committee on Foreign Affairs.

Mr. MURRAY of Oklahoma. I hope my time will not be taken up by the gentleman's objections. Mr. Chairman, the objects of an Army or Navy are those that I have stated. If any man can give any reason for the taxation of the American people in time of peace for an Army and Navy for any other purpose, I would like to know it.

But we find that our Armies are too often used for some other purpose. We find in the organization of the military establishment of this country that it is largely used to aid certain towns and localities. We find, in addition, that the scattering of our Army posts has crippled the efficiency of the Army. I can prove by the military experts of this Government or of any other first-class power in the world that a stronger military power than our military arm can be inaugurated for \$5,000,000 less than it cost to keep up our present establishment. Besides this they are used to build up an aristocracy. In the Naval Academy, when we appoint a boy as a congressional right, if the boy fails, before the boy knows it or before I or one of you know it, some man who is an officer in the Army or Navy will send a telegram, "Your boy has failed, and therefore I want my boy appointed." The only aristocracy built up in this country has been built up through the Army and Navy. To my thinking that is a wrong use and a wrong purpose for the Army. And then again, we find that the Army and Navy are used to promote the Steel Trust; but the greatest abuse of its use is when it is made to fire on a lot of laboring men in a strike.

Now, if these are the purposes for which our Army and Navy are to be used, and they are not to repel insurrection, to enforce neutrality, to protect commerce and the rights of treaties, and for the protection of life and property of the American citizen in foreign lands, I am ready to quit voting for an Army and Navy in time of peace.

The CHAIRMAN. The gentleman's time has expired.

Mr. MURRAY of Oklahoma. Mr. Chairman, I ask unanimous consent to extend my remarks in the Record on this subject.

The CHAIRMAN. The gentleman asks unanimous consent to extend his remarks on this subject. Is there objection? [After a pause.] The Chair hears none.

Mr. ESCH. Mr. Chairman, I would like to make a similar request.

The CHAIRMAN. The gentleman from Wisconsin [Mr. ESCH] asks unanimous consent to extend his remarks in the Record. Is there objection? [After a pause.] The Chair hears none.

Mr. MONDELL. Mr. Chairman—

Mr. MANN. Mr. Chairman—

The CHAIRMAN. For what purpose does the gentleman from Illinois [Mr. MANN] rise?

Mr. MANN. I rise to a point of order. The gentleman from Wyoming [Mr. MONDELL] desires to address the committee, as I understand, and I think he ought to have a larger audience, and it seems to me doubtful whether he can obtain it this afternoon. Therefore I make the point of order that there is no quorum present.

Mr. MONDELL. I trust, Mr. Chairman, that the gentleman will reserve his point of order.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] makes the point that there is no quorum present. The Chair will count.

Mr. FITZGERALD. Mr. Chairman, I move that the committee do now rise.

The CHAIRMAN. The gentleman from New York [Mr. FITZGERALD] moves that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. FLOOB of Virginia, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 7898) making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes, and had come to no resolution thereon.

ADJOURNMENT UNTIL MONDAY AT 11 O'CLOCK A. M.

Mr. FITZGERALD. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock on Monday.

The SPEAKER. The gentleman from New York [Mr. FITZGERALD] asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock on Monday morning. Is there objection. [After a pause.] The Chair hears none, and it is so ordered.

EXTENSION OF REMARKS.

Mr. FARR. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record.

The SPEAKER. The gentleman from Pennsylvania [Mr. FARR] asks unanimous consent to extend his remarks in the Record. Is there objection?

There was no objection.

Mr. MCKELLAR. Mr. Speaker, I desire to extend my remarks in the Record by placing therein an article by Mr. JAMES HAY on our preparedness for war.

The SPEAKER. The gentleman from Tennessee [Mr. MCKELLAR] asks unanimous consent to insert in the Record an article by the Hon. JAMES HAY, chairman of the Committee on Military Affairs, on our preparedness for war. Is there objection?

Mr. THOMPSON of Oklahoma. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record on the subject of preparation for war.

The SPEAKER. The gentleman from Oklahoma [Mr. THOMPSON] asks also unanimous consent to extend his remarks in the Record on preparation for war. Is there objection to these requests?

Mr. MURDOCK. Mr. Speaker, I failed to hear the request.

The SPEAKER. He desires to extend remarks in the Record on the subject of preparation for war.

Mr. MURDOCK. Preparation?

The SPEAKER. He wants to make a speech about our preparing for war.

Mr. MURDOCK. Does the gentleman want to extend his remarks in the Record on that subject?

The SPEAKER. Yes; on that subject.

Mr. THOMPSON of Oklahoma. Yes; I will make my speech now if the gentleman will hear it.

Mr. MURDOCK. Yes; I would rather hear it than read it.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee [Mr. MCKELLAR] and the request of the gentleman from Oklahoma [Mr. THOMPSON] to extend their remarks in the Record?

There was no objection.

ADJOURNMENT.

Mr. FITZGERALD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 35 minutes p. m.) the House adjourned, pursuant to the order previously made, until Monday, September 8, 1913, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Secretary of Commerce, transmitting a letter in reference to the appropriation for beacon lights, Newark Bay, N. J. (H. Doc. No. 225); to the Committee on Appropriations and ordered to be printed.

2. A letter from the Acting Secretary of War, transmitting a letter from the Chief of Engineers, submitting reports of the various district officers having charge of river and harbor improvements on water terminal and transfer facilities contiguous to harbors, rivers, and other waters under improvement by the United States, said reports having been prepared in compliance with provisions of section 4 of the river and harbor act of July 25, 1912 (H. Doc. No. 226); to the Committee on Rivers and Harbors and ordered to be printed.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 965) granting an increase of pension to Clarissa J. Freeman; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 4365) granting a pension to John H. Opperman; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. MOSS of West Virginia: A bill (H. R. 7949) to authorize Parkersburg-Ohio Bridge Co., a corporation created and existing under the laws of the State of West Virginia, its successors and assigns, to construct a bridge across the Ohio River from the city of Parkersburg, State of West Virginia, to the town of Belpre, State of Ohio; to the Committee on Interstate and Foreign Commerce.

By Mr. SHARP: A bill (H. R. 7950) to provide for the survey of the shores of Lake Erie at Lorain, Ohio, for the purpose of determining the cause of the recent increased erosion of the banks, and the relation thereto of certain Government improvements at that place; to the Committee on Rivers and Harbors.

By Mr. LEVER: A bill (H. R. 7951) to provide for cooperative agricultural extension work between the agricultural colleges in the several States receiving the benefits of an act of Congress approved July 2, 1862, and of acts supplementary thereto, and the United States Department of Agriculture; to the Committee on Agriculture.

By Mr. TALCOTT of New York (by request): A bill (H. R. 7952) to promote safety in the operation of railroads by compelling common carriers engaged in interstate commerce to equip their locomotives with efficient and suitable headlights, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. MOON: A bill (H. R. 7967) to amend the act approved June 25, 1910, authorizing a postal savings system; to the Committee on the Post Office and Post Roads.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALEXANDER: A bill (H. R. 7953) granting an increase of pension to James C. Baker; to the Committee on Invalid Pensions.

By Mr. BORLAND: A bill (H. R. 7954) for the relief of the heirs of Thomas Rogers, deceased; to the Committee on Claims.

By Mr. GORMAN: A bill (H. R. 7955) to remove the charge of desertion from the military record of Daniel G. Lang; to the Committee on Military Affairs.

By Mr. HOLLAND: A bill (H. R. 7956) to waive the age limit for admission to the Pay Corps of the United States Navy for five years in the case of Paymaster's Clerk Frank Edward Herbert; to the Committee on Naval Affairs.

By Mr. HINEBAUGH: A bill (H. R. 7957) to correct the military record of Henry Keeler; to the Committee on Military Affairs.

By Mr. KALANIANAOLE: A bill (H. R. 7958) to correct the military title of Fred R. Nugent; to the Committee on Military Affairs.

By Mr. PEPPER: A bill (H. R. 7959) for the relief of Frank P. Sammons; to the Committee on Claims.

By Mr. SMITH of New York: A bill (H. R. 7960) granting an increase of pension to George H. Harris; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7961) granting an increase of pension to Ira Baker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7962) granting an increase of pension to Conrad Haag; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7963) granting an increase of pension to Chauncy C. Robinson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 7964) granting a pension to Albert Hahn; to the Committee on Pensions.

Also, a bill (H. R. 7965) granting an increase of pension to Thomas M. Johnson; to the Committee on Invalid Pensions.

By Mr. STEPHENS of Texas: A bill (H. R. 7966) for the relief of the heirs of J. D. Bellah, sr.; to the Committee on War Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ASHBROOK: Papers to accompany bill (H. R. 7219) for the relief of Margaret E. Hurrey; to the Committee on Pensions.

By Mr. SHARP: Petition of Local Union No. 1426, United Brotherhood of Carpenters and Joiners of America, of Elyria, Ohio, favoring the passage of legislation granting to the citizens of the District of Columbia the voting franchise; to the Committee on the District of Columbia.

By Mr. SPARKMAN: Petition of sundry citizens of Lake County, Fla., favoring the passage of H. J. Res. 163, to prevent liquor traffic; to the Committee on Interstate and Foreign Commerce.

By Mr. TALCOTT of New York: Petition of the New York State Retail Jewelers' Association, Binghamton, N. Y., favoring the passage of legislation providing for the stamping of trademark, quality, and proportion of gold contained in gold-filled watch cases; to the Committee on Interstate and Foreign Commerce.

SENATE.

MONDAY, September 8, 1913.

The Senate met at 10 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.

The Journal of the proceedings of Saturday last was read and approved.

PROPOSED CURRENCY LEGISLATION.

Mr. STERLING. I present resolutions adopted by the Commercial Club of Pierre, S. Dak., which I ask may be printed in the RECORD and referred to the Committee on Banking and Currency.

There being no objection, the resolutions were referred to the Committee on Banking and Currency and ordered to be printed in the RECORD, as follows:

At a meeting of the Pierre Commercial Club, held September 2, 1913, the following resolution was unanimously adopted:

"That the proposed currency bill now before Congress is of such vital interest to the business and agricultural interests of the country that it merits and demands a careful and comprehensive study by Congress. Its passage should not be unduly hastened by any consideration, and it should be made the subject of public hearings before being enacted into law. A long, careful, and impartial consideration of the proposed measure convinces us that if enacted into law in its present form serious injury would follow, not particularly to the banks but to all classes of business by reason of the inevitable contraction of the power and ability of banks to extend the customary credit facilities.

"Through the mandatory transfer to the proposed Federal banks of several hundred million dollars, which is at present supplying a part of the basis of credit in the United States, the loaning power of banks will be enormously reduced. To the extent that bank reserves are locked up in the new Federal banks the ability of banks in the United States not only to extend new and better credit facilities but to maintain unimpaired the credit facilities they are now able to extend will be gradually reduced. This is by far the most important and serious contingency arising under the proposed system.

"The hope of banking reform has been a hope that credit facilities to those who need them most—to the young man in business, to the growing institution, to the units of business in developing sections of the United States—might be made more stable. To so direct credit facilities as to give them their maximum usefulness to sound business should be the first purpose of this legislation. Underlying all of this should be the thought that the defects of an inadequate system press hardest, not upon the well established, prosperous, and wealthy business

men and institutions of the United States but upon those who can least afford to suffer. Every farmer, every salaried man, and every wage earner feels the brunt of financial stress first of all.

"Adequate banking reform can not be built upon a substructure that of itself causes contraction of credit. This measure, any analysis shows, must inevitably reduce the loaning power of banks in an unprecedented degree, due to the forced withdrawal from commercial banks of large deposits on which they base their present loaning power. When it is considered that the sum of this contraction will be in direct proportion to the withdrawal of funds amounting to more than a half billion of dollars, now part of the basis of the loaning power of banks, the danger involved becomes very real, and the causes of keen apprehension become very sound and well founded.

"It is not sufficient to say that banks through the exercise of the privilege of rediscount, will save business from this danger. It is true that they will do the best they can, but no law can force them to become heavy borrowers through the process of rediscount, and banking and business judgment certainly would not justify these institutions in assuming a line of discounts sufficient to meet such a condition as is here involved."

J. L. LOCKHART, President.
ALBERT GUNNERSON, Secretary.

COTTON CONTRACTS.

Mr. SMITH of Georgia. I have two short letters and several telegrams with reference with the cotton-contract amendment that I should be glad to have read. Very little time was taken in the discussion of the subject of cotton futures, and I ask that they be read.

There being no objection, the letters and telegrams were read and ordered to lie on the table, as follows:

BANKERS' TRUST CO.,
Atlanta, Ga., September 5, 1913.

Hon. HOKE SMITH,
Washington, D. C.

MY DEAR SIR: The price of cotton in country towns broke nearly \$3 per bale to-day, the cause of which appears to be due to action of the caucus on the Clarke amendment. The people express regret that this action was not deferred until after the greater part of this crop had been sold. There seems to be no particular objections to the law, but inopportune just as we are harvesting a great crop, and the prosperity of the cotton States depending a great deal on the price they receive. I just want to give you this report of widespread adverse criticism along this line.

Yours, very truly,

W. S. WITHAM.

THE GRANTVILLE MANUFACTURING CO.,
Augusta, Ga., September 6, 1913.

Senator HOKE SMITH,
Washington, D. C.

HONORED SIR: Knowing of the absurd claims that some of the cotton speculators were making in their opposition of the amendment, concerning the downward trend of cotton, I have taken the liberty of wiring you as per inclosed confirmation.

While I do not know that the Clarke amendment is a "cure-all" for the evils of speculation, and in the wisdom of Congress it may yet have to be amended somewhat, I do know one thing, and that is that the cotton exchanges as they now exist are not run for legitimate people, and while I do not wish to see them abolished, yet some of their business transactions should certainly be rectified so as to prevent the wild speculation, both up and down, that we have in cotton at all times. I do not think it makes a particle of difference to these speculators which side of the market they are on, just so they can make money. They have sympathy neither for the manufacturer nor the farmer.

With kindest regards, I am, very truly, yours,

T. J. HICKMAN, President.

[Telegram.]

AUGUSTA, GA., September 6, 1913.

Senator HOKE SMITH, of Georgia,
Washington, D. C.:

Do not allow Senate to be deceived by numerous protests against Clarke amendment, as nine-tenths of them emanate from rankest cotton speculators, who have been attempting bull movement this early in season. Cotton having advanced speculatively 2 cents pound, yesterday's reaction natural. Conservative people believe Clarke amendment will prevent unwarranted gambling and put cotton at its fair value based upon supply and demand.

T. J. HICKMAN.

DAWSON, GA., September 6, 1913.

Hon. HOKE SMITH,
United States Senate, Washington, D. C.:

After a canvass of this section the opinion seems to be unanimous against the Clarke cotton rider placing tax on cotton futures as detrimental to the farmers of the South. We ask that you give your support in favor of the farmers by using your influence and vote against this measure. If adopted by the National Congress we feel that it will mean a loss of \$10 per bale or more to the farmers.

LOWREY & DAVIDSON,
J. P. PERRY & CO.,
HILL & PACE,
KENNEDY & BRIM,
G. W. DOZIER & CO.,
(And others).

AMERICUS, GA., September 6, 1913.

Hon. HOKE SMITH,
United States Senate, Washington, D. C.:

The agitation Clarke tax bill on cotton contracts at this time will work hardship on Southern people. Why not defer until cotton-marketing season over. Note yesterday's serious decline. The success of this measure would result in the abolishment of our exchanges and enable foreign cotton trade to dictate.

L. G. COUNCIL.

CONCORD, GA., September 6, 1913.

Hon. HOKE SMITH.

Washington, D. C.:

If possible, kindly give us your opinion as to passage of Clarke bill against future cotton contracts. Would be glad if you would oppose same. Answer collect.

THE R. F. STRICKLAND CO.

Mr. CLARKE of Arkansas. I present a telegram in the nature of a petition, which I will ask may be printed in the RECORD.

There being no objection, the telegram was ordered to lie on the table and to be printed in the RECORD, as follows:

AUGUSTA, GA., September 6, 1913.

Hon. JAMES CLARKE.

Washington, D. C.:

You have the hearty good wishes of the conservative business interests in your endeavor to cure the manipulation of cotton futures by the New York Cotton Exchange. Such manipulation is a serious detriment to the business of the spinner and a direct encouragement to ruinous speculation on the part of the gamblers. Opposition to your bill is due to the efforts of the speculators.

LONDON THOMAS.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CLAPP:

A bill (S. 3097) granting a pension to Jennie J. Sheehan (with accompanying paper); to the Committee on Pensions.

By Mr. SUTHERLAND:

A bill (S. 3098) granting an increase of pension to Mary Robertson (with accompanying paper); to the Committee on Pensions.

THE TARIFF.

The VICE PRESIDENT. The morning business is closed.

Mr. SIMMONS. I ask unanimous consent that the Senate proceed to the consideration of House bill 3321.

There being no objection, the Senate resumed the consideration of the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes.

The VICE PRESIDENT. The bill has been reported from the Committee of the Whole to the Senate, and the question is on concurring in the amendments made as in Committee of the Whole.

Mr. DILLINGHAM. Are amendments now in order?

The VICE PRESIDENT. The Chair states to the Senator from Vermont [Mr. DILLINGHAM] that amendments are in order.

Mr. DILLINGHAM. I desire to offer an amendment.

Mr. BRISTOW. As I remember, the usual practice is for the Senate to concur in the amendments made as in Committee of the Whole except as to reservations. What I wanted to know was when the opportunity would be given to make such reservations as we desire.

The VICE PRESIDENT. At any time prior to the vote.

Mr. BRISTOW. It seems to me that we ought to have a quorum for the consideration of the bill, especially for the reservations, and I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hitchcock	Nelson	Smith, S. C.
Bacon	Hollis	Norris	Smoot
Bankhead	Hughes	O'Gorman	Sterling
Borah	James	Overman	Stone
Brady	Johnson	Owen	Sutherland
Brandeggee	Jones	Page	Swanson
Bristow	Kenyon	Perkins	Thomas
Bryan	Kern	Pomerene	Thompson
Cañon	La Follette	Ransdell	Thornton
Chilton	Lane	Robinson	Tillman
Clapp	Lea	Root	Vardaman
Clark, Wyo.	Lewis	Saulsbury	Walsh
Clarke, Ark.	Lodge	Shafroth	Warren
Coit	McCumber	Sheppard	Weeks
Cummins	McLean	Sherman	Works
Dillingham	Martin, Va.	Shields	
Fletcher	Martine, N. J.	Simmons	
Gallinger	Myers	Smith, Ga.	

Mr. LANE. I desire to announce that the Senator from Oregon [Mr. CHAMBERLAIN] is absent unavoidably, and that he is paired with the Senator from Pennsylvania [Mr. OLIVER].

Mr. JONES. I desire to state that the junior Senator from Michigan [Mr. TOWNSEND] is necessarily detained from the Chamber. He is paired with the Senator from Florida [Mr. BRYAN].

The VICE PRESIDENT. Sixty-nine Senators have answered to the roll call. A quorum is present. The Senator from Vermont [Mr. DILLINGHAM] offers an amendment which will be read.

The SECRETARY. On page 209, after line 12, insert the following:

P. That it shall be the duty of the Secretary of the Treasury to annually distribute such sum as may be derived from the imposition of

the income tax, as provided for in the preceding paragraphs of this section, to the several States in the proportion which the population of each State bears to the total population of the United States, to be expended in the construction and maintenance of the public highways in such States, respectively: *Provided, however*, That no such annual apportionment shall be claimed by or delivered to any State until it appears to the satisfaction of the Secretary of the Treasury that such State has appropriated for expenditure during the current year for the construction and improvement of its public highways a sum equal in amount to the apportionment under this act.

Mr. SIMMONS. If the Senator from Vermont will excuse me for a moment, I ask that the Senate concur in the amendments made as in Committee of the Whole except those that have been reserved or may be reserved.

Mr. BRANDEGEE. How will anyone know whether an amendment has been reserved or not?

Mr. CLARK of Wyoming. Or may be reserved.

Mr. BRANDEGEE. Or may be reserved.

Mr. SIMMONS. So far as I am concerned I would take the word of any Senator on the floor that he had asked that an amendment be reserved.

Mr. BRANDEGEE. When will the time for reserving amendments close?

Mr. SIMMONS. I make the request only as to committee amendments.

Mr. BRANDEGEE. I understand that, but a great many amendments have been agreed to as in Committee of the Whole. What is meant by having everything agreed to except what may be reserved?

Mr. SIMMONS. What has been reserved.

Mr. BRANDEGEE. That is plain; the other expression is not plain.

Mr. SIMMONS. All that are now reserved.

Mr. BRANDEGEE. That is plain, but the expression "what may be reserved" I do not understand.

Mr. SIMMONS. I will change it to "now reserved."

Mr. GALLINGER. Before the vote is taken on concurrence in the amendments not reserved.

Mr. BRISTOW. Mr. President, I desire to reserve the amendments made to Schedule E. That is the schedule relating to sugar and molasses.

The VICE PRESIDENT. All amendments to Schedule E are reserved.

Mr. BRISTOW. And the amendments to paragraphs 188, 189, 190, 198, 208, 227, 548, 646, and 652, subdivisions 1 and 2 of section 2 of the bill, and subdivision O, on page 207.

The VICE PRESIDENT. The Senator from Kansas makes a reservation of amendments, which will be stated by the Secretary.

The SECRETARY. The amendments in Schedule E; the amendments made to paragraphs 188, 189, 190, 198, 208, 227, 548, 646, 652; subsections 1 and 2 of section 2 of the bill; and subsection O, on page 207.

Mr. STERLING. Mr. President, I desire to reserve the right to submit an amendment to the second paragraph of the bill on page 182, and also to the last paragraph of section 2 of the bill, found on page 222.

Mr. NORRIS. Mr. President, I should like to suggest to the Senator from South Dakota, and also to the Senator from Kansas, that two prints of the bill are now on our desks, and we ought to have an understanding as to which print we are going to use.

The VICE PRESIDENT. The old print will be used at the Secretary's desk. That is the only way in which the record can be kept straight.

Mr. STERLING. In my suggestion I had reference to the new print of the bill.

Mr. NORRIS. The Senator from South Dakota ought to change his request.

Mr. BRANDEGEE. If I may be allowed to suggest to Senators, the paragraphs of the bill remain the same.

Mr. SIMMONS. The paragraphs are the same.

Mr. BRANDEGEE. Though the page may be different.

The VICE PRESIDENT. The Senator from South Dakota [Mr. STERLING] has not given the numbers of the paragraphs to which he referred.

Mr. STERLING. I refer to the second paragraph on page 182, as it appears in the new print of the bill.

The VICE PRESIDENT. That does not agree with the old print.

Mr. STERLING. It is in subdivision O.

Mr. NORRIS. While the Senator from South Dakota is looking up his reference, I wish, on behalf of the Senator from Wisconsin [Mr. LA FOLLETTE], who is temporarily absent from the Chamber, and at whose request I make the reservation, to reserve the amendments to subdivision 2 of section 2 of the bill, on pages 165 and 166.

The SECRETARY. The amendments to subdivision 2 of section 2, on pages 165 and 168, are desired to be reserved by the Senator from Wisconsin [Mr. LA FOLLETTE].

Mr. BRANDEGEE. Mr. President, I stated on Saturday before adjournment that I had several amendments that I wished to offer, and at the request of the Senator from North Carolina [Mr. SIMMONS] I deferred them. Now, I will reserve—but will not ask for the yeas and nays—a few amendments which I will designate. I simply offer them and ask leave to print in the Record a letter that has been written to me concerning them. These are the amendments:

On page 19, line 4, the first amendment already agreed to; on page 36, line 9; on page 41, line 21; on page 97, line 10; on page 99, line 2; on page 104, line 2; on page 109, line 5; and on page 124, line 15.

The SECRETARY. Mr. BRANDEGEE makes the following reservations: The amendment on page 19, line 4; on page 36, line 9; on page 41, line 21; on page 97, line 10; on page 99, line 2; on page 104, line 2; on page 109, line 5; and on page 124, line 15.

Mr. GALLINGER. Mr. President, I desire to reserve paragraphs 376 and 534, relating to harness leather, and so forth.

The SECRETARY. Mr. GALLINGER makes reservation on paragraphs 376 and 534.

Mr. STERLING. The reservation I now make, referring to the old print of the bill, is on page 169, line 15; and from line 16, on page 208, to the close of the paragraph on page 209.

The SECRETARY. Mr. STERLING makes reservations as follows: On page 169, the amendment beginning in line 15, and on page 208, line 16, to the close of the paragraph on page 209.

The VICE PRESIDENT. Are there any further reservations? If not, is the Senate prepared to concur in the other amendments in gross?

Mr. SMOOT. I desire to reserve paragraph 367. I take it for granted that I do not have to reserve Schedule K. I expect to offer a substitute for that schedule, which was not voted upon as in Committee of the Whole. So, for that reason, I do not reserve it.

The SECRETARY. Mr. SMOOT reserves paragraph 367.

Mr. BRANDEGEE. Mr. President, I wish to reserve—I had nearly forgotten it and can not point to the paragraph now, though I do not know whether or not any use will be made of the reservation—the question of the importer being allowed to appeal from the rate of duty fixed by the customhouse where he claims that his merchandise was assessed too low.

Mr. ROOT. Mr. President, I will suggest to the Senator from Connecticut that that will be met, not upon any Senate amendment, but by proposing an amendment to the House provision; so a reservation is not necessary.

Mr. WARREN. I want to ask the Senator in charge of the bill a question. In view of the reservation just mentioned by the Senator from Utah [Mr. SMOOT] regarding Schedule K, I think there was no reservation made on the free list as to wool when we passed through the bill, but I assume that the bringing up of Schedule K will also bring up the question of placing wool on the free list.

Mr. SIMMONS. I assume that that necessarily would be so.

Mr. WARREN. So I do not wish to make any further reservation.

The VICE PRESIDENT. Are there any further reservations?

Mr. SIMMONS. Mr. President, I wish to reserve subdivision O, on page 207.

Mr. THOMAS. I wish to reserve paragraph B, on page 250, for the purpose of offering an addition thereto.

The VICE PRESIDENT. The reservations named will be made.

Mr. McCUMBER. I wish to reserve paragraph 646 if it has not already been covered by the reservation made by the Senator from Kansas [Mr. BRISTOW].

The VICE PRESIDENT. The reservation will be made. Are there any other reservations?

Mr. ROOT. I desire to reserve the amendment on page 172, paragraph D, section 2.

The VICE PRESIDENT. The reservation will be made.

Mr. GALLINGER. Mr. President, I will add to the reservations which I have made, paragraph 137, page 40, of the old print of the bill. The paragraph relates to needles.

The VICE PRESIDENT. The reservation will be made. Is the Senate ready to vote upon the question of concurring in gross in the amendments made as in Committee of the Whole, save and except such reservations as have been made? [A pause.] All in favor of concurring will say "aye," those opposed "no." [Putting the question.] The "ayes" have it, and the amendments made as in Committee of the Whole, save those which have been reserved, are concurred in.

Mr. DILLINGHAM. Mr. President, I find from an examination of the journal of the Vermont Senate, under date of January 15 of the present year, that one of the strong men of the State introduced resolutions on the subject embodied in the amendments which I have offered, which were referred to the committee on Federal relations. These resolutions never came up for adoption, for the reason that the constitutional amendment, which has since been ratified and has become a part of the organic law, was then awaiting action and nothing could have been accomplished; but the resolutions, I find by inquiry, represent what I conceive to be the settled conviction of men in Vermont who have given serious thought to the subject, and who think they see in the provisions of this bill serious danger to American institutions. The resolutions to which I have referred are as follows:

JOINT RESOLUTION REGARDING A GRADUATED INCOME TAX.

Resolved by the senate and house of representatives:

Whereas Congress has submitted to the States a proposed amendment to the Constitution of the United States to empower Congress to levy a graduated tax upon incomes for the purposes of the Federal Government; and

Whereas the General Assembly of Vermont of 1910 rejected the proposed amendment. Now that the attitude of Vermont may be fully understood: Be it

Resolved, 1. That we indorse and approve the general proposition of a graduated tax upon incomes. We believe that such a tax, properly graduated, would be a long step toward the solution of the serious problem of the concentration of wealth which now confronts this Nation. We believe that such a tax, justly levied and properly applied, would in a large measure alleviate class feeling and class jealousies.

2. We are in accord with the idea that the States separately are impotent to levy and collect an income tax for the reason that investments of persons of wealth are or can be so easily and widely distributed throughout the different Commonwealths which constitute the Nation.

3. We are firmly convinced, however, that it is both unwise and unjust to levy and collect an income tax and apply the same to the purposes of the Federal Government: Because

(a) The general functions of government are, under our political system, exercised by the States and not by the Federal Government, and therefore any direct tax, like a tax on income, ought to be applied directly to governmental purposes within the State.

(b) The levy and collection of an income tax for the purposes of the Federal Government would tend to engender extravagance on the part of Congress; would tend to induce sectionalism in fixing the rate of the tax and in the appropriation of the proceeds thereof; would place the expenditure of the tax largely out of the sight of the common people and in that way minimize the good effect upon class feeling which such a tax ought to bring about, and would tend to induce Congress to embark upon the expenditure of the funds in the Federal Treasury for local or sectional development and so tend to create political trading and political jealousies.

4. We express our strong belief that a graduated income tax should be assessed and collected by the Federal Government and the proceeds thereof distributed to the States in a just and equitable division and used by the States for such elementary functions of government as the maintenance of our educational system and the construction and maintenance of our public highways.

5. We urge upon Congress the views expressed in these resolutions and hereby petition Congress to submit to the States for ratification of an amendment to the Federal Constitution empowering Congress to levy a graduated income tax to be collected by the Federal Government for the benefit of the States and to be justly and equitably apportioned and distributed to the States for their use.

6. We request our Senators and Representatives at Washington to present these resolutions to Congress.

Mr. President, when these resolutions were introduced the Vermont Legislature had been in session more than three months, during which time the subject which overshadowed all others in both branches of that body related to methods of taxation. The one great question was how best to secure revenue sufficient in amount to meet the rapidly increasing expenses of State and municipal governments. During the last 20 years the demand for public improvements there, as everywhere else in the Nation, has increased beyond measure. Advanced educational facilities, the establishment and maintenance of permanent systems of highways, the installation of public water, sewerage, and lighting systems, have more than doubled the public expenses before that time deemed necessary. Almost every municipality throughout the United States is now bonded for public improvements, and it is a significant fact that during the last week such bonds bearing an interest rate of 4½ per cent and issued by one of the most enterprising and best governed municipalities in New England have been selling at par. It follows, as a matter of course, that the local rates of taxation throughout the country must constantly grow higher, and for this reason the States are jealous of any action on the part of the General Government which invades that great field of taxation which heretofore has been appropriated by them.

They look with alarm upon any proposition to change the policy of the General Government which during the entire period of its existence has provided revenue sufficient to meet all of its demands through customs duties, internal-revenue taxes, and other similar indirect methods.

They believe, as was said by the Senator from Utah [Mr. SUTHERLAND] in the debate upon the Payne-Aldrich bill, that—except in cases of necessity the taxes of the Federal Government should be confined to those things as to which, either under the Constitution

or under the operation of this common consent, the power of the Federal Government is exclusive, because when we undertake to impose taxes upon subjects which are also open to State taxation it is bound to result in more or less confusion and in more or less inequality. It will result in double taxation, in multiple taxation, sometimes. If we impose a tax upon incomes, we are taxing a subject which is also open to the State, a subject which has heretofore not engaged very much attention of the State-taxing power, but a subject which is taxed in some of the States of the Union and which may be taxed in all of them.

I can illustrate best what I mean by that by calling attention to the proposition which was contained in the bill as it came from the House proposing a tax upon inheritances. Twenty-one, I think, of the States of the Union already impose a tax upon inheritances, and several of the States, through their legislatures, protested to the Congress of the United States against imposing taxes of that class, because it would interfere with and embarrass the State. In the same way, if we impose taxes upon incomes, and as that subject of taxation becomes more popular with the States, we shall find that we are engaged in a conflict of interests which will become more and more embarrassing as time goes on.

So I say that form of taxation or any other form of taxation laid upon the subjects which are also open to the States ought not to be adopted except in cases of emergency.

And the people, or those who believe in the principle of protection in imposing customs duties, cordially indorse the position assumed by the Senator from Iowa [Mr. CUMMINS] when, in the debate upon the Payne-Aldrich bill, he said:

I am not in favor of an income tax for the purpose of destroying the efficiency of the system of protection; and if it be true that an import-duty law can not be adjusted so as to afford ample and adequate protection to American industry without foreclosing the opportunity for the operation of an income-tax law, then I abandon the income-tax provision, for I have no desire to invade by a hair's breadth the established and long-continued policy of the party to which I belong of giving full and ample protection to the American as against every other man on the face of the earth. * * * The Senator from Rhode Island [Mr. Aldrich] on Monday morning stated in substance, as I understood him, that we did not need more revenue than will be received at the customhouses, and that, if the adjustment of the import duties presented by the committee is disturbed, we will have either too large a revenue or too little protection. This, in effect, was the statement made by the distinguished chairman of the Committee on Finance. If these conclusions are sound, I for one abandon my proposal for an income tax, for I say without hesitation that if in securing adequate protection a revenue is necessarily raised that will meet the reasonable expenditures of the Government, then, from my standpoint, it would be an economic crime to impose a tax on incomes.

Again, later on:

I will restate it. I said that if I must choose between an adequate and complete protection to the industries of the United States and an income-tax law, I unhesitatingly would choose the former.

But at this time we are confronted by the avowed purpose of the Democratic Party to wipe out of existence any resemblance of the protective principle in tariff legislation. Under the pending bill they have gone so far in this direction as they can at present, but they propose to carry on the work in the future as rapidly as possible and until their purpose shall be fully accomplished. Under the pending measure they have carried it so far that they admit a deficit of substantially \$50,000,000, which must be provided for outside of the usual sources of revenue, and for this purpose they have, under the authority of the sixteenth amendment to the Constitution, provided for a tax upon incomes above \$3,000 a year. They tell us that this is but the beginning of the process, and that in the progress of time we must expect to see that which has been promised by their leaders, a system under which the Government will cease to rely upon those classes of revenue which have provided for all of its wants—both in war and in peace—during more than a century of its life.

Their position has been disclosed in many ways, but never more frankly than by the utterances of Mr. Bailey, formerly a Senator from Texas, who during the discussion of the Payne-Aldrich bill in 1909 engaged in the following colloquy with Mr. Carter, of Montana:

Mr. CARTER. I ask the Senator this question, for the purpose of ascertaining whether or not I correctly understand his position: Do I understand the Senator to mean that he would raise by customs duty only such an amount as equalled the deficiency in the revenue raised by an income tax?

Mr. BAILEY. The Senator states it differently. I think, from what he intends to state it. If he means to ask me if I would deduct from customs duties the amount to be collected through the income tax, I answer "yes."

Mr. CARTER. Then I will put my question in a different form. The Senator, according to my understanding, would first pass an income tax, and rely upon customs duties to raise such revenue as the income tax did not raise to meet public necessities. The amount of the revenue duties would therefore be dependent upon the proceeds of the income tax, instead of having the proceeds of the income tax rest on deficiencies arising from the failure of the customs dues to meet the needs of the Government. Do I correctly understand the Senator?

Mr. BAILEY. The Senator undoubtedly understands me, and has stated my position correctly. I do not propose the income tax as a mere means of providing for an emergency. I propose it as a deliberate, fixed, and permanent part of our fiscal policy. (CONGRESSIONAL RECORD, p. 2446, May 27, 1909.)

And during another discussion of the same measure, Mr. Bailey said:

I do not shrink from saying that if our Constitution would permit us to levy a direct tax in proportion to wealth instead of requiring it

to be levied in proportion to population, I would favor the abolition of all customs duties, and I would support the General Government by the same system of ad valorem taxation which now prevails in our several States and their subdivisions. This would not only be more equal and more just, but it would strongly tend, in my opinion, to insure that economy in governmental expenditures which is necessary to the strength and simplicity of a republic.

This policy was steadily fought by many Republicans then in the Senate. They were referred to by the then Senator from Colorado, Mr. Hughes, when he said:

I have respect for open, undisguised opposition. If Senators who are opposed to it—the income tax—say, "We will fight forever against the income tax, because we believe that if it is adopted it will grow and spread to every subject of income, until there will be nothing left to be cared for by customhouse duties, and for the sake of protection we are utterly against it," we can understand their palpable position.

Moreover, Mr. President, the Democratic Party was at that time pledged to this system, for in their national convention of 1908 they adopted this plank in their platform:

We favor an income tax as part of our revenue system, and we urge the submission of a constitutional amendment specifically authorizing Congress to levy and collect a tax upon individual and corporate incomes, to the end that wealth may bear its proportionate share of the burdens of the Federal Government.

The danger arising from the dependence upon an income tax for the maintenance of the different branches of the General Government, particularly when incomes of less than \$3,000 in amount are exempt from its operation, have not, I fear, been properly considered.

Speaking upon this subject during the pendency of the Payne bill, the Senator from New York [Mr. Root] said:

Mr. Choate, in the argument of the Pollock case, said that under the \$2,000 limit of the old income-tax law four-fifths of the tax was paid by the States of New York, New Jersey, Pennsylvania, and Massachusetts. Since that time there has been a wide diffusion of wealth, of course, but the limit is moved up to \$5,000; and I apprehend that the substantial effect of the adoption by this Congress of the income-tax provision as it is drawn, with that limitation, would be that a large majority of Congress would be imposing a tax from which their constituents would be, in a great measure, free and under which the constituents of others would, in the main, be taxed.

Mr. President, I am quite indifferent about whether my constituents pay the tax. I think in this favored land the burden of taxation bears very lightly. I think that the people of New York can afford to pay this tax or can afford to pay the tax proposed to be imposed in the general income-tax amendment, but I do not like to see Senators of the United States vote for a tax which is free from objection at home because it does not strike their constituents. If once we do that, we are in a fair way to realize the anticipation of Luther Martin in his address to the Legislature of Maryland. What limit is there to the extravagance of expenditure, except the fact that the burden will come upon the men who vote the expenditure? What a temptation it would be to our successors, ay, to us, when it is proposed to expend \$50,000,000 or \$100,000,000 for improvements in the West. If we have a system of taxation which will make the people of the East pay for the improvements, or to vote for the expenditure of \$50,000,000 or \$100,000,000 for improvements in the East when the money will be paid under our taxing system by the people of the West.

Ah, Mr. President, be tender of the people whose means are small in arranging our taxation. I would not make a man whose income is \$2,000 or \$3,000 or \$4,000 pay as large a percentage as a man whose income was three, four, or five hundred thousand dollars or thirty or forty or fifty thousand dollars; but I would have him bear some burden. I would never assent to a law, or I would with the greatest reluctance assent to a law, which seemed to be so framed that it took away from a large part of the people of a geographical section of our Union the burden which leads them to scrutinize expenditures and to measure the load that bears upon the people. In no other way lies safety, sir, for our country. The people of every section, of every class, of every condition and degree and calling ought to bear some part of the public burden. (CONGRESSIONAL RECORD, p. 4004, July 1, 1909.)

These suggestions, so pointedly made, bring us face to face to the proposition whether we shall encourage the development of a system in which sectionalism must of necessity prevail, in which class will inevitably be arrayed against class, under which the poor will be urged to action against the rich, and under which, whether fairly or unfairly, burdens in which each and all ought to bear some part will be unfairly avoided by some and be made unwarrantably severe upon others.

It can not be denied that the vast majority of the voters of the country are wholly exempt from the operation of this law, and are thus enabled to use it not only to relieve themselves but also to impose upon a small minority burdens which they ought not to be called upon to assume. I am not, Mr. President, objecting to a graduated system of imposing income taxes. I fully believe in a system that lays higher rates upon large incomes than those laid upon incomes of lesser amounts. What I object to, and what I look upon as a real danger to our system of Government, is the exemption of nine-tenths of all the voters of the United States from any share whatever in the burdens of this system, and which not only empowers but also tempts them to use their power unfairly against the small minority in financing any project which may be devised, whatever its character may be. No other civilized government has so much as considered a proposition so fraught with injustice and danger.

At this point, Mr. President, I desire to call attention to what is said by Mr. Kennan in his work on Income Taxation. He says:

From a tabulation of 56 countries which have exemptions it appears that the average amount deemed to be necessary as a minimum of existence, and therefore exempt at the foot of the scale, is \$406.30. If, however, these 56 countries are divided into two groups, the first to consist of England, 14 of her colonies, and Hawaii, and the second composed of the countries and States of continental Europe together with Japan, it will be found that the first, or what might be called the English-speaking group, has an average exemption of \$1,098.50, or, in round numbers, \$1,100, while the average of the second group, comprising 40 countries and political subdivisions, is only \$153.13.

The income tax in Europe is imposed substantially upon all classes, so that all, rich and poor, join in meeting the expenses of government, and so are better fitted to perform the obligations of good citizenship. The rates upon small incomes are, and should be, small and equitable; and, I believe, under popular government it is wrong in principle and will prove dangerous in operation to adopt any system which confers destructive powers upon the masses without check of personal participation in the consequences of their action.

Out of the thirty-odd millions of people who are engaged in gainful occupations in the United States, how many, think you, are recipients of \$3,000 annually as incomes? Out of the 12,000,000 engaged in agriculture, how many are thus blessed? How many out of the six or seven millions engaged in domestic and personal service?

In trade and transportation we had in 1900 seven and a half millions of persons employed, but a close examination of the different classes discloses the fact that less than 250,000 were either bankers, brokers, wholesale merchants, officials of banks or companies, packers, or shippers. And among the more than 7,000,000 of those engaged in manufacturing less than 250,000 were classed as manufacturers or officials. The balance of those engaged in gainful occupations were the professional classes, numbering something over a million in number, which list includes actors, designers, draftsmen, clergymen, dentists, musicians, as well as those of more liberal professions.

But, to make a more concrete statement of the proposition that but few among the many are affected by this provision, let me call attention to the results of the imposition of the income tax of the Civil War.

In 1870 we had a population of 38,000,000. Of this number only 54,048, or fourteen one-hundredths of 1 per cent, had incomes in excess of \$3,000.

We now have a population of about 100,000,000. By this same proportion we should have 140,000 with incomes in excess of \$3,000.

But, supposing that this class has increased tenfold over this proportionate number, yet we should have but 1,400,000 with incomes in excess of \$3,000, which is only about 10 per cent of our present voting population of 15,031,169, as given in the last election.

In other words, we should have a majority of 13,631,169 voters who have escaped the operation of this law and who have the power to demand of their Representatives that the whole amount of the expenses of the Government be placed upon 1,400,000 of their fellow citizens.

As a result of such consideration as I have been able to give the subject I am convinced that it is not only unwise but dangerous to embark upon this system with an exemption from its operation of more than nine-tenths of the voting population of the United States; it is a temptation to every irresponsible person in the country to exercise his right of franchise either selfishly or dishonestly and to his own advantage rather than to the advantage of the country as a whole; it will tempt demagogues to appeal to the poor against the rich, to arraign class against class, and it opens the way to a condition which may endanger the very foundation of government. We should impose these taxes so that they will be felt by all, lightly by those of small incomes and more heavily by those more fortunately situated, and so secure that sense of responsibility on the part of all classes which is essential to good citizenship, or we should adopt some method for the distribution of the avails of the tax which will tend to destroy the temptations to which I have alluded.

In the proposed division of the fund arising from the imposition of this tax among the States in proportion to the population of each, such a purpose will be achieved and the States will be enabled to meet the growing demands of the age and advance to higher and better conditions. The Nation does not need the money; the States do. I care not whether it is devoted to education or good roads or whether it is divided between the two objects. But to send it to the States in some form and for some purpose is directly in line with the thought of vast numbers of our people.

Assuming that this tax will yield forty-five to fifty millions of dollars, and that the same be distributed according to the plan proposed by the pending amendment, it would under the census of 1900 give to the different divisions of States substantially the following amounts annually:

Division.	Population.	Amount.
New England.....	6,552,681	\$3,276,340
Middle Atlantic.....	19,315,892	9,657,946
East North Central.....	18,250,621	9,125,310
West North Central.....	11,637,921	5,818,900
South Atlantic.....	12,194,895	6,097,447
East South Central.....	8,409,901	4,204,950
West South Central.....	8,784,534	4,392,207
Mountain.....	2,633,517	1,316,759
Pacific.....	4,192,304	2,096,152
Total.....		45,986,131

Mr. BRISTOW. I should like to inquire if the Senator has the figures by States?

Mr. DILLINGHAM. I have not.

Mr. President, I can not close without reminding the Senate that during the period of 10 years between 1900-1910 the number of foreign-born white residents in the United States which came from the United Kingdom, Germany, the Scandinavian countries, the Netherlands, Belgium, Switzerland, and France has increased only about 38 per cent, while the increase in the foreign-born white population in the United States during the same period which came from Portugal, Italy, Russia, Finland, Austria-Hungary, Roumania, Servia, Montenegro, Bulgaria, and Greece has been over 321 per cent. During this period substantially 10,000,000 immigrants have been admitted to the United States, 75 per cent of whom came from the countries last mentioned. Of these nearly 70 per cent were males and about 86 per cent of them are leading single lives in the United States, being unmarried, or if married, having left their wives in Europe. They have moved in racial bodies toward our large cities. Of more than a million Italians coming during this period—1900-1910—over 78 per cent went to the cities; of the 1,304,000 Russians 87 per cent went to the cities; of the 1,233,000 coming from Austria-Hungary 75 per cent went to the cities; of the Roumanians almost 92 per cent went to the cities, while of the Turks 83 per cent sought these centers of population.

These figures are potent in their suggestion of the danger that lies in any proposition to place the imposition of an income tax in the hands of a majority of the people which constitute nine-tenths of the whole, but as this course has been adopted by the Democratic Party and we are forced to submit to it by virtue of a decree of their caucus, I can only hope that the result of their action may be modified by the adoption of the amendment which I have offered and that this fund may be divided among the States to be applied to State purposes.

Mr. GALLINGER. I will ask the Senator from Vermont if it might not be well to limit the authority, say, for two years, so that it shall be the duty of the Secretary of the Treasury to annually distribute the fund for a period of two years, after which time Congress may determine whether the distribution shall be continued.

Mr. DILLINGHAM. I am perfectly willing to adopt that amendment to the amendment. I have offered this amendment for the purpose of bringing to the attention of the committee what I believe to be a great danger and what I believe would be a wise solution of this question.

Mr. GALLINGER. The Senator will accept that modification of his amendment?

Mr. DILLINGHAM. I will accept that.

Mr. GALLINGER. I have written very hurriedly words that it has occurred to me should be added to the amendment, or words somewhat similar. I do not insist upon the phraseology, because I have written it hurriedly:

And if any State fails to make appropriation as above during any year, the amount designated and set aside for such State shall revert to the Treasury of the United States.

Mr. DILLINGHAM. I am satisfied with that.

Mr. GALLINGER. The Senator from Vermont will modify his amendment in that way. I pass it to the desk.

The VICE PRESIDENT. The modification will be stated.

The SECRETARY. The Senator from Vermont modifies his amendment by inserting in line 2, after the word "distribute," the words "for a period of two years"; and at the end of the amendment to insert a comma and the words:

And if any State fails to make appropriation as above during any year the amount designated and set aside for such State shall revert to the Treasury of the United States.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Vermont as modified. [Putting the question.] The yeas seem to have it.

Mr. GALLINGER. I will ask for the yeas and nays on the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I am paired with the junior Senator from Michigan [Mr. TOWNSEND]. I transfer my pair to the junior Senator from South Carolina [Mr. SMITH] and vote "nay."

Mr. CHAMBERLAIN (when his name was called). I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In his absence, I withhold my vote.

Mr. LEWIS (when his name was called). I beg to announce my pair with the junior Senator from North Dakota [Mr. GRONNA]. He is still absent. I refrain from voting.

Mr. McCUMBER (when his name was called). I have a general pair with the junior Senator from Nevada [Mr. NEWLANDS]. I will transfer that pair to the junior Senator from Maine [Mr. BURLEIGH] and vote "yea."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from Ohio [Mr. BURTON]. I transfer that pair to the Senator from Oklahoma [Mr. GORE] and vote "nay."

Mr. WILLIAMS (when his name was called). I have a pair with the senior Senator from Pennsylvania [Mr. PENROSE], and I observe that he is not present. I withhold my vote.

The roll call was concluded.

Mr. LEEA. I will announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD]. If I were at liberty to vote, I would vote "nay."

Mr. BANKHEAD. I transfer my pair with the junior Senator from West Virginia [Mr. GOFF] to the senior Senator from Maryland [Mr. SMITH] and vote "nay." I make this announcement for the day.

Mr. SHEPPARD. My colleague the senior Senator from Texas [Mr. CULBERSON] is unavoidably absent. He is paired with the Senator from Delaware [Mr. DU PONT]. This announcement will stand for the day.

Mr. CHAMBERLAIN. I observe that my pair has returned to the Chamber, and I vote "nay."

Mr. BACON (after having voted in the negative). I am informed that the Senator from Minnesota [Mr. NELSON] has not voted. I withdraw my vote. I have a general pair with that Senator.

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Indiana [Mr. SHIVELY] and vote. I vote "nay."

Mr. WILLIAMS. I transfer my pair to the Senator from New Jersey [Mr. HUGHES] and vote "nay."

Mr. GALLINGER. I desire to announce the absence of the Senator from Maine [Mr. BURLEIGH] on account of continued illness. I will also announce that the Senator from Ohio [Mr. BURTON] is paired with the Senator from Colorado [Mr. THOMAS]; the Senator from Delaware [Mr. DU PONT] with the Senator from Texas [Mr. CULBERSON]; the Senator from West Virginia [Mr. GOFF] with the Senator from Alabama [Mr. BANKHEAD]; and the Senator from Michigan [Mr. TOWNSEND] with the Senator from Florida [Mr. BRYAN].

The result was announced—yeas 14, nays 55, as follows:

YEAS—14.			
Bradley	Clark, Wyo.	Gallinger	Stephenson
Brandegee	Colt	McCumber	Warren
Bristow	Dillingham	Page	
Catron	Fall	Perkins	
NAYS—55.			
Ashurst	James	Pittman	Smith, Ga.
Bankhead	Johnson	Poindexter	Sterling
Borah	Jones	Pomeroy	Stone
Brady	Kenyon	Ransdell	Sutherland
Bryan	Kern	Reed	Swanson
Chamberlain	Lane	Robinson	Thomas
Chilton	Lodge	Root	Thompson
Clapp	Martin, Va.	Saulsbury	Thornton
Clarke, Ark.	Martine, N. J.	Shafroth	Tillman
Cummins	Myers	Sheppard	Vardaman
Fletcher	Norris	Sherman	Walsh
Hitchcock	O'Gorman	Shields	Weeks
Hollis	Overman	Simmons	Williams
Jackson	Owen	Smith, Ariz.	
NOT VOTING—26.			
Bacon	Gore	McLean	Smith, Mich.
Burleigh	Gronna	Nelson	Smith, S. C.
Burton	Hughes	Newlands	Smoot
Crawford	La Follette	Oliver	Townsend
Culbertson	Lea	Penrose	Works
du Pont	Lewis	Shively	
Goff	Lippitt	Smith, Md.	

So Mr. DILLINGHAM's amendment was rejected.

Mr. SMOOT. Mr. President, I move to strike out the numeral "20," on page 114, paragraph 367, line 6, and to insert in lieu thereof the numeral "10."

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In paragraph 367, page 114, line 6, at the end of the line, strike out "20" and in lieu insert "10," so as to read:

Pearls and parts thereof, drilled or undrilled, but not set or strung; diamonds, coral, rubies, cameos, and other precious stones and semiprecious stones, cut but not set, and suitable for use in the manufacture of jewelry, 10 per cent ad valorem.

Mr. FLETCHER. I will ask the Senator from Utah if in offering his amendment he uses the former print, or does he refer to the reprint?

Mr. SMOOT. The page and line refer to the original print.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Utah.

Mr. SMOOT. Mr. President, the effect of the amendment would be to place "pearls and parts thereof, drilled or undrilled, but not set or strung; diamonds, coral, rubies, cameos, and other precious stones and semiprecious stones, cut but not set, and suitable for use in the manufacture of jewelry," at 10 per cent.

Mr. President, I offer it with no hostility whatever to the rate in the pending bill if it were possible to be collected. I am fully convinced that there are many Democratic Senators who feel exactly as I do relative to a rate of 20 per cent. As I stated the other day, if it were possible to collect a high-rate duty on precious stones, I would not object to 100 per cent, but I am positive that a high rate can not be collected.

I want to give to the Senate this afternoon an ocular demonstration of the ease with which pearls can be smuggled into the country. I hold in my hand an invoice for 10 pearls purchased by Mr. Ludwig Nisson, of New York. These 10 pearls [exhibiting] cost \$78,578.82.

Mr. REED. I suggest that the Senator pass them around for examination. [Laughter.]

Mr. OVERMAN. How much did they cost?

Mr. SMOOT. Seventy-eight thousand five hundred and seventy-eight dollars and eighty-two cents. Mr. President, I can conceal every one of these pearls in the center of one cigar.

Mr. ROBINSON. How did the Senator say he obtained those pearls? [Laughter.]

Mr. SMOOT. I am not going to confess to the Senator from Arkansas; but I will assure the Senator they are genuine pearls, purchased of late, and I will assure the Senator that this is the invoice of them.

Mr. GALLINGER. Probably the Senator gave bond for their safe return. [Laughter.]

Mr. SMOOT. I am compelled to return them, I will say to the Senator.

Mr. President, the duty of 20 per cent on these pearls would amount to \$15,715.76. If anyone desired to smuggle similar ones into the country they could be concealed in one cigar. Take a box of 100 such cigars and use them for smuggling, filled with pearls, the loss of duty upon such would be \$1,571.576.

Mr. President, the Treasury Department claims that the rate of 20 per cent in the pending bill will net the Government of the United States less than if a rate of 10 per cent were provided. Twenty per cent will be the cause of a great part of all pearls, diamonds, and precious stones being smuggled into this country.

A rather strange anomaly about this whole matter is that the honest dealers in precious stones are all opposed to the measure, notwithstanding they would be an immediate gainer. I know of one firm in New York that has over \$2,000,000 worth of pearls on hand. The increase of duty from 10 per cent to 20 per cent will immediately give that firm a profit of \$200,000. Yet they are opposed to the increase of duty. Why? Because they know that in the future they will be compelled to come in direct competition with men who will buy their pearls and precious stones from smugglers, instead of foreign dealers in their regular export business allowing the Government of the United States to collect 10 per cent as now. The history of the past has proven that the Government of the United States does not collect a rate higher than 10 per cent upon diamonds.

Mr. THOMAS. Mr. President—

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Colorado?

Mr. SMOOT. I do.

Mr. THOMAS. I was simply going to suggest that, in view of the interest manifested on this subject on this side of the Chamber, it really should be the subject of consideration in executive session.

Mr. SMOOT. I am going to suggest in all seriousness to the majority that they adopt this amendment. The question will

then be in conference, and they can then decide in conference as to whether a 10 per cent or a 20 per cent duty is best.

Mr. JAMES. Mr. President, if I understand the Senator from Utah correctly, his argument is that the importers' honesty will not exceed 10 per cent.

Mr. SMOOT. It is not the importer, but it is the smuggler. The honest importer will be compelled, if he pays the 20 per cent duty on diamonds and precious stones imported from the foreign dealer, to sell in direct competition with the dishonest dealer who will buy them from a smuggler, dividing with him the amount that may be saved by the evasion of payment of a duty.

Mr. JAMES. Does not the Senator from Utah believe that a man who would smuggle for 20 per cent would not hesitate to smuggle for 10 per cent, the only difference being that he might do more of it for 10 per cent?

Mr. SMOOT. History does not show that to be the case. I presented figures here the other day, when I spoke upon this question, showing that whenever the rate had been more than 10 per cent the duty collected by the United States had fallen below that which had been collected when the rate had been only 10 per cent. There is no question in my mind, Mr. President, but that that will again be the result if a duty of 20 per cent is placed upon precious stones in this bill.

Mr. BACON. Mr. President, I have not taken any part in the discussion of the pending tariff bill. I was very much interested in it four years ago, and I did make some little investigation regarding this very matter about which the Senator from Utah is now speaking. There is one feature of the rate of duty on diamonds which I think has always been improper—it was improper in the Payne-Aldrich law and I think it is improper in this bill—and that is the difference which is made in the rate of duty on uncut and on cut diamonds. I have not the figures before me, although I did have them four years ago, and then gave them to the Senate.

I think that the uncut diamond ought to come into the country at the same rate of duty as does the cut diamond. I repeat, I made some investigation four years ago by conferring with those familiar with the subject—jewelers, men who deal in diamonds—and I then found this to be the concurrent testimony by them. Of course it will be recognized that the uncut diamond imported as such when it is cut is worth just the same in this market as is the diamond which is imported as a cut diamond, and the figures which I then presented to the Senate, and which I ascertained, after conference with those who were familiar with the matter, were correct, showed that there was a very large profit in the cutting of diamonds—I have forgotten what it was—but a very much larger profit than is found in any ordinary business.

The profit on cutting diamonds is all that any legitimate business would desire in the way of profit growing out of the importation and cutting of diamonds. There is no necessity that there should be such a difference as will not only give to the importer of uncut diamonds a very large profit in his business, but also a direct bonus, as it amounts to in this case, of over a million dollars.

There are only one or two, if I recollect aright, concerns in the United States that cut diamonds. Does the Senator from Utah know whether or not I am accurate in that statement?

Mr. SMOOT. I know of but two or three.

Mr. BACON. Very well. If the Senator will refer to the Statistical Abstract, he will see that the value will show that there is over a million dollars of difference between the amount paid on cut diamonds and on uncut diamonds at the rate provided in this bill and what they would be if the rate were the same as on cut diamonds. Therefore it is a direct bonus of between one and two million dollars to these one or two establishments in the United States that cut diamonds, when they themselves in the cutting of the diamond make an immense profit in bringing the uncut diamond up to the same value as the cut diamond.

I repeat, I did not expect to have anything to say on this subject. I have had nothing to say so far in this discussion, but I did take an interest in this matter four years ago and looked into it, and the facts are as I state them—that the effect of this disparity is to give a direct bonus of between one and two million dollars to one or two establishments in the United States that cut diamonds. It is just exactly the same as if that money were taken out of the Treasury and handed to them.

Mr. SMOOT. Mr. President, there is a differential between uncut diamonds and cut diamonds and precious stones in the present law of 10 per cent, but in this bill—

Mr. BACON. Ten per cent! It is 50 per cent.

Mr. SMOOT. Under the present law uncut diamonds and precious stones come in free, but there is a duty of 10 per cent on cut diamonds. So I speak of it in that way as being a 10 per cent difference.

Mr. BACON. Is it not twice as much in one case as it is in the other?

Mr. SMOOT. No; under the present law the uncut diamond is free and the cut diamond pays a duty of 10 per cent.

Mr. BACON. Very well. I am speaking about the provisions of this bill.

Mr. SMOOT. Under this bill the uncut diamonds carry a rate of duty of 10 per cent and the cut diamonds carry a rate of duty of 20 per cent.

Mr. BACON. Exactly. That is what I said.

Mr. SMOOT. I myself, Mr. President, agree with the Senator from Georgia that there is too great a difference in the rate between the uncut and the cut diamond; but if there was no difference, then there would be no rough diamonds or rough precious stones imported into the country, on account of the difference of cost between cutting in a foreign country and in this country.

Mr. JAMES. The Senator from Utah says that in this bill there is too great a difference—that uncut diamonds are allowed to come in at 10 per cent and cut diamonds at 20 per cent, while under the existing law uncut diamonds come in free and cut diamonds at 10 per cent. There is just the same difference between the two provisions of this bill as there is between the two provisions of the existing law. We place uncut diamonds on the dutiable list at 10 per cent duty; the present law allows them to be imported free. On cut diamonds, the present law admits them here at 10 per cent duty; in this bill we increase the duty to 20 per cent.

Mr. SMOOT. I have not denied that, Mr. President; in fact, I specifically so stated.

I shall answer the Senator from Georgia [Mr. BACON] by saying that from the figures to which I called the attention of the Senate, and also which I myself had examined into, that there is perhaps a greater differential than is really necessary between the diamond in the rough and the cut diamond.

Mr. BACON. If the Senator will pardon me just a moment—and I will not interrupt him for more than a moment—it is true, as shown by the importations, that in each instance the one or two establishments in the United States that cut diamonds have an absolute bonus of between one and two million dollars. In addition to a large profit—

Mr. SMOOT. Mr. President—

Mr. BACON. If the Senator will pardon me until I get through, I will not detain him long. In addition to a large profit each year—and I am not incorrect in this statement, because I have a very distinct recollection as to what the jewelers themselves told me as to the profit on uncut diamonds—in addition to a large profit there is a distinct bonus of between one and two million dollars each year, limited to one or two establishments in the United States.

Now, just one other word and I am done, and that is on the general subject as to whether or not there ought to be a low rate of duty on diamonds simply to prevent smuggling. I do not believe in any such doctrine. If I had the fixing of the rate, I would put the rate on diamonds a good deal higher than it is in this bill. The truth is that those who want to smuggle are going to smuggle whether the duty is 10 per cent or whether it is 20 per cent or whether it is 25 or 30 per cent. The greatest security at last against smuggling is not the rate of duty, but it is in the fact that the diamond trade is such that no large transaction can be made in the purchase of diamonds in Europe that can not easily be found out and is found out by the proper methods used for that purpose through our agents there. I understand it to be a fact that in most instances where smugglers are detected they are detected by reason of the fact that we have information before they leave the other country. That information is conveyed here, and the American customs officers are on the watch for them.

Mr. SMOOT. I will admit that there are smugglers operating to-day, but there is not the incentive to smuggling to-day that there will be if the rate is increased to 20 per cent. The Senator's opinion is not shared in by the Treasury Department, because the Treasury Department says that if the rate is advanced to 20 per cent it will be the means of increasing the smuggling of precious stones into this country, and it expresses the opinion that the amount of duty collected will not be as much as under the 10 per cent rate of the present law.

Mr. REED. Mr. President—

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Missouri?

Mr. SMOOT. Yes; I yield.

Mr. REED. The Senator has displayed here a few pearls, the value of which I have forgotten.

Mr. SMOOT. Seventy-eight thousand five hundred and seventy-eight dollars.

Mr. REED. And the Senator made the statement that they could all be concealed in one cigar.

Mr. SMOOT. Yes; they can almost be put in a sparrow egg.

Mr. REED. If they are worth \$78,000, at a tariff of 10 per cent the smuggler would gain \$7,800 as his reward for bringing them over, or approximately that, although, of course, something would have to be deducted.

Mr. SMOOT. Of course the smuggler would have to sell them at a considerable reduction to the retailer or he would not buy of him.

Mr. REED. But assume that he would receive a profit of \$5,000. Is not that sufficient incentive to induce smuggling when it can be done so cleverly and so easily? It seems to me the argument of the Senator proves too much; it proves that 10 per cent reward is great enough, so that if a man be dishonest he would pursue this avocation.

Mr. SMOOT. The history of importations and of smuggling does not bear out that conclusion. A man in smuggling diamonds into this country must first find somebody who will buy them, and in order to find a merchant who will buy them, the smuggler must sell at a less price than the merchant would buy them from the regular trade, and there is not enough in it after that division to cause the development of smuggling to any great extent, but when you come to increase the duty to 20 per cent there will be a strong incentive and more people will engage in that business. There are people to-day engaged in it. Many of the precious stones are smuggled into the United States under the present rates, but if the rate of duty is increased 100 per cent, there is no doubt in my mind nor is there in the mind of the Treasury officials that the business will greatly increase and that smuggling will become a general thing.

Mr. BACON. Mr. President, as I understand, under the law, if a smuggler is caught the goods are confiscated, are they not?

Mr. SMOOT. Very few have been confiscated so far.

Mr. BACON. I asked the Senator if it is not a fact that they are confiscated?

Mr. SMOOT. Yes; they are subject to be confiscated.

Mr. BACON. Yes; I understand.

Mr. SMOOT. But it only happens in very few instances that they are confiscated.

Mr. BACON. If we catch 10 per cent of the smugglers and there is a 10 per cent duty on diamonds we will get even with them.

Mr. SMOOT. Not at all. That would be a rather poor argument. It seems to me that would be equivalent to saying that we would encourage smuggling with the hope that we would at least detect 10 per cent of the smugglers. In fact, in order to get even we would have to catch one-half of them.

Mr. BACON. Not at all. If there is a 10 per cent duty on diamonds, of course the diamonds are worth ten times as much as the duty, and therefore whenever you catch one-tenth of them you have equalled the loss of the duty. If the diamond when confiscated is worth ten times as much as the duty, of course the confiscation represents ten times the amount which would have been paid had it not been smuggled.

Mr. SMOOT. The only interest I have in this subject is to see that the law which we enact can be put into successful operation, and I am simply voicing the opinion of the honest dealers of precious stones in this country, and also the opinion that has been expressed by the Treasury Department, not only in the past, but at the present time.

Mr. JONES. I should like to ask the Senator—

Mr. BACON. I will just add one word, with the permission of the Senator. I have not looked at the bill to see whether the conference committee would have any control of the question of the rate of duty on uncut diamonds—

Mr. SMOOT. They will not have unless some amendment is made. If this amendment is adopted, then I will follow it up, of course, with another amendment.

Mr. BACON. If the Senator will pardon me, what I was going to say was that I hoped if there is an opportunity to do so the difference between the duty on uncut diamonds and on cut diamonds will be removed and that there will be imposed just the same duty on uncut diamonds as on cut diamonds.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Utah [Mr. SMOOT]. The amendment was rejected.

Mr. NORRIS. I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 209, after line 12, it is proposed to insert—

Mr. NORRIS. I am willing that the greater portion of the amendment should be printed without reading, because it has been once printed. There were some errors, however, as it was first printed, so that if the Secretary will read down to subdivision C it will be satisfactory to me, and then the whole amendment can be printed in the RECORD.

The Secretary proceeded to read the amendment, which is as follows:

On page 209, after line 12, insert:

Subdivision 3. A. That a tax shall be, and is hereby, imposed upon the transfer of any property, real or personal, or of any interest therein or income therefrom, in trust or otherwise.

First. When the transfer is by will or by the intestate laws of any State or Territory or of the United States from any person dying seized or possessed of the property while a resident of the United States or any of its possessions.

Second. When the transfer is by will or intestate law of property within the United States or any of its possessions and the decedent was a nonresident of the United States or any of its possessions at the time of his death.

Third. When the property of a resident decedent or the property of a nonresident decedent within the United States or any of its possessions transferred by will is not specifically bequeathed or devised, such property shall for the purpose of this subdivision be deemed to be transferred proportionately to and divided pro rata among all the general legatees and devisees named in said decedent's will, including all transfers under a residuary clause of such will.

Fourth. When the transfer is of property made by a resident, or by a nonresident when such nonresident's property is within the United States or any of its possessions, by deed, grant, bargain, sale, or gift made in contemplation of the death of the grantor, vendor, or donor or intended to take effect in possession or enjoyment at or after such death.

Fifth. When any such person or corporation becomes beneficially entitled in possession or expectancy to any property or the income thereof by any such transfer whether made before or after the passage of this act.

Sixth. Whenever any person or corporation shall exercise a power of appointment derived from any disposition of property made either before or after the passage of this act, such appointment when made shall be deemed a transfer taxable under the provisions of this subdivision in the same manner as though the property to which such appointment relates belonged absolutely to the donee of such power and had been bequeathed or devised by such donee by will; and whenever any person or corporation possessing such power of appointment so derived shall omit or fail to exercise the same within the time provided therefor, in whole or in part, a transfer taxable under the provisions of this subdivision shall be deemed to take place to the extent of such omission or failure in the same manner as though the persons or corporations hereby becoming entitled to the possession or enjoyment of the property to which such power related had succeeded thereto by a will of the donee of the power failing to exercise such power, taking effect at the time of such omission or failure.

B. The tax imposed hereby shall be upon the clear market value of the property so transferred, and the value of any transfer or transfers to any person or corporation shall be taxed at the following rates, to wit:

The first \$50,000 in value of any such transfer or transfers to any person or corporation shall be exempt from taxation under this subdivision. The next \$50,000 shall be taxed at the rate of 1 per cent. The next \$100,000 shall be taxed at the rate of 2 per cent. The next \$100,000 shall be taxed at the rate of 3 per cent. The next \$100,000 shall be taxed at the rate of 4 per cent. The next \$100,000 shall be taxed at the rate of 5 per cent. The next \$1,000,000 shall be taxed at the rate of 7 per cent. The next \$1,000,000 shall be taxed at the rate of 10 per cent. The next \$2,000,000 shall be taxed at the rate of 15 per cent. The next \$5,000,000 shall be taxed at the rate of 20 per cent. The next \$10,000,000 shall be taxed at the rate of 30 per cent. The next \$15,000,000 shall be taxed at the rate of 45 per cent. The next \$18,000,000 shall be taxed at the rate of 60 per cent, and all over \$50,000,000 shall be taxed at the rate of 75 per cent; *Provided*, That in the collection of the taxes imposed by this subdivision, if it shall be made to appear, to the satisfaction of the Commissioner of Internal Revenue, that any person or corporation liable for the payment of any tax hereunder has paid a like tax on the same transfer or transfers to any State, Territory, or District within the United States, then the amount so paid by such person or corporation to such State, Territory, or District shall to the extent of 95 per cent of the amount so paid be credited as a payment upon any tax due under this subdivision.

C. Any property devised or bequeathed to any purely educational, charitable, missionary, benevolent, hospital, or infirmity corporation, including corporations organized exclusively for Bible or tract purposes, shall be exempted from and not subject to the provisions of this subdivision. There shall also be exempted from and not subject to the provisions of this subdivision property bequeathed to a corporation or association organized exclusively for the moral or mental improvement of men or women, or for scientific, literary, library, patriotic, cemetery, or historical purposes, or for the enforcement of laws relating to children or animals, or for two or more of such purposes, and used exclusively for carrying out one or more of such purposes. But no such corporation or association shall be entitled to such exemption if any officer, member, or employee thereof shall receive or may be lawfully entitled to receive any pecuniary profit from the operations thereof except reasonable compensation for services in effecting one or more of such purposes or as proper beneficiaries of its strictly charitable purposes, or if the organization thereof for any such avowed purpose be a guise or pretense for directly or indirectly making any other pecuniary profit for such corporation or association or for any of its members or employees, or if it be not in good faith organized or conducted exclusively for one or more of such purposes.

* D. That if such tax is paid within six months from the accrual thereof a discount of 5 per cent shall be allowed and deducted therefrom. If such tax is not paid within 18 months from the accrual thereof, interest shall be charged and collected thereon at the rate of 10 per cent per annum from the time the tax accrued, unless by reason of claims made upon the estate, necessary litigation, or other unavoidable cause of delay such tax can not be determined and paid as herein

provided, in which case interest at the rate of 6 per cent per annum shall be charged upon such tax from the accrual thereof until the cause of such delay is removed, after which 10 per cent shall be charged.

E. That the tax aforesaid shall be due and payable in one year after the death of the testator, and shall be a lien and charge upon the property of every person who may die as aforesaid for 20 years or until the same shall, within that period, be fully paid to and discharged by the United States; and every executor, administrator, or trustee having in charge or trust any legacy or distributive share as aforesaid shall give notice thereof in writing to the collector or deputy collector of the district where the deceased grantor or bargainer last resided within 30 days after he shall have taken charge of such trust, and every executor, administrator, or trustee, before payment and distribution to the legatees or any parties entitled to beneficial interest therein, shall pay to the collector or deputy collector of the district of which the deceased person was a resident, or in which the property was located in case of nonresidents, the amount of the tax assessed upon such legacy or distributive share, and shall also make and render to the said collector or deputy collector a schedule, list, or statement, in duplicate, of the amount of such legacy or distributive share, together with the amount of the tax which has accrued or shall accrue thereon, verified by his oath or affirmation, to be administered and certified thereon by some magistrate or officer having lawful power to administer such oaths in such form and manner as may be prescribed by the Commissioner of Internal Revenue, which schedule, list, or statement shall contain the names of each and every person entitled to any beneficial interest therein, together with the clear value of such interest, the duplicate of which schedule, list, or statement shall be by him immediately delivered and the tax thereon paid to such collector; and upon such payment and delivery of such schedule, list, or statement said collector or deputy collector shall grant to such person paying such duty or tax a receipt or receipts for the same in duplicate, which shall be prepared as hereinafter provided. Such receipt or receipts, duly signed and delivered by such collector or deputy collector, shall be sufficient evidence to entitle such executor, administrator, or trustee to be credited and allowed such payment by every tribunal which by the laws of any State or Territory is or may be empowered to decide upon and settle the accounts of executors and administrators; and in case such executor, administrator, or trustee shall refuse or neglect to pay the aforesaid duty or tax to the collector or deputy collector as aforesaid within the time hereinbefore provided, or shall neglect or refuse to deliver to said collector or deputy collector the duplicate of the schedule, list, or statement of such legacies, property, or personal estate, under oath as aforesaid, or shall neglect or refuse to deliver the schedule, list, or statement of such legacies, property, or personal estate, under oath as aforesaid, or shall deliver to said collector or deputy collector a false schedule or statement of such legacies, property, or personal estate, or give the names and relationship of the persons entitled to beneficial interests therein untruly, or shall not truly and correctly set forth and state therein the clear value of such beneficial interests, or where no administration upon such property or personal estate shall have been granted or allowed under existing laws, the collector or deputy collector shall make out such lists and valuation as in other cases of neglect or refusal and shall assess the duty thereon, and the collector shall commence appropriate proceedings before any court of the United States, in the name of the United States, against such person or persons as may have the actual or constructive custody or possession of such property or personal estate, or any part thereof, and shall subject such property or personal estate, or any portion of the same, to be sold upon the judgment or decree of such court, and from the proceeds of such sale the amount of such tax, together with all costs and expenses of every description to be allowed by such court, shall be first paid, and the balance, if any, deposited according to the order of such court, to be paid under its direction to such person or persons as shall establish title to the same. The deed or deeds, or any proper conveyance of such property or personal estate, or any portion thereof, so sold under such judgment or decree executed by the officer lawfully charged with carrying the same into effect shall vest in the purchaser thereof all the title of the delinquent to the property or personal estate sold under and by virtue of such judgment or decree, and shall release every other portion of such property or personal estate from the lien or charge thereon created by this section. And every person who shall have in his possession, charge, or custody any record, file, or paper containing, or supposed to contain, any information concerning such property or personal estate, as aforesaid, passing from any person who may die as aforesaid, shall exhibit the same at the request of the collector or deputy collector of the district and to any law officer of the United States in the performance of his duty under this section, his deputy or agent, who may desire to examine the same. And if any such person having in his possession, charge, or custody any such records, files, or paper shall refuse or neglect to exhibit the same on request, as aforesaid, he shall forfeit and pay the sum of \$500: *Provided*, That in all legal controversies where such deed or title shall be the subject of judicial investigation, the recital in said deed shall be prima facie evidence of its truth and that the requirements of the law have been complied with by the officers of the Government: *And provided further*, That in case of willful neglect, refusal, or false statement by such executor, administrator, or trustee, as aforesaid, he shall be liable to a penalty of not exceeding \$1,000, to be recovered with costs of suit. Any tax paid under the provisions of this section shall be deducted from the particular legacy or distributive share on account of which the same is charged.

F. That from and after the passage of this act the Secretary of the Treasury, upon the recommendation of the Commissioner of Internal Revenue, is authorized to appoint a competent person, at an annual salary of \$5,000, whose special duty it shall be to conduct such investigations as may be necessary to secure the efficient enforcement of the tax imposed upon legacies and distributive shares of personal property by this section, and the Commissioner of Internal Revenue may also from time to time assign one or more special agents to aid in such investigations.

Mr. NORRIS. Mr. President, this amendment which I have offered provides for an inheritance tax upon all bequests, beginning after the first \$50,000, which is exempted, and running up to as high as 75 per cent on that part of any bequest which exceeds \$50,000,000.

I will print in the Record at this point a table showing the rate of taxation as it would work out if this amendment became a law.

The table referred to is as follows:

Table showing rate of taxation proposed.		Per cent.
		Exempted.
The first \$50,000 of any inheritance	1
The next \$50,000 of any inheritance taxed at	2
The next \$100,000 of any inheritance taxed at	3
The next \$100,000 of any inheritance taxed at	4
The next \$100,000 of any inheritance taxed at	5
The next \$500,000 of any inheritance taxed at	7
The next \$1,000,000 of any inheritance taxed at	10
The next \$2,000,000 of any inheritance taxed at	15
The next \$5,000,000 of any inheritance taxed at	20
The next \$10,000,000 of any inheritance taxed at	30
The next \$15,000,000 of any inheritance taxed at	45
The next \$16,000,000 of any inheritance taxed at	60
All over \$50,000,000 of any inheritance taxed at	75

Mr. GALLINGER. Mr. President—

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from New Hampshire?

Mr. NORRIS. I yield to the Senator.

Mr. GALLINGER. If the Senator will permit me, I did not quite grasp the full purport of his amendment. Does the Senator's amendment propose a direct inheritance tax or a collateral inheritance tax, or both?

Mr. NORRIS. It makes no distinction between collateral heirs and any other heirs or any other bequests.

Mr. GALLINGER. Then, if I heard the reading correctly, in the event of a State having taxed—

Mr. NORRIS. I am going to take up that matter now.

One of the objections to a Federal inheritance tax, and an objection which I believe has a great deal of reason for its basis, is that the different States desire to use that as one of the methods of taxation, and therefore that the Federal Government should not engage in any tax on inheritances.

In explaining a provision of the amendment which I think entirely meets that objection, I wish to say that one of the objects of the amendment is to break up the very large fortunes. No State so far has levied, and no State dares levy, a very high tax on inheritances for fear of driving property out of its borders to other States. If a Federal law were enacted that had in it a progressive rate sufficiently high to break up these immense fortunes, that objection, of course, could not apply. In order to meet that objection, I have incorporated in the amendment the following proviso:

Provided, That in the collection of the taxes imposed by this subdivision if it shall be made to appear to the satisfaction of the Commissioner of Internal Revenue that any person or corporation liable for the payment of any tax hereunder has paid a like tax on the same transfer or transfers to any State, Territory, or District within the United States, then the amount so paid by such person or corporation to such State, Territory, or District shall, to the extent of 95 per cent of the amount so paid, be credited as a payment upon any tax due under this subdivision.

I think that is an answer, in so far as under this provision I am able to make an answer, to the suggestion of the Senator from New Hampshire.

Mr. GALLINGER. Mr. President, in my own State we have a collateral inheritance tax from which we are deriving a very considerable revenue, and there has been some agitation in favor of an additional direct inheritance tax. In Massachusetts, and possibly in some other States, they have now both a direct and a collateral tax. Do I understand the Senator to say that the States must collect an equal amount, as his amendment provides, before they get the exemption?

Mr. NORRIS. Oh, no.

Mr. GALLINGER. The States are to be credited with the amount collected under State laws. Is that it?

Mr. NORRIS. They are credited with 95 per cent of the amount that they have paid to the State.

Mr. GALLINGER. That is what I wanted to get clear in my mind.

Mr. NORRIS. It may be well in the beginning to state that it has been uniformly held by the courts that an inheritance tax is not a tax on property. It is a tax on the right of a person to take property which he would not be allowed to take or have a right to take if it were not for the law which, under such circumstances, gives it to him.

At this point I desire to include in the Record a table showing the exact amount that would be taken from bequests of various amounts, if my proposition were enacted into law.

The table referred to is as follows:

Table showing operation of proposed inheritance tax.	
On an inheritance of \$50,000, tax would be.....	\$0
On an inheritance of \$100,000, tax would be.....	500
On an inheritance of \$200,000, tax would be.....	2,500
On an inheritance of \$300,000, tax would be.....	5,500
On an inheritance of \$400,000, tax would be.....	9,500
On an inheritance of \$500,000, tax would be.....	14,500
On an inheritance of \$1,000,000, tax would be.....	49,500
On an inheritance of \$4,000,000, tax would be.....	449,500

On an inheritance of \$9,000,000, tax would be.....	\$1,449,500
On an inheritance of \$19,000,000, tax would be.....	4,449,500
On an inheritance of \$34,000,000, tax would be.....	11,199,500
On an inheritance of \$50,000,000, tax would be.....	20,799,500
On an inheritance of \$80,000,000, tax would be.....	43,799,500

Mr. NORRIS. It will be noted that the amendment does not levy a tax upon the estate proper but only a tax upon the various bequests; and under the amendment, if it should become a law, it would be possible for any man with any amount of property so to bequeath it as to entirely avoid the tax.

This table shows, as I have computed it, the various amounts that would have to be paid for various bequests, running from \$50,000 up to \$80,000,000.

All taxes are burdensome. It would be better if we could avoid taxation. We desire, and I think it is the desire all over the world, to avoid burdensome taxation and to avoid expensive taxation. From the very beginning of government men have continually tried to enact into law such systems of taxation as would be least burdensome. Of all the taxes that ever have been conceived by man there is no other that is so little a burden as an inheritance tax. It is the only tax I know of that is not directly or indirectly a tax on consumption. There is no other tax that can be so easily and inexpensively collected. There is no other tax that is any more just or fair. It is a tax that can not be passed on to some one else.

An inheritance tax of the kind that is provided in this particular amendment would not take from any man a single dollar he had done anything toward earning. It would not take away from any person a single dollar that he had anything whatever to do with creating. It would, in fact, take only a part of the property that the legislatures of the States or of the Nation have a right, if they see fit, to take away entirely.

The right to inherit property is one given to the individual by law. It is not a natural right. It may be said that in some instances the children work and labor with their parents, help to create their property, and help to accumulate their property. That is sometimes true in the accumulation of small estates. I do not believe it is true in a single case where the tax provided in this amendment would be levied. In every instance, as far as I know, inheritances of from one to two or three or four or five million dollars go to people who never have as much as crooked their fingers to accumulate the money.

It has often been said during the course of the debate in this Chamber on the income-tax provisions, and I have not heard it contradicted here or elsewhere, that immense, swollen fortunes are an evil and a detriment not only to our Government but to humanity. There is a limit beyond which money can buy neither comfort, luxuries, nor pleasure. I think it is conceded by all men that the accumulation and the entailing of immense, swollen fortunes is detrimental to the welfare of humanity.

When George Washington died he left an estate, as I remember now, valued at somewhere about \$500,000, and I believe he was then the wealthiest man in the United States; but we have seen grow up within the last 50 years a large number of immense fortunes.

As was said in the debate by several Senators, some of these fortunes, perhaps, have been dishonestly acquired. Some of them have been acquired honestly and fairly under the law. I am going to take one of them as an illustration, and I am going to take one the legality, fairness, and honesty of whose acquisition, so far as I know, can not be questioned.

I take it that no one would object if we could break up the large fortunes that were dishonestly acquired; but it might be said that those that were honestly acquired ought not to be broken up, because of an alleged injustice that thereby would be done those who would otherwise inherit them.

As I said a while ago, I do not believe any injustice can come from taking away a portion of an inheritance from a man who has done nothing whatever, either with his hands or with his brains, toward its acquisition. It is taking something that he does not have, something that he can not inherit, except as the law gives him the right to inherit. It is taking something that he has not produced. The particular provision I have offered as an amendment in every instance will leave enough, without any serious taxation, to keep him and all his friends and family in absolute luxury during all their lives.

To illustrate the working out of this amendment I wish to take the estate of John Jacob Astor. Let me say right here that I have nothing against any of the Astors, or any of their predecessors, or any of those who live now. As far as I know, none of them has ever done a dishonorable act in the acquisition of property. As far as I know, the present young Mr. Astor is perfectly honorable, perfectly honest, and has not done anything to secure his fortune that is illegal, disreputable, unfair, or dishonest. When his father, John Jacob Astor, went down on

the *Titanic* he left an estate, speaking in round numbers, valued at about \$90,000,000. I am informed by the officials in New York City that this estate represents the increase in value of an original investment—a great many years ago, of course—of less than \$2,000,000, and that all of this immense fortune has been brought about by the increase in value of real estate, principally on Manhattan Island, in which for all these years the estate has been invested.

With an investment, let us say, and it is liberal, as I understand it, of \$2,000,000 years ago made by the original Astor, the estate has grown until at the death of John Jacob Astor it amounted to \$90,000,000. During all those years for several generations the Astors have really done nothing except to see the estate grow and become more valuable and to live in luxury off its income.

This property, worth originally \$2,000,000, now worth \$90,000,000, has been made valuable by the public. Every man who ever paid taxes in New York has contributed something toward its value. Every man who ever erected a building on Manhattan Island, whether it was a mansion on Broadway or an humble cottage in the suburbs, has done something to make this estate greater. From the man in the street who laid the paving blocks to the master minds that planned the giant skyscrapers which lift their heads up in the clouds, every one of them has contributed something to the Astors. Every drop of sweat that ever trickled down over the brow of labor on Manhattan Island for a century has contributed its mite to the Astor fortune.

There is nothing unjust, Mr. President, there is nothing unfair in such a case, after the man who owned it has used it during his lifetime, for the Government to say at his death, before anybody shall take this fortune which the people of the country have in reality made, we will levy a tax and give a portion of it back to the people, and realizing that vast aggregations of wealth are harmful to free government and to humanity generally, we will grade that tax in such a way that it will be practically impossible for the large aggregations of wealth to be entailed from one generation to another.

Mr. CLAPP. Mr. President—

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Minnesota?

Mr. NORRIS. I yield to the Senator.

Mr. CLAPP. There is a great deal, of course, in what the Senator says, but it must be based, however, upon a fundamental that reaches back of the taxing power. If the laws under which the Astor fortune—I use that as the illustration which the Senator has used—permit a fortune to be accumulated in the way in which that fortune was accumulated, there may then be a question as to the morals involved in first permitting that condition, and then turning around and from the viewpoint not of the necessity of government for revenue but to reach a condition which from the second viewpoint is sufficiently questionable to warrant reaching deep down into the fortune under the guise of taxation. That may present a question of doubtful morals.

I think I will vote for the Senator's amendment; but the trouble with an inheritance tax, especially where it is levied upon realty, is that it serves to reconcile the American people to a condition under which a man without lifting a finger accumulates year by year millions due entirely to the labor, the activity, the very existence, if I may use the term, of others. I hope the day is not far distant when instead of dealing with the frills, if I may use that expression, we will begin to go down to the fundamentals and make it impossible for a man to acquire a great fortune to which he contributes only that much which one life in a population of a million lives bears to that million.

The fortune of the Astors to-day is largely due to the fact that millions of people have resided upon Manhattan Island. To recognize that the Astors may first take that and then we get back a part of it through the doubtful process of taxation in the admitted excess of the needs of revenue it seems to me is presenting a picture in morals that we must soon withdraw from the American public.

While I shall support the amendment of the Senator from Nebraska, I wish that instead of tolerating the idea that a man makes his millions to which he is not entitled, and then the only remedy is for the people to get some of it back in excess of the due needs of revenue, we would study more and more the process by which the people in the first instance should retain that which properly belongs to them in the fruits of their existence, the fruits of their labor, the fruits of that wealth which population makes.

Mr. NORRIS. Mr. President, there is a great deal in what the Senator from Minnesota has said which appeals to me. I

do not regard it, however, as any objection to this amendment. The other day in the debate on the income tax reference was made to the inheritance tax, and it was said instead of taxing such large fortunes we ought to prevent them from being possible under our laws. That is true, perhaps, and I am not offering this amendment as a cure for all the evils of the Government or of taxation even. But we do have these large fortunes. We are facing a condition. We have men worth \$100,000,000 and \$200,000,000, more money than any man can use and more money than any mind can really comprehend, and we are faced with this condition. This kind of a law ought to be on the statute books even though we did what the Senator from Minnesota has so well said we ought to do—legislate in such a way, or let the States legislate in such a way, that it would be impossible to acquire in one lifetime these large fortunes.

Mr. CLAPP. Will the Senator pardon another interruption?

Mr. NORRIS. I yield to you, Senator.

Mr. CLAPP. While, as I said, I shall support the amendment, yet I fear there is this difficulty or evil that grows out of an income tax and an inheritance tax. I believe we should deal frankly with these great subjects. I believe that they do tend to reconcile the public and abate the efforts and study to find some means to first prevent them. I believe that Mr. Carnegie in doling out, as it seems to me almost in the attitude of a benefactor giving to mendicants, to communities in this country, almost on bended knees supplicating, a pittance from his hands to establish libraries, has done much to stay American thought and American purpose in trying to find some just way of preventing a Carnegie from first taking from the American people approximately \$500,000,000 of property, representing a taxing power against the American people based upon the returns and earnings of that \$500,000,000, and then doling some of it out as a benefaction to those who permitted the taking.

If the Senator will pardon me, too much to-day we find the American people confronted with a situation in which they come to recognize as a public benefactor the man who does thus. First, he obtains the \$500,000,000, and then he does it out to the public in institutions benevolent in their inception or institutions of an educational character.

If the Senator will pardon me another moment, the people have too much of the thought in this country that prosperity consists of a few men sitting around a banquet board heaped so high with the good things of life that a few crumbs must fall to the floor, and the gathering of those crumbs by the rank and file constitutes prosperity.

I regret that we are confronted to-day by the alternative of voting for or against these propositions, for while I believe, having tolerated a system under which these accumulations have been made, we should tax them, and perhaps temporarily have no other recourse than taxation, I can not help but feel that taxation and the receipt of these benefactions from great overgrown fortunes serve to enslave the American mind and make us more tolerant of conditions which it should be the primary thought and effort of every American patriot to see if there is not some way to so adjust the situation that instead of that banquet board thus being heaped overhigh and the crumbs falling to the masses there might be a banquet board around which all could sit with a fair equation of opportunity.

Of course, I have only used names in the sense of illustration.

Mr. NORRIS. Mr. President, I want in return to thank the Senator for what he has said. He presents a very interesting question; but, Mr. President, in my judgment, interesting as it may be, it is not directly related to the question before us. We do have the large fortunes. I presume that under any system which we could invent we are liable to have them. The particular fortune that I took as an illustration is no exception. I do not believe any man lives or ever did live who by his own effort, his own ability, his own wisdom is able to honestly make a fortune as large as the Astor fortune or as a great many of the other fortunes. They are usually made by influences entirely beyond the control of the owner; that is, if they are built up honestly.

Mr. GALLINGER rose.

Mr. NORRIS. I prefer not to yield just now. I will yield in a very few moments. I do not believe any man can make a million dollars by his own effort. These fortunes have not been made by the working of the hand or of the brain. Often accident, sometimes perhaps by some provision of law, men have been able to build up a fortune, but many of them have been built up—for instance, like the Astor fortune—that are perfectly honest, perfectly legitimate. Others have been accumulated by accident, by the investment, perhaps, of a few dollars in a mine that may turn out to give the owner millions and millions of dollars. There are thousands of ways in which these

vast fortunes are accumulated. We ought to have on the statute books a law that when the man who has the fortune is through with it, when he is dead, he shall not be able to pass it on and entail it from one generation to another, and thus accelerating what everybody admits to be an evil. I yield now to the Senator from New Hampshire.

Mr. GALLINGER. Mr. President, I will take just a moment.

I have had very grave doubts as to the propriety of taking from the States the privilege of passing statutes that would cover either the question of direct or collateral inheritances, and I still entertain serious doubt on that point.

I am glad the Senator from Nebraska has differentiated, and that he takes the Astor estate as an illustration of a fortune accumulated by honest methods. I am just as much disturbed over these great fortunes as is the Senator from Nebraska, and if there is any way to halt them properly, by legislation or otherwise, I will be glad to cooperate with the Senator from Nebraska in doing it.

Of course both of us see difficulty in accomplishing that result. The Astor estate has been accumulated by the enhancement of real estate values. The original Mr. Astor, I suppose, accumulated his first \$2,000,000 legitimately in the fur trade. He then, with great foresight, invested in real estate in the city of New York, and it has grown to \$70,000,000 in value.

A few years ago some men in public life were criticized for the purchase by the Government of Rock Creek Park, holding that it was an expenditure which ought not to be made, but I suppose Rock Creek Park would sell to-day for at least twenty-five times what we paid for it. Mr. Seward was denounced from one end of the country to the other for investing \$12,200,000 in Alaska. Yet we know that that sum is a mere bagatelle so far as the value of that great Territory is now concerned. So with the Astor estate. What cost a thousand dollars 50 years ago in New York City is worth fifty or one hundred or two hundred times that amount to-day in certain localities. So in dealing with an estate of that kind I think we ought to differentiate between that and estates accumulated in different ways.

I simply rose to say that I am glad the Senator from Nebraska recognizes that fact, and does not do as a great many men in public life do, denounce every man who has accumulated a large fortune, because some of these fortunes have been accumulated legitimately and honestly, just as the Astor estate has been accumulated.

Mr. NORRIS. Mr. President, I believe that a proper system of taxation would go a good ways, at least, to prevent the accumulation of these fortunes by the increase in the value of property. I believe that more fortunes are made on account of the increase in the value of real estate than in any other way. Many times the man who makes the investment has not exercised any particular ingenuity or wisdom. Circumstances over which he has no control have made the property very valuable. We have not yet in our States devised a system of taxation that has been just or has been able to keep down these big fortunes. If we could meet nationally that question, I would be glad to meet it. I would be glad to help, as well as I know how, to devise a system of taxation that would prevent the accumulation of large fortunes. But that would not do away with the large fortunes. It might do away with some of them, but there would be a great many of them that would be accumulated anyway under any system of laws or government.

Mr. WORKS. Mr. President—

Mr. NORRIS. All right, I yield to the Senator.

Mr. WORKS. I should like to ask the Senator from Nebraska whether he has estimated the amount of money that would be realized by the Government as the result of the adoption of this amendment?

Mr. NORRIS. No; I have not, Mr. President. I have no estimate. Of course it is a very uncertain proposition.

Mr. WORKS. Then I assume that the amendment is not offered with a view to raising needed revenue for the Government.

Mr. NORRIS. I presume the Senator from California was not in when I began my remarks. I explained a provision in the amendment that I thought would result in the different States passing the necessary laws and, in fact, getting most of the revenue that is provided for here. I have a provision in the amendment, I will say to the Senator, that I think would result in giving it practically all to the States.

Mr. WORKS. I am so strongly in sympathy with every effort to limit the great fortunes and to prevent their accumulation that I am liable to be tempted to vote for a measure of this kind, that ought not to appeal to my sense of justice. If it were necessary to raise funds for the Government by an inheritance tax, I should be entirely in sympathy with the idea of making the holder of a great fortune pay more than his

proportionate share or percentage toward that burden. Upon the other hand, it does not seem to me to be an act of justice or proper and appropriate to levy a tax of this kind simply as a means of taking away from a man the fortune that we have allowed him to accumulate.

Mr. NORRIS. Will the Senator tell me a single instance where that could possibly occur if this amendment became a law?

Mr. WORKS. I think it would necessarily occur.

Mr. NORRIS. It could not happen. The Senator has supposed an impossibility. It does not take away from any man anything that he has now.

Mr. WORKS. It is practically the same thing under the law of descent.

Mr. NORRIS. Indeed, it is not.

Mr. WORKS. Of course his descendants are entitled to receive money as if it were their own.

Mr. NORRIS. Why?

Mr. WORKS. You take it away from them.

Mr. NORRIS. Why are his descendants entitled to receive it?

Mr. WORKS. Partly because it is a law of the country and partly because—

Mr. NORRIS. Exactly; because it is a law.

Mr. WORKS. If the Senator will allow me, it is the uniform sentiment of this country that a man's children or his descendants should inherit whatever he may leave, and we are not only depriving them of what the law gives them, but what the sentiment of the country justifies. It may be possible that our laws are wrong and that that sort of thing ought not to be allowed, but I have not reached that frame of mind yet. It does not seem to me that it is proper to go to the extent the Senator proposes to go in dealing with these fortunes.

Mr. NORRIS. I will show the Senator how far we go with some of these fortunes. I want to say in answer to what the Senator from California has said that what I have proposed as an amendment to the bill would not take a dollar from any man. The reason why I have a right to inherit is because the law gives me that right. This would change that law to some extent and take away from me the right to get \$40,000,000 or \$50,000,000 that I had never crooked my finger to create. Is that unjust? Is there any unfair thing about that?

Mr. WORKS. Mr. President—

Mr. NORRIS. I yield to the Senator.

Mr. WORKS. That would not be unjust if we were taking this money for legitimate purposes to satisfy the needs of the country. In other words, I think the theory upon which the Senator proposes to take away the right that is given by law is a wrong theory.

Mr. NORRIS. The principal object of my amendment is to break up the swollen fortunes. The revenue would mostly, and perhaps eventually, all go to the States, and would to that extent reduce their taxation. Of course, there is always an objection to every proposition. We never can all of us agree as to just how we ought to do a particular thing that we all agree ought to be done. Here everyone agrees, as far as I know, that these immense fortunes are an evil and a menace, but when we come to any method that would in any way interfere with their being entailed from generation to generation and made still larger, then we are going to fall out about the method we take to do it.

This proposition simply says to A, when he becomes under the law entitled to receive a million dollars from somebody's estate: You can not take that property which you did not create; you can not have that immense fortune unless you give the Government, under whose laws that fortune was made, whose people really made it, a proper share of it. It is to give back to the people, in effect, what they have created, what they have in fact earned. Mr. President, every one of these big fortunes has been made, not by the man who possesses it, but by thousands and even by millions of men all over the country, whose labor has made the large fortunes possible.

Now, let us take the illustration I was starting out to give some time ago, when I was interrupted, and see the effect this would have on young Mr. Astor. He got from his father's estate, in round numbers, \$80,000,000. I want to pause again to say that I do not know Mr. Astor. I have nothing in the world against him. As far as I know, he is a perfectly honorable and honest gentleman. I know that I would not harm him if I could. I would not take away from him one single cent that I believed I had no right to take. But who is there, here or elsewhere, who will say that he ever so much as crooked his finger toward the accumulation of the \$80,000,000? He is the son of the man who owned it, who in turn got it from his father, and so on. That is his only claim for it.

What would this law have done to this bequest had it been in force? His share of that estate, as I have stated, was \$80,-

000,000. The tax on \$80,000,000, as will be seen from the table that I will print in the RECORD, would be \$43,799,500. That would have left Mr. Astor, out of the \$80,000,000, a little over \$36,000,000. Is that robbing a poor man? Thirty-six million dollars came into his lap without his ever sweating a drop for its accumulation, without his ever making an effort either with his hands or brains. He had been raised on the income of it. He already had spent for his benefit the income of it, a million dollars, and here we are going to pauperize him by this unjust proposition and turn him loose upon a suffering world with only \$36,000,000 and two or three hundred more thousand for spending money. That is not much of a hardship. I do not believe there is one of us here who would not feel as though we had been punished very hard if we had been taxed so little that we had \$36,000,000 left.

Mr. President, what could Mr. Astor do with \$80,000,000 that he could not do with \$36,000,000? I want to tell you that it is beyond the power of money to accomplish everything. The man with \$36,000,000 can get everything that the man with \$80,000,000 can get as long as it is legitimate. He would have left with this \$36,000,000 more than any one man ought to have, and there is not any injustice in it. It would be more than any man could possibly use or enjoy. It was not his property. The millions of people of the United States made that fortune as I showed awhile ago.

Let us take another illustration. Suppose this amendment that I have offered were the law and some one became entitled under a will or the intestate law of a State to \$1,000,000. Let us see what he would have to pay to get that million. He would have to pay \$49,500, and he would not feel it. If it was taken when he was not around he would not notice the difference in the size of his pile. If the balance was in dollar bills he would not have in his lifetime sufficient leisure time to count it to see whether he had lost any. He could not tell the difference. So, Mr. President, it seems to me that this provision that I have proposed here is no injustice to any man, but that it will have a tendency to break up the entailing of these large fortunes, giving a man who has them the right to do the breaking up himself, if he wants to, by dividing the fortune up in parcels that are small enough to entirely avoid the law.

Mr. SUTHERLAND. Mr. President—

The PRESIDING OFFICER (Mr. ASHURST in the chair). Does the Senator from Nebraska yield to the Senator from Utah?

Mr. NORRIS. I yield.

Mr. SUTHERLAND. I want to say to the Senator from Nebraska that with very much he has said I entirely sympathize. I have for many years been in favor of an inheritance tax; we have had in my own State a very good inheritance-tax law which has resulted in bringing a great deal of revenue to the State without any injury to the persons who have been taxed; but I think the Senator's proposed scheme of taxation is fundamentally wrong in some particulars.

In the first place, the Senator makes no difference between property which descends directly to the wife and children and persons who are directly dependent upon the deceased and—

Mr. NORRIS. Will the Senator let me answer that before he goes to the next proposition to which he has an objection?

Mr. SUTHERLAND. I have not quite finished my statement about that—property which descends or is willed to collateral heirs. This is what occurs to me about that: Here is a man who has a widow and a family of children, he has accumulated through a lifetime a hundred thousand dollars, which is not a swollen fortune in these days, at any rate; that hundred thousand dollars safely invested in most communities would produce an income of about \$5,000 per annum. Five thousand dollars per annum to the family of that man, when you come to consider the fact that he has earned the money which he has left to them, is not an unreasonable income. I do not think that the bequest of property or which descends by operation of law, when it amounts to that sum of money or even to a larger sum ought to be taxed at all. I would be in favor of taxing it if it went to a collateral heir, who had nothing to do with earning it, but not in the case of an estate of a hundred thousand dollars to the accumulation of which the wife may have contributed her part, and which belongs to her as much as it does to the husband, and in many instances where the children have assisted to some extent. That ought to be excluded altogether. I think, in framing a Federal inheritance tax, we ought to exempt at least \$200,000 where it descends directly to the wife and to the children for their benefit. Of course, when we come to State taxation, which deals with smaller amounts, that perhaps ought not to be done. That is my first objection.

Mr. NORRIS. Allow me to answer that, and then I will yield to the Senator further after I have done so.

Mr. SUTHERLAND. Very well.

Mr. NORRIS. The Senator's first objection is more a matter of detail. I would not have any particular objection to a larger exemption than that for which I have provided. I have said nothing about direct and collateral heirs, because I did not want to encumber the proposition, so far as the Federal Government was concerned, with that question, which has many difficulties in it. In the case the Senator puts as to a fortune of \$100,000, let us see just what the tax would be.

Mr. SUTHERLAND. It would be \$500.

Mr. NORRIS. It would be just \$500. The first \$50,000 would be exempt; the next \$50,000 would be taxed at 1 per cent. That would not be a hardship in case the heir has to pay only \$500.

Mr. SUTHERLAND. I see no reason for taking a single cent from the wife and children under those circumstances.

Mr. NORRIS. The Senator so thinks on the theory that the wife and children helped to make the \$100,000.

Mr. SUTHERLAND. Whether they did so or not.

Mr. NORRIS. I would not quarrel with the Senator two minutes about making the exemption higher, so far as I am concerned, because it is the large fortunes that I wish to get at; but I do not think there is any hardship in the case the Senator puts. I do not believe this provision could result in a hardship. This tax imposed on \$100,000 under this bill would require the payment of \$500. There would be \$99,500, or practically \$100,000, left. That would bring more than \$5,000 income.

In the next place, I do not believe there are fortunes even as low as \$100,000 where the children do very much toward their accumulation; but, on the other hand, they have been an instrumentality of expense during the time of its accumulation. I can see the man who has a little home, working a little farm, or working by the day in a factory, who is worth \$500 or \$800, or perhaps \$1,000 or \$5,000, with his children at work and his wife working, and they are all equally interested in the accumulation of their little income. In that case all of those people have an interest, and they ought to be protected in the combined income of the family; but that will not apply in a case of even \$100,000, where we come to the tax. In those cases the members of the family by their own efforts have not accumulated the fortune, as a rule. There may be a few exceptions, but I have not known of any in my lifetime. So, while I would be willing to concede all that the Senator has claimed, yet if it were necessary to get this enacted into law I would not stop to argue it; but it is not very important.

One other suggestion the Senator has made, and that is in regard to collateral and the direct heirs. My theory was that I would leave the exemptions so large that if this bill became a law it would necessarily follow—not necessarily, but it would follow—that all the States would enact inheritance-tax laws so as to take as much at least as this law provides, in order to get the benefit of the remission provided for in the bill to the States, and they would undoubtedly commence lower down. Their object would be to raise taxes, and I confess that my principal object in the legislation that I propose has not been to raise revenue, but to break up enormous fortunes. I now yield further to the Senator from Utah.

Mr. SUTHERLAND. Another suggestion which I desired to make to the Senator was this: I entirely sympathize with the Senator's view with reference to the evils which result from the amassing of vast fortunes. I think it is one of the great evils which we have in this country to-day. To my mind, there are indeed two great evils; first, the evil of putting into the hands of a few men a vast sum of money or a vast deal of property; and then the evil, which lies at the opposite pole, the depriving of a vast number of people of even the common necessities of life. Those are the two things in our civilization that I think very greatly threaten it, and I would sympathize with any legitimate effort for breaking up both conditions of affairs to which I have referred.

I think it is a very great evil for any man in this country to have as much as \$50,000,000 or to accumulate in a single lifetime as much as \$50,000,000. It is a menace in and of itself, and will turn out to be so as it comes to be more and more understood—it is a menace to our scheme of civilization. So I quite agree with the proposition of the Senator from Nebraska. I myself have always advocated a graduated inheritance tax, making the tax larger as you go to the larger amounts.

The power to tax is the power to destroy, as has a great many times been said. There is no limit to it. We may utilize it either for the purpose of raising revenue or we may utilize the taxing power for the purpose of accomplishing an entirely

ulterior thing, as has been determined by the Supreme Court many times. So I do not quarrel with that proposition; but the thing that occurred to me about it was, if the Senator makes his rate of taxation so high that it amounts, when you get above a certain sum, to practical confiscation, does the Senator not think that there can successfully be devised methods of getting around that by incorporating, for example? Could not some individual who has a very large fortune, millions of dollars, knowing that a fourth of it or a half of it was to be taken if he should leave it to one of his heirs—could he not form a corporation and dispose of it in that way?

Mr. NORRIS. I do not know how he could. Of course, I do not know but that it might be possible, though personally I am not able to see now just how it could be done.

Mr. SUTHERLAND. Well, it has been done for other reasons. Wealthy men have, as I understand, incorporated their estates and have in their lifetime so arranged the shares of stock that they are not obliged to go through the probate court at all. I am not entirely familiar with the machinery of it, but I simply invite the Senator's attention to a danger of that kind.

Mr. NORRIS. That would be an evil if it is possible, and after it was enacted into law if it were found that such a thing could be done it would necessitate an amendment.

Mr. SUTHERLAND. In other words, we may sometimes defeat our own purpose, however good it may be, if our law be too drastic.

Mr. NORRIS. Does the Senator think that in the part of the amendment where it is provided that a bequest exceeding \$50,000,000 shall be taxed 75 per cent the tax is too great? The Senator must remember that that means that the first \$50,000,000 will be taxed at the lesser rates.

Mr. SUTHERLAND. Yes.

Mr. NORRIS. So that the 75 per cent would be only on the excess over \$50,000,000. Does the Senator think that is too great a tax?

Mr. SUTHERLAND. In one sense, Mr. President, no. I have always been rather conservative not only about matters of this kind, but about all matters. That is a matter of temperament; and I happen to have been constructed on the plan that I always like to know my destination before I make a start. When I know what the destination is, I may be quite willing to go there; but I do not like to proceed in a haphazard way.

I think, of course, that nobody is seriously injured if the whole amount of a fortune over \$50,000,000 were taken over by the State.

Mr. NORRIS. Speaking about going far, I will say to the Senator that I would not hesitate if I thought we had a right to enact that kind of law, to absolutely take everything above \$50,000,000.

Mr. SUTHERLAND. I think if the holding of such vast fortunes were impossible, it would be a very wholesome thing, so far as that is concerned. I have not the slightest doubt about it.

Mr. NORRIS. Of course, when we are exercising our taxing power I presume if we should take all of a fortune there would be danger of the law being held unconstitutional.

Mr. SUTHERLAND. I have not the slightest doubt—

Mr. NORRIS. I will say to the Senator that I have tried to go so far that the man who has the fortune would himself try to divide it up in lesser amounts. I have offered an inducement to have him do that. We have practically said by this provision, "If you do not divide up your fortune, we will do it for you just as soon as you die." The trouble with these millionaires is that they want to control their fortunes not only while they live, but after they are dead.

Mr. SUTHERLAND. I think such huge fortunes are exceedingly unwholesome, and I quite sympathize with everything the Senator has said about that. I have said the same thing myself. That has been my opinion for a good many years, and the suggestions which I am making to the Senator are not to be taken by him as hostile criticisms.

Mr. NORRIS. I do not so take them. I am very much obliged to the Senator for his suggestions.

Mr. SUTHERLAND. But they occur to me, and I make them for what they are worth.

Mr. NORRIS. I know the Senator is acting in the best of faith.

Mr. SUTHERLAND. The other suggestion which I think is worthy of a good deal of consideration in a matter of this kind is that which has already been made by the Senator from California [Mr. WORKS] as to what amount is going to be raised by this scheme of taxation. We have already imposed an income tax which has been greatly liberalized by an amendment

adopted on Saturday. If the original estimate made by the committee, that the first draft of the income-tax provision would raise \$100,000,000, is correct, the amendment as it now appears will raise perhaps \$150,000,000 per annum. If the Senator's scheme, even leaving out of consideration the immense fortunes, were adopted, I would venture to say that it would raise perhaps more than \$150,000,000 per annum.

Mr. NORRIS. It might raise considerable temporarily. We might get a large amount from the estates of some immensely wealthy men who happened to die immediately after the enactment of the law; but the Senator will realize that if this provision were put on the Federal statute books every State would get busy and pass laws that would be at least as drastic as this in order that they might take advantage of the benefit and get for their own treasuries the 95 per cent of the taxes paid as provided for in the amendment.

Mr. SUTHERLAND. I think the Senator's provision would raise for some time a very large sum of money per annum. If we add that to the amount which is to be raised by the income tax, there will be paid into the Treasury an immense sum of money which in itself will constitute a direct invitation to extravagance.

Mr. NORRIS. The Senator ought to consider that I presume within the next year practically all of the legislatures of the States will meet, and the Senator does not doubt that at the first meeting of every State legislature they would enact an inheritance-tax law in order to get for each State its share of the moneys that would accumulate on account of this provision?

Mr. SUTHERLAND. That is probably so, but, of course, in the last analysis neither the Senator nor myself need trouble ourselves very much about what will happen under this amendment, because, in all probability, it will not be adopted.

Mr. NORRIS. I am afraid that our friends on the other side have surrendered their conscientious convictions to caucus control; I believe this amendment would be adopted if it were not for the decree of the Democratic caucus against it.

Now, unless there is some other question which some Senator desires to ask me, I will yield the floor. I had about concluded when I was interrupted.

Mr. WILLIAMS. If the Senator from Nebraska has yielded the floor, I desire to make a correction. I find this morning in the Record that precisely the opposite of what was intended to be done on Saturday was done with regard to the amendment beginning on page 219. My motion was to disagree to the Senate committee amendment in the paragraph beginning on line 4, page 219, the Senate committee amendment itself being in lines 6 and 7, in the words "upon a form to be prescribed by the Secretary of the Treasury according to the nature of the case." The Senate committee amendment having been to strike that out of the House bill, my motion was to disagree to the Senate amendment and restore the language of the House bill there, and that was carried.

There is also a subsequent Senate committee amendment that came up later in the same paragraph of section 4, beginning in line 21, page 219, and ending with line 7, page 220. The motion there was to agree to the Senate committee amendment, but that Senate committee amendment is, according to the Record, disagreed to. I move to reconsider the votes in order that the mistake may be undone and the matter fixed right.

The PRESIDING OFFICER. The question is on the motion of the Senator from Mississippi to reconsider the votes by which the action referred to by him was taken on the amendments indicated.

The motion was agreed to.

Mr. WILLIAMS. In lines 6 and 7, page 219, I move to disagree to the Senate committee amendment there.

The SECRETARY. It is proposed to strike out the words "upon a form to be prescribed by the Secretary of the Treasury, according to the nature of the case."

Mr. WILLIAMS. Now, the question will come up upon the motion to agree, and by voting "no" we will disagree to the amendment and the language of the House bill will be restored.

The PRESIDING OFFICER. The question is on the amendment.

The amendment was rejected.

Mr. WILLIAMS. Now, I move to agree to the Senate amendment beginning in line 21, page 219, and terminating in line 7, page 220.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment referred to by the Senator from Mississippi.

The amendment was agreed to.

Mr. CHILTON. Mr. President, I do not know whether or not the Senator from Nebraska desires a vote upon his amendment at this time.

Mr. NORRIS. No; there are two or three Senators who desire to speak upon it.

Mr. SHERMAN. Mr. President—

The PRESIDING OFFICER. Does the Senator from West Virginia yield to the Senator from Illinois?

Mr. CHILTON. Of course I will yield for a question at this time, but I desire to submit some observations to the Senate, and I presume this is as good a time as any to do so.

I should apologize, Mr. President, for saying anything upon the pending bill, but the debate has taken a very wide range and, rather than apologize, I will say to the Senate that I will occupy only a few moments of its time.

The PRESIDING OFFICER. The Senator from West Virginia is recognized.

Mr. CHILTON. Mr. President, the present bill has been in the Senate, with a favorable report from the Committee on Finance, since the 11th day of July. I believe that every Senator upon the minority side of the Chamber, except those who are on the sick list, has addressed the Senate at least once, some of them twice, and some of them many times, and some have made the same speech several times. Every section of the bill has been debated, and every objection that could be urged has been presented and discussed. Hundreds of amendments have been offered. Many days of discussion have been given to some of them, and if there be any source of information as to the duty of taking the people and the industries of this country out of the darkness of the Payne-Aldrich system into what we propose as the light of a new system, then it has not been suggested. It is difficult to imagine what it might be. Some one upon the other side of the Chamber said the other day that a new day is coming, and one of the leaders of the Democracy responded that the new day had already come. I want to correct both of them by saying that the people have declared for the new day, and are now patiently waiting, and have been waiting since the 4th of March last, for the party who promised it to usher it in. If there ever was a convert to and a believer in the doctrine—call it new freedom, progressivism, or what you may—that nothing should stand between the representative and the people, and that nothing ought to debar a majority of the voters of this country from having anything they want, consistent with the natural and constitutional rights of each individual, that convert is the Democratic majority. Formerly this was the belief of a majority; now it is the living conviction and the expressed party demand of the Democracy. We on this side believe that each representative of the States and the people here should cast each vote as if a majority of the people of his State were present and the representative was casting the vote simply because it is inconvenient for the people to cast it for themselves. But ever since this Government has been a government it has been administered by political parties, and as long as it shall be a government of the people that system will be a necessity. Once destroy the right or the power of the people to express themselves here through their political organizations and the Government will soon become a prey to personal and financial organizations, beside whose misgovernment the few objections to political organizations will be quite trivial.

In every State in this Union governors, legislators, Congressmen, and Senators are elected by political parties, and while strife between political parties has often been upon issues which were not real, still the essential fact remains that in some sort of a way political parties get together and each nominates candidates for governor, for Congressman, for members of the legislatures, and for United States Senators, and they elect them upon platforms or principles always enunciated before the people pass upon the merits of the candidates or of the political party. The primary-election system, the groundwork of election reform, recognizes parties. Indeed, it is built upon the essential truth that this Government will be run by political parties, and that nominations require, therefore, all the safeguards of a general election. We can not reform political parties by abolishing them. Recognizing that party government has come to stay, the people have demanded that primaries and other reforms shall regulate them. The Democrats of the Senate have held an open, fair primary on this bill and have elected it. In the last election there were three great political parties, which it may be now said were, at the beginning of the campaign, in sight of the Presidency and within reach of controlling the legislative branch. These were the Democratic Party, its ancient enemy the Republican Party, and the new Progressive Party, organized by that extraordinary man, who, as member of the legislature, civil-service commissioner, police commissioner, Assistant Secretary of the Navy, Vice President, and President of the United States, has measured swords with the great men of the earth, and who has distinguished himself, in his private capacity as historian, scholar,

editor, and naturalist, and crowned his achievements in 1912 by taking up the handicap of bolting the Chicago convention and organizing, within the space of four months, a political party which got more votes and carried more States than did the Republican Party. Great as was this achievement, and much as I am ready to concede of intellectual and personal force and political prowess to the eminent citizen who led it, I am forced to believe that less was due to his personal powers than to his acuteness in striking at the psychological moment. It can hardly be doubted now that the revenue bill now upon the statute books—the Payne-Aldrich bill—was, at the time of the assembling of the Republican convention in Chicago in 1912, the most unpopular statute, barring the alien and sedition laws of Adams's administration, that the people ever started in with a firm determination to repeal. While it may be denied in certain quarters now, still the sober judgment of the country felt then as it feels now, that this law was passed in violation of the solemn promise of the Republican Party made in 1908 to revise the tariff downward.

It must be admitted that the words of the Republican platform in 1908 do not use the word "downward" in this connection, still the construction put upon the platform by the party leaders, and especially by the candidate for the Presidency at that time, made it clear enough that not only was a revision upward not anticipated, but that a revision downward was intended. During the debate upon the bill in 1909 the meaning of the platform and its contemporaneous construction by the leaders of the party was thoroughly ventilated, and anyone who reads those debates is forced to the conclusion which I have stated. It will serve no good purpose to go into the details of the manner in which the Payne-Aldrich Bill was passed nor to analyze its schedules for the purpose of showing that the indictments against the bill by what was then known as the insurgents were justified. I do say that when the campaign of 1912 opened no party which apologized for the law or which did not promise to repeal it or correct what the people believed to be its inconsistencies, enormities, and wrongs had any sort of chance to be successful in that election, and when by the fortunes of war or the manipulations of committees, not for me to decide, it became a foregone conclusion that the President who signed the Payne-Aldrich bill and who "swung around the circle" and delivered a series of speeches in its defense, would be the nominee of the Republican Party, it ought to have been apparent to anyone who deserved the name of politician or statesman that that party was doomed to defeat and, as I shall show later on, the platforms of every other political party and the result of the vote in November following demonstrated the correctness of this view. We may differ upon details, we may differ upon the free list, the cost of labor in certain productions at home and abroad, the desirability of putting trust-made articles upon the free list, and how to graduate the income tax, but if we shall try to record in our action here the vote of the people of the United States in 1912, I am forced to say, with the greatest respect for anyone who may differ with me, that any bill which gives the people sufficient revenue to run this Government, which substantially tries the experiment of reducing the high cost of living by taking some of the taxes from the necessities of life, and which recognizes the consuming public as a factor to be consulted, is much preferred by the voters to the law now on the statute books.

At the election there were cast the following votes for each of the prominent candidates for the Presidency: For Wilson, 6,293,454; for Roosevelt, 4,119,538; for Debs, 300,672; Chafin, 206,295; and for Taft, 3,484,980. In other words, the party which stood for the Payne-Aldrich bill received about 23 per cent of the vote cast, while the other three leading parties together received approximately 75 per cent of the total vote. It is somewhat remarkable that the platforms of 1912, enunciated by the four leading parties in the country, should so soon be forgotten. It is even more remarkable that the leading men in public life should in discussions on this floor base an argument against this bill upon an alleged fact, which a very little investigation would disclose was the old story of the wish and the thought and thence to the belief and its acceptance.

The junior Senator from Wyoming, in a recent address to the Senate, took the position that all the votes cast for Taft and for Roosevelt in the election of 1912 were votes in favor of a protective tariff, and it was because of that position that I made the calculations and looked up the story of the election returns already given. However, it is far from our purpose to allow the position of the Senator from Wyoming from any standpoint to go unchallenged. The most casual reading of the Progressive platform will show that every intelligent vote cast for Roose-

velt was a specific rebuke to the Payne-Aldrich bill. I have found in that document the following strong language:

We condemn the Payne-Aldrich bill as unjust to the people. The Republican organization is in the hands of those who have broken, and can not again be trusted to keep, the promise of necessary downward revision.

There can be no mistaken view about the meaning of this language. I call attention especially to the charge that the Republican Party has broken faith with the people and that it can not be trusted to keep the faith, and that the Republican organization was not competent to revise the tariff downward. I leave it to a candid public to reconcile the vigorous English just quoted with the claim of the Senator from Wyoming.

Again quoting from the first, last, and only declaration of the Progressive Party:

We demand tariff revision because the present tariff is unjust to the people of the United States. Fair dealing toward the people requires an immediate downward revision of those schedules wherein the duties are shown to be unjust and excessive.

Assuredly if any voter would vote for that clause in the Progressive platform, he would be amazed if told that he did so in order to indorse the Republican program on the tariff. But I quote again from the same platform:

Primarily the benefit of any tariff should be disclosed in the pay envelope of the laborer.

Having denounced the present law as unjust to the people, and having declared that the Republican organization was in the hands of those who had broken faith with the people and could not be trusted to keep the promise of necessary downward revision, it is a most modest claim to insist that the clause just quoted meant to express the conviction of the Progressive Party that the then lean pay envelope of the laborer was evidence of the broken faith of those who cry "protection to labor" into the ears of everyone who makes an effort to put business upon a competitive basis by reforming a condemned revenue system. It certainly requires no excessive strain upon credulity to construe the Progressive Party's demand for "an immediate downward revision," its gentle reminder that the Republican organization could not be trusted to keep a promise, and its sarcastic generality about the pay envelope, when taken together, as an indictment against that kind of protection then in the public mind, the result of the past performances of the Republican Party. But let us quote again from the same document:

We declare that no industry deserves protection which is unfair to labor or which is operating in violation of Federal law.

Can anyone make good the claim that these declarations are in accord with the Republican position upon this floor, demanding protection whether or not it is enjoyed by trusts that control the greater part of the product, many of which have been convicted of violating the Sherman antitrust law? Is there a clause in the Payne-Aldrich tariff bill which holds out to labor any hope that it will get any part of the increased cost of an article due to the protective tariff in any other way than through demands of its organization or the law of supply and demand in labor?

In view of the fact that at the time the clause which I have just read was written the Republican Party had been in control of the Government for over 15 years and strikes were prevalent in many of the great textile industries, as well as in many other industries whose products were supposed to have been protected for labor's benefit by the Payne-Aldrich bill, what could have been in the mind of the party which announced this plank except the Republican Party, its platform, its policies, and the then very apparent failure of labor to get its share of the high tariff through the pay envelope? But there is another plank in that platform equally as conclusive upon the point which I am trying to make. In view of the absence of much consideration for the consumer upon the part of a section of the minority now claiming sympathy with the Progressive platform, the clause which I am about to quote is interesting. It reads as follows:

We believe that the presumption is always in favor of the consuming public.

That sounds more like a message of President Wilson or the report of the present Finance Committee than even acquiescence in, much less indorsement of, the Republican position upon the tariff. It may be set down that whenever the consumer is mentioned in a platform it is not the Republican platform. Whenever the consuming public is to be a factor in framing a revenue bill it is a safe guess that the Republican Party is not in a majority in Congress. That this peculiar language was used at that particular time is a mountain of evidence that the leaders of the party who framed that platform were getting far away from the old stand-pat Republican idea of the tariff. They were anxious that the voters should under-

stand that the new Progressive Party did not propose that the Democratic Party should have a monopoly upon the idea that the consuming public, the largest part, indeed all, of the population, should have not only consideration but favor, if any should be distributed, in framing the tariff. It is now a part of the history of this debate upon the pending bill that the Democratic members of the Finance Committee have shown that it is the purpose of our party to give the presumption always in favor of the consuming public, and in doing so they have followed not only a time-honored principle of the Democratic Party, but the exact rules laid down by the Progressive Party for reforming the tariff. It is true that the platform of the Progressive Party favored a tariff commission to report to the President and to Congress. But, consistent with its other declarations which I have quoted, it made the following qualification:

The work of the commission should not prevent the immediate adoption of acts reducing those schedules generally recognized as excessive.

So careful were the framers of the Progressive Party platform to acquiesce in the demand for immediate revision that it made it a part of its covenant that its demand for a tariff board should not be used as an excuse to prevent the immediate downward revision of the tariff.

Therefore I say that the Democratic Party is amazed to hear it claimed upon this floor that a vote for Roosevelt in 1912 was a vote for a protective tariff, as understood and announced by the Republican members. The exact contrary is the case, as the quotations which I have made from the platform verify.

But the hopelessness of the Republican position on the tariff, in any issue before the masses, is apparent from another factor in the recent election returns.

There were 900,672 votes cast in the election of 1912 for the Socialist candidate for President. Let us see whether or not, by any fair construction of the language of the Socialist platform, these votes were cast in favor of the Payne-Aldrich tariff bill or the protection system which the framers of that bill are advocating at this time. In the Socialist platform, under the head of "Political demands," clause 3, we find the following:

The gradual reduction of all tariff duties, particularly those on the necessities of life, the Government to guarantee the reemployment of wage earners who may be disemployed by reason of the tariff schedule.

Comment is hardly necessary. I could leave that language to speak for itself. It demands a reduction of all tariff duties, not some, but lays particular stress upon those duties levied on the necessities of life. There is just as much reason for claiming that the 900,672 votes cast for Debs should be counted in favor of a protective tariff as understood by the Republican Party as to make such a claim for the vote cast for Roosevelt.

It is useless to quote here from the Democratic platform, but with the permission of the Senate I will insert the Democratic tariff plank of 1912 as a part of my remarks:

We, the representatives of the Democratic Party of the United States, in national convention assembled, reaffirm our devotion to the principles of democratic government formulated by Thomas Jefferson and enforced by a long and illustrious line of Democratic Presidents. We declare it to be the fundamental principle of the Democratic Party that the Federal Government under the Constitution has no right or power to impose or collect tariff duties except for the purpose of revenue, and we demand that the collection of such taxes shall be limited to the necessities of government honestly and economically administered. The high Republican tariff is the principal cause for the unequal distribution of wealth; it is a system of taxation which makes the rich richer and the poor poorer; under its operations the American farmer and laboring man are the chief sufferers; it raises the cost of the necessities of life to them but does not protect their product or wages. The farmer sells largely in free markets and buys almost entirely in protected markets. In the most highly protected industries, such as cotton and wool, steel and iron, the wages of the laborers are the lowest paid in any of our industries. We denounce the Republican pretense on that subject and assert that American wages are established by competitive conditions and not by the tariff.

We favor the immediate downward revision of the existing high and in many cases prohibitive tariff duties, insisting that material reductions be speedily made upon the necessities of life. Articles entering into competition with trust-controlled products and articles of American manufacture which are sold abroad more cheaply than at home should be put upon the free list.

We recognize that our system of tariff taxation is intimately connected with the business of the country and we favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industry.

We denounce the action of President Taft in vetoing the bills to reduce the tariff in the cotton, woolen, metal, and chemical schedules and the farmers' free-list bill, all of which were designed to give immediate relief to the masses from the control of the trusts.

The Republican Party, while promising tariff revision, has shown by its tariff legislation that such revision is not to be in the people's interest, and, having been faithless to its pledges of 1908, it should not longer enjoy the confidence of the Nation. We appeal to the American people to support us in our demand for a tariff for revenue only.

It can thus be seen that the Democratic Party, the Progressive Party, and the Socialist Party, which together cast over 75 per cent of the total vote of 1912, made a direct attack upon the Payne-Aldrich tariff bill. If it is to be said that the Socialist plank was a flank movement instead of a front charge,

it is all sufficient to fall back upon the vote of the Democratic and Progressive parties, which together gave over 10,300,000 votes. The Democratic Party did not condemn the law upon the statute books in any more vigorous language than did the Progressive Party. The latter condemned it, in terms, as "unjust to the people" and demanded a tariff revision because of its "injustice to the people." Anyone who votes against the present bill can make his own reckoning with the voters as we who intend to vote for it must do; but if the Progressive Party were in the majority and making this bill and should present one on the lines suggested by the amendments which have been offered by the Members of the Progressive Party, or by those who call themselves Progressive Republicans, or by those, if any such there be, who have not yet made permanent political alliances and could be happy with either the Republican Party or the Progressive Party, "were t'other dear charmer away." I would frankly say that I would prefer any such bill to the Payne-Aldrich tariff and would readily vote for it rather than go back to my people and say I had missed an opportunity to substitute for the present condemned law a bill which more nearly meets the demands of the platform of the political party to which I belong. The day may be put off, but some time in the near future every Senator upon this floor must settle with his own constituents whether or not the bill offered by the Democratic Party is better than the Payne-Aldrich bill, and must make up his mind to go back to his people and explain why he voted to leave upon the statute books a bill condemned by over 75 per cent of the voters. And what a condemnation it was!

It seems to me that Mercy must have stood by Justice as the roll of the States was called in that election, and remembering Lincoln, Grant, Garfield, and Blaine, the great Dolliver, and the other eminent men and achievements of the Republican Party must have fairly shuddered when she realized that the roll call had proceeded down to the letter "T" without a single score standing to the credit of that party. She comprehended that there were few from which to select and that something must be done quickly to prevent the Republican Party from drawing a blank in the presidential election. There was but one State under the letter "U." In the "V's" there were Virginia and Vermont, but Virginia, the mother of Presidents and the birthplace of Wilson, was not to be considered. In the "W's" there were Washington, West Virginia, Wisconsin, and Wyoming. Washington was guarded by her alert junior Senator; West Virginia had been shaken too deeply by the new freedom to hold out hope; and Wisconsin's senior Senator had done his work too well for that State to fail to draw the broad distinction between true reform and the succotash of Rooseveltism or revert to standpattism; Wyoming, while accounted as a standpatter, had suffered and had felt the throb of the progressive movement from Sundance to Bitter Creek, and even her distinguished leaders on this floor who still cling to the old name and "plotted at Mentone" with their Bourbon brethren against the new Napoleon could not hold out even a hope to the willing goddess. There were no "X's," no "Y's," no "Z's." Therefore Mercy had a small list from which to choose and little time to make the choice. Justice was proceeding with the roll call, for she cared nothing for memories, names, or consequences. For the gentle Mercy it was then or never. She grabbed from the remainder of the list all that was possible. From the letter "U" she took the one State of Utah, from the "V's" she chose Vermont, and these two, which together had eight votes, were "snatched from the burning" as the seed corn of the reactionaries. Upon the granite green hills of the one and beside the dead sea waters of the other she planted the tattered flag of those who deliberately chose to stand with their faces toward Nebuchadnezzar and the Ptolemies for political inspiration. The followers of those two tiny, far-apart flags, like the monarchists of France, with their faces to the setting sun, still argue against the progress which engulfed them, and they now contend, backed only by eight little votes, that the Democratic Party is not commissioned by the people to revise the tariff downward because it did not receive a majority at the last election and Mr. Wilson was elected by a mere plurality.

That fact may be conceded without lessening the significance of the result from the standpoint of either reason or history. The fact is that the present law and those responsible for its passage were politically overwhelmed. The result shows that had the question been put, "Shall the Payne-Aldrich law remain permanently as a part of the statute law of the country?" the result would have been such a negative as probably to have swept even Utah and Vermont to the side of progress. When the voters went to the polls in 1912 they knew that a plurality was sufficient to carry any State, and they thoroughly understood that the election of Mr. Wilson meant that his party would revise the tariff downward and would

restore a revenue tariff and destroy the one formed for the purpose of protecting certain interests. The result in every State carried by Mr. Wilson by a plurality has the same significance to him and his party as if it had been carried by a clear majority over all. Governors, Congressmen, and members of the State legislatures are elected in the same way; and this is the first time that it has ever been argued that a party must be false to its platform pledges because it did not carry every State necessary to constitute a majority in the electoral college by a clear majority. It was part of the compact made with the people in 1912 that if the Democratic Party should win by either a majority or a plurality then it would do exactly as it is doing now—revise the tariff downward in good faith so as to put business upon a competitive basis and make a tariff that is justified under the Constitution.

But Mr. Wilson is not the first President who has been elected by a plurality. Polk in 1844 lacked 14,125 votes of a majority. Taylor in 1848 was short 150,000 votes of a majority. Lincoln in 1860 received about 900,000 votes less than a majority. Hayes in 1876 was not elected at all, but occupied the presidential chair four years against an admitted clear majority of the popular vote for Tilden of nearly 200,000; Garfield in 1880 had over 300,000 votes less than a majority; Cleveland in 1884 was 200,000 votes short of a majority; Harrison in 1888 received 98,017 votes less than Cleveland and was short of a majority of the whole vote by nearly 500,000; and Cleveland in 1892 lacked 945,515 votes of a majority of the votes cast.

I know that the party which now stands third on the list of political parties in the United States meets these lessons of history by the claim that in States like West Virginia and Nebraska, for instance, the electors for President were elected by only a plurality in 1912, and that for this reason Mr. Wilson's election can not be compared to the instances cited. But they forget that Cleveland in 1884 carried New York by a plurality of only 1,149, and that Lincoln's election in 1860 was due to the candidacies of Douglas and Breckinridge, which divided the opposition strength.

They forget that in the election of 1860 California gave Lincoln a plurality of less than 700 over Douglas, when there were over 40,000 votes cast for other candidates. Georgia cast its vote for Breckinridge by only a plurality. Kentucky was carried by Bell by a plurality; Louisiana voted for Breckinridge by only a small plurality; Maryland for Breckinridge by less than 1,000 plurality; Missouri for Breckinridge by less than 500 plurality. Oregon was carried by Lincoln by a plurality of a little more than 1,300, and there were 3,000 votes cast for the other candidates. Tennessee went for Bell by a plurality of less than 5,000 over Breckinridge, and there were 11,350 votes cast for Douglas. Virginia gave Bell about 300 over Breckinridge, and there were 8,000 votes cast for the other candidates.

In the election of 1876 Indiana was carried by Hayes by 5,500 plurality and there were 9,533 votes cast for Cooper.

In the election of 1880 Hancock carried California by a plurality of less than 100 with nearly 4,000 votes cast for the other candidates. Garfield carried Indiana by less than 7,000 plurality with nearly 13,000 votes cast for Weaver. In that election New Jersey was carried by Hancock by a plurality of 2,000 with over 2,800 votes cast for the other candidates.

In 1884 Cleveland carried Connecticut by a very small plurality. He carried Indiana by a plurality of over 6,000, with 11,000 votes cast for the other candidates. Massachusetts was carried that year by Blaine by a plurality of 24,000 when there were over 34,000 votes cast for the other candidates. Blaine carried Michigan that year by a plurality of 43,000, when there were over 60,000 votes cast for the third candidate. Cleveland carried New Jersey that year by a little over 4,000 plurality, when there were over 9,000 votes cast for the third candidate.

The broad claim that Mr. Wilson is a plurality President is admitted, but history shows that among the list of Presidents mentioned above others stand in the same category, and Mr. Wilson is therefore in law, in morals, and by precedent as clearly commanded to carry out the platform pledges of his party as were Polk, Taylor, Buchanan, Lincoln, Hayes, Garfield, or Cleveland. But at the election of 1912 Mr. Wilson got a plurality of over 2,100,000 and received 435 electoral votes to 89 for Roosevelt and 8 for Taft. Nothing in our history compares with this net result save and except the second election of Jefferson, in 1804, and the two elections of Monroe, in 1816 and 1820. But when it is noted that the combined vote for Taft and Roosevelt in 1912 did not equal the vote for Taft in 1903 by about 70,000 nor the Roosevelt vote in 1904 by about 20,000, all grounds for Republican consolation are wiped away.

But this bill contains an income-tax provision which taxes incomes by graded scales, commencing at incomes of \$3,000 and increasing the rate as the income is larger. The Democratic,

the Progressive, the Socialist, and the Prohibition Parties are committed to an income tax by their platforms. These parties together received 11,519,939 votes in 1912, or over 76 per cent of the total vote cast. The Republican Party alone omitted to mention the income tax in its platform. Its history commits it to the high protective-tariff theory. The Morrill, the McKinley, the Dingley, and the Payne-Aldrich Tariff Acts would drown the voice of any Republican and contradict any plank in the party's platform which would hint at the possibility of the immense incomes of the country supplying the place of a tariff tax taken from the food and clothing of the people. We congratulate it in its consistency in standing by the protective-tariff act, which is its own handiwork, and in refusing to indorse or even mention the income tax, demanded by over 76 per cent of the voters.

We expect the Republican Party to vote against this bill. There is no reason why a party which passed the existing revenue law, which indorsed it at the last election, and which failed to take any notice of the strong sentiment favoring an income tax should support our bill. But we do insist that those who vote against it upon the alleged ground that the free list is too extensive, and that the protected interests of the country can not stand the reductions made, take the risk of sorely disappointing over three-fourths of the American voters, who will demand more than a mere excuse for putting the graft of an unreasonable tax above the forward step of an income tax. The Democrats are willing to take all the honor of inaugurating an income tax. If those representing the other parties which have indorsed this reform are content to spend the rest of their lives in explaining why their names and their party's standards shall not be mentioned in history among the supporters of the first income-tax law, which no court can set aside, then we are content. If it be the wish of the minority in the Senate that there shall be added to our cup, now overflowing with the confidence of the people, the unexpected glory of not being compelled to share the honors of passing an income tax, then indeed we are blessed even beyond our deserts.

We are also criticized here because we as a party have been long considering the tariff and have given many weeks of close consideration to the bill now pending in a conference or caucus, whichever it may please our opponents to call it. The usual arguments against caucus government do not apply to the present situation. That argument can not be potential in a situation like that which confronts the Democratic Party now, until there be some way devised by which political pledges can be made in the concrete or until on every vote each Representative in Congress can be held directly responsible to the details of the popular will as expressed at the next preceding election. A majority of the Senators on this side of the Chamber were elected prior to the election of 1912, and while every member of the Democratic Party feels bound by the platform pledges of that year, still the very nature of the subject would leave some room for honest minds to differ upon the details of the various schedules of any bill that might be proposed. That the party is pledged to revise the tariff downward no one disputes. That we adhere to the doctrine of a revenue tariff no one worthy of the name Democrat would deny. That the history of the Baltimore convention and the campaign which followed commits every Democratic Senator and Representative to fight to substitute something better for the Payne-Aldrich bill is so plain that it occurs to anyone as self-evident that had the contrary been threatened by anyone during the campaign he would have been hissed from the platform and denounced by the party. Every one thoroughly understands that the Napoleonic tactics of dividing the stronger enemy is the only possible plan by which the Democratic program can be thwarted. With a clear majority of six in this body, the people of this country expected the Democratic Party to confer together and agree upon a bill which would substantially carry out the Democratic program, and then stand by the bill as interpreted by the combined judgment of the party as represented here. No one, two, or three sections of the country as represented in the Democratic Party in Congress could pass a tariff bill. It requires the united strength of the whole party to do so, and there is no way to get the united strength of the party except through and by a conference or caucus.

Our promises made at Baltimore were made by delegates representing every State in the Union. That convention did not differ from a conference or caucus except in size. It was in a sense an open caucus. Having made the pledges in a convention, there is no reason why they should not be interpreted in a similar convention of those charged with the duty of carrying out those pledges. Whether the Democratic meetings here be called conventions, conferences, or caucuses, the purpose of them is to interpret the Democratic platform and convert that inter-

pretation into law, and that this course would be pursued was the understanding of almost every voter who cast his ballot for Mr. Wilson. I often heard it charged during the campaign by those who supposed that the high protective theory still lived that individual and local interests would be subordinated to the action of the Democratic Party in caucus—a charge which I never denied. In the campaign the tariff was made a party issue, and it is too late for us to consider whether that was wise or expedient. The tariff was then and is now a party issue, and if there be a Democratic Party it must have a bill that stands for the party. In other words, it must be a party bill. We would have been subjected to ridicule and charged with bad faith had we not organized the Democratic Party here in the Senate, and, after composing any differences in detail, presented to the Senate a measure which is the party's interpretation of the platform upon which we staked our principal fight. This is the only practical course by which we can redeem the pledges made by the party and to be kept by the party. We shall therefore not be frightened by the continual reference on this floor to the fact that this bill was agreed upon in caucus. For every Democratic Member to meet in caucus to redeem the party pledges, and for each to decline to interpose any excuse to relieve him from the promises made by his party to his people, is a long step in the direction of progress and is a most wholesome sign that the people have a pretty good hold upon their Government. The most that can be said of the caucus charge is that every member of the Democratic Party in this Senate is not only willing but anxious to adopt a practical course by which the doctrine of responsibility to the people shall be a fixed principle of representative government. To let the people understand that there is a way by which the majority party can make good its platform pledges will outweigh any supposed unpopularity of the word "caucus." The people will readily distinguish between a caucus gotten up to dodge a promise and one whose purpose is to keep a promise. After all, the bill must speak for itself. If this bill does not square with our party pledges, it can be easily shown, and we are ready to take the responsibility.

The Democratic Party may now well profit by those instances in history when the dominant party failed to hold a party caucus in order to thrash out any differences as to detail. The Wilson-Gorman bill was passed in the Senate without any Democratic agreement. The Republicans got busy and emasculated it, and the 16 years of our party's wandering in the wilderness ought to impress upon us the lesson that such a precedent is not a safe one to follow. The Payne-Aldrich bill was passed without a party caucus by the majority party. As to whether or not the precedent has anything to invite us I will point to the empty seats upon the other side, to the 23 per cent of the total vote cast for Taft, to the eight votes for him in the electoral college, to the political complexion of the House of Representatives now and at the last session, and to the politics of the man in the White House. If the Democratic Party should be tempted to adopt the Republican plan of passing a tariff bill, I beg of them to take a look at that party now and be thoroughly reconciled to the plan which we have adopted at this session.

The attempt to hold up the President as a dictator in this legislation will neither frighten us nor will it find any lodgment except among those who want his administration to represent the last effort of the people to free themselves from a system of unequal taxation, which in the supreme test of 1912 was wanted by only 23 per cent of the voters of the country. What has the President done? He has delivered one message to Congress upon the tariff. It seems that that message has inspired terror in the minds of those who had capitalized for all future time, as they supposed, the right to tax the consumer, and that the defenders of the old system have imagined that the President, who wants to cancel a mortgage upon the brains, muscle, genius, and opportunity of the country, has been guilty of the same things which were necessary to be done in order to create the mortgage. They must not deceive themselves that in order to get rid of the Payne-Aldrich tariff bill it has been necessary to do those things by means of some of which that bill was passed. It is not surprising that the great trusts of the country should become nervous after reading the election returns. When the country saw a President of the people promptly call Congress together to carry out the mandate of the election, and read the patriotic, clear message which called upon the representatives of the people to keep the faith, of course there was alarm among those who lived in the tariff blockhouses and, in the language of the senior Senator from Mississippi, "walked upon stilts."

The message of the President was not an appeal to prejudice, nor to selfishness. It was a patriotic call to righteousness in government, to strict accountability, and a high standard of responsibility in our representative system. It breathed the

honesty of Cromwell and the stubborn courage of Jackson. No one could hear it or read it without a deep conviction that the President proposed, so far as in him lay, that government should be a most serious business, and that platforms looked to him after the election exactly as they did before. Does it seem strange to any school of politics in this country that we have a President who takes seriously the stump speakers and the leaders who during the campaign pledged the party's faith that if successful its President would see to it that the pledges of the platform would be sacredly fulfilled? That was the war-cry which nominated Mr. Wilson, which inspired the party during the election, and which was repeated upon every platform; and there is everything in the President's public life and addresses to carry home the conviction that he is the man who would do that very thing.

But he has not tried to influence Congress improperly. No one will dare to make such a charge. Let us be fair and perfectly frank with each other in discussing this matter. Jefferson, Jackson, Lincoln, Grant, Cleveland, McKinley, Roosevelt, Taft, and other Presidents kept in close touch with legislation and were freely consulted by party leaders in Congress, and they advised for or against legislation. Former Presidents have sent many special messages to Congress while legislation was pending. President Wilson has sent but one upon the tariff. The consternation which this message has stirred up is its highest compliment. *Æsop's fable* is in point. The fox nagg'd the lioness because the latter gave birth to but one offspring, whereas the fox gave birth to many. The answer of the lioness was, "Unused leonem," a liberal translation of which is "I give birth to but one, but it is a lion." President Wilson has given Congress but one message on the tariff, but it is a message. It justly excites those who thought that he might not have been in earnest. It is not a new thing for a President of the United States to have decided views upon public questions nor to express those views both publicly and privately. No one can point to an unconstitutional act of the President.

The only difference between the situation now and that which confronted some Congresses which have heretofore assembled is that the present President is known to be a man of learning who has devoted the best part of his life to the study of political economy, the history of his country, and the genius of its institutions. It is further known that he is a man of force, who is willing to take responsibility, and his advice and counsel would probably be more potent with an intelligent Congress, as it assuredly has been with the people, than were the advice and counsel of some Presidents who have preceded him. Certainly no one will blame him for taking the position that he will not, in the face of the promise to revise the tariff downward, sign a bill which does the reverse and then proclaim it as the best bill ever passed by Congress. Assuredly he can not be blamed for asking the Democratic Party to be true to itself and honest with the people. Whatever promises have been made by the party he is responsible for, just as much as is the Congress. It is not alone the party's promise; it is the pledge of every legislative and executive candidate elected. Is there anything strange that the joint obligor to the people of the United States shall ask and insist that his coobligor shall not default? And are we, the coobligor, to be amazed that our partner in the contract with the people asks us not to repudiate our obligation? I deny that the President has forced or attempted to force anything upon this Congress or has attempted to hamper any Senator or Representative in the discharge of his duties. He has used no power upon Congress except the moral force of an earnest man impressed with his responsibility. The people of the country understand the difference between a boss and a leader. This does not consist alone in difference in methods. They differ in methods and their sources of power and in their differentiation of self-imposed limitations upon the use of power. Neither politics nor statesmanship is more of an exact science than is personality or human nature. After all, the people alone are the judges of official conduct, and upon their judgment will depend the solution of the question whether or not a President is a boss or a leader. The boss and the leader are as old as civilization. The boss acquires power in any way possible and uses it for time-serving purposes, whether such purposes be patriotic or not. The leader acquires power by moral force and by appeals to reason and to patriotism. He uses that power for the public good as pledged and construed by the party or movement which votes for him.

While the President is the natural and elected leader of the Democratic Party in the great movement in which the party is now engaged, there has been no attempt by him to set aside the other leaders of the party nor to minimize the rights or prestige of those leaders. This Senate has followed the leadership of its Finance Committee, and that committee has taken the advice,

after full opportunity to be heard, of every member of the Democratic Party, and upon that party rests the responsibility of government at the present time. The President is not dictating to the Finance Committee nor to the Democratic Members of the Senate. He has taken an interest in the legislation which, when completed, will represent a covenant performed or broken. What we promised, President Wilson promised. What we do, he must approve before it becomes a law, and he must execute it afterwards. He would therefore fall very short of his responsibilities if he failed to take his place among the leaders of the Democratic Party in both the House and Senate and help the party to steer its ship—if I may use the same figure as that of the Senator from Iowa—not only past the Scylla of high protection, but past the Charybdis of agnosticism, panic, fear, uncertainty, and indecision upon the other side. We have no fears that the people will be deceived by the situation here. The last effort at tariff reform in this country brought forth the statement from the great Dolliver that the year in which that effort was made, to wit, the year 1909, would be made historical as the year in which there was a revision of the tariff downward, and the discovery of the North Pole by Dr. Cook. The President naturally uses every legitimate argument and influence to the end that some new Bull Moose Dolliver may not have grounds to assert humorously and sarcastically that the year 1913 occupied a greater page in history as the one in which the Democratic Party revised the tariff downward and Dr. Friedman gave to America a genuine tuberculosis cure, or in which Huerta restored representative government in Mexico. The President can not help it, if his party's promises should involve erroneous principles, but he objects that it should be unfaithful or ridiculous.

The Republican Party in 1909 needed what the Democratic Party has now—a leader who knows the people and who has no strings upon his pledges to serve them; who is impressed with their earnestness and in sympathy with their needs; who is sure enough of himself and his party to be human and practical in framing constructive legislation; who does not fear to work in a proper and legitimate way with the other leaders of the party in framing measures demanded in order to carry out the solemn compact made with the people by all of the legislative and executive nominees of the party. The whole party is now practically united upon a program of principles, but two of our number feeling constrained to dissent from our interpretation of the party's pledges.

Our friends on the other side profess to feel sure that we are mistaken and that our bill will bring disaster. They prophesied that even the threat to pass the bill would cause a panic. This last prediction might have come true if the country had not been fortunate enough to have an administration that took a different view of the duty of executive officers from that possibly supposed by some who made these predictions. There have been times when the gamblers in stocks and currency had only to show signs of a drunken pain in order to bring the Secretary of the Treasury to New York with the Government's millions. By depositing twenty-five to fifty millions in a very few banks the patient would sit up and take nourishment. Very soon he could move about sufficiently to annex a few more banks and trust companies and to absorb one or two dangerous industrial rivals, and then the patient would be discharged as restored, and the country would be asked to thank the patient without a word for the people's money that financed the cure and paid for the property that changed hands. It then paid to become financially ill in upper financial circles. The people now have a much firmer grip upon their Government. Financial pains now beckon the Treasury doctor to the people, not to Wall Street. The credits of the Nation, its ever-abundant cash, and its unparalleled influence are now assets of the Nation to relieve legitimate business in the small cities and towns which can not keep in touch with the stock ticker, and which do not feel like paying the penalty for mistakes in high finance and are not called upon to pay the high cost of artificial depression. The new freedom is in truth and in fact the possession of all the people, and their Government is a living example of it.

What has been done to free the executive department from private control and to make it a serviceable agency, under the law, for the public good we offer as a guaranty that the law which we propose will free business and will standardize the industries of the country upon the energies and genius of the people. Business ought to know by this time that it can not have a permanent status upon a high protective tariff basis. For the same reason that the people of a city will agitate against a well-recognized graft or special privilege to a few, the people of this country will never submit to a revenue system which is a tax in name but which gives the Government the smallest part of the tax and private interests the largest share.

Till the public conscience becomes seared and our citizenship ready to deceive itself with the mere name of public purpose as the justification for a tax upon consumption a high protective tariff must face attack at every election. There can be no industrial peace, no business stability till our tariff laws are framed upon the principle that any tariff tax is a burden upon all the consumers and must be justified upon the same reason as is any other tax. When our tariff policy shall become fixed and settled so that business can plan a long time ahead it will not be upon a high protective basis.

The opposition to this bill practically admits that it has not sufficient votes in the Senate to amend the bill and can not defeat it upon the final vote. We feel sure that they are correct in this opinion, and they are therefore responsible to the country for any further delays in the passage of the bill.

If business shall be held up, then the Democratic Party can very properly say that it has prepared a revenue measure, is ready to pass it, has the votes to pass it, and would pass it at once but for the fact that the country has not yet taken the progressive step which will force the Senate of the United States to so modify its rules as to bring debate in the Senate to an end at some time. My only consolation for this delay is that it will impress the country with the importance of forcing the Senate to amend its old, tiresome rules so that a majority can transact business.

We thoroughly understand that there are Members of this body who will feel a little nervous in saying to the country that they prefer the Payne-Aldrich tariff bill to the present one. We know that their discomfiture will not be relieved by the contemplation that the pending bill carries an income-tax provision, which guarantees to lift from the burdens of the people a large part of taxation and put that burden where it properly belongs. If they want to vote to retain the present law and against an income tax, they can do so, but they may well remember the votes by which the one was condemned and the other approved.

The Democratic Party is ready and willing to go to the country upon the proposition that its theory of the tariff is right and that the Republican theory is wrong. It is also ready and willing to have the country decide whether or not its income-tax measure is sound. It is likewise anxious that the Senate of the United States may go upon record to pass or defeat the measure. The country understands that the party that supports a high protective tariff, as announced by the Payne-Aldrich bill, has gained its last victory in many years. If the Democratic Party has any serious opposition in the near future, it will come from the Progressive Party or from some party with more moderate views than the Republican Party upon the tariff question. The Republican Party can not be brought to life again by protracting the debate upon this bill. The new Progressive Party is pressing forward for a hearing. It has burned its bridges behind and has its bayonets fixed for the charge, and the reactionaries can not drive it back to the rule of the few. It will not permit the Republicans to furnish the committeemen while the Progressives provide the votes. The Democracy understands that its campaign of education has been thorough and that a Progressive is only an overeducated Democrat, long on leadership and short on the Constitution, but nevertheless its chief antagonist is no longer the Republican Party.

Confident that this bill represents an effort made in good faith to redeem its pledges to the people; that it is on the right track; that it will bring relief; that it will help the consumer; that it will not injure legitimate business; that it will equalize tax burdens; that it will give opportunity to those now brow-beaten and held down by combinations that have monopolized most of the resources of the country and the avenues of distribution in most of the walks of life, the Democratic Party awaits the issue here with composure and welcomes an appeal to the country with confidence.

Mr. WARREN obtained the floor.

Mr. WILLIAMS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Wyoming yield to the Senator from Mississippi?

Mr. WARREN. I do.

Mr. WILLIAMS. On Saturday, by inadvertence, I neglected to offer an amendment which I offer now. In line 6, on page 171, I move to strike out the period and insert a comma and to add the language which I send to the desk.

The PRESIDING OFFICER. The Secretary will state the amendment.

The SECRETARY. On page 171, line 6, after the word "thereof," insert:

Except when such compensation is paid by the United States Government.

Mr. WILLIAMS. I will explain to the Senate that it has been a mooted point for a long time as to whether a United

States Senator is a United States officer or a State officer, and it was thought by some that if the exemption of State officers remained in the bill without this qualification all Senators' salaries might escape taxation under the income tax.

Mr. WARREN. Does the Senator wish a vote on the amendment now or to let it lie over?

Mr. WILLIAMS. I wish it passed now.

Mr. WARREN. Very well.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. WARREN. Mr. President, it would be an ungenerous foe indeed who could not congratulate his adversary on his winning. I believe I can say that the thoroughbreds of all parties, whatever their name, will respond to the cry, "To the victors belong the spoils." Of course, it is perfectly evident now whom the victor is to be. The spoils will naturally follow.

I congratulate my friend from West Virginia [Mr. CHILTON] upon the pleasure he has had while explaining how his President was elected by the minority, and the Democratic Representatives and Senators likewise. So it has happened before. The Senator says it is not a confirmed evil. I admit that. However, that does not change the fact. I am willing to accept the amendment as well made.

I observed as the Senator was proceeding with his speech he was somewhat guarded when he spoke of protection. He always spoke of it as high protection. But I think it is as well now, when we are to vote on this measure and when it is to go to the country, that the country should know just what it means. The fact is it means either protection is to end and we are to have absolute free trade or there will be some other bill that will pass in place of this measure in the not distant future.

I also observed that the Senator in his explanation of his party's accession to power challenged a statement that I made to the Senate that the Republican and Progressive Parties favored protection in their national platforms of last year. The Senator quoted part, claiming it was all of the Progressive platform on the tariff, in assailing my statement, but he failed to quote that item in the platform which reads:

We believe in a protective tariff which shall equalize conditions of competition between the United States and foreign countries, both for the farmer and the manufacturer, and which shall maintain for labor an adequate standard.

Had the Senator quoted this portion which I now quote and which I quoted before of the Progressive platform he would have refuted his own argument.

The Senator has been a little sarcastic about the divisions in the Republican Party. I would be the same if I were in his place. We regret it on our side, but we have had the advantages of differences on the other side in times past. They have been rather radical sometimes in the last 20 years, and I have no doubt those differences will appear again. If I am not very much mistaken, from the echoes we get out of the dark places where the caucus holds sway there are some progressive speeches. There are some progressive individuals in all caucuses and probably among members of the present dominant party. I do not wish them any harm. There can not probably anything worse happen to them than what has happened to us. It is all in the day's work.

Mr. President, I had not expected to take any further time, as the Senate has been generous enough to listen to me on two or three previous occasions, but I have been a patient listener, aside from the two or three times when I ventured upon the attention of the Senate. However, I want to state what my view is in short terms as to what this bill means and what the Senators on the other side expect it to lead to.

HOW WYOMING WILL FARE.

So far as the State of Wyoming, which I have the honor in part to represent, is concerned, it means absolute free trade from the first. Every item that my State produces for the market is to be sold in the market of the world with no benefits of protection while the producers of those items must buy their items in the protected market.

As the debate has progressed and the Senate amendments, both original and those offered from time to time, have been adopted, it has been perfectly apparent to me.

First. That the State of Wyoming is left high and dry on the rocks so far as protection is concerned, although she must buy largely in a fully or partially protected market.

Second. If I can judge, however, from what has been said in debate by the proponents of this bill, it will be but a short time before manufacturers and others who are now left partially protected will find themselves sliding down the toboggan rapidly to a final and absolute free-trade basis.

Third. That the socialistic idea of taking away from those who have and distributing among those who have not is the final goal toward which we are drifting.

Our markets for agricultural and manufactured products are to be opened up to the world and our supplies are to come largely from outside our own lines until wages in this country can be reduced to the level or below that of our foreign neighbors.

Already every product of Wyoming which that Commonwealth has to offer for sale—coal, cattle, sheep, meats, wool, hides, grain, and so forth—has been stripped of every scrap and atom of protection.

It seems that a jackscrew is being used to let down the manufacturers, but a battering ram is to be in play to reduce the farmer.

The public ought to know that it seems abundantly apparent from the bill itself and the arguments adduced that absolute free trade in all lines is the goal to which our friends the enemy, politically speaking, are drifting.

FIRST STEP TOWARD FREE TRADE.

This bill measures only the first step in the Democratic advance toward free trade. It is the initial triumph of the theorist in the school of political economy. It is the experimental, uncertain, incongruous, and dizzy conglomeration of the cubist delineator of a revenue producer. It is the partial realization of the dream of the political college professor. It does not represent the fulfillment of Democratic prophecy. It is but an index of that prophecy; the outline of a hope; the partial response to a prayer. It is but an experimental dose. Others are to follow if the patient survives. The deadly narcotic warranted to put to sleep any American industry is the brew of many witches in dark and secret conclave—otherwise the Democratic caucus. There is poison enough to go around. There are ingredients enough in the caldron for everything that resembles a protected industry.

The bill is but an index of the purpose of the Democratic Party to eventually wipe out the last vestige of protection. It does not represent the last word in Democratic tariff tinkering. It is the party's foreword; its epilogue to the tragedy. It is a mild and gentle curtain raiser to steady the nerves of the audience for what is to come after. From it and the program of the party's play we can judge but little of what is to follow. If the same players are to hold the stage and the great audience is to patiently sit out the performance, we may well conclude the final act will be a dark one.

This bill is the first assault upon the citadel of protection. The leaders of the Democratic hosts declare it to be such. It is but a slight lowering of the tariff wall, to use the language of the party's herald. It is but a partial, a gradual, an easy letting down of the masonry.

The distinguished military engineer of tariff reform at another place in the Capitol declares that in order to not harm American industries too much, in order that thousands of workers and laborers employed inside the walls may not be hurt, the Democratic Party has endeavored to lower the tariff wall with a jackscrew, since it was not commissioned to use an ax.

I must admit that picture of the lowering of a wall with a jackscrew is picturesque at least, and I have approached it from many angles.

If the Democratic House of Representatives, following the lead of the Democratic caucus that followed the lead of the Democratic Committee on Ways and Means that followed the dictation of a Democratic President, has given us an illustration of the lowering of a tariff wall with a jackscrew, then the Democratic Senate of the United States has grossly assaulted the ramparts with a battering ram.

It has at least made holes in the wall that an ax, even in the hands of the distinguished chairman, Mr. UNDERWOOD, could never have produced. The difference between the execution in the House and the Senate is pretty well outlined in a speech of one of the Junior Members of this body, but who for many years has been an acknowledged party leader. That distinguished Senator in a spirit of triumphal accomplishment said, and I quote his exact words:

(Senator HOKES SMITH in an address before the Georgia Legislature July 18, 1913. See S. Doc. 137, 63d Cong., 1st sess.)

For the first time in 50 years legislation intended to take the burdens off the masses of the people has found no resistance in the Democratic Senate. It must be conceded by all that the Senate Democrats have made the tariff bill more Democratic than it was when it reached the Senate.

The House Democrats put flour upon the free list, but taxed wheat. The Senate Democrats put both upon the free list.

The House Democrats put meat upon the free list, but taxed cattle. The Senate Democrats put meat and cattle both upon the free list.

The House Democrats left a tax of 25 per cent upon cheap woolen blankets. The Democrats of the Senate put them upon the free list. The House taxed wool of the Angora goat and alpaca. The Senate Democrats put them on the free list. The House Democrats taxed flax and hemp. The Senate Democrats put them upon the free list.

The Senator was extremely modest in his summary of Democratic achievement in the Senate along the line of making this bill "more Democratic than it was when it reached the Senate." He might have named at least fourscore and ten other articles upon which the House fixed what it styles a "competitive tariff" and the rates on which have been either wholly stripped off by the Senate or reduced below the temperature necessary for their life.

Truly, if the House used a jackscrew the Senate has employed a battering ram. But whether the House bill or the Senate bill or a modified conference bill is to measure this first step of the Democratic Party matters little; for it must be borne in mind it is but a first step. Others are to be taken until at least the body politic has reached the Democratic purgatory of strictly a revenue tariff, or, worse still, the bottomless pit of free trade.

Every declaration made by the party leaders since its victory in November, 1912, proves that the present bill does not measure the party's full purpose. The leaders declare the goal must be reached by degrees.

In his message personally delivered to Congress, called in extraordinary session by him to revise the tariff, President Wilson said:

We must abolish everything that bears even the semblance of privilege or of any kind of artificial advantage. * * * It would be unwise to move toward this end headlong, with reckless haste, or with strokes that cut at the very roots of what has grown up amongst us by long process and at our own invitation. It does not alter a thing to upset it and break it and deprive it of a chance to change. It destroys it. We must make changes in our fiscal laws, in our fiscal system, whose object is development, a more free and wholesome development, not revolution or upset or confusion. In dealing with the tariff the method by which this may be done will be a matter of judgment exercised item by item. To some not accustomed to the excitement and responsibilities of greater freedom our methods may in some respects and at some points seem heroic, but remedies may be heroic and yet be remedies.

PRESIDENT OPPOSED TO PROTECTION.

In the words "It would be unwise to move toward this end headlong, with reckless haste," and in the words that follow, the President clearly outlines the purpose of his party to proceed ultimately to the goal of free trade or a revenue tariff, which in the end is the same.

The President of the United States is now and has always been unalterably opposed to the policy of protection. When asked upon one occasion if he advocated the repeal of all tariff laws, he replied:

Of all protective-tariff laws, of the establishing a tariff for revenue merely. It seems to me very absurd to maintain that we shall have free trade between different portions of this country and at the same time shut ourselves out from free communication with other producing countries of the world.

So far, then, as this bill and the President of the United States are concerned, it is but an entering wedge. The President regards it as but a single step in the direction of his cherished goal.

Mr. UNDERWOOD, chairman of the Committee on Ways and Means, and whose name will forever be linked with the measure, in presenting the bill with the committee's report to the House on April 23, 1913, said:

The Democratic Party stands for a tariff for revenue only, with the emphasis upon the word "only." [Applause on the Democratic side.] We do not propose to tax one man for the benefit of another, except for the necessary revenue that we must raise to administer this Government economically. Then, how do we arrive at a basis in writing a revenue tariff bill? We adopt the competitive theory.

We have not been able to wipe out all the favoritism that you [Republicans] have engrafted in these bills, because a great many of the industries in the United States have been built up on the rotten foundation that you placed under them. Too great harm would result to industries, to the thousands of workers and laborers employed therein, were we suddenly to destroy these foundations. So far as it was practicable to do so without working an absolute injustice to the American consumer, we have endeavored to lower the tariff wall with a jackscrew, since it was not our commission to lower it with an ax.

I see myself guilty of incorporating that "jackscrew" picture again, but it will bear repetition, and possibly I may be the only person so dense as to be unable to perceive the easy process of lowering foundations with a single "jackscrew."

That the picture of just what was being accomplished did not meet the estimate of at least one Democrat is manifest from later proceedings. At most, he did not adopt the "jackscrew" theory.

The second member of the Committee on Ways and Means from Mr. UNDERWOOD declares the party's purpose in plain terms (RECORD, p. 536). He says:

We can not reform all the evils for which high protective tariffs are responsible in a day. We do not promise at the outset to accomplish in a year all the reforms the people of the country are demanding, but we do claim that in the bill we are presenting now we are taking a long step in the right direction.

As to the agencies that are being used to accomplish its initial purpose, he says in the same speech:

We recognize that wool is the keystone in the arch of protection. With all the force of a mighty party, with all the impact made possible by 20 years or more of waiting, we have kicked the keystone from the arch, and the arch is already commencing to crumble.

And again there was applause on the Democratic side.

The speech closed with a prophetic vision of the time when absolute free trade would exist between the nations of the world.

There is no suggestion of a mild and easy "jackscrew" in this last picture. The whole Democratic Party, with all the force of its leg muscles, bent up for 20 years awaiting the opportunity, with its mighty feet incased in 4-ply cowhide, from which the tariff is being removed, the awful assault is being made along the line. The keystone has been kicked from the arch "and the arch is already commencing to crumble."

That, Mr. President, is a picture that my dull comprehension can the easier imagine.

Every member of the majority of the great Ways and Means Committee attested and acknowledged the restraining influence of the party caucus. Every one declared the bill to be but a partial fulfillment of the party's program. Each owned up that it was not near enough a revenue measure to please him; that it did not go so far as it would have gone had he been given the individual task of drawing the measure.

Possibly the personal view of a Democratic Member from Pennsylvania; not a member of the Ways and Means Committee, goes as far in outlining the situation—the party's purpose—and in indicating future action as any other. He spoke on April 26 last as follows:

Mr. Chairman, even the distinguished chairman of the committee which drew the measure now under consideration does not claim it to be a perfect one. It falls far short even of his ideal. It is in large part a compromise of conflicting elements, and in certain details it is sadly disappointing, especially to those who had hoped that in a Democratic tariff no vestige of privilege or favoritism would be found.

But faulty as the measure may be in particular items, far as it falls short of perfection, sadly as it may lack in consistency, it is still a long step in the right direction. It has merits so surpassing that its shortcomings are almost neighbors. It goes so long a way toward the redemption of Democratic promises and the fulfillment of popular expectation that even the free trader, like myself, may applaud it with sincerity and vote for it without stultification.

Had I been writing it, items which now find a place in the dutiable list would certainly have been dropped therefrom. In a score, or perhaps a hundred, instances duties which seem to me excessive and indefensible upon any revenue ground would have been brought lower if not eliminated.

In this Underwood tariff we find an achievement along Democratic lines which may well appeal to Democrats of all shades and all persuasions. It so splendidly enlarges the free list that we may forgive its errors in the direction of according privileges to special interests. * * * Not since the Walker tariff bill of 1846 have we had one drawn so nearly in harmony with the revenue idea.

"Sadly disappointing, especially to those who had hoped that in a Democratic tariff no vestige of privilege or favoritism would be found."

At the time those words were uttered the Member had no means of knowing what the Senate Democrats were going to do with the bill. To-day he is probably not so sadly disappointed, and he has far more opportunity to discover how privileged products in certain localities can be played as favorites.

From speeches made by men in another place, not far distant from this Chamber, it would be easy to show without any possibility of contradiction that the bill now about to pass is not the full measure of Democratic hope or expectation.

The American manufacturer, the American farmer, and the American artisan who was fooled last fall, whose attention was distracted for the time from the real issue—possibly some of whom gave their votes for the Democratic electors under specious promises that the party was to reduce the cost of living, level wealth, and right every wrong—should now begin to realize what is before them. They should realize that the bill now being enacted into law is but a single step in the direction of free trade. They should know that after they have whetted their wits "against the wits of the rest of the world" under its working, and until their poor wits are tired, they are later to come up against the real thing, where the whetting of wits must be practiced as a science and under conditions that will test not only the wits but the patience and endurance of the strongest of men.

Before passing entirely from the subject it will be well to place some Senators in our galaxy of witnesses as to the purpose and mission of the party in power. The RECORD is replete with declarations.

SENATORS PROCEEDING TOWARD FREE TRADE.

The Senator from North Carolina [Mr. SIMMONS], chairman of the Committee on Finance, has repeatedly asserted the purpose of the party in the majority to proceed along the line of tariff revision until the goal of a revenue tariff is reached. It is his contention, as well as the contention of all party leaders upon that side, that the avowed policy of a tariff for revenue only was indorsed by the people in November, 1912. The only question is as to just how fast the goal shall be approached.

The Senator from Georgia [Mr. SMITH], a most potential Member in this body, has on divers occasions given emphasis to the party's purpose to frame a tariff bill upon the revenue basis. In addressing himself to the agricultural schedule, and especially to the rates upon machinery, he said:

We have cut the rate one-half. I hope it will be cut again before a great while. I hope that we will really bring the entire tariff to a revenue basis in the course of time. But I think we have gone as far as we could in this bill now.

In some of these duties we have left we have recognized existing conditions. I speak for my own mental operation in approving them. I have recognized existing conditions. I have felt that we could not afford to go as far as I would like to see the law go lest serious injury would affect those industries, in view of the position they have occupied in the past.

Later on in the same discussion the Senator used these words:

I believe it will help industries to take them out of the hothouse. You can not take a plant out of a hothouse instantly and put it where it is exposed to the weather. You must do it by degrees. What I meant when I said I hoped for progress, and what I meant when I said in this bill I had voted for duties higher than those I wished, was to consider them as a hothouse plant—a plant that ought to have been out in the sunlight—but has been hothoused. We have not put them out completely, but we have put them out a good part of the way, and we expect them to grow and flourish. I earnestly hope for the prosperity of every industry in the United States.

Mr. GALLINGER. Do I understand the Senator to say, representing himself, if not his party, that he believes the Democratic Party is to get entirely rid of tariff duties?

Mr. SMITH of Georgia. I have not undertaken to speak for the Democratic Party at all.

Mr. GALLINGER. Speaking for the Senator himself?

Mr. SMITH of Georgia. I expressed the hope.

And later still he said:

This bill expresses my view of what should be done now to a large extent, but not on every item. I could not hope to see a tariff bill that met in every item what I believe in; and if I worked out one by myself and then thought of it for 30 days longer, I do not believe every item would be what I approved. But, take it as a whole, I believe in it, and I think we have gone as far as we could.

Mr. GALLINGER. What attracted my attention particularly—and the Senator is not the only Senator who has made the suggestion; my amiable colleague [Mr. HOLLIS] made it the other day—was that this is the first step, and that the Democratic Party intend to proceed along the same highway until they accomplish more than is accomplished in this bill, I was wondering how rapidly our Democratic friends intended to go in the direction of free trade.

Mr. SMITH of Georgia. Mr. President, it is impossible for us to tell the Senator that. I have illustrated the rapidity with which I wish to go. It would depend upon the rapidity with which certain progress is made. I believe progress will be made. I have the confidence that it will be made.

The senior Senator from Mississippi [Mr. WILLIAMS], who has had so much to do with the handling of the bill upon the floor, has frequently given evidence that the measure is not the last word in Democratic legislation to provide revenue, but that instead it is but a first step.

A little later still in the debate, after the senior Senator from Idaho [Mr. BORAH] had said:

If the Senator from Mississippi is entirely logical in his statement, it was the deliberate design, as I understand, of the framers of this bill to kill the wool industry.

The senior Senator from Mississippi replied:

The Senator's assumption, as far as wool is concerned, is not an assumption that is accepted by me. It may be that putting some product upon the free list in this bill will destroy the industry. If that be true, then as to that particular product we have simply traveled too fast and too quickly. I do not say every paragraph in the bill is perfect.

It would possibly be profitable to quote more liberally from the remarks of the Senator from Mississippi, but the words already quoted, and that seem to be generally accepted as gospel upon that side, are sufficient to show the purpose of the Democrats of the Senate is not unlike that of the Democrats of the House, to place the tariff upon a revenue basis—not so soon as the country may be able to stand it, but so soon as the Democratic Party believes the time is ripe and conceives it has a further mission to perform.

Before quitting this branch of testimony I desire to add a single quotation from one of the younger Senators, who seems to have caught the infection—a New England Senator who seems to feel that New England manufacturing enterprises may to some extent be an evil in that they have attracted many

young men to their pay rolls who might otherwise have followed the plow upon the farm. I quote from the junior Senator from New Hampshire [Mr. HOLLIS]. He says (RECORD, p. 3614):

In other words, we find that expediency and fair dealing block the way to an immediate resumption of a constitutional tariff, for we are confronted with the need of raising an enormous revenue and by a host of hopeless, hothoused abnormal industries, nourished by a highly protective tariff, and which would be utterly destroyed by the immediate withdrawal of all governmental aid. To this extent we are handicapped in establishing a tariff for revenue only.

In the same speech the Senator declared his belief that certain rates in the bill were too high, and named specifically those of the cotton schedule, and continued:

I believe we have fulfilled our promise of a material reduction and have approached as closely a revenue basis as we safely may upon present information.

Of course, I could quote many pages from other Democratic Senators, but I believe it will be generally conceded upon that side that if the party remains in power it is to proceed to place the tariff upon a purely revenue basis, or to so amend the income-tax provisions and create other means sufficient to raise all revenue, and plunge the country into absolute free trade.

In a colloquy with the junior Senator from Minnesota [Mr. CLAPP], and after the latter had suggested that sooner or later the Democratic Party must acknowledge the basic principle of protection or accept the tariff-for-revenue-only theory, the Senator from Mississippi [Mr. WILLIAMS] said:

Does not the Senator from Minnesota recognize the fact that it must be later, and materially later? In other words, does not the Senator from Minnesota recognize, as a man of common sense, that although every line of what he has said is right, and although it is absolutely indefensible to have a tax system under which a part of the profits of the tax goes into the private pockets of individuals, nevertheless, having found a false and artificial condition to be amended and to be cured, no man of common sense would undertake to cure and amend it overnight? In other words, if a man lived in an old house, a bad one, and wanted a new house, he would not blow up the old house with dynamite, regardless of the inhabitants in it, but would, little by little, build a new house in place of the old one.

Does the Senator recognize that even if the fight must ultimately come between free trade and protection—or protectionism, as I prefer to call it—that fight can not come right now, and that it is absolutely impossible to have a logical principle running through a bill which is an amendment of the present existing heterogeneous fiscal laws of the United States? * * *

Any tariff bill must necessarily, confronted with the conditions with which we are now confronted, involve a certain degree of protection, and whether you call it protection for itself or protection incidentally makes no difference. Our duty, from our standpoint, is to make it involve just as little protection as we can.

Later in the same debate he said:

I, for one, have never said, and will not say, that this bill or any bill that we could draw up now—and everybody knows that I could not help saying that in ordinary frankness—that neither this bill nor any bill we could draw up now should—übernacht, as the Germans say—overnight, undertake to rush down a waterfall from one level to another; no bill could possibly be drawn up so as not to involve any protection at all. Therefore I have never said, and do not propose to say, that this bill is clear through, from beginning to end, a tariff for revenue only. All I have said is that it goes as far in that direction as we dare to go without—being confronted, as we are, with actual conditions—destroying men who have been put by the Government in a position where they must be ruined or else gradually permitted to come down. If a man is a hundred feet high, you can go up and let him down gradually, but if you go up and thereby pitch him down you will kill him.

Some statesmen will argue that, if this bill goes too far, if its effects are injurious, if it does not bring about the "new freedom" outlined and prophesied by President Wilson, the Democratic Party can retrace its steps. Oh, never! The Democratic Party never backs water. It will go to defeat before it will retreat. It will never acknowledge if ruin comes that it was the result of its policy. It will more readily determine that ruin was caused from the fact it did not proceed far enough in the direction of free trade. It exemplifies the truth of the old Latin couplet, "Facilis descensus Avernus, sed regradior difficile est." This, somewhat loosely and generously interpreted, means, "It is easy to go to hades, but it's hard getting back."

Everyone knows just how difficult it is going to be to connect Democratic tariff tinkering with ruination. The party began fortifying itself against such a contingency long before its bill was presented in the House of Representatives.

This bill measures only the length of the party's first step. With the thoughtful American citizen, and especially the producer and manufacturer, there must ever rest uncertainty as to when the next step is to be taken. It is not altogether pleasant to contemplate the possibility. While contemplating, however, it will be well to keep in mind the prophetic utterances of the junior Senator from New Hampshire:

Let these Senators remember that we are now taking merely a first step toward a revenue tariff. After we have seen the result of this first step we shall be in position to take a second. I very much fear that if we should make that first step so long that the cotton industry should receive a severe blow we might not be in a position politically to take the second step at an early date.

But even as a first step we have made a reduction on the whole cotton schedule * * * of 35 per cent. Two more steps like the first would leave the cotton industry of America entirely without protection.

We are going sled length in time. American industries and American workmen have been put on notice, and they can arrange their houses accordingly. Again I repeat that this bill is but one step in the direction of Democracy's goal.

DEMOCRATIC IDEAS MEAN FREE TRADE.

But, Mr. President, as the game has gone on, it has waxed warmer and warmer day by day. As the senior Senators have declared their allegiance to their old doctrine, which had slept under the latter version for many years, they have taken off the mask and disclosed their ideas, which mean free trade and nothing more. It remained for one of the younger Senators, the honorable Senator from Texas [Mr. SHEPPARD], on the 4th day of this month, to speak as follows:

Mr. President, the Republican Party may thank the doctrine of protection for its dissolution. No party, no nation, no man or group of men may permanently defy the truth. The Republican Party has been repudiated because protection is an infamy, a curse, a crime. The party that indorses such a doctrine must die; the government that practices it must fall. There is as much justice in taxing one man to feed and clothe another as in taxing one man to support the business of another. I believe that protection has been the source of more corruption and more woe in this Republic than any other agency outside of alcohol. Cherishing such a belief, I am against protection, both direct and incidental. I am against it wherever its venomous head is lifted, whether in my own State of Texas or in some other State. I shall never subscribe to the proposition that as long as protection exists in Massachusetts or in Pennsylvania it must be preserved in Texas, or that as long as protection is kept on one article it shall be retained on another. I can never consent to the idea that as long as another man is permitted to steal I propose to steal also. If I could not destroy protection in Massachusetts or in Pennsylvania now, that fact would not deter me from making every effort to destroy it in Texas now or wherever else I could strike it. In the name of the people of Texas I denounce protection as one of the giant evils of the time, and in their name I would do what I could to wrest unholy tariff privileges from the favored few in Texas without regard to whether I could immediately reach the pampered class elsewhere, and I would never arrest my efforts to eradicate this evil from every foot of American soil. Happily, sir, this bill represents a general assault on protection from one ocean to the other, and when enacted into law will so impair the foundations of this vicious system that its doom may be easily foretold.

The Underwood-Simmons bill carries more relief from excessive taxation for the American people than any other tariff measure in the 56 years since 1857. It does not attempt an entire overthrow of the protective system at this time, the disease being so deeply seated that conservative treatment is required.

And indeed, sir, the Democrats would have been more than human if they had been able to have adjusted the duty on every item among the 4,000 carried in this bill in such manner as to be proof against all objection. When it is remembered that the Democrats are not building a tariff system anew, but are compelled to begin the demolition of a high protective tariff that has been in operation for almost 50 years, and has become intimately interlinked with the vital parts of many industries, it is almost a miracle that they are able to present a bill making such progress in the right direction.

I am only bringing this matter up, Mr. President, at the present time so that those who choose to examine the doings of this last day may, as it were, have some index from which they may look back to discover what I have only in a cursory manner portrayed, and that is, that whatever is left of protection in this bill is left there because they dare not proceed further, and that the party which insists upon carrying this bill through and of declaring that protection, incidentally or otherwise, is a vice and a crime will surely, if left in control, proceed to the final end—absolute free trade.

HOW AND BY WHOM THE BILL WAS DRAWN.

The President of the United States has had a hand, a voice, and a potential influence in the shaping of this legislation.

Everyone admits the fact, although all are not agreed as to the extent and manner in which this influence has been exerted.

There has been a studied attempt on the part of some of those Senators and Members, most fearful and seemingly most self-responsible for the President's glory and fame, to minimize and circumscribe the extent of the President's influence in this regard.

Others, more frank and fearless, like the Senator from Colorado, have openly glorified in the President's interference with the legislative prerogatives, have set out the proposition that it is not only the right but that it is also the duty of the party's exalted chief to take a leading hand in the legislation that is to typify the policy of the dominant political party of which he is a member. All, as I say, have admitted this influence in framing, perfecting, and in the expected passing of the bill.

While thus acting, the President has taken unusual cognizance of any influence that might seem antagonistic to his own and the party's plans. Declarations were made from the White House that a hostile lobby was at work in Washington, and straightway plans were laid well calculated to frighten away from the Capitol anyone who might dare to appear, even for the purpose of making an ante-mortem protest over the extinc-

tion of his industry. The music has continued without much interruption since, and, with one Mulhall as the side attraction, has served for weeks to frighten away about everybody who might be opposed to the free-trade policy of running a great Government. There has appeared very little criticism during all this debate of those good emissaries, agents of foreign business houses, of importing houses in this country, and of the great sugar refineries who have been here in the interest of the administration's plans. These last have been angels of mercy, heralds of the "new freedom," and welcomed emissaries. All others have been wicked, hostile, pernicious agencies, and they have been frightened away.

While the bill was in the making its makers were in frequent conference with the White House. The bill rested there upon the Executive table; its sponsor pointed out the changes from day to day and reported to receive suggestions. Before it went to the party caucus of the House it received the "O. K." stamp of the President of the United States. It was baptized and christened before its real birth; it received the approval of the Chief Executive ahead of its introduction. Had the last parchment page been presented to the President upon the day the bill was presented to the Democratic caucus of the House of Representatives the President of the United States could have as easily and readily signed his name and given his approval.

Cover up the facts as best they may, shroud in mystery the White House conference as adroitly as they can, minimize the presidential influence and power as skillfully as skillful men are capable of, there is no gainsaying the fact that this is an administration measure we are about to enact into law, framed in full accord with administration plans, and having the power of the administration behind it. Some evidences of one way in which that power has been exerted—or, possibly I should say, may possibly have been exerted—is drawn by inference from reading the earlier pages of the Executive Journals of the Senate for the present session of Congress.

It is the first time in the history of the United States we have a tariff bill drawn by the representatives of a small minority of the people and by men representing a small fraction of the real diversified industries of the United States. The bill is drawn, championed, and will be passed chiefly through the overpowering influence of our good friends from the "Sunny South." I do not speak of this to reflect unkindly or unjustly upon any portion of the country. I refer to the subject simply that historical justice may rest where it belongs. Perhaps every Democrat in this body is pleased with the bill as a whole, although no single member of the party is pleased with all of its features. Every Democratic leader who has addressed the Senate has proclaimed the party's satisfaction and a willingness to accept the responsibility for the measure. When, then, the "new freedom" arrives, when the new political millennium is ushered in, the credit for this bill must rest with the South. Let credit go where it is justly due. So, now, the great industrial North and West, when about to get its new awakening, must take its hat off and make its acknowledgments. All hail the new and powerful South!

THE BILL A PATCHWORK OF LEFT OVERS.

The bill, in the first instance, was put together by Mr. UNDERWOOD, of Alabama, from a lot of old patchwork pieces left over from the Sixty-second Congress. To these was added the income-tax proposition, a subject remote and distinct from the tariff. Very well, then, Mr. UNDERWOOD, of Alabama, put the patches together. He had associated with him upon the Committee on Ways and Means a majority of the majority of Members from districts south of the thirty-ninth parallel of latitude. Of the 14 Democratic Members composing a majority of the committee, 8 are from the section named, as follows: Mr. UNDERWOOD, of Alabama; Mr. SHACKLEFORD, of Missouri; Mr. KITCHIN, of North Carolina; Mr. DIXON, of Indiana; Mr. HULL, of Tennessee; Mr. GARNER, of Texas; Mr. COLLIER, of Mississippi; and Mr. STANLEY, of Kentucky.

To these eight men more than to all others combined must be accorded whatever of glory and renown may come from the enactment of this legislation. Their brows must wear the laurel, and the political historians of the future must accord to them, very largely, the credit for the achievement. All of these men are time-tried, weather-seasoned, and experienced legislators. All have passed through seasons of tariff revision. Mr. UNDERWOOD himself has passed through no less than three such seasons and is now serving his tenth term.

These gentlemen, in daily contact with each other and in almost daily conference with the President of the United States, a southern gentleman, prepared this bill for the committee and the party caucus. It would be an interesting historical contribution to trace their fine hands and the history of the measure through the committee and the caucus; but I must leave this

subject to those who have had more intimate and personal experience with it.

We may get some idea of the caucus of the coordinate body from the CONGRESSIONAL RECORD.

That interesting publication shows that when last compiled the House of Representatives was made up of 435 Members. Of this number, 291 are classed as Democrats, 126 as Republicans, 7 as Progressive Republicans, 9 as Progressives, 1 as an Independent, and there is, or was, one vacancy. Thus it will be seen that the Democratic majority in the body referred to is 147, and the party's plurality over Republican Members is 165.

It may now be of interest to examine further into the make-up of the majority party in the lower body. Of the 291 Democratic Members, 184 have seen prior service in the body, while 107 Members are serving first terms, with the possible exception of one or two who have had prior service, but who were not Members of the Sixty-third Congress.

It will be interesting for those who cry loudest for majority rule and for popular government, either directly or through representatives, to consider the power lodged with the 184 Democrats of experience and long service in the body. No sane man will contend for one moment that the 107 new Democratic Members, called together in haste to consider and vote upon a new tariff bill that was practically prepared for them in advance, that they had never seen, that they had not had opportunity to read or know anything about, to which they must have their first introduction in the party caucus—no man will contend that these men had anything to do with the inception, development, or progress of this bill. They were novices. Their duty was to acquiesce. Their privilege was to take what was prepared for them. They had but to shut their eyes and take their medicine. Like sheep in the shambles they gathered inside the caucus pen, following the lead of their great shepherd, and took the salt. They were fresh from the farm and the forum and were useful in kicking the keystone from the arch of protection when Mr. UNDERWOOD pointed out its location.

Just how happy they were in doing this is joyously expressed by a Member, not wholly new to the caucus but whose words upon the floor were well calculated to inspire confidence in the breasts of novices and to stiffen their knees if there were signs of weakening. I quote from a speech by Mr. JOHN A. M. ADAIR, of Indiana, delivered on April 25 last. He says:

I shall vote for this bill as it was reported from a Democratic caucus without dotting an "i" or crossing a "t." I am one of those who believe in majority rule, and when a caucus of my party writes a tariff bill, regardless of whether each and every item in the bill meets with my approval or not, I shall stand by the action of the caucus and give the bill my hearty and enthusiastic support. No Democrat can do otherwise. * * * If we were to read out of the Democratic Party all Members who took issue with the Ways and Means Committee in our caucus on certain items of the bill, there would be none left to sustain the committee in presenting the bill as finally agreed upon to the House.

Similar sentiments were expressed by most of the Democratic orators during the limited debate and within "extended remarks" in another body. They are pictures of personal surrender and party subservience such as have never before appeared in legislative annals.

We are safe, then, in concluding that to the 184 old Democratic Members, or a small minority of the National House of Representatives, must be given credit for the passage of this legislation through the party caucus and through the lower House.

There are 107 new Democratic Members of this House, and one, a brand-new Member from the old woolgrowing State of Ohio, the mother of Presidents, voiced the sentiments of the minority of novices when he read correctly the signs of the times so far as his own and the fortunes of others similarly situated are concerned. He shows us with what abiding faith and with what good grace the 107 new Democratic Members accepted Democratic tariff faith. I quote from his speech of April 25 (RECORD, p. 376):

Political death, swift and certain, awaits any Democrat who now doubts or falters. We were sent here to prepare and pass a tariff law which will bear the test prescribed by the Democratic platform adopted at Baltimore. If any Democrat in whom the people have reposed trust and confidence now betrays them, it were better for him that a millstone were tied around his neck and that he were then cast into the bottomless sea. [Loud applause on the Democratic side.]

Does anyone have to guess that the "loud applause on the Democratic side" was the loudest from the 184 old Democratic war horses who were sustaining the game, and with a knowledge born of experience?

SOLID SUNNY SOUTH IN THE SADDLE.

Now, for a moment, let us analyze the 184 Members upon whom must largely rest the responsibility and the glory for this achievement. Here again I declare it is not my purpose to

draw any sectional lines for other than the placing of glory where glory belongs. I am glorifying the South, not casting aspersions upon it.

Of these experienced and potential 184 men 111 come from districts south of the thirty-ninth parallel of latitude. With this great majority in its favor, everyone must concede the potentiality of the South in the party caucus and upon the floor. Certainly no one will argue that the 73 old Members from the Northern, Northwestern, Northern Middle, and New England States wielded anything like the influence and power resting with these 111 southern gentlemen. The southern gentlemen themselves would not admit a proposition like that.

In a party caucus controlled by the unit rule, and where the voice of the majority is the voice of all, this power was overwhelming. The 107 brand-new men might not have readily recognized it, but even they were outnumbered and could not have easily rallied against it. Then, too, of these 107 new men 39 were from the South. It was but their duty to acquiesce. They were good men to take a hand at the "jackscrew" or to administer a swift kick against the "keystone of the arch," but they were there only to follow instructions, not to take the initiative.

If the South controlled the caucus and the bill in the lower House, what shall we say of the conditions in the Senate?

Prior to the recent death of the Senator from Alabama [Mr. Johnston] there were 51 Democratic Senators, 44 Republicans, and 1 classed as an Independent-Progressive. So far as this comparison goes, it will not be necessary to change these figures, inasmuch as Alabama will send a Democrat to succeed a Democrat, probably for some years to come. Of the 51 Democratic Senators, 32 are from States south of the thirty-ninth parallel of latitude, and but 19 from territory north of this line.

Take first the great Committee on Finance, to whom the bill was referred, that considered it behind closed doors, reported it to and engineered its progress through the caucus that reported it to the Senate. That committee is composed of 10 members of the majority party and 7 members of the minority party. The members of the minority party have had about as much say as to what the bill should contain as any 7 men located in the wilds of Africa. The 10 men comprising the majority, or participating party, are made up of 6 gentlemen from the South and 4 from the North, the Southern members being Messrs. SIMMONS of North Carolina, STONE of Missouri, WILLIAMS of Mississippi, SMITH of Georgia, JAMES of Kentucky, and GORE of Oklahoma. This is not alone a characteristic of the Finance Committee; it is true of a large number of the committees, while as far as chairmanships of the committees accorded to the majority party are concerned at least two-thirds of the number are presided over by Democrats from the South.

It is probably the first time in a half century when both branches of Congress were so overwhelmingly controlled and dominated by the South; and if it is that section's first opportunity in 50 years, we can not blame it or its representatives if they make the most of it.

We can now realize the spirit that was manifest in the closing words of the distinguished Senator from Georgia [Mr. SMITH] when, making his admirable address before the legislature of his State in the latter part of last July, he said:

Out of this Democratic administration much good will come for the entire country, but especially for our own section, reinstated and rehabilitated, great in the past, and to be far greater in the future.

The South has indeed been "reinstated and rehabilitated." In control of both branches of Congress, in control of the committees, dominating the caucuses, steering appropriations, claims, and revenue bills, and with a Southern gentleman in the White House, the South has a chance for the greater future predicted for her, and for which every right-minded citizen will be rejoiced.

Many men who have spoken in both branches of Congress have pointed out wherein this tariff bill is sectional. I do not doubt it is sectional. What of it? And why not? How could it be otherwise? Is the reason difficult to find? Is it to be wondered at that the South that grows the cotton does not take well to the fact that a great portion of the manufacture of cotton is done in New England? Do you chide the South because it wants to bring all the mills closer to the cotton fields? It is but a natural desire.

Is it difficult to find how the alien proposition of controlling gambling in cotton futures found its way into this bill? Is it hard to tell how such a sectional feature—sectional in the extreme—attained favor with the Finance Committee, passed muster in the caucus, and was reported out as a new section of this strange revenue measure? I think not. Possibly the newness and the novelty of their situation accounts for their modesty.

There is little, indeed, under the rules that generally govern caucuses, and that did tacitly govern the caucuses referred to, that might not have been accomplished by this legislative solid South.

So much for the agencies that drew and engineered and are to pass this bill.

CAUCUS AND CLOAKROOM LEGISLATION.

Instead of having legislation by Congress we now have legislation by the caucus and cloakroom.

It is a novelty, but the system has its advantages. Unfortunately for political history, the world may never have a correct picture of just what transpired in the Democratic caucus held in the farther end of this Capitol to give the party's representatives a chance to pass upon and approve the tariff bill submitted to it by the Committee on Ways and Means. Like the party caucus of the Senate, it was conducted behind closed doors, and the lips of all participants appear to be sealed as tightly as the lips of the Egyptian sphinx. We can only gather an inkling of what took place from the speeches of participants delivered upon the floor during the very limited time that was given for debate. These demonstrate the absolute subserviency of all participants to the rule of the majority; attest great personal sacrifices of individual opinion and submissive surrender to the powers that were in control. Sufficient quotations have already been made and party votes recorded to demonstrate how utterly and absolutely the junior Members were dominated by their seniors, and how surely the seniors were controlled by the overwhelming majority of this class from the Southern States.

Aside from the mere question of numbers, it can be taken for granted that the caucus at the south end of the Capitol was not unlike that at the north end.

Fortunately for us and the country, we have been given a closer inside view of the caucus system of legislation, as originated by the Democratic majority in this Congress, conducted at the Senate end. We are given glimpses of the inside occasionally by eyewitnesses, by men adept in statecraft and skillful in the art of correctly portraying things they see and recording things they hear. Two such witnesses have furnished us sketches, all too incomplete, I admit, but sketches true to life and full of interest. They furnish a safe ground from which we can judge fairly and impartially this new method of lawmaking. From them the country will be able to form its opinion and render its judgment as to the advisability of abandoning the old and somewhat exacting system for the newer and less responsible system.

TESTIMONY OF DEMOCRATIC SENATORS.

The senior Senator from Nevada [Mr. NEWLANDS], a conservative and careful man of unimpeachable character and unquestioned honor and probity, gives us our first view of the caucus. It is a view of but one of the sessions—the last before the tariff bill was reported to the Senate. It was held on July 7, 1913. He said:

Forty-one Democratic Senators stood up in the party caucus, one by one, late to-day and declared their intention to vote for the Underwood-Simmons tariff revision bill as finally approved by the caucus a few minutes previously.

No oath was administered to those men. They gave no formal pledges; they signed no agreement. They just "stood up, one by one, and declared their intention to vote for" the bill they had approved "a few minutes previously." It is a pretty picture and reminds me of the old-time camp-meeting revival, where the chief exhorter called upon the faithful one by one, in regular order, to arise and declare their allegiance to the Great King.

My Nevada friend's word picture continues:

An absolutely binding resolution was not adopted, the poll by individuals being substituted, and that poll was put only on the ground of personal promise and was not made binding.

From this we must infer that there was an attempt made to secure the adoption of some iron-bound resolution, something that would be of permanent record and well calculated to hold the subscribers or those sworn by every exaction of personal honor; but the "absolutely binding resolution was not adopted," and "the poll by individuals" was substituted.

The substitute was just "a gentlemen's agreement." All of them stood up, one by one, and declared their intentions. It was a poll of the caucus "on the ground of personal promise and was not made binding."

It is not hard to imagine the disappointment of the members of the Finance Committee over the failure to bind those present to the committee bill as fast as Prometheus was bound to the cold rock of Caucasus.

But the Senator from Nevada [Mr. NEWLANDS] continues:

A resolution was adopted, however, declaring the Underwood-Simmons bill a party measure, and urging its undivided support without amend-

ment, unless such should be substituted by the committee. Senator NEWLANDS, of Nevada, cast the only vote against this resolution, but Senators SHAFROTH, RANDELL, and THORNTON did not vote.

The resolution, drawn by the adroit and lovable senior Senator from Missouri [Mr. STONE], and kept in reserve by him until it was evident that a binding resolution would not be acceptable, reads as follows:

Resolved, That the tariff bill agreed to by this conference in its amended form is declared to be a party measure, and we urge its undivided support as a duty by Democratic Senators without amendment: *Provided, however*, That the conference of the Finance Committee may, after reference or otherwise, propose amendments to the bill.

The Senator from Nevada gives testimony, as I have already indicated, that he alone voted against this resolution, and that Messrs. RANDELL and THORNTON, of Louisiana, and SHAFROTH, of Colorado, refrained from voting. The duty of proclaiming the resolution and the vote upon it, for it was adopted by a call of the roll of the caucus, was intrusted to the junior Senator from Indiana [Mr. KERN]. That is about all we have from the interesting narrator named from which to judge of party legislation by the caucus system.

We know that the usual unit rule of all caucuses must have been adhered to throughout all the caucuses that were held. It is a pity that we may not have from the junior Senator from Indiana a more complete and detailed statement as to the caucus votes upon other propositions. It would be a valuable contribution to legislative history to know by what majority the Finance Committee's propositions for free wool, free sugar, and free agricultural products were adopted. Some constituencies would be glad to know how their representatives voted in the inner Senate, the Senate that actually did the business, the secret legislative body that determined upon all changes that appear in the bill.

The Senator from Nevada, in his careful account, does tell us just a little more of what transpired inside the secret legislative chamber. Details are so meager that everything we have before us is worth mentioning. He says:

Before final action on the bill the caucus gave concessions to the Senators from woolgrowing States by adopting an amendment making effective a provision for free raw wool on December 1, 1913, and the rates on manufactures of wool January 1, 1914. Earlier in the day the Finance Committee had voted to recommend the dates as October 1 and December 1, respectively, but the caucus voted for the further delay.

Then he adds:

This action completed the revision of the Underwood bill, which has occupied the Finance Committee majority and the caucus since May 7.

Of course that "action completed the revision of the Underwood bill." Everyone admits it. The country understands it. The world knows that so far as the Senate's influence upon this tariff legislation is concerned it was determined—ended—by the action of a majority of a caucus of a party having a small majority in the United States Senate on Monday, July 7, A. D. 1913.

The Senator from Nevada gives some interesting reasons why he would not agree to even the mild form of commitment to caucus action, and his speeches since will be entertaining to those who wish to follow the subject along side lines.

INEFFECTIVE PROTEST AGAINST CAUCUS RULE.

But I must return to my text. The senior Senator from Nebraska [Mr. HITCHCOCK], a man used to portraying current events and a legislator of considerable experience, went into his party's caucus because, as he says, he felt that he could properly go there to consider a tariff bill, which he regarded as a party bill, "and surrender a measure" of his "own independence for the sake of securing a harmonious party result." That Senator has given us something regarding the character of the caucus, its coercive and dictatorial tendencies, and has outlined some of the reasons why he decided to withdraw from it without acquiescence in its resolution declarations. All of the Senator's words are instructive and interesting, but I shall not quote all of them. They are already embalmed in the CONGRESSIONAL RECORD. I shall quote, however, just enough to give further insight into this new legislative propaganda. He says:

The pending bill, Mr. President, is something more than a tariff bill. It presents other means of raising revenue. It levies other taxes than tariff taxes, and contains a number of provisions for the regulation of business.

To my mind it was, to say the least, a mistake to endeavor in a Democratic caucus to bind the individual to the details, for instance, of the pending section providing an income tax. The income tax is a comparatively new idea in revenue legislation in this country. It involves great questions. It has its advocates on the other side of the Chamber as well as on this side of the Chamber. The collection of an income tax has become a matter of distinct constitutional right by Congress, and Republicans as well as Democrats voted for and assisted in securing the amendment to the Constitution to that effect.

When the income-tax question comes into this Chamber, involving as it does not only the degree to which taxation shall be levied upon the incomes of the country, but involving also great social changes which may follow, it seems to me that the individual Democrat, like the indi-

vidual Republican, ought to be permitted by his party to stand here and vote for his convictions.

After all, Senators here were elected to the Senate, not to a caucus, and it is in the interest of the public welfare that great questions of this sort be debated in public and decided in public, particularly when we are engaged in formative, fundamental legislation of this sort.

So, Mr. President, it seemed to me a mistake when my party undertook to decide the details of the income-tax bill in the caucus. Still, I did not leave the caucus on that account. I left the caucus when I asked the privilege of being permitted in the open Senate to introduce a legitimate amendment for the taxation of trusts, and that privilege was denied me. I asked it not only for myself, but I asked it for other Democrats on this side of the Chamber who believe in the principle and want to see it engrafted upon the pending bill. Those men, if compelled to vote against my amendment, which I am here to-day to urge, will have difficulty in explaining to their constituents why they have done so. It is not right for the party to put them in that position when no great party issue is involved.

It has been an unpleasant sight to me, as it has been to many Democrats during the last few days in this Chamber, when Senators on the Republican side of the Chamber have proposed amendments to the income-tax provision that appeal to the sense of justice and appeal to the judgment of Senators on this side, but who, because of caucus rule, were compelled to vote against such amendments. I do not think that is a worthy sight in the Senate of the United States. I do not believe it is right to bind individual Senators and compel them to vote against their conscience and their judgment upon such amendments when no party policy is involved.

That much is preliminary. The Senator goes on:

Mr. President, in order to justify myself for the position I am taking I shall go a little further, and perhaps verge upon the improper in reference to the Democratic caucus of which I was a part. Like all caucuses, I believe the fact to be that our Democratic caucus degenerated into a political machine, and I do not believe that upon the vote upon my tobacco amendment the real sense of the caucus was evoked. I did not offer my tobacco amendment; I merely asked the caucus to leave me free to offer it in the Senate of the United States as an amendment and an addition to the revenue bill.

I did not ask the caucus to approve my amendment; I asked to be left free to offer it here in the Senate, and I asked that other Democratic Senators be left free to vote for it according to their consciences and their judgment. I was refused. The Senator from Arizona [Mr. ASHBURN], however, offered my amendment, and after a heated controversy it came to a vote in that caucus. * * * Eighteen Members of the Senate voted for my amendment and 23 appeared to vote against it. I say "appeared" because it is a fact, which I shall take the liberty of stating, that the 9 Democratic members of the Committee on Finance voted as a unit, regardless of their convictions. So we have a wheel within a wheel, a machine within a machine. The inner machine controlled the caucus. The vote cast was not the correct expression even of the caucus.

Mr. President, under these circumstances I felt that I was justified and that I could still maintain my Democracy in leaving the caucus and coming here and offering my amendment, as I do to-day, to this bill.

I believe I was not only standing upon the ground of public interest, but that I was standing on good Democratic ground when I left the caucus, because I was denied even the privilege, if I remained in it, of presenting to the Senate this amendment proposing to tax the trusts in proportion to their size.

This is all highly interesting. The two pictures make a noteworthy contribution to contemporaneous legislative history. As in the caucus at the farther end of the Capitol, strong men were compelled to vote against their convictions "because of caucus rule." As there, so was there here "a machine within a machine," "a wheel within a wheel," and that inner machine and inner wheel, dominating everything, controlling everything, sweeping everything before it, voting as a unit, was the committee. Truly does the Senator from Nebraska say, "The inner machine controlled the caucus," and by the strength of nine committee votes cast as a unit against him he was denied the privilege of even presenting his amendment upon this floor.

The resolution had been adopted giving the bill the "undivided support" of Democratic Senators "without amendment," and under the prevailing unit rule and his narrow defeat the Senator's rights were exhausted. There was but one way left open to him, and he bravely took it.

CAUCUS RULE LEADS TO CLOAKROOM LEGISLATION.

Caucus legislation is a forerunner to cloakroom legislation. Once a bill has passed a caucus there is nothing left for caucus participants to do but await the good graces of Republican Senators and the final vote. If there are occasional votes in the meantime, there are electrical alarm bells to sound the long tocsin and call the scattered host to action. In this way the members of the majority party are permitted to retire to the cool retreat of the cloakroom, where there are comfortable lounges, cool mineral waters, electric fans, smoking accessories, good stories, and where ample opportunity is afforded to discuss other weighty matters of state. With one man left upon the field to watch the home goal, the caucus system, the call-bell system, and the cloakroom system work a combination that is beautiful to behold. The bill has already practically passed when it is out of caucus. No amendments are to be offered, unless by the Finance Committee, after reference to the caucus or otherwise. There is nothing to do but wait and tire out the minority. This is one of the advantages of the caucus system.

So it is that it has frequently happened, when the caucus has gathered within the cloakroom to celebrate its great achieve-

ment in hilarious joy, the presiding officer in the Senate has felt it incumbent upon him to have the doors to the Democratic cloakroom closed in order that the celebrations might not be disturbed.

The caucus has taken on new features since the day the Senator from Nebraska became disgusted with it. One feature is the presence of the Vice President within it. The newspaper accounts tell us how he was invited to the secret council and how for five long hours he was a silent and interested spectator. Why he should have been overlooked in the preceding conventions it is hard to explain. It can not be possible that the members of his party in this Chamber believed it necessary to stand him up that he might be added to the poll and be forced to declare his intention in the event that there should be a tie vote on the passage of the bill.

It can not be possible that the alarming reports in the press dispatches from Nevada to the effect that the senior Senator from that State [Mr. NEWLANDS] was returning to vote against the bill had anything to do with this. True, some of the votes, like those on the maple sugar and jute paragraphs, have been uncomfortably close. It may be that the leaders thought it time to pledge the reserved force. I can not believe, however, that the genial partisan called to the high office of Vice President was invited into late caucuses from any fear of his action in any event calling for party allegiance and testing party fealty.

VICE PRESIDENT ATTENDS CAUCUS.

To me there has never seemed any likelihood that the vote of the Vice President, if required, would ever go astray. That distinguished and delightful gentleman is noted for being a partisan, and this is said in no spirit of criticism. Without the binding force of a caucus resolution he has shown himself a splendid defender of the product of the caucus, and I say this in no spirit of derogation.

Whatever reason may have impelled the caucus to invite the President of the Senate to its sacred precinct it was not because of fear that that high official would not pick up the proper cue at the right time. The manner in which the Chair of the Senate has been guarded during the debate upon this bill would put to sleep any suggestion that its regular occupant could not be trusted. Never, for one moment, has a Republican Senator been called to it during all this debate. Regularly every day, whenever the Vice President has left the chair for any purpose, a Democrat has been left on guard. Certainly no Republican will find any fault with this; certainly no one will construe it as a reflection upon the honesty or fairness of Members upon this side; certainly no one would wish to deprive the Vice President of his rights in this respect. The fact is only cited to substantiate the claim that the genial presiding officer of this body can be trusted as a Democrat to stand without hitching. If he more readily hears Democratic voices, and more easily distinguishes Democrats in his landscape, it is only proof of his party loyalty and fealty and is no evidence that he does not wish to be wholly impartial. I am sure we on this side have no fault to find, and the presiding officer will understand that no criticism, not even in the least degree, has been intended.

We are all glad the Vice President has been given a seat in his party's caucus. He is a keen observer and a pleasant and eloquent raconteur. He has graphically portrayed some of the modern evils that are threatening the Republic. We will look forward with pleasure to his philosophical observations upon the caucus system of legislation.

INFLUENCE OF THE CAUCUS UPON LEGISLATION.

The influence of the caucus upon the course of legislation upon the floor has already been dwelt upon. At times it has been ridiculous and ludicrous. Whenever inconsistencies have been pointed out in the bill by Members on this side—and the bill is chock full of them—speedily there has been a getting together of heads upon that side. Going even to the matter of phraseology and punctuation; whether it was proposed to fix a rate upon etchings, engravings, and sheet music based upon the value of the paper or the cutting out of a superfluous comma, in every instance the gentleman handling the bill upon that side would look around for help, there would be a little group caucus over there, and business would stop until the weighty proposition had been passed upon. Frequently it would be determined that, under the terms of the Stone caucus resolution, no minority of the committee should permit the suggested change to be made, and back to the committee the paragraph or the faulty sentence or the misplaced comma would go. Whenever anyone on this side has offered an amendment containing popular features such as nine-tenths of the Democratic Senators would vote for, if unbound and unpledged, the wise senior Senator from Mississippi [Mr. WILLIAMS] could be counted upon to arise in

his place and announce that the committee had long had under consideration an amendment of the same sort that, in his judgment was just a little bit better, and he would suggest that the whole subject be recommitted, and recommitted it would be. This plan worked in the case of the well-balanced proposition of the senior Senator from Wisconsin [Mr. LA FOLLETTE] for the levying of a surtax on incomes, but not until after the caucus rule had been invoked on that side and a vote had been taken. Then, to stand square on the record, the senior Senator from Arizona [Mr. ASHBURST] did explain, and other Senators tried to explain, that they voted "No" upon the La Follette amendment because they were certain that the committee or the caucus would again cover the ground, and, realizing the dangerous ground upon which the Republican Members had placed them, the committee and the caucus, after long and heated struggles, have taken this paragraph under advisement.

The senior Senator from Kansas [Mr. BRISTOW] was more fortunate when he sprang his amendment for the abolition of the Dutch standard for testing sugars upon the unsuspecting Democracy represented in this Chamber. There was a scramble and confusion upon that side. There was a stir from the cloak room. Delay, recommitment, evasion could not satisfy the senior Senator from Kansas, and so, after the floor caucus over the aisle, the Dutch standard test went out headlong. That is the greatest individual victory that has been secured upon this side. That was the only important instance, so far as my memory serves me, where caucus legislation was thwarted and where the proviso of the Stone resolution was given a black eye.

But the abject and unrelenting subserviency to the caucus, the fear of it, the relentless jealousy by which great statesmen, leaders of their party—heretofore independent beings—have yielded to its domination, have followed the letter as well as the spirit of its demands and resolves, passes the comprehension of the speaker. There has never been anything like it before in legislative history—great men prohibited in terms from offering amendments even of the most trivial character; great statesmen, heads of great committees of this body, men of long and brilliant service, proscribed and muzzled.

When, pray, was the distinguished senior Senator from Georgia [Mr. BACON], head of the important Committee on Foreign Relations, unable, independently and of his own motion, to suggest and defend an amendment upon this floor? In what prior debate upon a tariff bill has he construed it his duty, under some secret caucus rule, to keep silent and leave the discussion to those alone upon the committee having the bill in charge? His voice is not the only one of the voices long heard and long heeded in this Chamber during tariff debates that in this debate has been conspicuous for its silence. I could name a dozen other war horses upon that side who have seemingly sacrificed their experience, their prowess, and their talents upon the altar of the party caucus.

These experienced statesmen have felt it almost incumbent upon themselves to sit as dummies while the business on the floor was being conducted by members of the Finance Committee, a number of whom are novices, so far as senatorial experience goes, but who secured places upon the committee with the great influx of new Members, who at once began smashing time-honored precedents of the Senate and changing the rule governing assignments to committees.

But the caucus system has wrought this change, and a new order prevails. Truly the old has become new.

It will be an addition to the history of this innovation in law-making to add a few illustrations of the complacent grace with which some of these rare, old-time Senators have accepted the caucus yoke and its binding force.

The distinguished senior Senator from Georgia yielded to the inevitable in these words:

Mr. President, I agree fully with what the Senator from Mississippi said. There are many things in this bill that I do not agree to. I will go further and say that if I had my way in forming the bill it would be drafted on some different lines, but I agree with the general principles which are involved, and I surrender and subject my private judgment to the judgment of my colleagues. It is only in such a way that anything can be accomplished by a body.

The senior Senator from Mississippi [Mr. WILLIAMS] has on all occasions been the chief defender of the caucus and its exactions. I will quote him fully, but only sparingly, just sufficient to show how humbly he accepted the yoke. The following are a few of his utterances upon the subject:

The Democratic Party is in power and is going to put through a Democratic tariff bill as nearly as it can. "As nearly as it must" is a better expression, because it is a case of "must," and to that extent it is coercion. There is not a man here who is not coerced to a certain extent by the actual industrial condition with which he is confronted. * * * As to my position on the sugar question, the Senator says I can not candidly announce it and can not logically defend it. I can candidly announce it, at any rate, but I simply confess that I can not logically defend it. I can not logically defend the provision of the pending bill upon sugar. I am not going to attempt to do it, because

it is not my view. But I can candidly announce that the position I could have logically defended I have voluntarily surrendered in order to help get a reformation of the tax laws of this country. That is candid enough, I take it, as an announcement.

The chairman of the Finance Committee [Mr. SIMMONS] takes a pugilistic stand for the caucus system. In defending it, upon one occasion he said:

Mr. President, I deny that our method of framing this bill has met the disapproval of those who are in favor of tariff reductions and opposed to the outrageous and burdensome exactions of the present tariff for the benefit and enrichment of a privileged few. We are willing to stand or fall by our actions in this behalf.

Why should Senators on the other side be solicitous about the effect of our caucus action upon the fate of the Democratic Party? We are not. We assume full responsibility and have no fears. We are not apologizing for our action; we are standing by it. This bill represents the collective judgment of the Democrats of this Congress and we are going to pass it as a fulfillment of our pledges to the people.

The good-natured senior Senator from New Jersey [Mr. MARTINE], who always states things in plain words, rushes to the defense with this:

I realize, and the Senator [Mr. CUMMINS] must, too, that I am a member of a great party; and I want to say in defense of our caucus, to which the Senator has alluded, that it was a most typical Democratic caucus. We advocated our respective sides of the various schedules to our heart's content, and as Americans, as Democrats, and as citizens under a democratic form of government we bowed to the edict of the majority and allowed our individuality and our individual thoughts to be swallowed up by the majority of our party. We believed that we were best advancing the welfare of our Commonwealths and the welfare of our country by so doing.

I could stand here for the remainder of my time giving quotations from Democratic Senators who have seemed to feel the new system needs some defense and who have been quick to rush to arms, but my only desire has been to contribute a slight, and necessarily all too meager, description of the new system of caucus and cloakroom legislation.

Lines are distinctly drawn.

So, Mr. President, the lines are distinctly drawn. If our friends on the other side, who now have the working majority, are able to retain that majority, we shall have entire and absolute free trade as soon as they can reach it. But if they have what that party has had heretofore and what our party has had, divisions that seem unimportant at first, and that can be easily overcome in caucus, and ultimately they are divided as we have been, then again we must take up this subject.

For that reason and for many others I have been one of those ready to support any kind of a proposition for a tariff board that might, at least in some small measure, remove the business of the country from the field of party politics.

Mr. BRADY. Mr. President, this seems to be a day for saying the last word. It seems that the time has come, and the hour is almost here, when we must cast our votes for or against this measure. I am going to vote against the bill for the reason that I believe it is full of discriminations, especially against the farmers and the producers of the country.

I was very much interested this morning in the address of the senior Senator from West Virginia [Mr. CHILTON]; and yet he did not produce a single argument that I believe will satisfy the American citizen that this bill will fulfill the hopes and desires of the Democratic majority. With the junior Senator from Wyoming [Mr. WARREN], who has just taken his seat, I must say for my own State, as he said for his, that it seems that they have placed upon the free list almost every article we produce in our State and have given us very little benefit in other ways.

LEAD MINING A GREAT INDUSTRY.

Before the arguments upon the bill are closed, I desire to say just a few words relative to one particular industry in our State that means much to our people. The State of Idaho produces 30 per cent of all the lead that is produced in the United States and 10 per cent of all the lead produced in the world. This industry gives employment to over 10,000 men, and indirectly is of great benefit to at least 40,000 of the people of our State. It is an industry that necessarily will have to be protected in order to survive. This is admitted by our Democratic friends when they place a tariff duty of three-fourths of 1 cent per pound upon lead ore.

While our Democratic friends have put upon the free list almost every other product of our State they have been good enough and generous enough to allow us a duty of three-quarters of a cent a pound upon lead. I am not going to say that they have attempted to act otherwise than honestly and fairly with us from their viewpoint. But I do say that the lead industry of Idaho and the West can not continue to prosper with a protection of three-quarters of 1 cent per pound, and I sincerely hope that when the bill goes to conference the members on the part of the Senate may see their way clear to have the conference committee raise the amount from three-quarters of 1 cent to 1 cent.

I am not a high-protective advocate in any sense of the word. I believe in the protection of American industry, but I believe

that should be given on a fair and equitable basis, and that the tariff should be extended to any industry whenever it is necessary to maintain it.

If it had not been for the protection afforded by Republican legislation to lead ores the great Coeur d'Alene mining district in Idaho could never have been successfully developed and have been enabled to furnish so large a portion of the world's supply in competition with Mexico, Spain, and other lead-producing countries.

THE PROSPECTOR AN IMPORTANT FACTOR.

Mining is very different in character from any other industry. It requires patience, good judgment, and honesty and tenacity of purpose to make a successful miner or prospector, and only men who have had practical mining experience can really appreciate what it means to go down into the bowels of the earth and bring forth the precious metals for the beneficial use of mankind. A man's intentions may be good, but he will surely fail either as a prospector or practical miner if he lacks the proper training and experience. It is imperative, if a mining enterprise is to be successful, that it be conducted along sane and legitimate lines, and that only properties which have merit be developed to any great extent. All investments made in the development of mining properties must be spent in an intelligent and conservative manner. The prospector and miner—the men who discover and develop mines—are the persons who need encouragement and protection. We do not concern ourselves with the promoter who has richly furnished offices in some eastern city and sells his worthless mining stock to the credulous investor, but the prospector who starts for the hills at the first indications of spring and toils every hour of every day until the snow drives him back in the winter must be encouraged to continue his explorations if the mineral resources of the country are to be developed. He is a most necessary and important factor in the mining industry.

One of the great assets of this country is its mineral resources, and it should be our ambition as a Nation to develop these resources to the fullest extent. This can only be done by proper encouragement and protection to the prospector, to the investor, and to the man who toils in the mine. To accomplish this, if our present high standard of wages is to be maintained, we must grant a reasonable protection to the products of the mines.

I come from a State possessed of great mineral resources. Idaho to-day is a producer of gold, silver, copper, and is the second lead-producing State in the Union, and yet her mining industry is in its infancy. We are just beginning to realize the great possibilities that are in store for our State in the way of mineral production. New mines are being discovered by the prospector who takes his pick and shovel upon his back and wanders through the hills and ravines until he finds indications of mineral. He then begins development work alone. If the prospect is encouraging, he returns and persuades some of his friends to join him in the development work. They continue to develop the prospect faithfully until it is determined whether or not it is a good mine or a failure. Nine times out of ten these prospects are abandoned. Years of work by the prospector and his associates may be lost.

GREAT RISK INVOLVED IN MINING.

The next year they may try again, for there is no class of men on earth with the hope and faith of the prospector and the miner. They are optimists in the strongest meaning of the term, and it is necessary that it should be so or the great mines that are contributing millions and millions to the wealth of our Nation to-day would not have been discovered or developed. These men need encouragement. When they have discovered a mine, have sunk the shaft to a sufficient distance to deliver ore, they hire American workmen to take this mineral from the ground; they pay good wages and secure good and efficient service. The State of Idaho to-day has 631 active mines that have been developed beyond the preliminary prospect and are being worked for the ore that they produce. We also have 242 idle mines that even under the present favorable conditions have not proved to be paying properties.

This can not be attributed to the tariff, either at the present time or in the future. These 242 mines are situated at a great distance from the railroads, and for that reason they are unable to transport the ore at rates that would justify mining. They can be developed only as the years go by and railroad facilities can be utilized.

Ninety per cent of these mines are owned and operated by honest, industrious western miners, who belong to no trust or combination, but are honestly developing the properties for the legitimate profit that may in the future be secured. These are the men and these the products that need protection. I do not believe that a duty of three-fourths of 1 cent per pound on lead will give them such protection as will enable them to develop and operate their mines. I honestly believe if this bill becomes

a law that within the next two years 75 per cent of the mines in my State, if not more, will close down. The larger mines have been developed under a protective-tariff system to a substantial paying basis. They have all modern appliances and may be able to operate in the hope that at the first opportunity the American people will right this great wrong that will have been done if this bill becomes a law by putting American labor on an equal footing with that of Mexico, Spain, and other nations of like character. The western miner is the best paid workman in the world and constitutes the highest class of labor. In my State we have a law that does not permit a foreigner to be employed in an underground mine. Both operators and workmen desire to keep American labor on a high plane. This can only be done by giving reasonable protection to the mining industry.

OUR MINES CAN NOT COMPETE WITH MEXICO AND SPAIN.

It will be seen by the following comparative statement of wages in the United States and Mexico just what a wide difference there is in the wages paid in these two countries for the same class of work. In the production of lead the labor cost is the largest factor, and it will thus be seen that it is absolutely impossible for the lead mines of Idaho to compete with the lead mines of Mexico and Spain, and other foreign lead-producing countries, and be able to maintain the American standard of wages without the benefit of our present protective tariff.

Here, without delaying the Senate, I shall ask to have the table inserted, and also a brief filed by the lead producers of Idaho in behalf of a tariff on their product.

The VICE PRESIDENT. Without objection, that will be done.

The matter referred to is as follows:

	Coeur d'Alene, Idaho.	Mexico.
Miners.....	\$3.50-\$4.00	\$0.75
Muckers.....	3.00-3.50	.50
Laborers.....	3.00-3.50	.50
Timbermen.....	3.50-4.00	\$0.75-1.00
Pumpmen.....	4.00	1.00
Engineers.....	4.50-5.00	1.00
Shift bosses.....	5.00-6.00
Track and pipe men.....	3.50-4.00	1.00
Blacksmiths.....	4.00-5.00	1.00-1.25
Blacksmiths' helpers.....	3.50-4.00	.75
Machinists.....	4.50-5.00	1.00
Millmen.....	3.50-4.00	.65

Average, Coeur d'Alene, \$3.60; day's work, 8 hours.

Average, Mexico, 80 cents; day's work, 10 to 12 hours.

BRIEF TO THE COMMITTEE ON WAYS AND MEANS, HOUSE OF REPRESENTATIVES, BY LEAD PRODUCERS OF THE COEUR D'ALENE DISTRICT, IDAHO.

[Submitted January 10, 1913.]

Hon. OSCAR W. UNDERWOOD,
Chairman Committee on Ways and Means,
House of Representatives, Washington, D. C.:

The producers of lead ores in the Coeur d'Alene district, Idaho, respectfully protest against the proposed reduction of the duty on lead in ores, pigs, and bullion, and urge that the present schedule (pars. 181 and 182) be allowed to remain unchanged, and that if any reduction be made it shall not exceed one-fourth of 1 cent per pound.

The Coeur d'Alene district produces about 117,000 tons of lead per annum, which is more than 30 per cent of the total lead produced in the United States. It has developed this great output under the protection afforded by the present tariff, without which the production would be insignificant. The industry is the sole support of a community of 12,000 people, who, by reason of the high wages paid, are prosperous and contented, and most of whom own their homes. The wages paid in these mines average \$3.60 per day of eight hours. The laws of Idaho make it unlawful for any private corporation doing business in the State to employ any alien who has failed to declare his intention to become a citizen of the United States. (Sec. 1458, Revised Code of Idaho.) This makes the Coeur d'Alene district a peculiarly American community, with a population far above the average in intelligence, industry, and thrift.

Besides the men directly employed in the mines, it should be borne in mind that there are thousands of others employed in the transportation and smelting of the ores and the distribution of the refined product. The total value of the ore, which amounts to nearly \$14,000,000 annually, is ultimately distributed as wages and affords a livelihood to approximately 40,000 people.

The production of lead ore in the Coeur d'Alene district is carried on with a very small margin of profit. Any reduction of the tariff resulting in a lower price for lead will reduce that profit to the vanishing point in some instances and in others to a point below a fair and equitable return on the money invested. Some of the mines will be forced to close, and those that continue to work will be obliged to restrict their operations. Investors will lose their income, and the value of their properties will be destroyed. Many men will have to leave and search for other occupation, the entire business fabric will be unsettled, and distress will prevail throughout the district.

That this is no alarmist view will be seen from the accompanying statement, showing the cost of producing lead in the Coeur d'Alene district for the three years 1909, 1910, and 1911. In those three years the district shipped, in ores and concentrates, 351,461 tons of lead and 19,102,555 ounces of silver. The average New York prices during the period were, for the lead, 4.401 cents per pound, and for the silver, 52.462 cents per ounce, making the gross value of the product \$40,956,174. The total amount received by the mines was \$23,195,310, the difference

of \$17,760,855 being the cost of smelting, transportation, and marketing. Of the latter amount, \$501,078 represents the smelting loss on silver, leaving the cost of marketing the lead \$17,259,777. The cost of production at the mines amounted to \$16,249,846. Adding this to the cost of marketing, we have a total cost of producing and marketing the lead amounting to \$33,509,623, equal to 4.767 cents per pound. The price received was, as stated, 4.401 cents per pound, showing a deficit of 0.366 cents per pound, or a total deficit on the lead in the three years under consideration of \$2,575,019. It is clear that the lead, considered by itself, can not be produced at the prices which have prevailed, even under the present tariff. The production is possible only by reason of the fact that these ores carry silver. It takes all of the lead value and part of the silver value to cover the cost of producing and marketing the lead. The profit is dependent entirely on the by-product. The total surplus earnings for the three years amounted to \$6,945,473, or \$2,315,158 per annum, or about 8 per cent on the capital invested. If the total value of the silver by-product be credited on the cost of production and this surplus be considered as profit on the lead, it will be seen that the cost of producing and marketing a pound of lead was 3.413 cents and the profit was 0.988 cent per pound, with an average selling price of 4.401 cents. This is without any charge for amortization of the capital invested, for which a proper allowance would be one-half cent per pound. Deducting this, the actual profit was only 0.488 cent per pound and the total profit \$1,143,621 per annum, which is less than 5 per cent on the capital invested. With the prospect of a lower duty, the price of lead has already declined to 4.25 cents per pound.

The foregoing statement of the cost of production in the Coeur d'Alene district is verified by the investigations of W. R. Ingalls, from whose work on Lead and Zinc in the United States the following is quoted:

"In chapter 1 it was estimated that the cost of producing lead in the Coeur d'Alene in 1907 was in the neighborhood of 3.3 to 3.5 cents per pound, basis New York delivery; i. e., if the price of lead should be 3.5 cents per pound and the price of silver 50 cents per ounce at New York, some of the Coeur d'Alene large producers would realize no profit, even after disregarding allowances for amortization. It would be highly difficult to generalize the capital account in this district, but probably it would not be far out of the way to say that the total cost of producing lead in the Coeur d'Alene is in the neighborhood of 4 cents per pound when silver is worth only 50 cents per ounce.

"There is no question that lead can be produced more cheaply in Mexico, Europe, and Australia than in the United States, inasmuch as the price at London for long periods has been lower than 3 cents per pound and the output of the mines is maintained. The superior advantage of the foreign countries is partly in cheaper labor, partly in higher grades of ore, which more frequently than in America yield two valuable products, e. g., zinc and lead, as in Australia, and partly to shorter railway hauls. The cost of smelting and refining is as low in the United States as anywhere in the world; the freights on the whole are higher—not per ton-mile, but in the aggregate of miles; the cost of mining per ton of concentrated product is doubtless higher on the whole, which is attributable to the higher rates of wages."

The present duty on pig lead is 2½ cents per pound, and on lead in ores it is 1½ cents per pound. The rate provided in the bill introduced in the last session of Congress was 25 per cent ad valorem on both classes. The average price of pig lead in London for a period of 32 years, from 1880 to 1911, inclusive, was equal to 2.85 cents per pound. With freight added, the cost laid down in New York would not exceed 3.1 cents, and the proposed duty of 25 per cent ad valorem would amount to 0.78 cent, making the price at New York, duty paid, 3.88 cents per pound. As a matter of fact, very little of the foreign lead that is imported comes in the form of pig lead. It is nearly all in ores and bullion imported from Mexico, to be smelted in bond. Whenever conditions are favorable for importation for consumption it is this lead that is retained in the country, and the charge for freight from Europe has not to be considered.

This duty of 0.78 cent, compared with the present duty of 2½ cents, shows a reduction of 63.3 per cent. In the case of lead in ores the reduction will be still greater. Take, for example, a Mexican ore containing 40 per cent lead. What would be the value of the lead in such an ore at the port of entry, say El Paso, Tex.? The cost of smelting and refining and the freight to New York, which would be \$12 per ton of ore, or 1½ cents per pound on the lead, must be deducted from the New York price. If the latter be 3.88 cents, we have then a value of 2.38 cents per pound for the lead contained in the ore after the payment of duty. That would give a value of 1.9 cents per pound of lead, and the duty of 25 per cent would be only 0.48 cent, as against 1½ cents at present. In that case the reduction would be 68 per cent.

Lower grade lead ores, carrying high silver values, might come in free. If we take, for instance, an ore containing 15 per cent lead, but of such a character that the cost of freight, smelting, and refining would still be \$12 per ton, or 4 cents per pound on the lead contained, the latter would have no value at the port of entry, and no duty could be assessed upon it. Undoubtedly large quantities of such ores would be sent into this country; and silver ores, carrying no lead, would be mixed with lead ores for the purpose of reducing the grade of the latter and so avoiding the payment of duty. This would simply swell the profits of the foreign mine owners. It would produce no revenue for this Government, and would destroy an important established industry, employing many thousands of men. We should be throwing open our market to the world and forcing American labor to compete with the labor of Mexico and Spain, where wages average only 80 cents per day.

Beside their cheap labor, the Mexican producers have a great advantage in the matter of transportation. From the principal mines to the Mexican smelters the freight on ore is \$3 per ton, and as the ore contains about 50 per cent lead, the freight is equal to \$6 per ton of pig lead. From the smelter to New York the freight on pig lead is \$4 per ton, making the total cost of transportation from the mines to New York \$10 per ton of pig lead. The total cost of transportation from the Coeur d'Alene mines amounts to \$23 per ton of pig lead. The Mexican mines have therefore an advantage of \$13 per ton of pig lead, or 0.65 cent per pound.

It is to be presumed that the reduction of the duty is proposed in the interest of the consumer. But experience shows that the consumer is not likely to derive any substantial benefit from the reduction of duty, and that practically the entire benefit will accrue to a few manufacturers. The largest consumption of lead is in the form of white-lead pigment. But the price of the latter bears no fixed ratio to the price of pig lead, as will be seen by reference to the table attached hereto, showing the prices of the two commodities for a period of 17 years. Taking the period of three years, 1895 to 1897, during which the duty was one-half of the present duty, and comparing it with the subsequent period, we find that the prices averaged as follows.

Year.	Pig lead.	Dry white lead.
	Cents.	Cents.
1895-1897.....	3.263	4.958
1898-1911.....	4.492	5.448
Difference.....	1.229	.490

Showing that, although in the earlier period the price of pig lead was 1.229 cents per pound lower than in the later period, the price of white lead was only 0.490 cent lower. In the fall of 1907 the price of pig lead fell 24 cents per pound, but the price of white lead fell only three-quarters of a cent per pound.

In the 14 years from 1898 to 1911, during which the present tariff has been in effect, the duties collected on imports of lead have averaged \$596,733 per annum. Under the tariff which was proposed, to produce the same revenue approximately three times as much lead must be imported, which would amount to about 50,000 tons per annum. To pay for this we must send out of the country each year more than \$3,000,000, which ought to be paid as wages to 3,000 American miners.

Attention is called to the annexed table, showing the effect of an ad valorem duty applied to the market conditions of the last 10 years. From this table it appears that at all times within the 10 years, under a duty of 25 per cent ad valorem, foreign pig lead could have been laid down at New York at prices much below those which prevailed under the existing duty of 2½ cents per pound. The average London price during the 10-year period was 3 cents per pound, on which the ad valorem duty would be 0.75 cent per pound, making the cost, duty paid, 3.75 cents. The average New York price for the same period was 4.57 cents, a difference of 0.82 cent per pound. If the Coeur d'Alene mines had been obliged to face the price of 3.75 cents, some of the largest producers would have been unable to meet the competition and would have been forced to close. It has been shown that for the three years 1909, 1910, and 1911 the gross profit earned by these mines averaged 0.988 cent per pound of lead produced, or, after allowing 0.5 cent for amortization, the net profit was only 0.488 cent per pound. For these three years the average difference shown by the table is 0.78 cent per pound, the price of foreign lead, duty paid, averaging 3.6 cents. Had the Coeur d'Alene mines met this price their average gross profit would have been only 0.208 cent per pound, and with the allowance for amortization there would have been an average loss of 0.292 cent per pound.

The New York and London prices run substantially parallel. When the price is low here it is usually correspondingly low there. Consequently, under an ad valorem tariff, the duty on foreign lead would be least at the time when our own mines most need protection. When natural business conditions had lowered the price, the market would be further weakened by the larger importations made possible by the lower duty. The duty, whatever it may be should be specific; and it has been shown that the rates now in effect are absolutely necessary for the continuation of the lead industry in the Coeur d'Alene district.

Respectfully submitted,

FREDERICK BURBRIDGE,

For the Lead Producers of Coeur d'Alene District, Idaho.

Cost of producing lead, Coeur d'Alene district, Idaho, 1909-1911.

Shipped 351,461 tons lead, at 4.401 cents per pound.....	\$30,934,604

Mr. BRADY. We are not here to beg for a prohibitive tariff on lead. We do not even suggest this, but we are asking that you do not destroy an industry that furnishes employment to thousands of men and pays the highest known wage to mining men in the world and that does not permit foreigners to supplant the American workingman in American mines.

Idaho stands out preeminently as a State that is inhabited by exceptionally industrious and law-abiding people. The statistics of the last census show that 98.1 per cent of our entire population are white and that only 2 per cent are illiterate. It is the American man and the American woman that we are asking you to protect. It is the American standard of labor that we are asking you to maintain. It is the American principle of fair play that we are asking to be applied to us at this time, and it would only be fair play for you to give us a duty that will sufficiently protect the lead-mining industry and thus enable us to at least keep our heads above water until the people of this country can have a chance to say, with the matter fairly and squarely presented to them, whether this tariff bill will accomplish the results claimed for it by the party now in power.

Mr. President, I simply wish to say, in closing, that I have listened to the arguments pro and con on this tariff bill, and I believe it is only just and fair to say at this time that, in my judgment, both the minority and the majority have placed their arguments before the Senate in a fair and unbiased way. I am not one of those who claim that because a man differs with me politically, or upon any other point, he is viciously wrong. I believe in the goodness of men. I believe in the manhood of the American citizen. I believe that, while the Senators on the other side have tried honestly and faithfully to enact a law that they believe to be just and right, their endeavors have been a failure. I am willing to go back to the people of the West and lay our case before them, on what I have learned here in the few short months I have served in the Senate, as to the real difference in the principles of the Republican and the Democratic Parties.

REPUBLICAN POLICY OF PROTECTION A DEMONSTRATED SUCCESS.

The Republican Party believes in the principle of protection for fostering and building up our industries. I never knew, or at least I never comprehended, the full extent of what was meant by the Democratic doctrine of a tariff for revenue only. I wish to warn the Senators who are going to pass this bill in a few hours that the farmers of this country, and especially of

the western part of the country, from which I come, do not so understand it.

I stood up in the last campaign before farmers, honest men, honest Democrats, who rose up in the audiences and told me I was mistaken when I said that the Democratic Party would put the products that I had named in the speech that I was at that time making on the free list. Under the terms of this bill every single one of them has been placed upon the free list.

If the people of this Nation believe in a tariff for revenue only, your party is going to be kept in power; but if the people of this Nation believe that the industries of this Nation should be protected, you will see four years from now an overwhelming majority for the Republican Party and the protection of the industries of this country.

Mr. LA FOLLETTE. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The Secretary will read the amendment.

The Secretary proceeded to read Mr. LA FOLLETTE'S amendment, and read to line 5, on page 7, the entire amendment being as follows:

Amendment in the form of a substitute intended to be proposed by Mr. LA FOLLETTE to the bill (H. R. 3321) to reduce tariff duties and to provide revenue for the Government, and for other purposes, viz: Strike out paragraphs 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 318½, 427½, 652, and 653, and insert in lieu thereof the following:

1. All wools, hair of the camel, Angora goat, alpaca, and other like animals shall be divided, for the purpose of fixing the duties to be charged thereon, into the two following classes:

2. Class 1, that is to say, merino and all wools containing merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including Bagdad wool, China lambs' wool, Cactel Branco, Adrianople skin wool, or butcher's wool, and such as have been heretofore usually imported from Buenos Aires, New Zealand, Australia, Cape of Good Hope, Great Britain, Canada, and elsewhere, Leicester, Cotswold, Lincolnshire, Down combing wools, Canadian long wools, or other like combing wools of English blood and usually known by the terms herein used, the hair of the Angora goat, alpaca, and other like animals, and all wools and hairs not hereinafter included in class 2.

3. Class 2, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and all other native, unimproved wools such as have been heretofore usually imported into the United States from Turkey, Greece, Asia, and elsewhere, excepting improved wools hereinafter provided for; and the hair of the camel.

4. The standard samples of all wools which are now or may be hereafter deposited in the principal customhouses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools under this act, and the Secretary of the Treasury is authorized to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other customhouses of the United States when they shall be needed.

5. Whenever wools of class 2 shall have been improved by the admixture of merino or English blood, from their present character as represented by the standard samples now or hereafter to be deposited in the principal customhouses of the United States, such improved wools shall be classified for duty as class 1.

6. The rate of duty on wools and hairs of class 1 shall be 30 per cent ad valorem.

7. Wools and hairs of class 2 shall be free of duty.

8. The rate of duty on wools of class 1 on the skin shall be 27½ per cent ad valorem, the quantity and value of the wool to be ascertained under such rules as the Secretary of the Treasury may prescribe.

9. On top waste, slubbing waste, roving waste, ring waste, and garnetted waste, the rate of duty shall be 27½ per cent ad valorem.

10. On shoddy, wool extract, noils, yarn waste, thread waste, and all other wastes composed wholly of wool or of which wool is the component material of chief value and not specially provided for in this section, the rate of duty shall be 25 per cent ad valorem.

11. On woolen rags, mungo, and flocks, the rate of duty shall be 20 per cent ad valorem.

12. On combed wool or tops, and all wools which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this section, the rate of duty shall be 37½ per cent ad valorem.

13. On carded woolen yarns, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 40 per cent ad valorem.

14. On worsted yarns, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 42½ per cent ad valorem.

15. On cloths, knit fabrics, flannels, felts, women's and children's dress goods, coat linings, Italian cloths, bunting, and all other manufactures made wholly of wool or of which wool is the component material of chief value and not otherwise specially provided for in this act, valued at not more than 60 cents per pound, 50 per cent ad valorem; valued at more than 60 cents per pound and not more than \$1 per pound, 52½ per cent ad valorem; valued at over \$1 per pound, 55 per cent ad valorem.

16. On blankets and on flannels for underwear, composed wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 50 per cent ad valorem: *Provided*, That on flannels composed of wool or of which wool is the component material of chief value, valued at over 50 cents per pound, the rate of duty shall be the same as assessed by this schedule on women's and children's dress goods.

17. On clothing, ready made, and articles of wearing apparel of every description, including shawls, whether knitted or woven, and knitted articles of every description made up or manufactured wholly or in part, and not otherwise specially provided for in this act, the rate of duty shall be 55 per cent ad valorem.

18. On webbings, gorings, suspenders, braces, bandings, beltings, bindings, braids, galloons, edgings, insertings, flounces, fringes, gimps, cords, and tassels, ribbons, ornaments, laces, embroideries and all articles embroidered by hand or machinery, head nets, nettings, buttons or barrel buttons or buttons of other forms for tassels or ornaments, and manufactures of wool ornamented with beads or spangles of whatever material composed, any of the foregoing made of wool or of which wool is the component material of chief value, whether containing india rubber or not, the rate of duty shall be 55 per cent ad valorem.

19. On handmade Axminster, Aubusson, oriental, and similar rugs and carpets, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 50 per cent ad valorem; on all other carpets and rugs made wholly of wool or of which wool is the component material of chief value, and not otherwise specially provided for in this act, including machine-made Axminster, moquette, chenille, Wilton, Brussels, tapestry, and ingrain carpets and rugs, 30 per cent ad valorem.

20. Carpets and carpeting of wool, flax, or cotton, or composed in part of any of them, not otherwise specially provided for in this act, and mats, matting, and rugs of cotton, 30 per cent ad valorem.

21. Mats, rugs for floors, screens, covers, hassocks, bed sides, art squares, and other portions of carpets or carpeting made wholly of wool, or of which wool is the component material of chief value, and not specially provided for in this section, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description.

22. Whenever, in any paragraph of this schedule the word "wool" is used in connection with a manufactured article of which it is a component material, it shall be held to include wool or hair of the sheep, camel, goat, alpaca, or other animal, whether manufactured by a woolen, worsted, felt, or any other process.

23. Paragraphs 1 to 11, inclusive, of this schedule shall be effective on and after the 1st day of January, 1914, and shall remain in full force and effect up to and including the 31st day of December, 1914, and paragraphs 12 to 22, inclusive, shall be effective on and after the 1st day of April, 1914, and shall remain in full force and effect up to and including the 31st day of March, 1915.

24. All wools, hair of the camel, Angora goat, alpaca, and other like animals, shall be divided, for the purpose of fixing the duties to be charged thereon, into the two following classes:

25. Class 1, that is to say, merino and all wools containing merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including Bagdad wool, China lambs' wool, Castel Branco Adrianople skin wool, or butcher's wool, and such as have been heretofore usually imported from Buenos Aires, New Zealand, Australia, Cape of Good Hope, Great Britain, Canada, and elsewhere, Leicester, Cotswold, Lincolnshire, Down combing wools, Canadian long wools, or other like combing wools of English blood and usually known by the terms herein used, the hair of the Angora goat, alpaca, and other like animals, and all wools and hairs not hereinafter included in class 2.

26. Class 2, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and all other native, unimproved such as have been heretofore usually imported into the United States from Turkey, Greece, Asia, and elsewhere, excepting improved wools hereinafter provided for; and the hair of the camel.

27. The standard samples of all wools which are now or may be hereafter deposited in the principal customhouses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools under this act, and the Secretary of the Treasury is authorized to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other customhouses of the United States when they shall be needed.

28. Whenever wools of class 2 shall have been improved by the admixture of merino or English blood, from their present character as represented by the standard samples now or hereafter to be deposited in the principal customhouses of the United States, such improved wools shall be classified for duty as class 1.

29. The rate of duty on wools and hairs of class 1 shall be 25 per cent ad valorem.

30. Wools and hairs of class 2 shall be free of duty.

31. The rate of duty on wools of class 1 on the skin shall be 22½ per cent ad valorem, the quantity and value of the wool to be ascertained under such rules as the Secretary of the Treasury may prescribe.

32. On top waste, slubbing waste, roving waste, ring waste, and garnetted waste, the rate of duty shall be 22½ per cent ad valorem.

33. On shoddy, wool extract, noils, yarn waste, thread waste, and all other wastes composed wholly of wool or of which wool is the component material of chief value and not specially provided for in this section, the rate of duty shall be 20 per cent ad valorem.

34. On woolen rags, mungo, and flocks the rate of duty shall be 15 per cent ad valorem.

35. On combed wool or tops, and all wools which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this section, the rate of duty shall be 32½ per cent ad valorem.

36. On carded woolen yarns, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 35 per cent ad valorem.

37. On worsted yarns, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 37½ per cent ad valorem.

38. On cloths, knit fabrics, flannels, felts, women's and children's dress goods, coat linings, Italian cloths, bunting, and all other manufactures made wholly of wool or of which wool is the component material of chief value and not otherwise specially provided for in this act, valued at not more than 60 cents per pound, 45 per cent ad valorem; valued at more than 60 cents per pound and not more than \$1 per pound, 47½ per cent ad valorem; valued at over \$1 per pound, 50 per cent ad valorem.

39. On blankets and on flannels for underwear, composed wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 45 per cent ad valorem: *Provided*, That on flannels composed of wool or of which wool is the component material of chief value, valued at over 50 cents per pound, the rate of duty shall be the same as assessed by this schedule on women's and children's dress goods.

40. On clothing, ready-made, and articles of wearing apparel of every description, including shawls, whether knitted or woven, and knitted articles of every description made up or manufactured, wholly or in part, and not otherwise specially provided for in this act, the rate of duty shall be 50 per cent ad valorem.

41. On webbings, gorings, suspenders, braces, bandings, beltings, bindings, braids, galloons, edgings, insertings, flouncings, fringes, gimps, cords and tassels, ribbons, ornaments, laces, trimmings, and articles made wholly or in part of lace, embroideries and all articles embroidered by hand or machinery, head nets, nettings, buttons or barrel buttons or buttons of other forms for tassels or ornaments, and manufactures of wool ornamented with beads or spangles of whatever material composed, any of the foregoing made of wool or of which wool is the component material of chief value, whether containing india rubber or not, the rate of duty shall be 50 per cent ad valorem.

42. On hand-made Axminster, Aubusson, oriental, and similar rugs and carpets, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 50 per cent ad valorem; on all other carpets and rugs made wholly of wool or of which wool is the component material of chief value, and not otherwise specially provided for in this act, including machine-made Axminster, moquette, chenille, Wilton, Brussels, tapestry, and ingrain carpets and rugs, 30 per cent ad valorem.

43. Carpets and carpeting of wool, flax, or cotton, or composed in part of any of them, not otherwise specially provided for in this act, and mats, matting, and rugs of cotton, 30 per cent ad valorem.

44. Mats, rugs for floors, screens, covers, hassocks, bed sides, art squares, and other portions of carpets or carpeting made wholly of wool or of which wool is the component material of chief value, and not specially provided for in this section, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description.

45. Whenever, in any paragraph of this act, the word "wool" is used in connection with a manufactured article of which it is a component material, it shall be held to include wool or hair of the sheep, camel, goat, alpaca, or other animal, whether manufactured by a woolen, worsted, felt, or any other process.

46. Paragraphs 24 to 34, inclusive, of this schedule shall be effective on and after the 1st day of January, 1915, and shall remain in full force and effect up to and including the 31st day of December, 1915, and paragraphs 35 to 45, inclusive, shall be effective on and after the 1st day of April, 1915, and shall remain in full force and effect up to and including the 31st day of March, 1916.

47. All wools, hair of the camel, Angora goat, alpaca, and other like animals shall be divided, for the purpose of fixing the duties to be charged thereon, "into the two following classes:"

48. Class 1, that is to say, merino and all wools containing merino blood, immediate or remote Down clothing wools, and wools of like character with any of the preceding, including Bagdad wool, China lamb's wool, Castel Branco, Adrianople skin wool, or butcher's wool, and such as have been heretofore usually imported from Buenos Aires, New Zealand, Australia, Cape of Good Hope, Great Britain, Canada, and elsewhere, Leicester, Cotswold, Lincolnshire, Down combing wools, Canadian long wools, or other like combing wools of English blood and usually known by the terms herein used, the hair of the Angora goat, alpaca, and other like animals, and all wools and hairs not hereinafter included in class 2.

49. Class 2, that is to say, Donskol, native South American, Cordova, Valparaiso, native Smyrna, and all other native unimproved wools such as have been heretofore usually imported into the United States from Turkey, Greece, Asia, and elsewhere, excepting improved wools hereinafter provided for; and the hair of the camel.

50. The standard samples of all wools which are now or may be hereafter deposited in the principal customhouses of the United States, under the authority of the Secretary of the Treasury, shall be the standards for the classification of wools under this act, and the Secretary of the Treasury is authorized to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other customhouses of the United States when they shall be needed.

51. Whenever wools of class 2 shall have been improved by the admixture of merino or English blood, from their present character as represented by the standard samples now or hereafter to be deposited in the principal customhouses of the United States, such improved wools shall be classified for duty as class 1.

52. The rate of duty on wools and hairs of class 1 shall be 15 per cent ad valorem.

53. Wools and hairs of class 2 shall be free of duty.

54. The rate of duty on wools of class 1 on the skin shall be 12½ per cent ad valorem, the quantity and value of the wool to be ascertained under such rules as the Secretary of the Treasury may prescribe.

55. On top waste, slubbing waste, roving waste, ring waste, and garneted waste the rate of duty shall be 12½ per cent ad valorem.

56. On shoddy, wool extract, noils, yarn waste, thread waste, and all other wastes composed wholly of wool or of which wool is the component material of chief value and not specially provided for in this section, the rate of duty shall be 10 per cent ad valorem.

57. On woolen rags, mungo, and flocks, the rate of duty shall be 10 per cent ad valorem.

58. On combed wool or tops and all wools which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this section, the rate of duty shall be 25 per cent ad valorem.

59. On carded woolen yarns, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 30 per cent ad valorem.

60. On worsted yarns, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 32½ per cent ad valorem.

61. On cloths, knit fabrics, flannels, felts, women's and children's dress goods, coat linings, Italian cloths, bunting, and all other manufactures made wholly of wool or of which wool is the component material of chief value and not otherwise specially provided for in this act, valued at not more than 60 cents per pound, 40 per cent ad valorem; valued at more than 60 cents per pound and not more than \$1 per pound, 42½ per cent ad valorem; valued at over \$1 per pound, 45 per cent ad valorem.

62. On blankets and on flannels for underwear, composed wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 40 per cent ad valorem; *Provided*, That on flannels composed of wool or of which wool is the component material of chief value, valued at over 50 cents per pound, the rate of duty shall be the same as assessed by this section on women's and children's dress goods.

63. On clothing, ready-made, and articles of wearing apparel of every description, including shawls, whether knitted or woven, and knitted articles of every description made up or manufactured wholly or in

part, and not otherwise specially provided for in this act, the rate of duty shall be 45 per cent ad valorem.

64. On webbings, gorings, suspenders, braces, bandings, beltings, bindings, braids, galloons, edgings, insertings, flouncings, fringes, gimps, cords and tassels, ribbons, ornaments, laces, trimmings, and articles made wholly or in part of lace, embroideries and all articles embroidered by hand or machinery, head nets, nettings, buttons or barrel buttons or buttons of other forms for tassels or ornaments, and manufactures of wool ornamented with beads or spangles of whatever material composed, any of the foregoing made of wool or of which wool is the component material of chief value, whether containing india rubber or not, the rate of duty shall be 40 per cent ad valorem.

65. On hand-made Axminster, Aubusson, oriental, and similar rugs and carpets, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 50 per cent ad valorem; on all other carpets and rugs made wholly of wool or of which wool is the component material of chief value, and not otherwise specially provided for in this act, including machine-made Axminster, moquette, chenille, Wilton, Brussels, tapestry, and ingrain carpets and rugs, 30 per cent ad valorem.

66. Carpets and carpeting of wool, flax, or cotton, or composed in part of any of them, not otherwise specially provided for in this act, and on mats, matting, and rugs of cotton, 30 per cent ad valorem.

67. Mats, rugs for floors, screens, covers, hassocks, bedsides, art squares, and other portions of carpets or carpeting made wholly of wool or of which wool is the component material of chief value, and not specially provided for in this section, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description.

68. Whenever, in any paragraphs of this schedule, the word "wool" is used in connection with a manufactured article of which it is a component material it shall be held to include wool or hair of the sheep, camel, goat, alpaca, or other animal, whether manufactured by a woolen, worsted, felt, or any other process.

69. Paragraphs 47 to 57, inclusive, of this schedule shall be effective on and after the 1st day of January, 1916, and paragraphs 58 to 68, inclusive, shall be effective on and after the 1st day of April, 1916.

Mr. LA FOLLETTE. Mr. President, first I will make a statement, and then I will make a request for unanimous consent.

The remaining paragraphs of this schedule repeat the paragraphs which have been read by the Secretary from the first paragraph to paragraph 22, with the exception that the paragraphs which have been read by the Secretary from 1 to 22 start with a duty of 30 per cent on raw wool and on this base fix upon the manufactured products of wool a duty measured according to the difference in the cost of production between this and competing countries.

Paragraph 23 provides that this 30 per cent duty on raw wool shall remain in full force and effect from January 1, 1914, up to and including the 31st day of December, 1914; and the paragraphs numbered 12 to 22, inclusive, which fix the rates upon the manufactures of wool, upon the 30 per cent raw-wool basis, shall become effective April 1, 1914, and remain in effect up to and including March 31, 1915.

The remaining portions of the amendment consist of two complete schedules for this division of the tariff bill.

On the next one I start with a base-line duty of 25 per cent on raw wool, and all the duties upon the manufactured products of wool are scaled down to be in agreement with that rate. I provide that those duties, based upon the 25 per cent rate on raw wool, shall take effect immediately after the expiration of the duties in the schedule that are based upon the 30 per cent rate, and are to remain in effect up to and including December 31, 1915. The rates on manufactures to become effective April 1, 1915, and to remain in effect up to and including March 31, 1916.

The third division of the amendment repeats in exact language the provisions which have been read, except that the duty upon raw wool is fixed at 15 per cent and the duty on all the manufactured products is scaled down to that base line. These duties represent the protection that the manufacturers should receive, and, according to the best information we have, measure exactly, with raw wool at 15 per cent, the difference in the cost of production from the raw wool to the finished product. The 15 per cent rate on wool is to become effective January 1, 1916, and the rates on the manufactures of wool on the 15 per cent raw-wool base are to become effective April 1, 1916.

Mr. President, I have made this statement to save the time of the Senate, and I ask unanimous consent that the further reading of the amendment may be dispensed with.

The VICE PRESIDENT. Is there objection? The Chair hears none.

Mr. STONE. When is it to go into effect?

Mr. LA FOLLETTE. The 30 per cent amendment goes into effect the 1st day of January, 1914, and continues in effect up to and including December 31, 1914; the 25 per cent schedule goes into effect January 1, 1915, and is to continue in effect up to and including December 31, 1915; the 15 per cent provision goes into effect January 1, 1916, and to continue in effect. Upon the manufactured products the rates of the 30 per cent bill become effective April 1, 1914; the 25 per cent bill April 1, 1915; and the 15 per cent bill April 1, 1916.

Mr. SIMMONS. I understand that the amendment offered by the Senator from Wisconsin, which has been read, is offered as a substitute for Schedule K in the pending bill.

Mr. LA FOLLETTE. It is, sir.

Mr. SIMMONS. The Senator is merely explaining his own substitute.

Mr. LA FOLLETTE. Yes, sir. After the complete reading of the first division of the amendment, that being a complete Schedule K, based upon a duty of 30 per cent ad valorem upon the raw wool, I was asking unanimous consent to dispense with the reading of the latter part of the amendment, as it repeats the first division twice, once with a series of rates having a 25 per cent ad valorem duty on the raw wool as a base and again, with 15 per cent as the basic duty.

Mr. SIMMONS. That part of it I understand, and there is no objection to granting unanimous consent.

The VICE PRESIDENT. Unanimous consent has been given and the reading of the remainder of the amendment is dispensed with. It will be printed in full in the RECORD.

Mr. LA FOLLETTE. Mr. President, I shall later have other amendments to submit, but what I have to say now pertains to Schedule K, and I shall address myself solely to this amendment.

HOW SCHEDULE K WAS FRAMED.

Schedule K has justly received the severest criticisms that have been leveled against the protective system. This schedule was framed as a result of a coalition between the woolgrowers and the wool manufacturers. The mill owner and the sheep owner united to frame a schedule which would protect the interests of both. Its terms were so complicated, so technical, so obscure, as to baffle general understanding and criticism for many years. They contrived a mixture, a blend of duties, compensatory and protective, specific and ad valorem, so compounded with mysterious proportions and equivalents and false assumptions as to afford a complete mask and cover, behind which they have exacted tribute at will from the American people.

The manufacturers agreed to support such duties on wool as were satisfactory to woolgrowers, and the woolgrowers agreed in return to support such compensatory and protective duties as were satisfactory to the manufacturers, but in the combination the woolgrowers were overreached and defrauded by the manufacturers, who were masters of their craft in all its detail.

The duties on wool were made to appear much higher than they are. The duties on the manufactures of wool were obscured and concealed in the technical terms of the law. The woolgrower was fooled; the public was victimized.

Contemplate for a moment the scheme or plan upon which this schedule is constructed. Two duties are imposed upon all manufactures of wool.

First. A compensatory duty supposed to equal the amount of duty imposed upon the quantity of raw wool contained in a manufactured article.

Second. In addition to this compensatory duty there is levied the so-called protective duty. This protective duty is presumed to measure the difference in the cost of producing the manufactured article in this and the competing foreign country.

The compensatory duty supposedly gives the American manufacturer his raw wool on terms of equality with his foreign competitor who has free wool.

The manufacturers and the woolgrowers agreed that a duty of 11 cents a pound on wool of the first class was necessary to protect the woolgrower. Then the manufacturers claimed that it required $2\frac{1}{2}$ pounds of that grade of wool in the grease to make a pound of yarn valued at 30 cents a pound or less, and that it required $3\frac{1}{2}$ pounds of wool of the first class to make a pound of yarn valued at more than 30 cents per pound, and that it was necessary for them to receive as a compensatory duty $27\frac{1}{2}$ cents per pound for yarn worth 30 cents a pound or less, and $38\frac{1}{2}$ cents per pound as a compensatory duty for yarn valued at more than 30 cents per pound.

In addition to this they claimed that it required 35 per cent on yarns valued at 30 cents per pound or less and 40 per cent on yarns valued at more than 30 cents per pound as a duty to protect them in converting the wool into yarn.

The manufacturers likewise claimed that it required 3 pounds of wool of the first class in the grease to make a pound of cloth valued at 40 cents per pound or less, and that it required 4 pounds of wool of the first class in the grease to make a pound of cloth valued above 40 cents per pound. In other words, they claimed that they required a compensatory duty to the amount of 33 cents per pound on cloth valued at less than 40 cents per pound and 44 cents per pound on all cloth valued at more than 40 cents per pound.

In addition to this they claimed that it required as a duty to protect them in converting the yarn into cloth 50 per cent on all cloth worth 70 cents a pound or less and a protective duty of 55 per cent on all cloth valued at more than 70 cents per pound.

Now, then, having agreed between themselves upon these compensatory and these protective duties and this duty on raw wool, the woolgrower and the woolen manufacturers joined forces and they succeeded in having those duties enacted into law. They organized national associations which formed alliances as with other associations whose interests were kindred to their interests, so that back of Schedule K was the most powerful organization in all the tariff history of this country, the most powerful organization behind any of the schedules.

Having at an early day formed this combination they selected representatives of their organization to appear before congressional committees to secure for the benefit of the woolgrowers legislation that would insure to them the duties agreed upon between themselves and the manufacturers, and to secure for the benefit of the manufacturers these double duties which had been agreed upon by this combination.

I say to you that out of an experience on tariff legislation reaching back to my young manhood, when as a member of the Committee on Ways and Means I helped to frame the McKinley tariff bill, I have never seen nor have I read of a more potential and forceful organization for securing that which it wanted than this combination between the woolgrowers and the woolen manufacturers of the United States. Before I have concluded this afternoon I trust it will be made plain to so many Senators as choose to honor me with their attention that that agreement was conceived in fraud and executed in fraud.

CONSTRUCTED ON FALSE BASE.

Whether the protective duties as fixed at the time were unreasonably high does not matter now; that they have become extravagantly excessive is susceptible of proof. And that the compensatory duties were out of all proportion is beyond dispute. The claim as to the quantity of wool required to make a pound of yarn and a pound of cloth was false, and throughout all the years the consumers have been compelled to pay unreasonable prices upon woolen goods because of these duties.

Every yard of cloth assessed at the customhouses, in which wool is the component material of chief value, is weighed and taxed as though it were all wool, and 4 pounds of wool in the grease per pound of cloth had been required in its manufacture; that is, it is taxed 44 cents per pound, even when more than half the weight of the cloth is composed of cotton.

As an example of the reprehensible character of these compensatory duties, I cite a case reported by Mr. N. I. Stone, formerly chief statistician of the Tariff Board, in his excellent article on Schedule K, published in the Century Magazine for May, 1913. Mr. Stone says:

The law takes no account of the admixture of materials other than wool of which the cloth is made. A worsted may contain cotton to the extent of one-half or more of its total weight, yet the worsted manufacturer is allowed 44 cents a pound "compensation" on the entire weight of the cloth.

Mr. Dale, editor of The Textile World Record, quotes a typical instance of a cotton worsted. In turning out 8,750 pounds of this cloth 3,125 pounds of raw wool were used, the remainder being cotton. Assuming that the price of the wool in this country was enhanced to the extent of the duty of 11 cents a pound, the manufacturer would be entitled to a compensatory of 3,125 times 11, or \$343.75.

But the law, on the four-to-one theory, allows a compensatory duty of 44 cents per pound of cloth, or 8,750 times 44, which is equal to \$3,850. The manufacturer is thus granted an extra protection of more than three and one-half thousand dollars in the guise of compensation for the duty on wool which never entered the cloth.

Mr. President, the indefensible character of these rates was shown by the report of the Tariff Board on Schedule K. It is there shown that the average value of yarn per pound, imported in 1909, was 26 cents; in 1910, 22 cents; in 1911, 24 cents. The compensatory duty alone upon these yarns was more than 100 per cent. Added to that was the protective duty. The ad valorem rate on yarns imported into the United States during the fiscal year ending June 30, 1911, as computed by the Tariff Board, was from 76.61 per cent on yarns valued at more than 30 cents per pound, to 149.19 per cent on yarns valued at not more than 30 cents per pound. Upon fabrics valued at 40 cents a pound or less, the cheaper goods worn by the poorer people, the Tariff Board computes the duty 149.59 per cent; valued at more than 40 and not more than 70 cents per pound, 123.71 per cent. Here again, as in the case of yarns, the cheaper the goods the higher the duty.

It has always been contended by the advocates of Schedule K that these excessive duties on the cheaper yarns and cloths were justifiable, for the purpose of excluding goods made of shoddy and other wool substitutes. But with the high prices prevailing

on woolen goods, many people are compelled to buy fabrics made from wool substitutes. As stated by the Tariff Board—

They meet a market demand, which is fixed by the amount the purchaser is able to pay, and the real question is not whether they shall be used in the United States, but who shall produce them.

It is well known that the profit on the cheaper grades is relatively greater than on the higher priced fabrics. And the maintenance of these prohibitory duties on the coarser wools, yarns, and fabrics not only compel people of limited means to use goods made of shoddy and other wool substitutes by American manufacturers, but compel them to pay very dearly for them.

Schedule K takes good care that the American manufacturer of shoddy shall have this market exclusively and under such extortionate rates as enables him to make a round profit out of those who are so unfortunate as to be compelled to wear shoddy, or short-lived cotton worsted. Except for the prohibitory duties on the coarser wools, yarns, and fabrics, the poorer people of this country could be clothed in the durable, warm, though coarse woolen cloth which the workingman of Great Britain and on the Continent can afford to wear.

It is largely the concealed protection in the compensatory duties that makes the tariff so high as to shut out goods of this class. As shown by the report of the Tariff Board, page 124, the compensatory duty on goods valued at 40 cents or less per pound was 99.59 per cent of their total value—just the compensa-

tory duty alone, to say nothing of the protective duty that was added to it.

The compensatory duty on dress goods is more burdensome even than that on cloth. By way of illustrating that the compensatory duty falls as a heavier burden on the low and medium than on the high grades I submit a table, which shows, classified according to value, the imports in 1912 of yarns, blankets, and cloths. The quantity of each class imported and the computed ad valorem rates tell the whole story.

For example, cloths valued at not more than 40 cents per pound pay a duty of 144.79 per cent; cloths valued at more than 40 cents per pound and not more than 70 cents per pound pay a duty of 124.51 per cent; and cloths valued at above 70 cents per pound pay a duty of 93.23 per cent.

The importations under the highest classification were comparatively large, being valued at \$4,513,584. The average value per pound was \$1.15. These were the fine goods, which compete only slightly with any American product.

I ask, Mr. President, without reading it in detail, to present here a table taken from the report of the Tariff Board which brings out in graphic form the proposition which I am now arguing to the Senate.

The VICE PRESIDENT. Without objection, the table referred to will be printed in the Record.

The table referred to is as follows:

Imports entered for consumption—Year ending June 30, 1912.

Articles.	Rates of duty.	Quantities.	Values.	Duties.	Value per unit of quantity.	Actual and computed ad valorem rate.
Yarns made wholly or in part of wool:						
Valued not more than 30 cents per pound (pounds).....	27½ lb. + 35%.....	323.50	\$83.90	\$118.36	\$0.259	141.07
Valued more than 30 cents per pound (pounds).....	38½ lb. + 40%.....	60,706.73	59,386.26	47,126.75	.978	79.36
Total yarns (pounds).....		61,030.23	59,470.16	47,245.11	.974	79.44
Blankets:						
Valued at not more than 40 cents per pound (pounds).....	22½ lb. + 30%.....	1,821.00	603.90	581.80	.332	96.34
Valued at more than 40 and not more than 50 cents per pound (pounds).....	33½ lb. + 35%.....	1,131.60	539.05	562.11	.476	104.28
Valued at more than 50 cents per pound (pounds).....	33½ lb. + 40%.....	39,421.27	45,677.88	31,280.49	1.16	68.48
	(D. R., for min.).....	22.00	32.00		1.45	
More than 3 yards in length—						
Valued at not more than 40 cents per pound (pounds).....	33½ lb. + 50%.....	244.00	53.00	107.03	.217	201.94
Valued at above 40 and not above 70 cents per pound (pounds).....	44½ lb. + 50%.....	2,495.75	1,482.00	1,839.13	.594	124.10
Valued at over 70 cents per pound (pounds).....	44½ lb. + 55%.....	3,273.46	3,618.35	3,430.42	1.11	94.81
Total blankets (pounds).....		48,409.08	52,006.18	37,800.98	1.07	72.69
Cloths, woolen or worsted:						
Valued at not more than 40 cents per pound (pounds).....	33½ lb. + 50%.....	10,123.38	3,524.30	5,102.89	.348	144.79
Valued at more than 40 and not more than 70 cents per pound (pounds).....	44½ lb. + 50%.....	282,239.56	166,659.47	207,515.18	.599	124.51
Valued at above 70 cents per pound (pounds).....	44½ lb. + 55%.....	3,921,317.61	4,513,584.12	4,207,851.06	1.15	93.23
Total cloths, woolen or worsted (pounds).....		4,213,680.55	4,683,767.89	4,420,469.13	1.11	94.38

Mr. LA FOLLETTE. Mr. President, that the duties on Schedule K are practically prohibitory is shown conclusively by the table found in the Report of the Tariff Board, page 190, which I herewith submit. This table gives the principal classes of goods affected by the duties of Schedule K, namely, (a) woolen and worsted cloth, (b) blankets and flannels, (c) dress goods, (d) carpets, and (e) rugs. In each class it gives the total value of the production, the total value of the imports, and the percentage which each bears to the whole.

In almost every case the imports, as will be seen by the percentage, are practically negligible. Relatively almost nothing is able to get it over the tariff barrier.

The text which accompanies the Tariff Board's table explains it fully, and therefore I will take the liberty of asking that the text be printed in connection with the table. I will only pause, Mr. President, to read from this table the percentages. Of woolen and worsted cloth the production in the United States was \$181,217,156, and the imports were \$4,777,447, or 2.57 per cent. There was not much doubt about the height of the tariff wall at that point on those goods. Of blankets and flannels the total production of this country was \$10,566,965, and the imports \$125,147, or 1.17 per cent. That surely is as near prohibitory as you could make it, Mr. President.

Some of my friends on the Republican side may be querying in their minds as to why I am dwelling upon the existing law. The reason will appear from time to time as I present my amendments and submit my arguments in the course of this debate.

The dress-goods production in this country was, in 1909, \$98,239,275; the imports, \$7,019,284, or 6.67 per cent. The production of carpets was \$48,475,889, and the imports \$195,108, or four-tenths of 1 per cent. On rugs it is a little better, something nearer a fairer measure of duty, judged solely by the imports, the total production being \$18,490,449 and the total

imports \$3,553,448, or 16.12 per cent. Taking the schedule as a whole it may fairly be said to be prohibitive in its duties. Large importations are made in some particular line for special purposes to meet special demands, and would be made no matter what the duties were. I now ask that the entire table and text accompanying it may be printed in the Record.

The VICE PRESIDENT. In the absence of objection, permission is granted.

The matter referred to is as follows:

Imports and production of manufactures of wool compared: Comparison of production and imports of manufactures of wool can be made only by values, for the units of quantity vary. Comparisons by value always favor imports, because, as has been pointed out repeatedly in this report, the average value of the goods imported is higher than the average value of goods produced in the United States. This fact should be kept in mind in studying the table which follows. Table 163 presents the imports and production in 1909 of certain manufactures of wool and also the percentage which each is of the total of the two.

Production and imports of specified wool products in the United States in 1909 and the percentage which each is of the total of the two.

Item.	Value.	Per cent of total.
Woolen and worsted cloth, production and imports.....	\$185,994,603	100.00
Production.....	181,217,156	97.43
Imports.....	4,777,447	2.57
Blankets and flannels, production and imports.....	10,692,112	100.00
Production.....	10,566,965	98.83
Imports.....	125,147	1.17
Dress goods, production and imports.....	105,258,559	100.00
Production.....	98,239,275	93.33
Imports.....	7,019,284	6.67
Carpets, production and imports.....	48,475,889	100.00
Production.....	48,475,889	99.80
Imports.....	195,108	.40
Rugs, production and imports.....	22,043,897	100.00
Production.....	18,490,449	83.88
Imports.....	3,553,448	16.12

The production and imports of woolen and worsted cloth for the United States in 1909 was valued at \$185,994,603; 97.43 per cent of this was domestic production and 2.57 per cent was imports. The imports were substantially all under the highest-value classification of paragraph 375.

The production and imports of blankets and flannels for the United States in 1909 was valued at \$10,692,112; 98.83 per cent of this was domestic production and 1.17 per cent of it was imports.

The production and imports of dress goods for the United States in 1909 was valued at \$105,258,559; 93.33 per cent of this was domestic production and 6.67 per cent was imports. The imports included both the low and high grade dress goods.

The production and imports of carpets for the United States in 1909 was \$48,670,997; 99.60 per cent of this was domestic production and 0.40 per cent was imports.

The production and imports of rugs for the United States in 1909 was \$22,043,897; 83.88 per cent of this was domestic production and 16.12 per cent was imports. The imports consisted chiefly of expensive oriental rugs valued abroad at over \$4 per square yard. The average value per square yard of rugs produced in the United States in 1909 was 77 cents. (Tariff Board report on Schedule K, pp. 190-191.)

Mr. LA FOLLETTE. On Schedule K, as on every other, the basis of the arguments made by the manufacturers for high duties heretofore and now is the difference in the wage scales of this and the competing countries.

Turn to the hearings conducted by any committee that has considered a tariff bill and for the most part the argument presented by the manufacturers who appeared contending for the duties which they demanded is simply that the wages in this country are so much and the wages in the competing country are so much; and, in so far as any attention has been given to the figures at all, that has been almost exclusively the basis upon which tariffs have been framed.

"We pay our labor twice as much as the woolen manufacturers on the other side" is a statement that runs through all of the tariff hearings on Schedule K, and indeed in modified form upon every other schedule of the tariff bill. Tables are abundantly furnished, showing the difference in the wage scales of the United States and Great Britain on each operation necessary to convert wool into cloth. It is, as a rule, a most misleading form of argument.

The efficiency of the labor is the vital thing. The wage scale is only a factor. I may pay a cheap, bungling workman \$1 per day. My competitor across the street may pay his workman \$3 per day; and by his superior skill and intelligence, combined with up-to-date mechanical devices and methods, his output may surpass mine both as to quality and quantity and at a less cost per unit of product.

And so I say it is time to demand something more than a mere statement of the difference in wages paid in this and foreign countries.

I digress for a moment to say in this connection what I have said many times before in the course of tariff debates, that the direct and almost certain effect of prohibitory duties, the pampering and coddling of overprotected industries, is to take away all incentive for advanced modern methods and higher efficiency. The excessive duties of Schedule K show in a marked degree this tendency. While we have in this country many highly efficient establishments under progressive and far-seeing management, nevertheless the blighting influence of overprotection is found in a great majority of the woolen-manufacturing establishments of the country.

The Tariff Board in its report on wool examined this question of efficiency in the different establishments investigated.

Industrial efficiency is a large question in itself. A great many elements of far-reaching importance must be weighed carefully in connection with any adequate consideration of the subject. And it is not practical to go into it fully at this time. A study of the report of the Tariff Board, however, with an analysis of the tables in which is gathered the results of their investigation, tends to prove that the establishments paying the highest wages were producing at the lowest cost.

On this subject of productive efficiency, labor cost, average wages, and their relation to output, I quote again from Mr. Stone, chief statistician of the Tariff Board:

In wool scouring, the lowest average wage paid to machine operatives in the 30 mills examined was found to be 12.16 cents per hour—

Now, mark that. I repeat it:

In wool scouring, the lowest average wage paid to machine operatives in the 30 mills examined was found to be 12.16 cents per hour, and the highest 17.79. Yet the low-wage mill showed a labor cost of 21 cents per 100 pounds of wool, while the high-wage mill had a cost of only 15 cents. One of the reasons for this puzzling situation was that the low-wage mill paid 9 cents per 100 pounds for supervisory labor, such as foremen, etc., while the high-wage mill paid only 6 cents. Apparently well-paid labor needs less driving and supervising than low-paid labor.

The Tariff Board conducted its investigations still further. This was the scouring process for wools. Next Mr. Stone says:

In the carding department of 17 worsted mills the mill paying its machinery operatives an average wage of 13.18 cents per hour had a machine labor cost of 4 cents per 100 pounds, while the mill paying

its machine operatives only 11.86 cents per hour had a cost of 25 cents per 100 pounds. This was due largely to the fact that the low-cost high-wage mill had machinery enabling every operator to turn out more than 326 pounds per hour, while the high-cost low-wage mill was turning out less than 48 pounds per hour.

The same tendency was observed in the carding departments of 26 woolen mills. The mill with the highest machine output per man per hour, namely, 57.7 pounds, had a machinery-labor cost of 23 cents per 100 pounds, while the mill with a machine output of only 6 pounds per operative per hour has a cost of \$1.64 per 100 pounds. Yet this mill, with a cost seven times higher than the other, paid its operatives only 9.86 cents per hour, as against 13.09 cents paid by its more successful competitor.

These examples could be repeated for every department of woolen and worsted mills, but will suffice to illustrate the point that higher wages do not necessarily mean higher costs. They show that mill efficiency depends more on a liberal use of the most improved machinery than on low wages. Thoughtful planning in arranging the machinery to save necessary steps to the employees, careful buying of raw materials, the efficient organization and utilization of the labor force in the mill, systematic watching of the thousands of details, each affecting the cost of manufacture, will reduce costs to an astonishing degree. When the board, therefore, states that the labor cost of production in this country is, on the average, about double that in foreign countries, we must bear in mind the difference in costs in our own country and the causes to which high costs are due. The fact is that the woolen industry, being one of the best, if not the best protected industry in the country, shows an exceptional disposition to cling to old methods and to use machinery which long ago should have been consigned to the scrap heap. That is where the chief cause of the comparatively high cost of production in a large part of the industry is to be looked for.

Mr. President, the next point to which I wish to direct the attention of the Senate is the results of this schedule, which is the existing law, and which, as preliminary to what I have to say upon the existing schedule, I take the time of the Senate to present. The next step to which I wish to direct their attention is a scientific test of the operation of the terms of this law upon this industry.

I have mentioned to the Senate the fact that it has been my privilege to enjoy what I esteem to be rather exceptional advantages for the investigation of the subjects—or, at least, some of them—covered by this great bill. Not all the Senators upon this floor, I know, would count it as any advantage; but I have esteemed it so. In this sort of legislation, as in all legislation which affects the economic life of the American people, I believe in thoroughgoing, scientific investigation; and knowing that we had a board or commission that had studied this subject, and believing that they had investigated many of the schedules upon which, perhaps, their investigation had not progressed to the point where they could make report, but that they had accumulated a large amount of valuable material, I undertook to locate whatever the Tariff Board, when it went out of existence, had left as a sort of heritage to anyone who might be interested in what it had done in its somewhat short life.

I found that there was a room set apart in the Treasury Building in which were stored all of the papers and all of the data of the Tariff Board, their finished and unfinished work, their original investigations, upon which were based the reports which they did make to Congress.

It seemed to me, with my views of tariff making, wrong that that great work, upon which had been expended so much intelligent investigation, at such large expenditure of the people's money, should be altogether wasted, excepting as to that which had been reported to Congress and was public property; for I felt that in their unfinished work would be found much valuable material which could be carried forward and applied to the great subject of legislation which this Congress was convened in extra session to consider.

So I undertook to secure the opportunity to see that material, and I was finally accorded access to it by the President's order. I then secured the services of men who had been employed by the Tariff Board in investigative work; and the chairman of the Tariff Board, Prof. Emery, was kind enough to come here and sit down with us for a day and go over this material, and put his estimate upon that which was far enough along in investigation to make it useful and helpful to be carried on further. I had the assurance of the chairman of the Tariff Board that the very men whose cooperation and assistance I had secured were the men upon whom, among others—but he distinguished them especially—he had placed the utmost reliance and upon whom he had laid the very heaviest responsibilities. With respect to this particular schedule, I have had the assistance of the man who wrote the first volume of the report for the Tariff Board upon that schedule. Not only upon these schedules upon which they made report have I been able to get very material assistance, but upon many phases of legislation covered by this bill I have been very greatly helped in arriving at my conclusions by the fact that I had access to the Tariff Board files and had the assistance of such able men.

Mr. President, I have here not a great graphic chart like that which hangs on the wall, but I have a table which will present

and graphically portray the facts to you, if you will take the pains to examine it in the RECORD when it is printed. I have not reduced it to the form of that hanging on the wall of this Chamber. I wish I had been able to do so, for it is a most interesting and instructive portrayal of Schedule K.

It shows the duties on the Tariff Board's woolen and worsted samples under the Payne-Aldrich law compared with the difference in conversion cost and compensatory duties as found by the Tariff Board and applied by the expert who prepared the report on the wool schedule.

I have here before me the samples, nearly 50 in number, which are known as the Tariff Board's woolen and worsted samples. They are samples of cloth manufacture embraced in Schedule K, which are typical of the whole industry. These are the identical original samples which the Tariff Board obtained the costs upon. The table which I hold in my hand I ask leave to insert in the RECORD with the explanatory matter which accompanies it and which will aid those who wish to comprehend it in all its details.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and permission is granted.

Duties on Tariff Board woolen and worsted samples under the Payne-Aldrich law compared with the difference in conversion cost and compensatory duties as found by the Tariff Board.

Sample No.	Kinds of cloth.	1	2	3	4	5	6	7	8	9	10	11
		Weight in ounces per yard.	Price per pound.	Compensatory duty in Payne-Aldrich bill.	Ad valorem duty in Payne-Aldrich bill.	Ad valorem duty in Payne-Aldrich bill.	Total duty under Payne-Aldrich bill per pound.	Difference in conversion cost per pound.	Compensatory duty recommended by Tariff Board on basis of 18 cents per pound on the scoured content of wool.	Total duty and compensation required, according to Tariff Board.	Excess of Payne-Aldrich ad valorem duties over duty necessary to cover conversion cost. (5-7.)	Excess of total Payne-Aldrich duties over total necessary duties, according to Tariff Board. (6-9.)
				Per lb.	Per cent.

The foregoing table contains representative samples of all the woolen worsted goods worn by men and women. They may be classified as follows:

(a) Staples and piece-dyed fabrics are represented by samples 37, 41, 44, 46, 47, 48, and 53. These goods are staple products and represent a line little affected by fashion. They are often woven from the gray yarn and then dyed a uniform color. They include fabrics light enough for suiting and heavy enough for overcoating.

(b) Serges are represented by samples 12, 22, 23, 36, 42, and 49. These goods are a well-known standard product, worn both by men and women. Mills have standard serge patterns which they run year after year. They are usually piece dyed.

(c) Fancy woolens are represented by samples 9, 13, 14, 21, 25, 28, and 32. Many of these fabrics contain shoddy, noils, and waste, but they are substantial fabrics and worn by the poorer classes in our communities. They can not be imported under the Payne-Aldrich rates. They include woolen tweeds, woolens with cotton warp, fancy woolen overcoating, and cassimeres.

(d) Fancy worsteds are represented by samples 30, 34, 38, 45,

Mr. LA FOLLETTE. This table which follows is a comparison of the duties on all of the Tariff Board samples excepting three or four which could not be included in either the map or chart hung upon the wall or in my table, for reasons given below. But it is upon all of the other samples of the Tariff Board. It compares the duties of the Payne-Aldrich law with the difference in conversion cost and compensation required as found by the Tariff Board.

The samples omitted from the table fall into one of the following classes:

(a) Dress goods weighing less than 4 ounces to the square yard were excluded.

(b) In some cases the board's figures were incomplete, so that all the factors necessary for the calculation were not present. For example, the total English cost for sample 11 is not given.

(c) The table is based on the difference in conversion cost between England and the United States. On a few of the samples the board obtained no English cost, but only the French or German costs. This is true, for example, of samples 40 and 43.

and 52. These are the fine worsteds made each year to meet the demands of fashion. At the present time these goods are more in vogue than fancy woolens. They are figured with some pattern, usually a stripe, and they often contain silk decoration, as sample 52.

(e) Women's wear goods are represented by samples 8, 15, 16, 17, 20, 27, and 33. In this class fall the heavier woolen and worsted goods used by women for suits or skirts. The samples are representative of the great bulk of goods used by women for these uses. They include homespun weaves, chevots, covert cloth, sacking, and broadcloth.

(f) Lightweight women's wear goods are represented by samples 1, 6, and 10. These goods are the lightweight goods used by women for overskirts or even for lightweight suits. It includes lightweight serges and particularly Panama cloth, such as samples 1 and 6. Panamas like sample 1 have a low cost of production and are produced by the mill.

(g) Cotton-warp goods are represented by samples 2, 4, 24, and 26. These goods represent cheap production. The cotton

warp makes it possible to run a number of looms to one weaver. Far more of them are produced in the United States than abroad, and in a large degree they are used by our poorer classes where people of like social position abroad would use shoddy goods. They have a better appearance than shoddy goods, but they are not nearly so serviceable. They can not be imported under the Payne-Aldrich rates.

The method by which the difference in conversion cost was arrived at in the foregoing table is explained fully in the following quotation from an article by W. S. Culbertson, "The Tariff Board and Wool Legislation," which was published in the American Economic Review, March, 1913, and subsequently as House Document No. 50, Sixty-third Congress, first session:

WOOLEN AND WORSTED FABRICS.

When the question of the duty on woollen and worsted fabrics is taken up, a field is entered upon vastly more complicated than that

of tops and yarns. In investigating the cost of weaving the Tariff Board chose 55 samples of woollen and worsted fabrics, which included samples of all the standard varieties used for men's and women's wear. The board, in the first place, obtained the actual weaving cost of each fabric from the mill originally making it; in the next place, it submitted the various samples to foreign and domestic manufacturers making similar goods, and obtained from them, after their books had been studied by the board's agents, the cost at which they could make the fabrics. The figures were checked and compared and the record of each sample written up. The board contented itself with giving the costs of converting yarn into cloth, and it made no effort to report specifically on the conversion costs of the tops and yarns used in the making of the fabrics. Nor did it attempt to connect its investigation of weaving costs with its costs of combing and spinning. An effort will here be made to do this. In Table 10 the difference in conversion costs between this country and abroad for the samples reported on by the Tariff Board is calculated from the raw wool through combing and spinning to the finished fabrics. Those samples on which no English costs were obtained are not included. In this table the classification of the Hill bill has been adopted, not necessarily because it is the last word on classification, but because it was the one most discussed in the Sixty-second Congress.

The ad valorem duty necessary to cover the difference in conversion costs for the samples reported on pages 651 to 690 of the Tariff Board's report on Schedule K.

Sample No.	Name of cloth.	1 Weight (ounces per yard).	2 Difference in conversion cost for top in 1 pound of cloth.	3 Difference in conversion cost for yarn in 1 pound of cloth.	4 Difference in weaving conversion cost per pound of cloth.	5 Total difference in conversion cost of 1 pound of cloth (2+3+4).	6 Price (English total cost plus 17½ per cent) per pound.	7 Ad valorem rate necessary to cover difference in conversion cost (5÷6).

The unit of measure in Table 10 is 1 pound of cloth. Before the difference in conversion costs of the tops and yarn entering into a pound of cloth could be computed it was necessary to determine how much waste there is in combing and spinning. It should be clear that, because of the wastes in these processes, it requires more than a pound of yarn to make a pound of cloth and more than a pound of top to make a pound of worsted yarn. The conversion cost of the material wasted, however, must be considered in calculating the total conversion cost of a fabric. At best the method by which the figures in Table 10 were computed is complex. The best way to make it clear is to take one sample and follow it through all the computations.

Sample No. 22 is a men's blue serge weighing 14 ounces to the yard. In making the yarn required to make 1 pound of this fabric approximately 1.24 pounds of top were consumed. The difference in the conversion costs between this country and England of the top in this fabric is 3.5 cents per pound, and the corresponding cost for 1.24 pounds is 4.34 cents. By this means all the figures in column 2 were computed.

In making 1 pound of sample No. 22 approximately 1.13 pounds of worsted yarns were used—.60 of a pound were used in the warp and .53 of a pound were used in filling; 2/24s were used in the warp. According to the Tariff Board the difference in conversion cost between this country and England of 2/24s is 6.31 cents per pound, and the corresponding figure for .60 of a pound would be 3.79 cents; 1/12s were used in the filling. While no cost was given for 1/12s by the Tariff Board, a fair estimate on the basis of the costs given would make the difference in conversion cost between this country and abroad for 1

pound of this yarn 5.04 cents, and the corresponding cost for 0.53 of a pound would be 2.67 cents. Adding 3.79 cents and 2.67 cents the result is 6.46 cents—the difference in conversion costs between this country and abroad of making the yarn in 1 pound of sample No. 22. This method of calculating the yarn costs was followed in the case of each sample, and the results are to be found in column 3.

The American weaving cost for sample No. 22 was 22.2 cents per yard and the English weaving cost was 11.93 cents per yard. (Report of the Tariff Board on Schedule K, p. 665). The latter cost was subtracted from the former in order to obtain the difference in the weaving conversion costs per yard between this country and abroad. This difference per yard was then reduced to the corresponding difference per pound, or 11.7 cents. In this manner each of the costs in column 4 of Table 10 was computed.

Column 5 is the sum of columns 2, 3, and 4 and shows the total difference in cents per pound between this country and England of converting wool through all the processes into finished cloth. For sample No. 22 this cost is 22.5 cents.

It next became necessary to determine the price on which the duty would be assessed if the fabric in question were imported. Under the present administration of the customs this price would, of course, be the foreign price. The Tariff Board did not give prices for the samples under discussion, but it did give the total costs. Upon the basis of the total cost the price is computed. Recurring to sample No. 22, the total English cost, i. e., both material and conversion costs, for this sample was 49.11 cents per yard. This total cost per

yard was reduced to the total cost per pound, and to it was added 17½ per cent of itself in order to determine a figure on which the duty should be assessed. This method is employed by the customs officials when goods are billed to this country at cost, and 17½ per cent is a fair allowance for distribution expenses and profit. For sample No. 22 the figure on which the duty would be assessed is 65.94 cents per pound. This is the way column 6 was made up.

Column 7 is the real object of all the computations in Table 10. It is the per cent which column 5 is of column 6; in other words, it is the total difference in conversion costs between this country and England expressed in percentage. If, then, a duty were being levied just adequate to offset the disadvantages of the American manufacturer arising from the difference in conversion costs alone between here and England of sample No. 22, the ad valorem rate would be 34.12 per cent. This duty, of course, does not provide for compensation on account of a duty on raw wool.

There are certain other observations to be made concerning the method by which Table 10 was constructed. No effort was made to work out the top costs in column 2 according to the particular qualities of top in the warp and weft. For the purpose of avoiding confusion and possible inaccuracy, the difference in the conversion costs between this country and England of 1 pound of tops of the lower qualities was taken at 3.5 cents and of 1 pound of the higher qualities at 4 cents. These costs correspond approximately to the results of the discussion of tops above. Such variations as occur in column 2 are due to variations in the amount of top used in making 1 pound of each fabric. Whenever the spaces are blank in column 2, the fabrics considered are woolsens, as distinguished from worsteds, and no tops were used in their manufacture. Whenever the fabric considered was in part worsted, only the actual tops used were considered.

In some cases in the construction of Table 10 it was necessary to make use of information generally familiar to manufacturers but not found in the report of the Tariff Board. This was true in proportioning the material in a pound of cloth between the warp and weft and in some cases in estimating the amount of loss of material in the various processes. In obtaining the costs of all the various kinds of yarns used in the construction of the sample under discussion, several sources of information had to be resorted to. The costs of producing worsted yarns were taken from the report on Schedule K, and in those cases where costs were not given for particular counts the costs of these were estimated on the basis of the costs given. The costs of cotton yarns (when a part of a sample) were taken from the Tariff Board's report on Schedule L. No costs of carded woolen yarns are given by the Tariff Board, but it is generally recognized in the trade that the conversion cost of these yarns in the United States is one-half cent a cut, and in the absence of anything better this estimate has been used here.

These detailed explanations of Table 10 have been made for the purpose of being frank with the reader. Differences of opinion unavoidably arise in a subject as complicated as the one under consideration. There is no desire to force any conclusions on the reader and therefore the methods of computation are set forth plainly and the result left to the judgment of him who reads.

The purpose of the foregoing table is to illustrate the excessiveness of the Payne-Aldrich rates on woolen and worsted goods.

In the first place, the ad valorem duty in cents (column 5) may be compared with the difference in conversion cost as found by the Tariff Board (column 7). In each case the Payne-Aldrich rate is excessive and the excesses are shown in column 10. Even if we, therefore, assume that there is no excessive protection in the so-called compensatory duties of the Payne-Aldrich law the ad valorem duties themselves are clearly shown to be excessive.

There is, however, concealed protection in the so-called compensatory duties of the Payne-Aldrich law. It is difficult to measure this excess, but the table gives a fair idea of it. It was necessary first to determine what compensatory duty would equal the actual amount of compensation needed under the present duties. Of course the importation of low shrinking wools has increased the protection contained in the so-called compensatory duties. It is conservative to say that the wool-grower does not get under the duty of 11 cents a grease pound in the Payne-Aldrich law more than protection equivalent to 18 cents on the scoured content of wool. If anything, the 18 cents on the scoured content is more protection than 11 cents on the grease content. Eighteen cents per pound was the rate in the Hill and Penrose bills of last Congress. The Tariff Board states (p. 626) that on the basis of 18 cents on the scoured contents of wool the compensatory duty should be 26 cents. Twenty-six cents was therefore added to the difference in conversion cost in order to arrive at the total duty required by the Tariff Board, assuming, of course, that the Payne-Aldrich rate on raw wool is correct. This is shown in column 9. These figures were then subtracted from the total duty under the Payne-Aldrich law (column 6), and the excess is shown in column 11.

It should be distinctly understood that this table does not indorse the 18-cent duty on the scoured content of wool. It is used simply to get a comparable basis.

Without taking the time of the Senate to go into the details, let me say that being fortunate enough to have the assistance of an expert upon this schedule I have been able to make this table include the total conversion cost from the raw wool to the finished cloth. I believe that the chart hanging on the wall starts with the yarn instead.

Without describing these various samples of cloth and their use, I am going just to call the attention of the Senate to them by number, because it will save time. Then I am going to give you not all the details that you will find in the table, which are very interesting, such as the compensatory duty and the ad valorem duty under the Payne-Aldrich law, the total duty under the Payne-Aldrich law, the difference in conversion cost per pound, the compensatory duty recommended by the Tariff Board on a basis of 18 cents per scoured pound of wool content, the total duty and compensation required according to the Tariff Board, the excess of the Payne-Aldrich ad valorem duties, the different duty necessary to cover the conversion cost, and the excess of the total Payne-Aldrich duties over necessary duties, including compensation, according to the Tariff Board. I just want to read the excesses shown in the last column to you that we may see what the burden is that the American people have to bear at this time under existing law.

Sample No. 1, excess of the total Payne-Aldrich duties over the total necessary duties, according to the Tariff Board, 25.80 cents per pound.

Sample No. 2, 35.49 cents per pound.

Sample No. 4, 15.02 cents per pound.

Sample No. 6 is an all-wool Panama.

I stop to mention that, because it is a rather cheap class of dress goods worn largely by the American people. On all-wool Panama, No. 6, the excess of the Payne-Aldrich duty over that which is necessary to measure the difference in the cost of production and furnish compensation is 40.27 cents a pound.

Women's homespun, 40.70 cents a pound.

Woolen tweed, 32.78 cents a pound.

Women's all-wool blue serge, 31.62 cents a pound.

Women's worsted serge, 30.02 cents a pound excess, which measures the overprotection. Do you begin to realize what thinned us out on this side of the Chamber?

Men's fancy woolen suiting, 13.58 cents a pound excess protection.

Fancy woolen overcoating, 25.11 cents a pound.

Women's worsted cheviot, 24.18 cents a pound.

No. 16, a covert cloth, 38.75 cents per pound excess.

No. 17, women's all-wool sacking, 41.73 cents excessive protection.

Women's all-wool broadcloth, 43.60 cents excessive protection. Fancy woolen overcoating, 27.07 cents a pound excess protection.

Men's blue serge, common, worn by everybody, 28.47 cents a pound excess protection.

Fancy cotton warp worsted, 50.15 cents a pound excess protection.

Fancy cassimere, 31.60 cents a pound excess.

Cotton warp worsted, 36.51 cents a pound excess.

Women's cheviot, 26.11 cents a pound excess.

Men's fancy woolen suitings, 23.31 cents a pound excess.

Fancy worsted, 41.24 cents a pound excess.

Fancy fine woolen, 28.19 cents a pound excess.

Covert wool cloth, 40.77 cents a pound excess.

Fancy worsted suiting, 24.88 cents a pound excess.

Men's blue serge, 55.34 cents a pound excess.

When you get down to the common ones I tell you there is where you get the excess duties.

Men's black clay worsted, 45.27 cents a pound excess.

Fancy worsted suiting, 45.57 cents a pound excess.

Black thibet cloth, 42.38 cents a pound excess.

Men's lightweight blue serge, 43.82 cents a pound excess.

Woolen overcoating, 43.58 cents a pound excess.

Men's fancy half-worsted suiting, 54.51 cents a pound—more than it was necessary to measure the difference in the cost of production and furnish compensation.

Uniform cloth, 50.56 cents a pound excess.

Black unfinished worsted, 39.40 cents a pound excess.

Men's unfinished worsted, 39.31 cents a pound excess.

Men's serge, 37.78 cents a pound excess.

Silk mixed worsted, 44.11 cents excess protection.

Men's unfinished worsted, 38.17 cents more than was necessary to furnish a complete and thorough protection.

Mr. NORRIS. Mr. President—

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from Nebraska?

Mr. LA FOLLETTE. I do.

Mr. NORRIS. I should like to inquire of the Senator if he can give us that excess as applied to yards, or will the table show it?

Mr. LA FOLLETTE. The table will not show it, because the duty is measured by pounds, and the whole matter must be

figured out by the pound. But reference is made to the Tariff Board's report where every Senator will have the opportunity to make investigation into the full text relating to the matter.

Mr. NORRIS. I make the inquiry because to the ordinary person the illustration would be enhanced in value very much if in each case the amount were given in yards.

Mr. LA FOLLETTE. Of course that would be available, it all the while depending upon the weight of the goods.

Mr. NORRIS. Yes; it would vary with each sample, I understand.

Mr. LA FOLLETTE. But according to the views of the Senator from Nebraska I am sure there should not be one cent of excess protection over and above that which measures the difference in the most of production.

Mr. NORRIS. Certainly not. I agree with that proposition, but I will say to the Senator that the ordinary person judges cloth not by the pound but by the yard, and it seems to me it would elucidate the argument the Senator is making if we knew in each case how many pounds there were in a yard or how many yards there were in a pound.

Mr. LA FOLLETTE. As it is all measured by the pound and as the weight of each sample varies, it would have been quite an additional labor to have figured out the yards. But it shows that throughout the whole schedule—for this is a representative class of samples typical of the industry—the duties are extravagant and prohibitory. They are not simply extravagantly protective, but they are prohibitory.

Mr. SUTHERLAND. Mr. President—

Mr. LA FOLLETTE. I yield to the Senator.

Mr. SUTHERLAND. The Senator has given us the amount of excess upon the various samples. Does the Senator's statement show the amount of the duty so that we can determine the percentage of excess?

Mr. LA FOLLETTE. Oh, yes. It shows the weight in ounces. It can be figured out. I fancy that perhaps what the Senator from Nebraska just asked me about can be computed from this table, but it will require some computation on the part of anyone interested in it. The weight in ounces per yard is given.

Mr. NORRIS. If that is given, anyone will have sufficient data by which to figure it out for himself.

Mr. LA FOLLETTE. The price per pound is given. The compensatory duty in the Payne-Aldrich bill is given per pound. The ad valorem duty in the Payne-Aldrich bill reduced to cents per pound is given. The total duty under the Payne-Aldrich bill per pound in cents is given. The difference in conversion cost per pound is given in cents. The compensatory duty recommended by the Tariff Board on the basis of 18 cents per pound on the scoured content of the wool is given. The total duty and compensation required according to the Tariff Board is given. The excess of the Payne-Aldrich ad valorem duties over the duty necessary to cover conversion cost is given, and the excess of the total Payne-Aldrich duties over the total necessary duties according to the Tariff Board is given.

Now, Mr. President, that brings me to another phase of this schedule, which is of deep and vital interest to the American people. The framers of the pending bill were confronted by these enormously excessive duties and they addressed themselves to the solution of the problem according to their standard.

They have reported to the Senate a bill which places wool upon the free list and, in a marked degree, reduces the duties upon all of its manufactured products.

I approached the consideration of the questions presented by the pending legislation on this schedule, I think, without any prejudice, or if I had any I am sure that it was in favor of the producer of the raw material which enters into the manufactured products of the wool manufactures. I was born and reared and spent all the years of my boyhood and early manhood upon a farm, and because we are all affected by our environment and association in that formative period of our life, I think all of my sympathies and attachments draw me to the farmer's side of any question in which his interests are in issue.

I have made such investigation and such study of the effect of free wool on the producer of wool as I have been able, and with the indulgence of the Senate I shall present the result of that investigation for whatever it may be accounted to be worth. It is the result of painstaking effort and a sincere desire to reach a sound conclusion.

It is important at the outset to recognize that the question of woolgrowing and the tariff is, like most economic questions,

very complex, and that the effect of the tariff upon the growth and maintenance of the industry has been grossly exaggerated. Among the factors other than the tariff that have influenced the industry in the past, C. W. Wright ("Woolgrowing and the Tariff," p. 319) enumerates:

- (a) The spread of population.
- (b) The rise of manufactures.
- (c) The relative changes in the prices of agricultural products and the competition of other farm pursuits.
- (d) The abnormal conditions of war with its distorting inflation of the currency.
- (e) The opening of the far West.
- (f) The greater relative profits in other lines of agriculture.

The tariff has without doubt been an influence; it has been too much belittled by the free trader and too much exaggerated by the protectionist. It has maintained the price of wool at a level that made it profitable to keep more sheep than would have been kept under free wool, and it has enabled woolgrowing, as distinguished from mutton raising, to remain an independent industry.

The questions that present themselves are: What parts of the woolgrowing industry will be destroyed by free wool? Can the parts that will be destroyed be maintained and defended on an economic basis?

There are in the United States three distinct classes of sheep:

- (1) The fine-wooled merino of Ohio and adjoining States.
- (2) The crossbred sheep of the Middle Western and Eastern (farm) States.
- (3) The range sheep.

FINE-WOOLED MERINO SHEEP AND THE CROSSBREDS.

The net charge against fine merino wool, according to the Tariff Board, is summarized in the following table. The table is based on the table on page 369 of the Tariff Board's report on wool, which I will ask leave to incorporate in my remarks.

The PRESIDING OFFICER (Mr. POMERENE in the chair). In the absence of objection, permission to do so is granted.

The table referred to is as follows:

TABLE 1.—Net charge against fine merino wool produced in the Eastern States.

Pounds of wool.		Receipts.		Average net charge against wool per pound.
Number.	Percentage of total.	Percentage from wool.	Percentage from other sources.	
37,934.....	6	78	22	\$0.42
57,083.....	10	77	23	.32
90,886.....	15	71	29	.27
129,169.....	22	71	29	.22
248,519.....	42	57	43	.12
29,588.....	5	38	62	.06
592,979.....	100	64	36	.19

Mr. LA FOLLETTE. As the table shows, the great part of the cost of these fleeces is carried by the receipts from wool, the average being 64 per cent from wool and 36 per cent from other sources. This explains why the net charge against wool is abnormally high. To the uncompromising protectionist these figures prove the need of higher protection than given by the present tariff bill; to the advocate of free wool they prove that the particular type of sheep that make up these fleeces is not adapted to the conditions of the country. There are in the Eastern States about 5,000,000 sheep to which the costs in Table 1 apply. The product of these fleeces competes with the merino fleeces of Australia, where the net charge against wool is only a few cents. Nothing short of a prohibitive tariff would make this method of growing wool profitable. It is a highly specialized industry trying to raise a type of sheep that yields little or no income from mutton. Merino are desirable on the range where a hardy sheep with flocking characteristics is needed, but it is out of place in a farming community.

Free wool would eliminate the pure merino type, but it would not destroy the industry. By crossing with mutton bucks or by introducing the mutton types of sheep the receipts from mutton could be increased and the income from wool would still remain. The Tariff Board showed that the net charge against wool grown on the crossbred sheep in the Eastern States was less than nothing; that is, the receipts from mutton more than paid the cost of maintaining the fleeces and the wool was all "velvet." On page 369 of the Tariff Board report it is shown that of the receipts from 159,396 pounds of wool raised on crossbred sheep

only 33 per cent was from wool and 67 per cent was from other sources—chiefly mutton.

It follows, therefore, that if the eastern farmers will adopt the crossbred or mutton types of sheep they can raise wool profitably as a by-product without any tariff. The United Kingdom furnished a good example of a free-wool country with extensive flocks. There are sheep in every county in England. In 1910 the United Kingdom, with an area of 77,690,240 acres, contained 31,164,587 sheep and lambs, or 1 sheep or lamb for every 2.5 acres. The United States, on the contrary, with an area of 1,903,461,760 acres, contained in the same year 52,447,861 sheep and lambs, or 1 sheep or lamb for every 36.3 acres. The condition in the United Kingdom goes to show that we have not touched our woolgrowing possibilities in this country, and that woolgrowing, as an incident to general farming, can be made profitable under free wool. Free wool will force a readjustment in the eastern woolgrowing conditions. Many farmers who now keep fine merino flocks as a matter of pride or on account of tradition will be forced to abandon the pure merino type, except as a breeding proposition. If, however, he keeps his head and turns to a type of sheep adapted to the new conditions, he, as well as the public generally, will be benefited. He will already find his neighbors owning 10,000,000 crossbred sheep, that would be profitable under free wool.

The Tariff Board divides the merino sheep of the East into classes, the first including such heavier types as the French Rambouillet, the Black Top, and the Delaines; the second, the small American merino. In addition to these there are the crossbreds. Of the eastern sheep the board says:

The results clearly differentiate three types of flocks: (1) Crossbred flocks, producing a good medium fleece and showing receipts from other sources, chiefly mutton, which are sufficient, or nearly sufficient, to cover the cost of maintaining the flock; (2) pure-bred or high-grade flocks of improved merinos, producing a somewhat heavier clip of superior wool and showing receipts from other sources, which, although usually not sufficient to cover the cost of maintenance, are in many cases large enough to afford the grower a fair profit; and (3) flocks that produce a lighter fleece and show receipts from other sources, which are far from sufficient to cover the cost of maintenance; so that, as the receipts from wool are not large enough to cover the flock expense, the industry seems to be carried on either at a very narrow margin or, in many cases, at a decided loss.

THE RANGE SHEEP.

I come now, Mr. President, to the case of the range sheep. The net charge against wool in the far West, according to the

Tariff Board, is summarized in the following table, marked "Table 2," which, Mr. President, I ask leave to incorporate in my remarks without reading in detail. I will merely say that the calculations of this table are based to be 20,764,713 pounds of wool. The receipts from wool are 43 per cent of the total, the receipts from other sources are 57 per cent, and the average net charge per pound against wool is 10.9 cents.

The PRESIDING OFFICER. If there be no objection, the table referred to by the Senator from Wisconsin will be printed in the RECORD. The Chair hears none.

The table referred to follows.

TABLE 2.—Net charge against wool produced in the range States.

Wool.	Percent- age of total.	Receipts.		Average net charge against wool per pound.
		Percent- age from wool.	Percentage from other sources.	
Number of pounds:				
2,636,297.....	12.7	47.7	52.3	\$0.237
3,836,815.....	18.5	49.8	50.2	.168
5,459,088.....	26.3	47.4	52.6	.119
4,665,141.....	22.5	42.0	58.0	.077
2,293,087.....	9.0	36.2	63.8	.027
1,874,287.....	11.0	28.9	71.1	+.039
20,764,713.....	100.0	43.0	57.0	.109

Mr. LA FOLLETTE. These figures are given more in detail in Table 3, which is taken from page 329 of the Tariff Board's report on wool. The average rate of income on capital should be studied in connection with the proportion of receipts from sources other than wool.

I ask leave to have incorporated, without reading in detail, that which in my notes is marked "Table 3." This is a summary of the Tariff Board's statistics relating to the net charge against wool raised on the range in the far Western States.

The PRESIDING OFFICER. In the absence of objection, the table referred to by the Senator from Wisconsin will be printed in the RECORD.

The table referred to is as follows:

TABLE 3.—Summary of the Tariff Board's statistics relating to the net charge against wool raised in the range or far Western States.

Net charge.	Cases.		Sheep.		Pounds of wool.		Wool.	Receipts.					Average net charge against wool per pound.	Differ- ence be- tween net charge and aver- age selling price.	Aver- age rate of in- come on capital.
	Num- ber.	Per- cent- age of total.	Num- ber.	Per- cent- age of total.	Num- ber.	Per- cent- age of total.		Per- cent- age from wool.	Other sources.	Percent- age from other sources.	Total.	Aver- age per cent.			
20 cents and above.....	40	12.1	438,541	13.9	2,636,297	12.7	\$479,858.88	47.7	\$528,957.52	52.3	\$1,006,816.38	100.0	\$0.237	\$0.055	-9.1
15 cents and under 20 cents.....	59	17.9	594,268	18.9	3,836,815	18.5	656,814.50	49.8	661,554.83	50.2	1,318,369.33	100.0	.168	.003	-0.5
10 cents and under 15 cents.....	71	21.5	807,775	25.6	5,459,088	26.3	825,627.50	47.4	912,737.26	52.6	1,738,364.76	100.0	.119	.034	3.8
5 cents and under 10 cents.....	74	22.4	677,545	21.5	4,665,141	22.5	733,849.53	42.0	1,013,036.76	58.0	1,746,886.29	100.0	.077	.08	10.7
Under 5 cents.....	42	12.7	352,912	11.2	2,293,087	9.0	352,830.12	36.2	622,219.93	63.8	975,050.05	100.0	.027	.126	15.3
Net credit.....	44	13.4	280,690	8.9	1,874,287	11.0	262,859.30	28.9	648,132.58	71.1	910,991.88	100.0	.039	.179	24.2
Total.....	330	100.0	3,151,731	100.0	20,764,713	100.0	3,311,839.81	43.0	4,384,638.88	57.0	7,696,478.69	100.0	.109	.050	6.2

The above table shows that the proportion which the average receipts from wool per head constitute of the average total receipts per head varies widely—from 49.3 per cent in Group II to 28.9 per cent in Group IV—with an average of 43 per cent. It will be noted that in general the higher this percentage is the higher is the average net charge against a pound of wool and the lower is the average net income on capital.

Mr. LA FOLLETTE. I will not take the time of the Senate to go fully into that table, and shall only say that it will be observed from Table 3 that as the percentage of receipts from sources other than wool—that is, chiefly mutton—increases the net charge against wool decreases and the average rate of income on capital increases.

COMPETING COUNTRIES.

Mr. President, what are the countries with which we have to compete under the conditions existing in America to-day?

The countries which compete directly with the United States in woolgrowing and on which the Tariff Board furnishes information are Australia, New Zealand, and Argentina.

AUSTRALIA.

In 1910 there were 89,941,520 sheep in Australia. These may be classified according to the size of flocks as in Table 4. The high proportion of large flocks shows that range conditions are almost universal.

I ask, Mr. President, permission to incorporate in the RECORD this table, which is marked "Table 4," without reading it in detail.

The PRESIDING OFFICER. If there is no objection, it is so ordered.

The table referred to is as follows:

TABLE 4.—Size of flocks in Australia.

Under 500.....	6,622,593
500 and under 1,000.....	6,623,140
1,000 and under 2,000.....	8,517,920
2,000 and under 5,000.....	12,716,449
5,000 and under 10,000.....	10,485,392
10,000 and under 20,000.....	13,407,357
20,000 and under 50,000.....	17,287,396
50,000 and under 100,000.....	9,903,250
100,000 and upward.....	4,378,023
Total.....	89,941,520

Mr. LA FOLLETTE. In Australia, because of the abundance of pasture land, it is profitable to raise the merino; that is, it is

profitable to raise sheep for their wool only. The Government has a system of leasing public lands that is a benefit to the wool-grower. About 85 per cent of the sheep in Australia are merino. The so-called paddock system is common in Australia. Under it sheep are left in a large fenced inclosure. The system protects the sheep and economizes labor. As compared with it the haphazard system pursued in the United States is wasteful and expensive. Upon this point the Tariff Board said:

Under our shepherding system much more labor is required than under the paddock system and the unfavorable range conditions of the United States still further increase the amount of labor required. Whereas in Australia and South America the cost of the actual labor of caring for the sheep is merely nominal, in the United States, on the other hand, this item alone is a heavy burden, constituting about 48 cents of the 82 cents which is the average total labor charge per head.

Most of the large free ranges of the early days of western sheep raising have been broken up by the coming of the homesteader; and in order to utilize the free range remaining the flockowner must now run his sheep in comparatively small bands. Furthermore, the land policy of the United States has been unfavorable to the holding of large tracts of land, and therefore grazing land belonging to flockowners or leased by them from the State or from private parties often consists of scattered sections.

Furthermore, the grazing lands are, as a rule, the waste parts of the country, mountainous, semiarid, and producing but scant herbage, and are, to a great extent, fit only for sheep grazing. Thus, while forage may be obtained free or at a low cost, the remoteness of the grazing lands, the nomadic nature of the grazing, the scarcity of water, the danger of predatory animals, and the constant need of care to prevent trespassing, necessitate an expenditure for labor so great as almost entirely to overshadow the advantage of the cheap forage.

Owing to these conditions the number of men required in the United States for the direct care of sheep—that is, the number of herders and camp tenders—has for some years steadily increased, until at present one man is required for about 1,000 sheep, whereas one boundary rider can attend to 10,000 to 20,000 sheep in Australia and 10,000 to 15,000 in South America, according to the carrying capacity of the land; and in those regions of South America where the sheep-herding system is in vogue the large open ranges make it possible for one man to care for about 5,000 sheep.

NEW ZEALAND.

In 1911 there were in New Zealand 23,290,503 sheep in flocks. Of these, 21,525,084 were crossbred and other mutton sheep and only 1,765,419 were merino sheep. A great proportion of the cost of maintaining the New Zealand flocks is therefore carried by the mutton production. On the cost of production in New Zealand the Tariff Board said:

Upon the net charge against a pound of New Zealand wool there seems to be some very definite figures. The tremendous increase in their young stock, the ability to fatten their old ewes and sell at good prices, the high carrying capacity of their lands, and other favorable conditions all tend to reduce the cost of production. This, together with very high average prices for both their wool and mutton output, a high average shearing, a moderate amount of investment in improvements, etc., makes it appear as if the mutton output from any given flock in New Zealand must cover almost the entire cost of production, leaving the wool practically free of all charges, or not to exceed a few cents at the extreme.

ARGENTINA.

Argentina contained in 1908, 67,211,754 sheep, the great proportion of which were crossbred.

The Tariff Board found (p. 11) that the net charge against wool raised in Argentina was between 4 and 5 cents.

AGRICULTURAL COMPETITION.

I wish now, Mr. President, upon another point, to submit something upon the agricultural competition which presses upon sheep growing in the United States, and I quote a very interesting observation from C. W. Wright in his work on Wool-growing and the Tariff. He says:

In the United States the situation is such as to render any marked advance in the woolgrowing industry improbable and a gradual decline likely. Experience indicates that the power to prevent this is not to be found in the present tariff. If the industry is to be maintained in a position of the same relative importance as formerly, a higher tariff will be necessary. A tariff which simply offsets such advantages as the foreign woolgrower may have in relatively cheaper cost of production is not sufficient. The foreign fleece is by no means the only rival of the American; equally serious competitors are found at home in the greater relative profits of other lines of agriculture. The very advantages and great natural resources of the country thus become an obstacle. Therefore, if the lands of the woolgrower prove to be particularly well adapted for something else, and it is still deemed best that his sheep be not abandoned, he must have a duty such as will make wool at least as profitable as that other product for which his land is so well adapted. The greater the superiority of the land—the better fitted it becomes for other things—the heavier must be the duty. To some this may appear to make the cost of protection high, but as the history of the old woolgrowing centers shows, it is a cost which the adoption of this policy involves. It does not necessarily condemn the policy—

I repeat—

It does not necessarily condemn the policy. It is simply one of the things to be weighed in the balance against such advantages as the maintenance of the industry may secure to the country.

MUTTON.

The Tariff Board figures in Table 3 show that where mutton is the predominant source of income wool can be raised as cheaply in the United States as any place in the world. They show that even with the present duty flocks can not be maintained profitably for wool alone. This fact is confirmed by the Tariff Board. It says:

These figures indicate that under present conditions sheep raising can not be profitably carried on for the sake of the wool alone, and that if the industry is to prosper, the receipts from mutton must cover a large part of the costs. The loss incurred in exclusive wool production is the result of two causes—(1) the gradual encroachment of agriculture on grazing lands and the consequent great increase in the costs of sheep growing, and (2) the gradual decline of wool values.

The decline in the profits of wool production has, however, been accompanied by an increase in the demand for mutton, resulting from the fact that the production of pork and beef has not kept pace with the growth of population. And at the same time the development of refrigerating facilities has made it possible for the flock owners of countries which, like Australia and South America, are far from centers of population to market their mutton.

The extent of the increase in mutton consumption is indicated by the statistics of receipts of sheep, cattle, and hogs in the Chicago stockyards during the last 40 years. In 1870 there were received, in round numbers, 350,000 sheep, 533,000 cattle, and 1,690,000 hogs; in 1880, 336,000 sheep, 1,382,000 cattle, and 7,060,000 hogs; in 1890, 2,180,000 sheep, 3,484,000 cattle, and 7,660,000 hogs; in 1900, 3,550,000 sheep, 2,729,000 cattle, and 8,109,000 hogs; and in 1910, 5,229,000 sheep, 3,053,000 cattle, and 5,587,000 hogs; and it is estimated that in 1911 there will have been received 5,668,000 sheep, 2,920,000 cattle, and 7,031,000 hogs. The receipts of cattle reached a maximum in 1892 and since then have gradually declined. The receipts of hogs reached a maximum in 1898 and have undergone a sharp decline since that year. But the number of sheep received has constantly and rapidly increased, having passed the receipts from cattle in 1894 and being at the present time almost equal to the receipts of hogs. These figures are embodied in the following table:

	1870	1880	1890	1900	1910	1911
Sheep.....	350,000	336,000	2,180,000	3,550,000	5,229,000	5,668,000
Cattle.....	533,000	1,382,000	3,484,000	2,729,000	3,053,000	2,920,000
Hogs.....	1,690,000	7,060,000	7,660,000	8,109,000	5,587,000	7,031,000

¹ Estimated.

It seems to me, Mr. President, that the position then of the advocates of free wool toward the flocks in the far West is similar to their position toward the eastern flocks. They insist that in proportion as the flockmasters put emphasis upon mutton production their profits will increase and their need of tariff will diminish. The range conditions that in the past have made it possible to raise sheep in the far West for their wool only are passing and as settlement advances the conditions will continue to disappear. Flockmasters in the Northwest are putting emphasis on mutton production and their flocks are profitable. The more quickly we recognize in this country that wool is a by-product and treat it as such the better for the grower and the public. Free wool is really a concealed benefit to sheep husbandry in the United States, in my opinion.

NUMBER OF SHEEP.

There are defects in the census returns for sheep, due to the change in date of enumeration and the mixing of the count of lambs and sheep. While, therefore, fine distinctions can not be drawn from the census figures they are sufficiently accurate to show a general tendency. Table 5 shows that the population of the United States has increased rapidly, but the number of sheep has declined. The decline is both absolute and relative.

TABLE 5.—Population of the United States and number of sheep (excluding lambs) in the United States compared for 1880, 1890, 1900, and 1910.

Year.	Population of the United States.	Increase in population.	Sheep (including lambs) in the United States.	Decrease in number of sheep.	Sheep per thousand of population.
				Per cent.	
1880.....	50,155,783	42,192,074	841.3
1890.....	62,947,714	25.5	40,876,312	3.1	649.4
1900.....	75,994,575	20.7	39,852,967	2.5	524.3
1910.....	91,972,266	21.0	39,644,046	.5	431.5

The best statistics available on the number of sheep in, and the wool production of, the United States are found in a table which I have marked "Table 6," and which I ask leave to have printed in my remarks without reading.

The PRESIDING OFFICER. If there be no objection, it will be so ordered.

The matter referred to is as follows:

TABLE 6.—Number of sheep and amount of wool produced in the United States, 1840-1912.

[The number of sheep is based on the census figures 1840-1860 on the estimates of the Department of Agriculture 1867-1893, and on the figures of the wool manufacturers' bulletin since then. The first column of figures for the wool clip, believed to be the more accurate, is based on my own estimates for the years previous to 1862, the figures of Tichenor and Tingle 1862-1867, the figures of Lynch and Truitt 1868-1891, and the manufacturers' bulletin since then. The second column gives the estimates of the Department of Agriculture. Since 1895 the department has accepted the estimates of the bulletin.]
(The figures are to the nearest thousand.)

	Number of sheep.	Pounds of wool produced.	
		Trade figures.	Department of Agriculture figures.
1840.....	19,311	45,000	35,802

[From C. W. Wright, Wool Growing and Tariff, pp. 335-336.]

FARMS REPORTING SHEEP.

Mr. LA FOLLETTE. In 1910 there were 610,894 farms reported in the census as having sheep. I present a table showing that matter somewhat in detail and ask leave to have it incorporated in my remarks without reading.

The VICE PRESIDENT. Is there any objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

Sheep and lambs in the United States in 1910.

Number.....	52,447,861
Value.....	\$232,841,585
Average value.....	\$4.44
Farms reporting.....	610,894
Per cent of all farms.....	9.6

Mr. LA FOLLETTE. I shall recur to that table in some observations which I shall make presently upon my amendment to this schedule; and without taking time to read it, with the permission of the Senate, I will add a statement of some of the effects upon the sheep industry of the United States arising from the Wilson bill. I ask leave to incorporate that in my remarks.

The VICE PRESIDENT. Is there any objection? The Chair hears none.

Mr. STONE. Mr. President, was that statement prepared by the Senator himself?

Mr. LA FOLLETTE. It is partially quoted. It is only two pages, Mr. President. I will submit it, without asking leave to have it printed.

Mr. SIMMONS. Mr. President, I do not think anybody would object to the Senator's printing it.

Mr. LA FOLLETTE. I prefer to submit it. I thank the Senator for his courtesy.

This is a quotation which I make from an article on "The effect of the Wilson bill on sheep raising," by one of the members of the Tariff Board. My recollection, if it is material to state it in this connection, is that the member of the Tariff Board who wrote this article is a Democrat.

EFFECT OF THE WILSON BILL ON SHEEP RAISING.

Speaking of the conditions under the Wilson bill, Prof. Thomas W. Page, formerly a member of the Tariff Board, says, in the North American Review for April, 1913, the following:

In this generation the output of wool has had many ups and downs. It reached its apogee in 1893, and immediately afterwards there began a sharp decline, from which there has never been a complete recovery. Naturally the woolgrowers attribute the decline to the free-wool provision of the Wilson bill. And undoubtedly they are in large measure right, for so many flockowners were panic-stricken at the prospect of free wool that millions of sheep were hurried to the stockyards, slaughtered at home, or allowed to perish for lack of care, and for several years few of those that kept their sheep found any profit in them. But it should not be forgotten that a similar decline both in number and in profits occurred in the case of hogs and cattle, which were in no way affected by the tariff. The truth is that many forces contributed to cause the memorable business depression of the middle nineties. These bore as heavily upon sheep husbandry as upon other industries, and just how much of its decline was due to them and how much to the Wilson bill no human being will ever know.

After a very brief period the duties were restored, but in half a generation they have failed to restore the industry. Not only is the production of wool absolutely smaller than it once was, but it has fallen constantly still further behind the growing needs of the manufacturers. At present these are importing from abroad about two-fifths of the wool they use, and unless some overwhelming disaster comes upon their industry under no conceivable circumstances will the domestic supply of wool ever equal the demand.

In addition to the comments made by Mr. PAGE it is important to note that the decline in the number of sheep under the Wilson bill was more marked in the eastern farm States than in the range States of the far West. This was no doubt due in a large degree to the inability of the fine merino sheep to endure the competition. Table 7 shows the effect of the bill upon the number of sheep in the ranch and farm States. It should be noted that the farm States have never recovered as far as numbers are concerned.

If one, Mr. President, can divest one's self of everything but the pursuit of the truth he finds this economic study intensely interesting. I have found it so. I present a table showing for a period of years the number of sheep for the leading States where farm and ranch conditions prevail, and ask leave to have it incorporated in the Record without reading it in detail.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The table referred to follows.

Number of sheep over a period of years in April for leading States where farm and where ranch conditions prevail.¹

[Expressed in thousands.]

Year.	Ranch States. ²	Farm States. ³	Total.
1890.....	24,217	20,119	44,336
1891.....	23,615	19,816	43,431

¹ Statistics taken from Bulletin of Wool Manufacturers.

² Includes Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Texas, Utah, Washington, and Wyoming.

³ Includes all other States.

Mr. LA FOLLETTE. Mr. President, it is not correct to say that free wool will not injure anyone. It will injure many indi-

riduals; those who have lung with tenacity to the pure merino can not prosper under free wool. They, in fact, are not prospering now. I do not believe that they can exist under free wool. There will also be much unnecessary loss due to the psychological panic which such radical legislation as it is proposed here will cause. If something would happen to make sheep owners forget the tariff, and forget this legislation, a portion of the loss would never befall him.

But, Mr. President, it is my belief to which I have been forced by my study of this question, a belief which I did not entertain prior to the issuance of the report of the Tariff Board, that free wool will ultimately place the industry on a sound economic basis, a sounder economic basis than that upon which it rests to-day.

In the course of my reading I came upon a book entitled "Sheep farming in America," by Joseph E. Wing, staff correspondent of the Breeders' Gazette. This book has run through three editions warranting enlarging it and printing it with illustrations. It is an elaborate treatise upon the subject. Mr. Wing was employed by and made a comprehensive investigation of the sheep-breeding industry for the Tariff Board. He is a lecturer and staff correspondent of the Breeders' Gazette of Chicago.

I was somewhat curious to know if he were a practical man; if he were engaged in the business of producing sheep; if he were interested in sheep as sheep, and I had some inquiry made from which I find that Mr. Joseph E. Wing, the author of this book, lives in Mechanicsburg, Ohio; that he is a Republican; that he is a strong protectionist, and that he is heavily interested in sheep raising. I will quote from the third edition of his book.

The book is devoted to sheep husbandry; breeding and cross breeding. It deals with mutton sheep; care in winter and summer; feeding, washing, shearing, marketing; the flock husbandry in the Western States; the blood of the different herds; the division of the ranges. Indeed, as its title indicates it is a comprehensive manual for the sheep farmer in America. It devotes as much space to the great western ranches and flocks as to the eastern branch of the business. It does not discuss the relation of the industry to tariff rates. Indeed, I believe the subject is not mentioned from the first chapter to the last. But in the introduction to the third edition I find this word of advice and encouragement from the author to the sheep breeders of America, submitted in anticipation of the tariff changes, which all intelligent men have for years believed must come sooner or later:

The future holds no menace, but hope instead. Should wool tariffs be lowered there might possibly be a small decrease in the numbers of sheep in the West. This would in ultimate effect cause mutton values considerably to enhance, so while possibly the American consumer might get his woollen clothing cheaper the sheep farmer would receive as much for his output of wool and mutton as ever before, and it might well be that he would receive more. With all tariff duties removed we might possibly sell wool for 15 cents per pound, as they do in Canada, if at the same time mutton prices were enhanced, which in the long run they would assuredly be. While the fleece of the ewe might bring us 70 cents less the lamb would bring us from 85 cents to \$1.70 more, and the income from the farm flock be increased. The lesson is clear. No matter what ups and downs the sheep market may see in the near future the wise sheep owner is the one who stays with his flock and seeks only to make it better and healthier than before. His reward is assured.

Mr. President, Mr. Wing did not see a pall of disaster hanging over his industry, even in the anticipation of the removal of all the duties from wool.

But, Mr. President, the framers of this bill, when they came to consider the woolgrowers, were confronted with a "condition" as they were when they came to consider the duties on manufactured products.

They reduced the duties on manufactures of wool; they did not remove them altogether and at once. They were mindful of the large capital invested upon the encouragement which the Government had given under protective duties. They were mindful of the millions of people employed in these manufacturing industries upon the basis of those protective duties. And they made the reductions in the tariff with a view to maintaining the industries in this country under what they call competitive rates which will be found, for the most part, to be protective rates.

Why did they not proceed in the same way with the wool-grower? They were dealing with an important industry in which, as shown by the census of 1910, they found no less than 610,894 farmers were engaged.

Upon these 610,894 farms they found that there were 58,000,000 sheep and lambs.

These sheep and lambs they found to be of the average value of \$4.44, and of a total value amounting to \$232,841,583.

They found that although the number of the sheep and lambs had declined in 10 years, the value had increased from

\$170,203,000 in 1900 to \$232,842,000 in 1910, an increase in value of 36.8 per cent.

They found that the annual clip of wool from these sheep amounted to more than \$55,000,000.

More than this, they found that these 600,000 farmers had been encouraged to invest their money and devote their labor to this business of sheep husbandry, relying upon a tariff system which protected their industry from open competition with 90,000,000 sheep in Australia, producing wool at one-third the cost of production upon our farms, 67,000,000 sheep in South America, producing wool at one-half the cost of the American farmer, and of 23,000,000 sheep in New Zealand, with a production cost for wool of "not to exceed a few cents at the extreme," to quote the language of the Tariff Board.

These 610,000 farmers had invested their \$232,000,000 in good faith, relying upon a protective tariff which had, with the exception of 4 years, been afforded them for nearly 40 years. This protection amounted to a varying ad valorem of from 45 to 50 per cent.

Mr. President, there has been much contention as to the value to the farmer of a protective tariff upon certain products of the farm, but there is one duty that does afford protection to the farmer. That is his duty of 45 to 50 per cent on wool. There can be no controversy about that.

You propose in this bill to remove the duties on practically all farm products, because you say "they are 'buncombe' duties placed there to fool the farmer." You can not make that claim for your removal of the duties on wool.

These duties do afford protection to the farmer. They yield him a substantial protection—a very substantial protection. And yet you cut him to the bone as ruthlessly here as elsewhere.

You may answer that you are opposed to all protective duties on all American production; but you have not removed all protective duties upon all American productions. You have left the manufacturer of woollen goods what you call a competitive tariff. I think you have left him a fairly adequate protective tariff. The tables which I have asked to have incorporated in my remarks this afternoon, applying to the duties in your bill, show that the wool schedule is substantially a protective bill to the woollen manufacturer. It is not as much as it ought to be on tops; it is 5 per cent; it ought not to be less than 7½ per cent to be fairly safe. There are one or two other lines of manufacture not adequately covered, but in the main you have left a protective tariff for the manufacturer. You call it a competitive tariff. Your process of reasoning in reaching what you designate as a competitive tariff has been substantially the same reasoning that I pursue to get at a protective tariff on the difference in the cost of production.

I say you have not removed all protective duties from manufactured products. You have left to the manufacturers of woollen goods what you call a "competitive" duty. I think you have left him in the main a fairly adequate protective duty.

You have excused yourselves for this compromise with your principles on the ground that you were confronted with a condition; that you found the manufacturer in the enjoyment of monopoly privileges due to practically prohibitory rates; that you could not take these excessive duties from him at one sweep; that every consideration of prudence and fair play required you to proceed with your purpose to wipe out all protective duties by a gradual process of reduction.

I think one of the members of the committee, the Senator from Mississippi [Mr. WILLIAMS], expressed it in picturesque language one day. He said, "We found the manufacturer on the top story of the building, away out on the roof; we could not push him off all at once, we are letting him down a story at a time." I do not do justice, of course, to my friend's statement.

Mr. WILLIAMS. The Senator has improved it, but it was something like that.

Mr. LA FOLLETTE. But why did you not accord the farmer's sheep industry the same consideration and reduce his protective duties upon wool one-third to one-half, instead of stripping him of all protection at one stroke?

Even if you believe that the farmer can reorganize this branch of his business upon a new basis, which will enable him to maintain it in the face of free competition with Australia, South America, and New Zealand, why do you not give him time in which to work out this reorganization without sacrificing his capital? Is not that a fair proposition?

You know that cane sugar in Louisiana can not survive free competition with cane sugar in Cuba, and you say to the cane-sugar farmer of Louisiana, "Brother, we do not believe it a sound economic policy to longer protect your product. But you have been encouraged to invest your money in cane-sugar cultivation, you have been accustomed to feel the protecting arm

of the Government about you—it shall not be withdrawn all at once. We will temper this drastic legislation to you. We will take away one-fourth and leave you three-fourths of the protection you now enjoy for a period of three years, when it will all be withdrawn and you must stand alone. We do this to give you time to substitute for cane some other crop which you can produce and market against all competition."

This was considerate; this was fair. And if you propose to destroy cane-sugar production in Louisiana it is wise to do it with as little waste and loss to the Louisiana farmer as possible.

But why not show the same regard for the producer of wool? For the life of me I can not see why. The report of the Tariff Board makes it plain that the farmers who own the millions of merino sheep, cheaply valuable for wool and of little or no value for mutton, can not compete with the crossbred sheep of Australia and South America without a high protective duty. These merino flocks can not be crossbred into mutton sheep in a single season. They have been taught to raise sheep for wool production alone. Badly taught, if you please, but this has been their teaching, backed up by a governmental tariff policy, upon which they have become dependent.

From this high-tariff altitude you precipitate them without warning to a free-trade level with a crash. This is an unwarranted discrimination against the farmer. It can not be defended as a legislative policy. It can not be defended on any ethical basis.

The woolgrower is not a wrongdoer. He is not to be treated as a malefactor. He is an honest, industrious, American citizen. He works long hours. He practices every economy. He is entitled to the same measure of justice, the same measure of consideration in reducing the existing tariff rates which, by your own declarations made again and again in this debate, you have shown to the manufacturer in granting him a little time, a brief season of grace, to adjust his business to a gradually lowered level of tariff rates.

Mr. President, some days ago I introduced into the Senate an amendment to Schedule K of the pending tariff bill. I have this afternoon presented, and there is already upon the desks of Senators, an amendment upon which I shall ask for a vote before I ask for a vote upon the amendment formerly introduced. The ad valorem duty on wools of the first class at the present is about 49 per cent. I have here an amendment that reduces that duty to 30 per cent for one year, the duty to go into effect on the 1st day of January, 1914. It reduces the duty at the end of a year to 25 per cent, that duty to remain in force for a year, and then the duty is to be reduced to 15 per cent, to continue in force thereafter. For all the paragraphs of Schedule K on the basis of each of these duties on raw wool are carefully graded duties on the cloth, measuring the difference in the cost of converting that wool into all the manufactured products between this country and England.

As regarding the duties provided for raw wool in my substitute, the level of rates on wool manufactures, except those upon tops and one or two other items, is substantially the same as the level of rates provided in the pending bill.

Mr. STONE. But the general average is higher.

Mr. LA FOLLETTE. The general average would not be substantially higher, excepting as made so by the fact that there is a duty on raw wool incorporated as the basis. I am pleading with Senators upon the other side that you ought to fairly treat this farm product—this one farm product of all, perhaps, upon which the farmer realizes a protection that is substantial, that is considerable, and which he has had for 40 years, especially when you treat the manufacturer with such consideration. You have left the manufacturer of woolen and worsted products with fairly protective duties, while you have cut the wool producer clear to the bone on his wool.

Now, I am just praying—I do not know whether I am hoping or not—that you will give the farmer a chance to change the type of his sheep. It will take him at least three years to introduce the mutton breeds by crossbreeding. If you will give the farmer a chance, he will save the large amount of capital he has invested in this business. It may be the amount may seem small to some, but I assure you that it is a serious matter to the 600,000 farmers who raise sheep. It seems to me only fair that the farmer should have some consideration. At the end of three years my amendment would leave to the farmer a duty of 15 per cent, but you will have given him a chance to square away and to save himself a little.

Most of you have been in touch one way or another with the farmer. You know what a life of toil he lives, and you are aware of the slow saving and the little economies that make up the life of the farmer. If there is anybody who ought to receive liberal treatment and not be pushed off from not only of the roof but of the cupola of the building, clear down, not to the pavement but into the subcellar, it is the farmer. When you

go through this bill from beginning to end, section by section, and see the things that are produced upon the farm which you have put on the free list, do you not think it would let you down a little easier if you could give the farmer this slight protection on wool, where he directly receives some benefit?

Mr. President, the amendment I have proposed makes at its first stage of reduction as deep a cut as you have made in this same schedule on the manufactured product, and if you adopt the amendment, when you come to be arraigned for your harsh treatment on the other products of the farm, you can show here that you have treated with some consideration at least this very important product, the duty on which is not buncombe to more than a half million farmers; that you have given the sheep raiser some show for his capital and a chance to turn around and save himself.

I appeal to you, Senators, to make this gradual reduction in the duties on wool. Although the duties to the manufacturers average higher and you will not, in the general average, have quite the same showing with wool at 30 per cent and the rates fixed on the manufactured products in the amendment, if it be adopted, you will give no more protection than you do in the pending bill, and in the next stage, where the duty on raw wool is fixed at 25 per cent, you will give there no more protection to the manufacturer than he is given in the pending bill, and the same is true in the next stage, where the duty is fixed at 15 per cent; you will then give the manufacturer no higher level of duties than he receives in the pending bill. But you will do a small measure of justice to the farmer and you will make this pending bill more acceptable to that great body of our people who have borne the burdens of excessive duties on everything they have to buy without complaining, but who have never received directly their share of tariff benefits.

Mr. President, I thank the Senate for its very great patience.

Mr. BRISTOW. Mr. President, I should like to make an inquiry of the Senator before he takes his seat. I have undertaken to make a comparison of the duties on manufactured fabrics in the bill with those submitted by the Senator in the first part of his amendment, where he fixes a duty of 30 per cent on wool. Does paragraph 297, embracing cloth, knit fabrics, felts not woven, hosiery, and so forth, correspond to paragraph 15 in the amendment offered by the Senator?

Mr. LA FOLLETTE. I have not before me the notes I have used. The manuscript has been taken from my table just as fast as it was submitted, and I have not it here.

Mr. BRISTOW. Section 15 of the Senator's amendment reads:

On cloths, knit fabrics, flannels, felts, women's and children's dress goods—

And so forth.

They are practically the same. I notice here that the maximum duty in that paragraph of the Senator's amendment is 55 per cent. That is in the first part, where there is a 30 per cent duty on the raw wool, while the maximum duty in the bill on hosiery is 50 per cent; that is, the duty in the Senator's amendment on the manufactured article of hosiery is 5 per cent higher than the duty in the bill, although he has a duty of 30 per cent on the wool that goes into the hosiery.

Mr. LA FOLLETTE. If the Senator has the corresponding paragraph before him, it is possible that there may be some misprint in one or the other.

Mr. BRISTOW. I do not know that it is a misprint.

Mr. STONE. Mr. President—

Mr. BRISTOW. I have been advised by the Senator from Utah [Mr. Smoot] that in the bill the rate was reduced by the committee from 50 per cent to 40 per cent.

Mr. LA FOLLETTE. The Senator has the old print.

Mr. BRISTOW. I have the old bill.

Mr. LA FOLLETTE. That may explain it.

Mr. BRISTOW. That may explain it; but still it shows that the bill is exceedingly considerate of the manufactured article. While the Senator has worked out his duties on the manufactured product upon a basis of 30 per cent on raw wool, in no instance do any of his duties run 30 per cent higher on the manufactured articles; so that the duty on wool is not anywhere completely added in this amendment to the duty on the manufactured product, showing that, so far as the bill is concerned, it has treated far more considerately the manufacturers of woolen goods than has the Senator and the Senator's amendment treated the producer of the wool, bearing out the contention that he has made from the beginning, that the duty on the manufactured product in the bill as reported by the committee is very satisfactory indeed as a protective duty.

Mr. STONE. Mr. President, I was a member and chairman of the subcommittee which had charge of Schedule K. The subcommittee gave several weeks of patient consideration to that schedule, and reported the result of its labors to the

whole committee—that is, the majority members—and the schedule was considered by them; afterwards the recommendations of the committee were considered in conference and agreed to.

If it were desirable or advisable, I think a very adequate reply could be made to the criticisms of the Senator from Wisconsin [Mr. LA FOLLETTE] as to the action taken. But I think the debate should be now concluded, and I will say nothing calculated to prolong it. I am unwilling now to enter upon a rediscussion of this question so as further to prolong the consideration of the bill. I have the highest respect for the Senator from Wisconsin. Besides being personally a most lovable gentleman, he has impressed himself with great force on the deliberations of this body and on the just attention of the country. I have only one remark to make of the Senator from Wisconsin—and I say this with the most considerate respect, and in saying it I paraphrase an utterance I read yesterday from our distinguished Secretary of State in a speech he made in Maine a day or two ago descriptive of a Progressive—namely, that the Senator is too good to be a Republican and not quite good enough to be a Democrat.

I should like to have a vote on the amendment of the Senator from Wisconsin.

Mr. JONES. Mr. President, before proceeding to consider the amendment of the Senator from Nebraska [Mr. NORRIS] relating to the inheritance tax, which, as I understand, is the pending amendment, I desire to submit a few general observations with reference to the bill, possibly along lines a little different from the other utterances that have come from this side of the Chamber.

Mr. President, our Democratic friends, in my judgment, have lost a great opportunity to take the tariff out of politics. If they had been courageous enough to accept and carry out the real verdict of the people last fall they would have shown not only great patriotism but great wisdom. The real issue in the people's mind in the campaign was not so much a tariff for revenue or a protective tariff as the revision of the tariff downward. The Democrats declared for a tariff for revenue only, other parties declared for a protective tariff, and the people of the country, while they placed them in power in a constitutional way, really declared against their policy and in favor of a protective tariff. The total vote cast at the election last fall was 14,720,037. On the tariff-for-revenue platform there were cast 6,292,718 votes, or practically 2,500,000 less than the opposing parties cast. The Republicans declared in their platform:

We reaffirm our belief in a protective tariff.

The Republican tariff policy has been of the greatest benefit to the country, developing our resources, diversifying our industries, and protecting our workmen against competition with cheaper labor abroad, thus establishing for our wage earners the American standard of living. The protective tariff is so woven into the fabric of our industrial and agricultural life that to substitute for it a tariff for revenue only would destroy many industries and throw millions of our people out of employment. The products of the farm and of the mine should receive the same measure of protection as other products of American labor.

We hold that the import duties should be high enough, while yielding a sufficient revenue, to protect adequately American industries and wages. Some of the existing import duties are too high and should be reduced. Readjustment should be made from time to time to conform to changing conditions and to reduce excessive rates, but without injury to any American industry. To accomplish this, correct information is indispensable. This information can best be obtained by an expert commission, as the large volume of useful facts contained in the recent reports of the Tariff Board has demonstrated.

The pronounced feature of modern industrial life is its enormous diversification. To apply tariff rates justly to these changing conditions requires closer study and more scientific methods than ever before. The Republican Party has shown by its creation of a Tariff Board its recognition of this situation and its determination to be equal to it. We condemn the Democratic Party for its failure either to provide funds for the continuance of this board or to make some other provision for securing the information requisite for intelligent tariff legislation. We protest against the Democratic method of legislating on these vitally important subjects without careful investigation.

And the Progressives declared in their platform as follows:

We believe in a protective tariff which shall equalize conditions of competition between the United States and foreign countries, both for the farmer and the manufacturer, and which shall maintain for labor an adequate standard of living. Fair dealing toward the people requires an immediate downward revision of those schedules wherein duties are shown to be unjust or excessive.

We pledge ourselves to the establishment of a nonpartisan scientific tariff commission, reporting both to the President and to either branch of Congress, which shall report, first, as to the costs of production, efficiency of labor, capitalization, industrial organization and efficiency, and the general competitive position in this country and abroad of industries seeking protection from Congress; second, as to the revenue-producing power of the tariff and its relation to the resources of government; and, thirdly, as to the effect of the tariff on prices, operations of middlemen, and on the purchasing power of the consumer. The Democratic Party is committed to the destruction of the protective system through a tariff for revenue only—a policy which would inevitably produce widespread industrial and commercial disaster.

Both of these parties declared definitely for a protective tariff and a tariff commission, and the vote cast was 7,426,640, or more than half of the total vote and over a million votes more than were cast for Mr. Wilson.

Clearly the people did not declare for a revenue tariff. They did not place you in power because of your tariff declaration, but despite it. You have been given an opportunity to act as statesmen and patriots instead of partisans. You could have avoided the reproach that must come to you and to representative government by the arbitrary secret-caucus methods that you have adopted, and which are, in fact, necessary, if you would carry out your platform promises on the tariff. You should have accepted the verdict as disclosed by the vote at the election. You should have said that the people have not declared for a revenue tariff but for a revision downward. We will accept that verdict, and we ask the Republicans to join with us in the open Senate and work out a tariff bill that will be a substantial reduction in the present tariff rates, but take into account, so far as possible, the conditions at home and abroad, and we will provide for a tariff commission and lay down a rule for its guidance that will enable it from time to time to readjust our tariffs in a scientific way and without any disturbance to business. In this way the tariff question would have been settled and taken out of politics, constitutional and representative government would have been exemplified, and the will of the people fully carried out.

There are those who object to a tariff commission. When I entered the Senate four years ago I was opposed to a tariff commission. I had never gone through a revision of the tariff and had no knowledge of what a problem it is. But before we had concluded the consideration of the Payne-Aldrich bill I was convinced that we should have a commission at least to gather the facts in an impartial way and submit the same to Congress for its information, to be used by it in revising the tariff. Having participated in another tariff revision, I am fully convinced not only that we should have a tariff commission, but that such a commission should be given full power, in accordance with a rule or standard laid down by Congress, to revise the tariff and fix the rates. Surely no one can watch the proceedings here from day to day without being convinced that no method could be devised under which the tariff would be revised in a more haphazard, hit-or-miss, ignorant way than it is revised by this Senate.

We have been considering this bill from day to day, but few of us have acted upon any of its provisions or amendments that have been offered upon any definite, certain, and detailed information of our own. Our votes have been cast for or against provisions upon such information as has been given to us by Members on the floor who have given particular attention to a particular topic, and but few of us have listened to this information. Most of us have voted upon the majority of the items simply because those in charge on this side or that side voted in a certain way. When I say this I am not criticizing anyone, but am simply stating what everyone knows to be a fact. It can not be otherwise. No man on this floor can acquaint himself with all the business interests and industries affected by this bill in the short space of time permitted him, with the multitude of other matters that must be attended to at the same time. He must vote without information, without knowledge, except that he votes this way or that because he believes it is in accordance with a general principle or because he has confidence in some one who has given a particular matter special consideration. Often during the consideration of this bill and the adoption of amendments not 15 Senators have been present, and often when roll calls have been had the great majority of the Senate would come in and vote simply as their party associates voted. Yesterday an amendment consisting of several pages was presented about which no one outside of the committee knew anything, and we were asked to vote without any explanation whatever. If Congress were to levy a certain tax for revenue purposes and provide a commission and direct it after careful consideration to fix such rates upon certain imports as it found would afford ample protection to our labor and our industries, a far more equitable, accurate, and scientific tariff system would be developed than we can possibly provide for in the method that we must now pursue. The people are impatient at the delay in the passage of this bill and if they could watch us here in our deliberations they would be disgusted with us or our procedure. The need of dealing with the tariff in an entirely different way is imperative. I can not blame the Democratic Party for proceeding to carry out its platform, but it has neglected a great opportunity to commend itself to the people as a great, brave, patriotic, statesmanlike organization.

Mr. President, caucus is king. This bill was prepared in a secret caucus of the Democratic Members of the House. Republicans had nothing to do with it. It came to this body and was referred to the Committee on Finance, and its various schedules

were referred to different subcommittees composed entirely of Democrats. The Republicans were eliminated from its consideration. These subcommittees considered the schedules and submitted their reports to the Democratic membership of the committee, and the bill, with certain amendments, was finally agreed upon. The bill and these proposed amendments were referred, not to the full membership of the committee but to the caucus of the Senate Democrats. It was there considered secretly, amended, and agreed upon, and a resolution passed declaring it to be a party measure, two Senators, we understand from press reports, being given permission to vote against it on final passage and also reserving the right to vote against any amendments or for any amendments they saw fit. At 11.30 o'clock on the morning of July 11, 1913, the bill as agreed to in caucus was referred to the full committee of Democrats and Republicans and at 2 o'clock of that day was reported without change to the Senate.

So far as the preparation of the bill is concerned, Republican Senators might just as well have been at home. They had nothing to do with it and no influence in connection with it, and those States without Democratic Senators had no representation or part in the preparation of this measure, and their interests and industries had no representation except by proxy. No matter how unjust this bill may be to any industry in my State, no matter how just and desirable an amendment may be, you will all vote "No" because a caucus has so decided. The bill is going through a form of consideration in the Senate, but no amendments of any consequence, however meritorious, can or will be adopted, because of the binding action of the caucus upon the members of the majority, unless a further decree be issued by the caucus authorizing the adoption of the same.

Mr. President, this is simply a plain statement of the facts. I do not complain at the action of our Democratic friends; they have no doubt acted wisely under the circumstances. If we Republicans had held conferences four years ago we could have harmonized our differences on the tariff; the schedules would have been wisely and fairly revised in harmony with the principles of protection; the people would have been satisfied and the Republican Party would be in control of this Government to-day; business would be buoyant and confident and prosperity would be increasing by leaps and bounds. The course the majority has taken is the course necessary as long as tariffs are to be revised by Congress and party lines are drawn on revenue and protective principles. If all were for a tariff for revenue only, that policy could be carried out in a bill framed in the open Senate, each Senator expressing by his vote here on amendments his individual judgment rather than the aggregate judgment of the entire membership. If all believed in protection, the same action could be followed. That is the course we really ought to take. I hope that we will all be for a revenue tariff or all for a protective tariff. Until this time comes the wisest and most patriotic course to take, however undesirable we may regard it, is for the party in power to harmonize its differences in free and open discussion among its membership, each individual expressing his views and opinions, and accepting the aggregate wisdom of his party as his policy when he can do so conscientiously.

Mr. CLAPP. Mr. President, with the Senator's permission, I should like to ask him a question. What should he do if he can not do that?

Mr. JONES. Then he should, of course, vote against the decree of his party caucus. The party caucus should not take the place or usurp the functions of the legislative body, and no Senator should allow the caucus decree to interfere with his action as a legislator.

As I was proceeding to say, I will never be bound by any caucus, but I am glad to meet my colleagues and confer over matters of party, and after full and careful deliberation I am willing to waive my individual judgment to the judgment of the majority, in so far as I can conscientiously do so, on matters of detail.

The only complaint I have to make of our Democratic friends is that they have professed such an abhorrence for the methods heretofore pursued by the Republicans of the House and the Senate and sought the people's support in order to put a stop to the arbitrary rules which they claimed were followed and adopt new and better methods, and now they have gone so far beyond what was ever thought of in arbitrary and despotic methods that they must appear to the people of the country, when it is fully realized what has been done and the course taken, as loud-speaking Pharisees. They certainly will not be able to deceive the people again.

Mr. President, the people want this bill passed. They know it is going to pass and they do not understand the delay. They want uncertainty ended. If the bill works well every one will be pleased and we will all be for the revenue tariff hereafter

and can enter upon a revision of this bill in due time without any necessity for the caucus. If it works ill, if it disturbs business, if it reduces wages, if it brings disaster to the country—and I hope it will not—then we will all be for the protective tariff and will place it on the statute books in a proper way and provide for a commission that will bring about an undisturbed, scientific way of changing the tariff.

I believe in a protective tariff. I believe it promotes happiness, comfort, and prosperity among our people. I believe it is best for labor and best for the welfare, growth, development, and prosperity of the country. I voted for the Payne-Aldrich law, not because I approved all of its provisions, because I did not, but because it contained so many important provisions in it that met my approval that I deemed it better for the conditions then existing than the law then in force. I wish I could vote for this bill, but I can not. It has some good things in it. I am for the income-tax provision, although it does not go as far as I would like. I am for many of the duties in the bill, but it is so unfair, so unjustly discriminatory, and so fundamentally against my beliefs that I must vote against it, with the sincere hope, however, that it will be shown that I am wrong and that the bill will fully justify the sincere hopes of those who favor it. I know the Democrats are sincere in their belief that this bill will promote the well-being of the people of this country. I am willing for it to go into effect under as favorable circumstances as possible. I am not even going to express my fears, but it goes forth with my hope that no laborer will be thrown out of employment or have his wages reduced by it; that the farmer's markets will not be restricted nor his prices lessened; that the railroads of the country may continue to be taxed to the utmost to carry the products of the country to and from the market places at diminishing rates and increasing profits; that financial institutions may increase their rates on deposits and decrease the interest on their loans; that manufacturers may continue working day and night, paying their laborers better wages and working them shorter hours; that merchants will continue prosperous; that clearing-house returns will grow larger; that deposits in savings banks will continue to grow; that new business blocks and comfortable homes will continue to be erected; that public and private improvements will continue with unabated activity; that our foreign commerce may increase, and that the unexampled prosperity that now blesses the land, under Republican laws and policies, may not only continue but increase under this Democratic law.

Mr. President, just a word upon other matters that will come up for our consideration. I have the utmost confidence in the high purposes and lofty patriotism of President Wilson, not only as to our foreign but also our domestic affairs, and every effort he may make to preserve peace between this and other countries shall have my unqualified support. If I do not approve his acts, I shall not embarrass his efforts by my criticism. Partisanship can have no place in our foreign relations; patriotism alone should control in the solution of such problems. While solicitous for the preservation of the lives and property of our citizens in foreign countries, we must not overlook the property that must be consumed and the lives that must be sacrificed of citizens who have remained at home if war comes between us and any other country. I am sure the President has all these things in mind, and behind him are our people, regardless of politics.

The currency question is coming up. On it there is no line of party division. It should be kept out of politics, and we should consider it as statesmen and not as partisans. There may have been justification for caucus action on the tariff, but, gentlemen, there is no excuse for caucus action on the currency. This question should be considered by the entire committee having charge of it, and they should present a bill to the Senate that can be considered freely and fully and finally passed in such shape as may meet the wish and patriotic judgment of the majority in this body. Such a course is expected by the people and will justify the wisdom of constitutional and representative government, and this great question will be solved for the best interests of the people and the Government.

Now, Mr. President, I desire to consider for awhile the amendment offered by the Senator from Nebraska [Mr. NORRIS] in connection with one which I have pending. On the 8th of April I introduced a bill providing for an inheritance tax, and on the 23d of August I proposed an amendment to the pending bill which incorporates many of the provisions of the amendment of the Senator from Nebraska. I am heartily in favor of his amendment and I intend to vote for it. I desire to direct the attention of the Senate to some of the provisions of the amendment which I offered, and in the discussion of it of course I shall discuss it in a way that will apply to the amendment of the Senator from Nebraska as well.

We are accustomed to boast of the amazing growth and progress of our country and its wonderful commercial activity. Prosperity is so general and so great that the question as to the effect of the pending legislation is whether it will permit this prosperity to continue unabated rather than will it increase it. With all this prosperity, however, he is blind indeed who does not recognize that discontent, distrust, and dissatisfaction are growing among our people. Many think that our legislative efforts are directed more to the protection of property and property rights than toward the real betterment and uplift of the people. It is charged that those who really need help and assistance are neglected. We depend upon the indirect effect that may come to the poor and struggling from the protection and encouragement afforded to property and property rights. I fear there was too much basis for this feeling in the not distant past and too much for it now.

A law has just been passed in one of the great States of the Union with reference to child labor and one of its leading papers makes this statement regarding it:

This measure fixes the age limit at which children may be employed in manufacturing and commercial enterprises at 12 in 1914; at 14 in 1915; and at 16 in 1916. It is expected by this gradual increase from year to year to check the evils arising from the employment of young children without serious embarrassment to employers.

While such legislation ultimately will be of benefit to the children, their rights and welfare must give way to the financial interests, and the evils that come to the child must be endured, for a time in a lessening degree, rather than to bring serious embarrassment to financial interests. The reverse should be the case; financial interests should suffer rather than the children.

I am glad to say, however, that a radical change is coming in this respect. The rights of humanity are being placed more and more above the rights of commercialism. Much legislation tending in this direction has been enacted during the last few years. Laws have been and are being passed to equalize opportunity, to prevent discrimination and rebates, to protect the weak, to shorten hours and improve conditions of labor, to protect children and insure their education, to guard the health of women, to insure sanitary and healthful conditions for the home and about the workers, to curb rapacity in business and promote the general welfare of the masses, and to make life mean more of happiness and comfort to them. This, after all, is the highest function of government. If government does not mean happiness, contentment, and equal opportunity, it means nothing. The questions involved are far above party. They are questions of humanity, and the end to be sought is one upon which we all agree, although we may differ as to the methods of reaching the proper solution. As one step in the direction of the solution of these questions, I have offered this amendment.

It provides for a tax on inheritances, which are divided into two classes, direct or lineal and indirect or collateral. The rate of taxation is determined by the value of the individual inheritance and not by the value of the estate. The rate on direct inheritances is comparatively small and the exemption large. A father, mother, husband, wife, child, brother, sister, wife or widow of a son, or the husband of a daughter, or any child or children adopted may take any amount less than \$25,000 free of taxation. On other amounts the rate is as follows:

	Per cent.
\$25,000 and up to \$50,000.....	1
Above \$50,000 and up to \$250,000.....	2
Above \$250,000 and up to \$500,000.....	3
Above \$500,000 and up to \$1,000,000.....	4
Above \$1,000,000 and up to \$5,000,000.....	7
Above \$5,000,000 and up to \$10,000,000.....	15
Above \$10,000,000 and up to \$20,000,000.....	25
Above \$20,000,000 and up to \$30,000,000.....	35
Above \$30,000,000.....	50

In collateral inheritances there is no exemption, and the rate of taxation is as follows:

	Per cent.
\$5,000 and less.....	1
Above \$5,000 and up to \$50,000.....	2
Above \$50,000 and up to \$250,000.....	5
Above \$250,000 and up to \$750,000.....	10
Above \$750,000 and up to \$1,500,000.....	15
Above \$1,500,000 and up to \$3,000,000.....	20
Above \$3,000,000 and up to \$7,000,000.....	25
Above \$7,000,000 and up to \$15,000,000.....	40
Above \$15,000,000.....	50

In the consideration of this amendment we are met at the threshold by the objection that is always made to any legislation that may affect capital. It is urged that it is unconstitutional. Happily this objection has been met by the Supreme Court of the United States in no uncertain way and is no longer open to argument. In the war-revenue act of 1898 a graduated inheritance tax was levied. Capital, as it always does, resisted the payment of the slight burden which this law imposed upon it and carried the question to the Supreme Court

of the United States, and in *Knowlton v. Moore*, 178 U. S., at page 109, the court said:

Lastly, it is urged that the progressive-rate feature of the statute is so repugnant to fundamental principles of equality and justice that the law should be held to be void, even although it transgresses no express limitation in the Constitution. Without intimating any opinion as to the existence of a right in the courts to exercise the power which is thus invoked, it is apparent that the argument as to the enormity of the tax is without merit. It was disposed of in *Magoun v. Illinois Trust & Savings Bank*, 170 U. S., 283, 293.

The review which we have made exhibits the fact that taxes imposed with reference to the ability of the person upon whom the burden is placed to bear the same have been levied from the foundation of the Government; so, also, some authoritative thinkers and a number of economic writers contend that a progressive tax is more just and equal than a proportional one. In the absence of constitutional limitation, the question whether it is or is not legislative and not judicial. The grave consequences which it is asserted must arise in the future if the right to levy a progressive tax be recognized involves in its ultimate aspect the mere assertion that free and representative government is a failure and that the grossest abuses of power are foreshadowed unless the courts usurp a purely legislative function.

This opinion was rendered by Justice White, now Chief Justice of the Supreme Court. All the other judges, except Justice Brewer, concurred in the opinion so far as it held that a progressive rate of taxes can be constitutionally imposed.

The tax proposed is not new. It has been adopted in principle by 30 or more States in the Union and by almost every civilized nation in the world. In *Magoun v. Illinois Trust & Savings Bank*, 170 U. S., at page 287, the court says:

Legacy and inheritance taxes are not new in our laws. They have existed in Pennsylvania for over 60 years, and have been enacted in other States. They are not new in the laws of other countries. In *State v. Alston* (94 Tenn., 674) Judge Wilkes gave a short history of them as follows:

"Such taxes were recognized by the Roman law. (Gibbon's Decline and Fall of the Roman Empire, vol. 1, pp. 163, 164.) They were adopted in England in 1780, and have been much extended since that date. (Dowell's History of Taxation in England, 148; Acts 20 George III, c. 28; 45 George III, c. 28; 16 and 17 Victoria, c. 51; Green v. Craft, 2 H. Bl. 30; Hill v. Atkinson, 2 Merivale, 45.) Such taxes are now in force generally in the countries of Europe. (Review of Reviews, Feb., 1893.) In the United States they were enacted in Pennsylvania in 1836; Maryland, 1844; Delaware, 1869; West Virginia, 1887, and, still more recently, in Connecticut, New Jersey, Ohio, Maine, Massachusetts, 1891; Tennessee in 1891, chapter 25, now repealed by chapter 174, acts 1893. They were adopted in North Carolina in 1846, but repealed in 1883. Were enacted in Virginia in 1844, repealed in 1855, reenacted in 1863, and repealed in 1884."

Other States have also enacted them—Minnesota by constitutional provision.

The constitutionality of the taxes has been declared, and the principles upon which they are based explained in *United States v. Perkins* (163 U. S., 625, 628), *Strode v. Commonwealth* (52 Penn. St., 181), *Eyre v. Jacob* (14 Grat., 422), *Schofield v. Lynchburg* (78 Va., 366), *State v. Dalrymple* (70 Md., 294), *Clapp v. Mason* (94 U. S., 589), *In re Merriam's Estate* (141 N. Y., 479), *State v. Hamlin* (86 Me., 495), *State v. Alston* (94 Tenn., 674), *In re Wilmerding* (117 Cal., 281), *Dos Passos Collateral Inheritance Tax* (20), *Minot v. Winthrop* (162 Mass., 113), *Gelstrophe v. Furnell* (Mont.) (51 Pac. Rep., 267). See also *Scholey v. Rew* (23 Wall., 331).

In France the rates run from 1 per cent to 20½ per cent, with no exemptions, the rate of 20½ per cent being upon inheritances over 50,000,000 francs, or \$10,000,000, going to relatives beyond the sixth degree and strangers in blood.

I have tables here giving the inheritance tax of different countries, which I ask may be put in the RECORD without reading.

There being no objection, the tables were ordered to be inserted in the RECORD, as follows:

	1 to 2,000 francs.	2,001 to 10,000 francs.	10,001 to 50,000 francs.	50,001 to 100,000 francs.
Direct line.....	Per cent. 1.00	Per cent. 1.25	Per cent. 1.50	Per cent. 1.75
Husband or wife.....	3.75	4.00	4.50	5.00
Brothers or sisters.....	8.50	9.00	9.50	10.00
Uncles and aunts, nephews and nieces.....	10.00	10.50	11.00	11.50
Great-uncles and great-aunts, grand-nephews and grandnieces, cousins-german.....	12.00	12.50	13.00	13.50

Relatives of the fifth and sixth degrees.....	17.50	18.00	18.50	19.00	19.50
Relatives beyond the sixth de- gree and strangers in blood.....	18.50	19.00	19.50	20.00	20.50

Mr. JONES. In Germany the rate runs from 4 per cent on amounts over 20,000 marks, or \$5,000, to 25 per cent on amounts over 1,000,000 marks, or about \$250,000. In addition they have a State or Province tax.

In Great Britain there are legacy, succession, and death duties which amount to a graduated tax of about 1 per cent on estates between \$500 and \$2,500 in value and from 10 to 23 per cent on estates up to and exceeding \$15,000,000. In the dependencies of Great Britain inheritance taxes are levied varying from 2 to 20 per cent on collateral heirs and strangers in blood and from 1 to 10 per cent on direct heirs.

I have also a table giving the rates in Great Britain and her Provinces, which I ask be published in the RECORD without reading.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Progressive inheritance taxes in foreign countries.

Country.	For collateral heirs.		For direct heirs.		Strangers in blood.		Progressivity (on basis of property).	Other exemptions.
	Rate per cent.	Exemption.	Rate per cent.	Exemption.	Rate per cent.	Exemption.	Rate per cent.

¹ One-half of collateral rates on amounts not exceeding £50,000. In certain cases the rate applies to distributive shares.

² Progression ceases with collateral heirs at £20,000 and with direct heirs at £200,000.

³ £1,500 exempted if estate does not exceed £2,500; if in excess, no exemption.

⁴ Direct heirs pay one-half of collateral rates.

⁵ One-half of the collateral rates on property passing to certain direct heirs when total net value does not exceed £50,000.

⁶ Progressive schedule applies only to direct heirs. Progressivity on basis of property.

⁷ Share passing to immediate relatives.

⁸ Schedule rates doubled on property passing by transfer out of the Province.

⁹ Proceeds devoted to asylums, hospitals, and other charities.

¹⁰ Great Britain has also a "probate duty," "account duty," "temporary estate duty," and a "corporation duty."

¹¹ Paid upon the principal value of all property, real or personal, settled or unsettled. Settled property is subject to a further estate duty of 1 per cent.

¹² Small estates up to £300 gross pay a duty of 30s. Small estates up to £500 pay a duty of 50s. These duties are inclusive of all other "death duties."

¹³ Legacy of any value, and any share of residue of personal estate arising under will or intestacy.

¹⁴ Succession duty applies to a succession of the value of £20 or upward, where the whole succession derived from the same predecessor amounts to £100 or upward.

One-half of 1 per cent of the succession duty on lineals and 1½ per cent on other descendants constitutes what is called "additional succession duties." This additional

duty is not payable when the property subject to the succession duty is chargeable with estate duty.

¹⁵ Rate applies to child, descendant of child, father, mother or lineal ancestor and is not payable where probate or letters of administration were obtained or where "account

duty" or "estate duty" has been paid.

¹⁶ The "legacy duty" and "succession duty" together practically constitute a collateral inheritance tax paid in addition to the "estate duty," with the exception, how-

ever, that estates valued at £1,000 or less are subject to the "estate duty."

¹⁷ 1 to 20 per cent on amounts up to 10,000 francs. Rate then increases by ½ through a series of 10 steps until it becomes ⅓ higher than the primary rate.

¹⁸ 2 to 10 per cent on amounts between 2,000 and 10,000 francs. Rate then increases by ½ for each additional 10,000 francs until it becomes ⅓ higher than the primary rate.

¹⁹ 2 to 10 per cent on amounts up to 10,000 francs. Rate then increases by ½ for each additional 10,000 francs until it becomes ⅓ higher than the primary rate.

Mr. JONES. In Lucerne, Switzerland, the rate is 1 per cent for direct heirs, from 5 to 15 for collateral heirs, and from 20 to 40 to strangers in blood.

Objection is made to a national inheritance tax on the ground that it will interfere with the right of the States to collect inheritance taxes and be in effect a double tax. This is not a valid objection. The levying of an inheritance tax by the United States does not in any way affect the right of the State to levy such a tax. It may put an additional burden upon an estate or inheritance, but the aggregate of such a burden is not too great. State inheritance taxes are very low as a general rule, and especially so upon direct inheritances.

Inheritances are now taxed to a greater or less extent in 36 States of the Union and in Hawaii and in Porto Rico. Twenty States of the Union tax both direct and collateral heirs, and in

13 States the inheritance tax is in some degree progressive. Wisconsin, California, Idaho, Minnesota, and Massachusetts have progressive rates for both direct and collateral heirs; in Illinois, Colorado, Nebraska, South Dakota, Oregon, and North Carolina the progressive rates apply only to distant relatives and strangers in blood, while in Washington and Texas they apply to all collateral heirs. Minnesota and Utah make no distinction between direct and collateral heirs; in all other cases in which direct heirs are taxed at all the rates are much lower and the exemption (except in Connecticut and North Carolina) much larger than for collateral heirs. It may be added that the new constitution of Oklahoma expressly authorizes progressive taxation of both direct and collateral inheritances.

The following table shows the main provisions of the inheritance-tax laws of the various States in the Union.

State.	Collateral.		Direct.	
	Rates.	Exemption.	Rates.	Exemption.
	<i>Per cent.</i>		<i>Per cent.</i>	
Arkansas.....	5

Wyoming.....	5	500	2	\$10,000

¹ Widows and (except in Wisconsin) minor children taxable only on the excess above \$10,000 received by each.

² Tax payable only by strangers in blood.

³ Tax not payable when the property bore its just proportion of taxes prior to the owner's death.

⁴ Applies to personal property only.

⁵ Decedents' estates of less than \$10,000 are also exempt.

⁶ For the surviving husband or wife and children, if residents of Wyoming, \$25,000.

I have received a statement from nearly every State in the Union which collects inheritance taxes, and the following table shows the amount of the taxes collected during the last year:

	Collections.	Year.
Arkansas.....	\$41,948.79	1911-12
California.....	1,575,000.00	1913
Connecticut.....	1,080,482.20	1912
Colorado.....	413,700.00	1911-12

Total.....	27,379,906.90	

¹ Went into effect May, 1913.

² Act approved Mar. 26, 1913.

I desire to call the attention of the Senate to the disparity or inequality in the various State taxes. For instance, in the great State of Ohio they collected in 1912 only \$80,000 inheritance taxes, while in the State of New York they collected over \$12,000,000.

The total amount collected in the States is a mere bagatelle compared with the value of the property which doubtless was transferred by inheritance during the year and but a small recompense for the outlay by the State for the protection of

this property and the safeguarding of the rights of its possessors. It would be no undue burden for the National Government also to take a part of this wealth because of the protection it affords and the guaranties it extends to the owners in insuring them the undisturbed enjoyment of their property and rights. It is no more double taxation than is the levying of State and county taxes.

Under the amendment which I propose, however, the objection that it is double taxation can not be urged. It is expressly provided that the amount of any State inheritance taxes shall be deducted from the amount levied under this amendment. Under such a provision it would rest with each State whether any part of their tax would go to the United States and the States would, no doubt, very shortly impose rates equivalent to those provided in this amendment. We would have uniform inheritance laws under which revenues would accrue to the States that could be used for relieving the people of the various burdens of taxation which they now bear and many desired improvements and reforms could be carried out by the agency best fitted to do it.

It is strenuously urged that this tax is confiscation of private property. Not so. It is not levied upon property while he who earns it needs it. No one's property is affected while he lives. The tax is imposed only when the owner no longer needs his property and can no longer use it. Ordinary taxes are in fact pro tanto confiscations of one's property, but this is not. It takes nothing from the heir, because nothing is his. What he gets comes to him by the grace of the sovereign and the bounty of the decedent. He has nothing to confiscate. This objection is pure declamation.

This tax is called socialistic and it seems to be taken for granted that this objection is sufficient to defeat it. It is no more socialistic than any other legislation that deals justly with the people, equalizes opportunity, lightens the burdens of government, and promotes prosperity, good will, happiness, peace, and contentment. It respects entirely one's rights in property ultimately acquired, is the very antithesis of socialism and the principles of socialism applied to property, and does not interfere with nor overturn private or individual rights. An inheritance tax may be advocated by some Socialists, but I do not know of any who advocate it as a socialistic principle or doctrine. It is advocated, however, by many who are not Socialists.

And I say when these millionaires, as the time comes, lie down with their fathers the community falls in its duty and our legislators fall in their duty if they do not exact a tremendous, a progressive share—if he leaves little, little taken.

This is not the language of a Socialist, an anarchist, or a poor man, but it is the language of one of the richest men of this or any other age, Andrew Carnegie.

Again Mr. Carnegie says, and I refer to an address made by him at the dinner of the sixth annual meeting of the National Civic Federation in 1907:

They—

Said he, referring to the people—

see what I tell you is true, that the community made most of the wealth, and I hope they will persist and tax heavily by graduated taxation every man who dies leaving behind him his millions, which it was his duty to administer for the public good in his life, and that they will cease to honor any man who does not regard his surplus wealth as a sacred trust to be administered for the good of the community from which it has arisen.

At this same meeting Melville E. Ingalls, chairman of the Cleveland, Cincinnati, Chicago & St. Louis Railway Co., expressed himself in favor of an income tax and also an inheritance tax, and while he suggested that an inheritance tax should be confined to the States, advanced a more radical proposition when he said:

If it can not be managed in that way then the National Government should take it up and the money that is obtained from these sources will enable it to reduce the burden of taxation in places where it is advisable to do so and will produce income which may be lost from the modification of the tariff. I would also enact legislation—or if it can not be done under the present Constitution, I would get an amendment—that no man should have the right to dispose of his property by will and that when he dies it shall be divided equally among heirs. I would take away from any citizen the right to tie up any property in trust for one life or two or more. It is simply a continuance of the old law of entail under another form and holds these immense fortunes together when if they were divided equally among the heirs they would soon scatter and be harmless. I know that this will be criticized and people will say that if a man has children and some are weak and incompetent to handle the fortune coming to him or her that the parent should have the right to put them in trust, but that is the very thing that perpetuates some of these large fortunes. Let them be distributed. If some of the heirs waste their inheritance the public will gain. The property is not lost by distribution and nothing, in my judgment, will so protect our future against large accumulations of wealth as this.

It seems to be a craze with some men to perpetuate after their death the immense fortunes that they have built up, but it is not a thing that the State ought to allow.

Mr. GALLINGER. Mr. President—

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from New Hampshire?

Mr. JONES. Certainly.

Mr. GALLINGER. Has the Senator taken into consideration this phase of the matter, that if we legislate for a Federal inheritance tax and the States have direct and collateral inheritance taxes, it is very likely that it will result in the distribution of a great deal of property before death, and we will not get our taxes?

Mr. JONES. I think that would be very desirable.

Mr. GALLINGER. The Senator would approve of that?

Mr. JONES. I would. I should like to see the distribution before death. I do not want to see the transmission of large estates after death.

Mr. GALLINGER. Yet it would result in the very thing the Senator says he would legislate against, in making it illegal for a man to make a will to distribute his property among his children.

Mr. JONES. The Senator did not understand it. That was not my language. It was the language of Mr. Ingalls, the president of the railroad.

Mr. GALLINGER. I beg pardon; I thought it was the Senator's language.

Mr. JONES. I was using that argument to show that it is not socialistic.

Mr. GALLINGER. Precisely. I understand the Senator now. It was not his own language.

Mr. JONES. No.

Mr. SMITH of Arizona. From whom did the Senator read the last quotation?

Mr. JONES. Mr. Ingalls, president of the railroad.

Mr. GALLINGER. M. E. Ingalls.

Mr. JONES. Yes.

Wayne MacVeagh, in the North American Review for June, 1906, says:

There is no use in pretending that the proposal to establish such a system of taxation is of a radical, much less of a revolutionary, character, or in attempting to persuade the American electorate that it is a wicked attack upon private property to ask Congress to adopt a system of taxation which has been accepted by the most aristocratic and conservative legislative assemblage in the world—the House of Lords of Great Britain. After 12 years' experience of it, the graduated taxation of inheritances is now firmly established as a part of the permanent financial policy of the United Kingdom.

It has been adopted from time to time for hundreds of years and by the great majority of the States of the Union, as already shown.

Such legislation has been enforced at various times by acts of Congress, and in 1909 the House of Representatives adopted it as a feature of the tariff bill. It passed the House with practically no opposition. It was strongly recommended by President Roosevelt and again by President Taft. President Roosevelt, in discussing the theory and principles of an inheritance tax in his message at the beginning of the first session of the Sixtieth Congress, said:

But proposals for legislation such as this herein advocated are directly opposed to this class of socialistic theories. Our aim is to recognize what Lincoln pointed out: The fact that there are some respects in which men are obviously not equal; but also to insist that there should be an equality of self-respect and of mutual respect, an equality of rights before the law, and at least an approximate equality in the conditions under which each man obtains the chance to show the stuff that is in him when compared with his fellows.

President Taft, in his inaugural address of March 4, 1909, after referring to the necessity of raising revenue in order to overcome a deficit which was then threatened, said:

Should it be impossible to do so by import duties, new kinds of taxation must be adopted, and among these I recommend a graduated inheritance tax as correct in principle and as certain and easy of collection.

In his message of June 16, 1909, he refers to this recommendation.

As already said, the act of 1898 actually incorporated this principle into law, and Congress and the President were not at all socialistic.

With all these high and conservative indorsements of this method of taxation, it is idle to denounce it as socialistic.

It is urged that the imposition of an inheritance tax is an interference with the natural rights of the individual to dispose of his property as he sees fit. This is not true. No such natural right exists. The right to dispose of one's property is a civil right over which the State has full control and has been so generally recognized. Practically every State in the

Union has enacted laws restricting or affecting the disposition of property by will or descent, and the right to do so can not be questioned.

The Supreme Court of the United States disposed of this objection when it said in *Magoun v. Illinois Trust & Savings Bank* (170 U. S., p. 288):

It is not necessary to review these cases, or state at length the reasoning by which they are supported. They are based on two principles: 1. An inheritance tax is not one on property, but one on the succession. 2. The right to take property by devise or descent is the creature of the law, and not a natural right—a privilege; and therefore the authority which confers it may impose conditions upon it.

It is again urged that such legislation will take away the incentive to frugality and industry, discourage the promotion of great enterprises, stifle activity, and retard the development of our country and the progress of civilization. If this legislation tends to check the grasping, overreaching, and avaricious disposition that is manifested by so many of our wealthy people it will be a godsend. The more men have the more they seem to desire; the less they need the more they strive for. Underhanded, unscrupulous oppression and dishonest means are adopted and the rights of humanity are utterly disregarded in the mad scramble for wealth. The lives of men, women, and children seem to be counted as naught against its acquisition.

This legislation, however, will not discourage anyone from putting forth proper efforts in the conduct of his business, the development of the country, and the acquirement of riches. There seems to be an irresistible desire to acquire as large a sum of money or as great wealth as possible. It is unreasonable to suppose that the desire to transmit wealth and power to children is the incentive that prompts the efforts, struggles, sacrifices, and heartless methods that are put forth to attain wealth and the control of property. Men desire to achieve victories, to surpass their competitors, to conquer difficulties, to promote great enterprises, to accomplish great results. These are the mainsprings of human action, and the desire to control the disposition of property after death has practically nothing to do with the efforts put forth in the acquirement of property. This legislation in no way interferes with these ruling passions, because it does not interfere with the acquisition of property or its disposition during one's lifetime. As a matter of fact, this kind of tax is the least objectionable from this standpoint. It imposes no burden on sagacity, industry, energy, and power. What a man acquires he keeps. It becomes new capital. No tribute is levied on thrift, self-denial, or success. One achievement leads to another. Instead of being a deterrent it should encourage industry, activity, energy, and the development of great enterprises. No one will suppose that Astor, or Vanderbilt, or Sage, or Gould, or Morgan would have been deterred in their struggle for wealth and the power that it gives by legislation of this character. If such legislation would make them more considerate of the rights of others and the interests of the public, then we could well afford to pass it, if for no other reason. We need not fear that a reasonable burden upon the transmission of property after death will in any wise deter men of ability, capacity, and ambition from exerting themselves to the utmost to surmount the difficulties, amass wealth, carry on and complete great undertakings, acquire power, and command the admiration of men.

There are exceptions to all rules, but not more exceptions, we think, to this rule than to rules generally, that the "almighty dollar" bequeathed to children is an "almighty curse." * * * No man has a right to handicap his son with such a burden as great wealth.

The growing disposition to tax more and more heavily large estates left at death is a cheering indication of the growth of a salutary change in public opinion. * * * Of all forms of taxation this seems to be the wisest. Men who continue hoarding great sums all their lives—the proper use of which for public ends would work good to the community from which it chiefly came—should be made to feel that the community, in the form of the State, can not thus be deprived of its proper share * * *. By all means such taxes should be graduated, beginning at nothing upon moderate sums to dependents, and increasing rapidly as the amounts swell, until of the millionaire's hoard, as of Shylock's, at least—

"The other half
Comes to the privy coffer of the State."

This policy would work powerfully to induce the rich man to attend to the administration of wealth during his life, which is the end that society should always have in view, as being by far the most fruitful for the people. Nor need it be feared that this policy would sap the root of enterprise and render men less anxious to accumulate, for, to the class whose ambition it is to leave great fortunes and to be talked about after their death, it will attract more attention, and, indeed, be a somewhat nobler ambition to have enormous sums paid over to the State from their fortunes.

That the parent who leaves his son enormous wealth generally deadens the talents and energies of the son, and tempts him to lead a less useful and less worthy life than he otherwise would, seems to me capable of proof which can not be gainsaid.

If you will read the list of the immortals who "were not born to die," you will find that most of them have been born to the precious heritage of poverty.

Why should men leave great fortunes to their children? If this is done from affection, is it not misguided affection? Observation teaches that, generally speaking, it is not well for the children that they should be so burdened. Neither is it well for the State. Beyond providing for the wife and daughters moderate sources of income, and very moderate allowances indeed, if any, for the sons, men may well hesitate; for it is no longer questionable that great sums bequeathed often work more for the injury than for the good of the recipients. Wise men will soon conclude that, for the best interests of the members of their families, and of the State, such bequests are an improper use of their means.

These are the words of Andrew Carnegie and are quoted at length because they cover well several of the points for and against this character of legislation.

That this system of taxation is not destructive, that it will not discourage industry and thrift, that it will not impose a burden upon anyone unable to bear it, is proven by actual experience and is testified to by those who have had an actual demonstration of it. William J. O'Sullivan, chairman of the transfer tax bureau of the city of New York, in Pearson's Magazine for December, 1907, says:

So, quite aside from the philosophical, ethical, sociological, or political justifications for a national inheritance tax, which have been so fully advanced in the discussion up to date, the American people, being a very hard-headed, practical people, must be satisfied, in so far-reaching a matter, that an inheritance tax is not only feasible but practical; that it will be constructive and not destructive; in short, that while working out a great purpose of social justice, it will not deprive any man or woman of the encouragement to industry and thrift without which national progress is impossible.

In fact, there is no real, substantial objection that can be urged against such a system of taxation when ample provision is made for the surviving members of the immediate family and dependent relatives.

Taxes are not levied for pleasure. They are always a burden and are levied only out of necessity. That tax which is the least burdensome is the most desirable. An inheritance tax is no tax at all in the usual and ordinary way. It imposes no burden on the living and can not affect the dead. The owner of wealth can not complain, because it takes nothing from him while he lives. The heir is not injured, because it deprives him of nothing that he has earned by effort or sacrifice or to which he has a legal or even a moral claim. It is, in fact, the ideal way to raise at least a part of the money necessary to defray the expenses of government.

Those receiving the greatest benefits from government should defray the expenses. Property interests and men of wealth and extensive business make more demands on the Government than others. Most of our governmental machinery is made necessary by the demands of big business. Courts are engaged most of the time in settling disputes between great financial interests, testing the constitutionality of laws at their instance, or in protecting the public from their aggressions. Legislatures spend their time legislating to promote the welfare of wealth in the hope that the indirect benefits will accrue to the ordinary citizen. Executive officers are giving their time and using the resources to promote the prosperity of industry. Armies and navies are maintained and used when necessary to protect great properties in time of industrial disturbance and war. To-day war is threatened largely on account of injury to property and citizens who have gone into a foreign country for pleasure or to exploit its resources. The following is from a news item in one of the papers printed a few days ago:

The big battleship *Michigan* sailed from Vera Cruz yesterday to investigate a report that a small plantation belonging to _____, situated near Ciudad del Carmen, State of Tabasco, and an adjacent property owned by the Mexican Exploitation Co. (American) had been occupied by insurrectionary forces under the leadership of Manuel Castilla Pascual.

Wealth and industry can well afford to pay for these great benefits, and it is very unwise and very unjust for it to object to doing so at one time or another.

It may be urged that wealth is already taxed, and thus already bears its just burden. Taxes are levied and are paid by wealth in the first instance, but the great proportion of such taxes are passed on and eventually borne by those ill prepared to pay them and who, in fact, should not pay them. A large part of the high cost of living to-day is caused by the shifting of burdens from the shoulders of those able to bear them to those less able to stand up under the weight. Under this bill more than ever before will the tax paid by the wealthy importer be shifted to the poorer consumer, because you place a tariff on many articles we do not produce but which are generally consumed. We are imposing taxes in this bill on incomes in the hope that wealth will be compelled to bear a more equitable share of the burdens of government, and yet a large part of this tax eventually will be shifted from those who should bear it and who are able to bear it to those who should not have to pay it. The strong can and do shift their burdens to the weak,

who can not avoid them. We should seek to avoid this if it can be done. There is no inducement to shift an inheritance tax, and it can not be shifted if there were any inducement to do so. It is the most equitable tax that can be imposed and the easiest borne, and it is surprising that our people have not more generally used it.

This tax is also justified by reason of the fact that wealth during the lifetime of its possessor not only shifts many of its just burdens, but also avoids its equitable part of the direct taxes imposed under our present systems. It is generally known that in the levying and collection of ordinary taxes the man of small means pays more proportionately than his wealthy neighbor. It is less difficult to conceal a large part of a great property than it is to conceal a small part of a lesser estate, and the result is that the wealthy escape taxation and the poor do not.

As illustrating what everybody knows to be a fact, I will give a few examples.

In 1873 personal property in the State of Illinois was listed for taxation at a valuation of \$287,292,809; in 1893, about 20 years after, with an increase in population of over 50 per cent and a corresponding development in wealth, the personal property was listed at only \$145,318,406. In 1894 the aggregate value of the shares of stock of the State and National banks in Cook County was over \$56,000,000. In the city of Chicago the assessed valuation of real estate for city taxes in 1873 was \$262,969,820. In 1893 it was assessed at \$146,044,422. During this 20-year period the population had quadrupled; \$400,000,000 had been expended in new buildings, and yet the assessed value of the real estate had decreased over \$116,000,000.

I hold in my hand the report of the New York special tax commission for 1907. In a supplemental report made by Spencer E. Warnick and George R. Malby, among the facts fully established, they say:

The richer a person grows the less he pays in relation to his property or income. Experience has shown that under the present system personal property practically escapes taxation for either local or State purposes.

As proof of this the following table, showing the amounts assessed against well-known multimillionaires for 1907 in the city of New York, is submitted:

August Belmont	\$100,000
Oliver H. P. Belmont	200,000
Cornelius Bliss	100,000
Andrew Carnegie	5,000,000
Henry Clews	100,000
William E. Corey	100,000
Morris K. Jesup	100,000
Chauncey M. Depew	50,000
John W. Gates	250,000
Frank J. Gould	50,000
John D. Rockefeller	2,500,000
John D. Rockefeller, Jr.	50,000
William Rockefeller	300,000
H. H. Rogers	300,000
Russell Sage	2,000,000
Alfred G. Vanderbilt	250,000
Cornelius Vanderbilt	150,000
Elsie F. Vanderbilt	100,000
Fred. W. Vanderbilt	250,000
George W. Vanderbilt	50,000
William K. Vanderbilt	100,000
John Jacob Astor	300,000
George Ehret	200,000

While all should bear to a greater or less degree the burdens of government because all partake of its benefits, those burdens should be placed as largely as possible where they will be most easily borne. It is more just to require the payment of taxes in proportion to ability to pay than in proportion to the amount of wealth one possesses. The dollar in a million is far more potential than the dollar in a hundred. When you take \$10 from a man whose income barely suffices to house, feed, and clothe his family you impose on him an immeasurably greater burden than you do on the man whose income is \$100,000 a year when you take \$10,000 for government expenses. To take a large share of an estate is to impair no one's ability, especially when liberal exemptions are allowed. Under this amendment an exemption of \$25,000 is allowed direct heirs. My only fear is that the exemptions are too large and the rates on the smaller amounts too low, but I have sought to make it plain that it is not desired to work any unnecessary hardship on anyone or to deprive anyone of any reasonable excuse for opposing this amendment.

We hear much now of the high cost of living. Campaigns have been waged with that as the battle cry. The Democratic Party was put into power largely on the promise and in the belief that it would reduce the cost of living. Congress has been in session for months considering a tariff bill with the reduction of the cost of living as one of its primary objects. This bill will impose about the same amount of taxes as we

heretofore have imposed by tariff legislation and its sponsors during this debate have practically conceded that the duties which they have imposed or which they have taken off will not affect the price of commodities in this country. They have admitted that prices will not be reduced. Duties have been placed upon articles now on the free list which we do not produce and which, while not absolutely necessities, are generally used. The tariff imposed upon such articles will increase their price and increase the cost of living to the consumers. The income tax is supposed to take the place of many duties eliminated, and yet this tax will be largely shifted from those who pay it in the first place to those who are less able to pay it and will be a large element in the cost of living. As a matter of fact, there is not a single tax levied in this bill that will not, in accordance with Democratic theories, have a tendency to increase or maintain the high cost of living and bear heaviest on those the least able to pay.

The tax proposed in this amendment will not increase or add to the high cost of living at all. On the contrary, when put into operation, it will make it possible to relieve our people from much of the burdens of ordinary taxation. It would actually reduce the cost of living. It would relieve the people of some of the burdens which they now bear. It would place the burdens of government more equitably and impose them where they can be most easily borne.

The effect of such a system upon the distribution of the large fortunes of this country is worthy of the highest consideration. The concentration of wealth has become a most serious problem. It is one that should command our most careful attention. Its possible effect upon our people and our system of government itself is likely to be far reaching and of tremendous import. We are face to face to-day with problems in connection with the concentration of wealth that demand solution. Fortunes have been accumulated in this country during the last 50 years beyond the wildest dreams of avarice. John Jacob Astor's fortune of \$20,000,000 increased in the hands of his son William to \$100,000,000, and it is now estimated that the fortunes of the Astor family amount to over \$500,000,000.

Commodore Vanderbilt died leaving a fortune of about \$100,000,000, ninety million of which was bequeathed to his son W. H. Vanderbilt, who, at his death, left an estate of \$200,000,000. After numerous bequests to his wife and other relatives he divided the remainder equally between his two sons, Cornelius and William K. Vanderbilt, who already had amassed large fortunes, Cornelius being estimated to be worth \$80,000,000 at the time of the bequest from his father. These fortunes have tremendously increased until no one knows what this family controls.

The Sage fortune is estimated at \$79,000,000; Kennedy's at \$65,000,000; Brady's at \$75,000,000; Gould's at \$78,000,000; Morgan's at \$100,000,000; Stephen Sanford's at \$40,000,000, and Marshall K. Field left a fortune estimated at \$150,000,000 in trust for two young boys.

No one knows the amount of the fortune of John D. Rockefeller, but it has been estimated as high as a billion dollars. This no doubt is greatly exaggerated, but his fortune and financial power are tremendous. Andrew Carnegie has a fortune of from three to five hundred millions of dollars, bringing in an annual income of over \$16,000,000, or more than a million dollars a month.

How were these fortunes acquired? Is it possible for any man through his individual effort, thrift, and industry to acquire command of such tremendous sums of money? That these fortunes have been acquired by individual effort no one can believe. The methods adopted are pretty well disclosed by public records, newspaper reports, and general statements which appear to be thoroughly reliable. It can safely be asserted that as a general rule these exceedingly large fortunes are the result of increased values of real estate, forest and mining lands, brought about by the development and growth of communities; the construction and operation of railroad lines which have prospered by reason of the growth and development of the country through which they have passed; speculation in and manipulation of stocks and bonds; the arbitrary increase of the stock of various enterprises and the sale of such stock to the public or the receipt of dividends upon such increased stock; the securing of franchises from States, counties, and municipalities; financial manipulations; banking and banking combinations; and by other means whereby the energy and wealth of the people have been diverted to the possession and control of the individuals controlling and manipulating these various agencies, as well as by fraud, short weight, adulteration, and other sharp practices.

In the wake of these vast fortunes will be found buccaneering and piracy; cheated and defrauded Indians; exorbitant war contracts; land grants and franchises secured by fraud, trickery,

and bribery; railroads wrecked by stock manipulations; railroads wrecked by competition, with the sole desire to destroy; watered stock, by which and upon which millions have been taken from the public; adulterated food; short weights; "Black Fridays"; railroad discriminations; rebates to friendly business; overcharges to struggling competitors; and tremendous combinations in whose grasp reside the very destinies of the Nation.

The accumulation of fortunes by many of the methods pursued in the past should be prevented by legislation so far as possible, and I am glad to say that during the last 10 years much legislation has been passed to correct these evils and the public conscience has become so aroused that legislators are more regardful of the rights of the people and public franchises are not so frequently given away without any safeguards for the people's interest. There is need of legislation to prevent stock manipulations, "gentlemanly" gambling, and many other ways actually criminal in operation.

A brief examination in regard to the accumulation of some of these fortunes will show that they were not the result of the honest and industrious efforts of their possessors, nor the result of the ordinary growth and development of the country, which has had so much to do with many individual fortunes. A mere statement of the amount accumulated within a certain period will be enough to convince anyone that they were not accumulated fairly or honestly.

At the age of 70, Commodore Vanderbilt had acquired a fortune of \$20,000,000. He turned from shipping to railroading, and his biographer, Croffut, says:

In the first five years of his railroad ventures and experiments he had made a clear profit of not less than \$25,000,000.

And the same authority says, referring to his entrance into the railroad business:

As a matter of fact, this giant of achievement had just entered upon the most brilliant period of his life, and he doubled his wealth four times during the next 15 years.

In the hands of his son this increased in a few years to \$200,000,000.

If President Wilson had served as President of the United States at his present salary of \$75,000 a year continuously during the last 1,000 years, he would not have earned as much money as Commodore Vanderbilt made in 15 years, and 100 laboring men at \$1,000 a year would have had to begin before the morning stars sang together at the birth of our Savior and work continuously ever since to earn the amount of which William Vanderbilt died possessed at the age of 65 years.

By the manipulation of the stocks and bonds of certain railroads Harriman is said to have made over \$50,000,000 in nine years.

How much should be allowed in the increase of fortunes on account of the activities of the community and the growth and development of the country it is difficult to say, but there is no question but that all fortunes of a few hundred thousand dollars and over are very largely the result of investments made profitable, not so much by the efforts of the individual as through the activities and wants of the community.

Eighty lots were purchased by a certain individual in a certain section of New York many years ago at about \$600 a lot. These lots have a present aggregate value of \$20,000,000 or more. Lands in the city of Chicago which in 1830 were worth from \$20 to \$80 an acre are now worth from \$10,000,000 to \$15,000,000 per acre. These are but illustrations of what has taken place all over the country to a greater or less extent.

No one can contend with any reason that these values are the result of the owner's efforts. Their values have come independently of him and of his efforts. After allowing due credit for one's judgment in making his investment, still the great credit for the increase in values belongs to the community. When the owner dies, when he no longer needs this property, when he no longer has any use for it or claim upon it the community, his "partner," not only has the right to take but should take a large part of this increase to itself. It is the real producer of it and is the real owner of it.

Andrew Carnegie, referring to President Roosevelt's advocacy of an inheritance tax, said:

I am with the President in regard to the graduated tax, and a heavy graduated inheritance tax, for many reasons. One is that it belongs to the community that made most of the money, and it should come in and get its dues.

Again he says:

It is not the millionaire alone who creates wealth. A man who had mines in Montana and made an enormous fortune did not make the ore from which his fortune came. Who made it valuable? The community wished to use that ore, then it became worth while to take it out of the ground, and he made a profit. Gentlemen, wealth is based upon the community. Where a nation does not increase in population and is not prosperous, where wealth does not accumulate, you will find no millionaires; but where a nation is prosperous, as we are—a new Nation, beyond precedent prosperous—there the millionaire, and there only, they develop.

For the community to take to itself a share, and a large share, of these great fortunes through an inheritance tax is no attack on wealth. The fortune is left in the hands and control of its owner until he passes to that country where earthly wealth is unsought and undesired. No man's abilities or activities are hampered; no industry is paralyzed; no one is impoverished or distressed. The real owner simply steps in and takes part of that which it has created and appropriates it to itself for benefits given to relieve burdens borne, to equalize opportunity, and to encourage energy, ambition, ability, and thrift.

The possession of wealth carries with it great power, and as wealth accumulates its power increases. There are very few things that men with fortunes like those already referred to can not do. They can make or unmake prosperity. They can make or unmake cities. They can promote or destroy great enterprises. They can make or destroy the very prosperity of the country. But a short time ago it was generally believed that the prosperity of the Nation and its financial safety rested upon the will of a single man.

This amendment does not propose to interfere with this power so long as its possessor lives. That should be done, however, by other legislation. This bill does propose to prevent, to a certain extent, the transmission of that power from its possessor to a single individual. Instead of objecting to legislation preventing the transmission of such power it ought to be welcomed. It amazes us that a civilized, educated, liberty-loving people like the English should complacently see the powers of their sovereign transmitted from father to son, and yet we see tremendous fortunes accumulated by fair means and foul and the control of our great industrial enterprises resulting therefrom transmitted by a stroke of the pen to some boy who has done absolutely nothing to show himself worthy of such a trust or capable of discharging its responsibilities. He receives a power for evil far transcending that of the greatest potentate of modern times. The transmission of millions of property to a single person qualified and prepared to handle and care for it properly should not be permitted, because in such hands it will grow and multiply to still greater proportions, while in hands unfitted to care for and manage it it may bring industrial ruin and disaster to the business world.

J. P. Morgan, jr., not only commands what is equivalent to the services of thousands of men, women, and children, but he holds the destiny of the business world of this great Republic in the hollow of his hand. Intentionally he could throw our Nation into such a cataclysm as the world has never known. He might do so by lack of ability, care, or intelligence. Such a power is too great to be entrusted to any one man. The interests of the community demand that the community shall not permit such a condition of things in a free government. That government is not free where its presidents must act at the beck and nod of some private king of finance, and that nation is not safe whose prosperity depends upon the whim, caprice, or will of any private individual. Legislation which will curb or prevent the transmission of such power should be welcomed by its possessors themselves, because it is the safest guaranty against anarchy and revolution.

Love for country dies where government ceases to promote happiness. Poverty pinches patriotism. Where one enjoys what it takes thousands to earn, discontent, envy, and hate will grow until the one falls a prey to the wrath of the many.

These fortunes are becoming of such frequent occurrence and of such tremendous magnitude that a widespread distrust, not only in our institutions and our business conditions, but in the very Government itself is being awakened. While no one can fail to see that general conditions are better in this country to-day than they were 20 or 50 years ago, while no one can deny that labor commands more for shorter hours and that comforts and even luxuries are more generally distributed and enjoyed now than years ago, it can not be denied that individual fortunes have increased in such a degree and with this increase has come such power and opportunity as to awaken a feeling that the many are being forced to depend upon the few and we are getting that accelerated motion toward industrial dependence of the increasing many and the industrial independence of the diminishing few that should be stayed. This does not mean in a financial sense that the rich are getting richer and the poor are getting poorer, but it does mean a proportionately increasing power and wealth in the few as against the many.

As Small says:

We are passing through a social transition in which the power of a few men to control opportunities for employment is enormous, and the liberty of many men to defy the caprice of employers is correspondingly reduced. From the standpoint of a right thinking and of a right feeling man such control is intolerable. So far as it exists in any class of cases, it means nothing else than the subversion of the freedom of the dependent parties, and their retrogression into a unique and re-

fined order of servitude. It is possible to consider such relationship a permanent feature of human society only on the assumption that the exercise of freedom, which is necessary to some men, is no part of the natural function of other men.

My own amendment does not pretend to correct the evils under which and by which these great fortunes have been and may be accumulated. As I already have said, that will have to be done and ought to be done by additional legislation, and much already has been accomplished along these lines. The purpose of my amendment, however, is not only to distribute the burdens of taxation to those who are able to pay it and to reimburse the community for benefits received through it, but it is intended indirectly to prevent the transmission of these tremendous fortunes from father to son and from generation to generation, and to bring about their distribution and thereby diminish the power and distribute it.

Some may think that the rates provided in this amendment are high, but they overlook the provisions of the amendment under which these high rates may be avoided by the voluntary action of the owner of the fortune. The rate is determined by the size of the inheritance and not by the entire estate. If the testator, for instance, does not desire the high rates to apply, he can avoid it by distributing his fortune among several children or favored individuals. This probably would be the result, and in my judgment it is a very desirable one. If anyone, having accumulated a fortune of \$100,000,000, would not desire the community to take 50 per cent of his bequests, he would divide his fortune among 8 or 10 or more legatees and in this way subject them to a smaller rate.

As Melville E. Ingalls said, referring to his proposition to prohibit any man from disposing of his property by will and to provide for its distribution equally among his heirs:

The property is not lost by distribution, and nothing in my judgment will so protect our future against large accumulations of wealth as this. It seems to be a craze with some men to perpetuate after their death the immense fortunes that they have built up, but it is not the thing that the state ought to allow.

It is urged that such a tax will drive wealth and capital out of the country. Where will it go? There is scarcely a civilized country, province, or state in which this tax is not levied at a greater or less rate. Independent of this, there is no force in this objection. Capital will go where its owner believes it will bring the greatest return during his lifetime. Little consideration is given to what shall happen after death. Death is uncertain; when it will come no man knows, and everyone hopes it will be put off indefinitely and acts on that assumption. In the investment of money, the prosecution of great works, and the acquirement of riches no thought is given to testamentary disposition. Says a millionaire:

I venture to say that very few men, if any, conscientiously consider the advantage of the right of testamentary disposition when they attempt to secure wealth. That is probably the last thing entering their brains. If they knew that they would not be able to bequeath their fortunes, they would still try to accumulate wealth in the hope of either cheating the law, or, if that were impossible, with the idea of giving it away while they were still alive.

Sir Charles Dilke also testifies to the fact that in New Zealand and the other British colonies, where the rate of taxation is high, no such result has occurred.

The continued concentration of wealth and its transmission from father to son will result disastrously if the experience of the past is any guide to the future. The fall of the ancient republics is attributed largely to the fact that many were poor and a few were enormously wealthy. Blackstone says of Greece:

Thus the ancient law of the Athenians directed that the estate of the deceased should always descend to his children, or, on failure of lineal descendants, should go to the collateral relations, which had an admirable effect in keeping up equality and preventing the accumulation of estates. But when Solon made a slight alteration, by permitting them (though only on failure of issue) to dispose of their lands by testament and devise away estates from the collateral heir, this soon produced an excess of wealth in some and of poverty in others, which, by a natural progression, first produced popular tumults and dissensions, and these at length ended in tyranny and the utter extinction of liberty, which was quickly followed by a total subversion of their state and nation.

Webster, from his knowledge of history and experience of mankind, said:

The freest government, if it could exist, would not be long acceptable if the tendency of the law was to create a rapid accumulation of property in few hands and to render the great mass of the population dependent and penniless. In such a case the popular power would be likely to break in upon the rights of property, or else the influence of property to limit and control the exercise of popular power. Universal suffrage, for example, could not long exist in a community where there was great inequality of property.

We can better run the risk of having wealth leave the country and seek other fields than to risk the dangers that have come to the nations of the past.

It is a dangerous situation for that country when one man is interested in, connected with, and so controls so much wealth

or so many financial interests and industries that he can say to one here, "You can do this," and to another there, "You can not do that," or by the wave of the hand can start the storm of industrial ruin or by the stroke of a pen open the floodgates of the nation's prosperity. In the control of a good and wise man such power may bring untold good and business stability. In the hands of a wicked or unwise man it may bring such a horrible cataclysm of industrial disaster as war and pestilence have never brought to mankind. If this is not our condition to-day it is nearly so, and if not one man a half dozen now hold the control of our business stability in their grasp.

Even if we do not prevent the accumulation of such power in the hands of a few, as we should earnestly strive to do, shall we permit them to transmit the power which they hold over the destinies of a great people undiminished and unrestrained? To do so is unfair to our citizens and dangerous to the Republic.

This amendment seeks in a slight degree to prevent such a condition and the transmission of such power.

Mr. President, far be it from me or my purpose to discourage anyone from using his ability, exerting his energy, or exercising his sagacity in endeavoring to develop and carry on great enterprises which by thrift and industry and proper care will bring to him an ample reward for all his efforts. I freely recognize the right of every man during his lifetime to all that his industry and sagacity will bring him. I make no war upon wealth or against the wealthy. I would not excite the envy of the poor or the hate of the struggling against the rich and prosperous, and especially not against those who by frugality, carefulness, energy, and wisdom have accumulated much of this world's goods. Some men are wiser than others. Some men have better judgment than others. Some are fortunate and some are unfortunate. Some are venturesome and some are timid. Some seem to be able in a perfectly legitimate way to turn whatever they touch into gold, while others may toil and struggle day in and day out but seem to be followed by failure and misfortune and to eke out only a miserable existence.

These conditions may not be changed by law, but we can more nearly equalize opportunity and from time to time start all in the race of life more nearly upon an equality. I do not advocate the ancient custom of the year of jubilee, but its spirit can well be applied in our legislation. A man who uses to the utmost the gifts with which nature has endowed him fighting the battles of life with brain and brawn and attains great wealth or high position commands my admiration. If he amasses a large fortune, I do not envy him, but when he is through with it, when his life work is ended, let it be generally distributed or a liberal share be taken by the State for its own preservation and in order that its citizens may more nearly have that equality which all desire and deserve.

The transmission of a large fortune to a young man is a handicap and a detriment to his success. It takes away ambition and encourages extravagance; makes him idle, lazy, and shiftless; encourages dissipation and high living; unfits him for places of trust and responsibility. History proves and our own observation shows that as a rule the men who have succeeded in business or government, the great captains of industry or the wise statesmen of the ages, have all come up through poverty and hardship. It develops the latent powers that are found in the babes of the poor and which is stifled in the babes of the rich. They are unfitted for places of trust and responsibility because they never have been tested. Young men who by their own efforts have mastered the various lines of work in which they have engaged and have demonstrated their worth, reliability, and powers are the men who have succeeded, who will succeed, and will be sought after. The manager of a great steel plant of England, on a visit to Mr. Carnegie, said:

It is not the unrivaled natural resources of your country, Mr. Carnegie, I have to envy most, nor even your wonderful machinery, but it is the class of young men you have to manage all your departments. We have no such class in England.

Legislation that will prevent our young men from being handicapped by great wealth will make of many of them better, stronger, more self-reliant, more successful, more virile men and better and more worthy citizens.

Mr. President, the time has come for us to put more humanity and less commercialism in our legislation. With all our boasted wealth, prosperity, and happiness, there is too much poverty, suffering, and sorrow among our people. Thousands of honest, hard-working men, women, and children are living and toiling amid conditions and surroundings not fit for animals to live in. The better impulses and instincts of their natures are blunted, deadened, and killed. They hate the institutions under which they live. The Government is to them an agent of oppression. They see wealth transmitted to father and son. They see men who "toil not, neither do they spin," revel in wealth and luxury that must come from the efforts of some one, maybe from theirs. They see the men who own the miserable, cramped, insanitary,

deadly habitations in which they live grow rich out of the rents that take much of the product of their toil. Is it any wonder that there are anarchists and violent agitators? They see the men for whom they work at starvation wages live in fair mansions, ride in automobiles, dress in fine linen, and spend for one meal more than they can earn in a week, and their hearts are filled with bitterness. Women work long hours at miserable wages while the children who need their loving, tender care are at home by themselves or playing on the streets under conditions that undermine their health and their morals. These are problems that the States and the Nation must solve. We must do our part. The people demand it. We must show them that we are going to take up earnestly legislation that will help the individual that needs help and bring happiness and comfort where there is now sorrow and suffering.

This amendment will not go far, but it will tend to equalize opportunity, compensate for benefits received, place the burdens of government where they can be easily borne, make it possible to relieve the masses from many taxes they now bear, tend to dissipate the distrust that is growing among our people, provide a fund that can be used for hospitals, for nurseries, for the care of children while their parents are at work, for pensions for widows and orphans, and lead to the distribution of wealth during the lifetime of its possessor in ways that will alleviate suffering and bring light into dark places.

Mr. President, this is not a cry against wealth. It is an appeal to wealth and to all who know that these conditions demand a remedy. Unless we meet the problem of humanity that has come down to us through the ages, the poet's cry may become a reality:

O masters, lords, and rulers in all lands,
How will the Future reckon with this Man,
How answer his brute question in that hour
When whirlwinds of rebellion shake the world?
How will it be with kingdoms and with kings—
With those who shaped him to the thing he is—
When this dumb Terror shall reply to God,
After the silence of the centuries?

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Nebraska [Mr. NORRIS].

Mr. BRISTOW. Mr. President, I desire to say in regard to this proposition that I am in favor of an inheritance tax, and I shall vote for the amendment; but in so doing I do not want it to be understood that it is an indorsement of the schedule of rates fixed. I do not believe that the rates provided are as they should be; but believing in the principle of an inheritance tax, I shall vote for the amendment.

Mr. NORRIS. I ask for the yeas and nays on agreeing to the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the junior Senator from Michigan [Mr. TOWNSEND], which I transfer to the junior Senator from South Carolina [Mr. SMITH] and vote "nay."

Mr. LEA (when his name was called). I transfer my pair with the senior Senator from South Dakota [Mr. CRAWFORD] to the Senator from Oklahoma [Mr. OWEN] and vote "nay."

Mr. LEWIS (when his name was called). I am paired with the junior Senator from North Dakota [Mr. GRONNA]. If he were here, I would vote "nay."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from Ohio [Mr. BURTON] and withhold my vote. If I were permitted to vote, I would vote "nay."

The roll call was concluded.

Mr. JAMES (after having voted in the negative). I have a general pair with the junior Senator from Massachusetts [Mr. WEEKS]. I voted "nay." I am informed by the senior Senator from Massachusetts [Mr. LODGE] that if his colleague were present he would likewise vote "nay." Therefore I will allow my vote to stand.

Mr. JONES. I desire to state that the junior Senator from Michigan [Mr. TOWNSEND] is necessarily absent and that he is paired with the Senator from Florida [Mr. BRYAN]. I make this announcement for all other votes to-day.

Mr. KERN. Being paired with the Senator from Kentucky [Mr. BRADLEY] I withhold my vote. If I were at liberty to vote, I would vote "nay."

Mr. REED. I have a pair with the Senator from Michigan [Mr. SMITH]. I transfer my pair to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

The result was announced—yeas 12, nays 58, as follows:

YEAS—12.

Borah
Brady
Bristow

Clapp
Cummins
Jones

Kenyon
La Follette
Norris

Page
Stephenson
Sterling

NAYS—58.

Ashurst	Gore	Overman	Simmons
Bacon	Hollis	Penrose	Smith, Ariz.
Bankhead	Hughes	Perkins	Smith, Ga.
Brandegge	Jackson	Pittman	Smith, Md.
Bryan	James	Pomerene	Stone
Catron	Johnson	Ransdell	Sutherland
Chamberlain	Lane	Reed	Swanson
Chilton	Lea	Robinson	Thompson
Clark, Wyo.	Lippitt	Root	Thornton
Clarke, Ark.	Lodge	Saulsbury	Tillman
Colt	Martin, Va.	Shafroth	Vardaman
Dillingham	Martine, N. J.	Sheppard	Walsh
Fall	Myers	Sherman	Williams
Fletcher	O'Gorman	Shields	
Gallinger	Oliver	Shively	

NOT VOTING—25.

Bradley	Gronna	Newlands	Townsend
Burleigh	Hitchcock	Owen	Warren
Burton	Kern	Polindexter	Weeks
Crawford	Lewis	Smith, Mich.	Works
Culberson	McCumber	Smith, S. C.	
du Pont	McLean	Smoot	
Goff	Nelson	Thomas	

So Mr. NORRIS's amendment was rejected.

Mr. JONES. I desire to offer an amendment. I will simply ask that the amendment be printed in the Record and not have it read. It is the amendment which I already explained in reference to the inheritance tax. I shall not ask for a roll call, but simply ask for a vote.

Mr. JONES's amendment was to add to the bill as a new section the following:

SEC. —. That a tax shall be, and is hereby, imposed upon the transfer of any property, real or personal, or of any interest therein or income therefrom, in trust or otherwise, to persons or corporations, within the United States or any of its possessions (except the Philippine Islands), in the following cases:

First. When the transfer is by will or by the intestate laws of any State or Territory or of the United States from any person dying seized or possessed of the property while a resident of the United States or any of its possessions (except the Philippine Islands).

Second. When the transfer is by will or intestate law of property within the United States or any of its possessions (except the Philippine Islands), and the decedent was a nonresident of the United States or any of its possessions at the time of his death.

Third. Whenever the property of a resident decedent, or the property of a nonresident decedent within the United States or any of its possessions (except the Philippine Islands), transferred by will, is not specifically bequeathed or devised, such property shall, for the purpose of this section, be deemed to be transferred proportionately to, and divided pro rata among, all the general legatees and devisees named in said decedent's will, including all transfers under a residuary clause of such will.

Fourth. When the transfer is of property made by a resident, or by a nonresident when such nonresident's property is within the United States or any of its possessions (except the Philippine Islands), by deed, grant, bargain, sale, or gift made in contemplation of the death of the grantor, vendor, or donor, or intended to take effect in possession or enjoyment at or after such death.

Fifth. When any such person or corporation becomes beneficially entitled, in possession or expectancy, to any property or the income thereof by any such transfer, whether made before or after the passage of this act.

Sixth. Whenever any person or corporation shall exercise a power of appointment derived from any disposition of property made either before or after the passage of this act such appointment when made shall be deemed a transfer taxable under the provisions of this act in the same manner as though the property to which such appointment relates belonged absolutely to the donee of such power and had been bequeathed or devised by such donee by will; and whenever any person or corporation possessing such power of appointment so derived shall omit or fail to exercise the same within the time provided therefor, in whole or in part, a transfer taxable under the provisions of this act shall be deemed to take place to the extent of such omission or failure, in the same manner as though the persons or corporations thereby becoming entitled to the possession or enjoyment of the property to which such power related had succeeded thereto by a will of the donee of the power failing to exercise such power, taking effect at the time of such omission or failure.

Seventh. The tax imposed hereby shall be, except as otherwise prescribed in paragraph 2 of this section, as follows:

If such property, real or personal, or any interest therein so transferred, is of the value of less than \$5,000, at the rate of 1 per cent upon the clear market value of such property; if of the value of \$5,000 and not exceeding \$50,000, at the rate of 2 per cent upon the clear market value of such property; if exceeding \$50,000 and not exceeding \$250,000, at the rate of 5 per cent upon the clear market value thereof; if exceeding \$250,000 and not exceeding \$750,000, at the rate of 10 per cent upon the clear market value thereof; if exceeding \$750,000 and not exceeding \$1,500,000, at the rate of 15 per cent upon the clear market value thereof; if exceeding \$1,500,000 and not exceeding \$3,000,000, at the rate of 20 per cent upon the clear market value thereof; if exceeding \$3,000,000 and not exceeding \$7,000,000 in value, at the rate of 25 per cent upon the clear market value thereof; if exceeding \$7,000,000 and not exceeding \$15,000,000 in value, at the rate of 40 per cent upon the clear market value thereof; and if of the value of over \$15,000,000, at the rate of 50 per cent upon the clear market value thereof.

PAR. 2. That when property, real or personal, or any beneficial interest therein, of the value of less than \$25,000 passes by any such transfer to or for the use of any father, mother, husband, wife, child, brother, sister, wife, or widow of a son or the husband of a daughter, or any child or children adopted as such in conformity with the laws of any State, Territory, or of the United States (in which such person shall at the time of such transfer reside), of the decedent, grantor, donor, or vendor, or to any child to whom any such decedent, grantor, donor, or vendor, for not less than 10 years prior to such transfer stood in the mutually acknowledged relation of a parent: *Provided, however, That such relationship began at or before the child's fifteenth*

birthday and was continuous for said 10 years thereafter: *And provided also, That, except in the case of a stepchild, the parents of such child shall be deceased when such relationship commenced, or to any lineal descendant of such decedent, grantor, donor, or vendor born in lawful wedlock, such transfer of property shall not be taxable under this section; if real or personal property, or any beneficial interest therein, so transferred is of the value of \$25,000 and not exceeding \$50,000, it shall be taxable under this section at the rate of 1 per cent upon the clear market value of such property; if exceeding \$50,000 and not exceeding \$250,000, it shall be taxable under this section at the rate of 2 per cent upon the clear market value of such property; if exceeding \$250,000 and not exceeding \$500,000, it shall be taxable under this section at the rate of 3 per cent upon the clear market value of such property; if exceeding \$500,000 and not exceeding \$1,000,000, it shall be taxable under this section at the rate of 4 per cent upon the clear market value of such property; if exceeding \$1,000,000 and not exceeding \$5,000,000, it shall be taxable under this section at the rate of 7 per cent upon the clear market value of such property; if exceeding \$5,000,000 and not exceeding \$10,000,000, it shall be taxable under this section at the rate of 15 per cent upon the clear market value of such property; if exceeding \$10,000,000 and not exceeding \$20,000,000, it shall be taxable under this section at the rate of 25 per cent upon the clear market value of such property; if exceeding \$20,000,000 and not exceeding \$30,000,000, it shall be taxable under this section at the rate of 35 per cent upon the clear market value of such property; and if exceeding \$30,000,000, it shall be taxable under this section at the rate of 50 per cent upon the clear market value of such property. But any property devised or bequeathed to any purely educational, charitable, missionary, benevolent, hospital, or infirmity corporation, including corporations organized exclusively for Bible or tract purposes, shall be exempted from and not subject to the provisions of this section. There shall also be exempted from and not subject to the provisions of this section personal property, other than money or securities, bequeathed to a corporation or association organized exclusively for the moral or mental improvement of men or women, or for scientific, literary, library, patriotic, cemetery, or historical purposes, or for the enforcement of laws relating to children or animals, or for two or more of such purposes, and used exclusively for carrying out one or more of such purposes. But no such corporation or association shall be entitled to such exemption if any officer, member, or employee thereof shall receive or may be lawfully entitled to receive any pecuniary profit from the operations thereof except reasonable compensation for services in effecting one or more of such purposes or as proper beneficiaries of its strictly charitable purposes; or if the organization thereof for any such avowed purpose be a guise or pretense for directly or indirectly making any other pecuniary profit for such corporation or association or for any of its members or employees; or if it be not in good faith organized or conducted exclusively for one or more of such purposes.*

PAR. 3. That if such tax is paid within six months from the accrual thereof a discount of 5 per cent shall be allowed and deducted therefrom. If such tax is not paid within 18 months from the accrual thereof, interest shall be charged and collected thereon at the rate of 10 per cent per annum from the time the tax accrued, unless by reason of claims made upon the estate, necessary litigation, or other unavoidable cause of delay such tax can not be determined and paid as herein provided, in which case interest at the rate of 6 per cent per annum shall be charged upon such tax from the accrual thereof until the cause of such delay is removed, after which 10 per cent shall be charged.

PAR. 4. That the tax or duty aforesaid shall be due and payable in two years after the death of the testator, and shall be a lien and charge upon the property of every person who may die as aforesaid for 20 years or until the same shall, within that period, be fully paid to and discharged by the United States; and every executor, administrator, or trustee having in charge or trust any legacy or distributive share as aforesaid shall give notice thereof, in writing, to the collector or deputy collector of the district where the deceased grantor or bargainer last resided within 30 days after he shall have taken charge of such trust, and every executor, administrator, or trustee, before payment and distribution to the legatee, or any parties entitled to beneficial interest therein, shall pay to the collector or deputy collector of the district of which the deceased person was a resident, or in which the property was located in case of nonresidents, the amount of the duty or tax assessed upon such legacy or distributive share, and shall also make and render to the said collector or deputy collector a schedule, list, or statement, in duplicate, of the amount of such legacy or distributive share, together with the amount of duty which has accrued or shall accrue thereon, verified by his oath or affirmation, to be administered and certified thereon by some magistrate or officer having lawful power to administer such oaths in such form and manner as may be prescribed by the Commissioner of Internal Revenue, which schedule, list, or statement shall contain the names of each and every person entitled to any beneficial interest therein, together with the clear value of such interest, the duplicate of which schedule, list, or statement shall be by him immediately delivered and the tax thereon paid to such collector; and upon such payment and delivery of such schedule, list, or statement said collector or deputy collector shall grant to such person paying such duty or tax a receipt or receipts for the same in duplicate, which shall be prepared as hereinafter provided. Such receipt or receipts, duly signed and delivered by such collector or deputy collector, shall be sufficient evidence to entitle such executor, administrator, or trustee to be credited and allowed such payment by every tribunal which by the laws of any State or Territory is or may be empowered to decide upon and settle the accounts of executors and administrators. And in case such executor, administrator, or trustee shall refuse or neglect to pay the aforesaid duty or tax to the collector or deputy collector as aforesaid within the time hereinbefore provided, or shall neglect or refuse to deliver to said collector or deputy collector the duplicate of the schedule, list, or statement of such legacies, property, or personal estate, under oath as aforesaid, or shall neglect or refuse to deliver the schedule, list, or statement of such legacies, property, or personal estate, under oath as aforesaid, or shall deliver to said collector or deputy collector a false schedule or statement of such legacies, property, or personal estate, or give the names and relationship of the persons entitled to beneficial interests therein untruly or shall not truly and correctly set forth and state therein the clear value of such beneficial interests, or where no administration upon such property or personal estate shall have been granted or allowed under existing laws, the collector or deputy collector shall make out such lists and valuation as in other cases of neglect or refusal and shall assess the duty thereon, and the collector shall commence appropriate proceedings before any court of the United States, in the name of the United States, against such person or persons as may have the actual or constructive custody or possession of such property or personal estate, or any part thereof,

and shall subject such property or personal estate, or any portion of the same, to be sold upon the judgment of decree of such court, and from the proceeds of such sale the amount of such tax or duty, together with all costs and expenses of every description to be allowed by such court, shall be first paid, and the balance, if any, deposited according to the order of such court, to be paid under its direction to such person or persons as shall establish title to the same. The deed or deeds or any proper conveyance of such property or personal estate, or any portion thereof, so sold under such judgment or decree executed by the officer lawfully charged with carrying the same into effect shall vest in the purchaser thereof all the title of the delinquent to the property or personal estate sold under and by virtue of such judgment or decree, and shall release every other portion of such property or personal estate from the lien or charge thereon created by this section. And every person who shall have in his possession, charge, or custody any record, file, or paper containing, or supposed to contain, any information concerning such property or personal estate, as aforesaid, passing from any person who may die as aforesaid, shall exhibit the same at the request of the collector or deputy collector of the district and to any law officer of the United States in the performance of his duty under this section, his deputy or agent, who may desire to examine the same. And if any such person having in his possession, charge, or custody any such records, files, or paper shall refuse or neglect to exhibit the same on request, as aforesaid, he shall forfeit and pay the sum of \$500: *Provided*, That in all legal controversies where such deed or title shall be the subject of judicial investigation, the recital in said deed shall be prima facie evidence of its truth and that the requirements of the law have been complied with by the officers of the Government: *And provided further*, That in case of willful neglect, refusal, or false statement by such executor, administrator, or trustee, as aforesaid, he shall be liable to a penalty of not exceeding \$1,000, to be recovered with costs of suit. Any tax paid under the provisions of this section shall be deducted from the particular legacy or distributive share on account of which the same is charged.

PAR. 5. That from and after the passage of this act the Secretary of the Treasury, upon the recommendation of the Commissioner of Internal Revenue, is authorized to appoint a competent person, at an annual salary of \$5,000, whose special duty it shall be to conduct such investigations as may be necessary to secure the efficient enforcement of the tax imposed upon legacies and distributive shares of personal property by this section, and the Commissioner of Internal Revenue may also from time to time assign one or more special agents to aid in such investigations.

PAR. 6. That in all States having a local inheritance-tax law the amount of such local inheritance tax shall be deducted from the normal amount to be collected under the provisions of this section.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Washington [Mr. JONES].

The amendment was rejected.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Wisconsin [Mr. LA FOLLETTE].

Mr. LA FOLLETTE. On that amendment I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I have a pair with the Senator from Michigan [Mr. TOWNSEND]. I transfer that pair to the Senator from South Carolina [Mr. SMITH] and vote "nay."

Mr. KERN (when his name was called). I transfer my pair with the Senator from Kentucky [Mr. BRADLEY] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

Mr. LEA (when his name was called). I make an announcement of my pair with the senior Senator from South Dakota [Mr. CRAWFORD] and its transfer to the Senator from Oklahoma [Mr. OWEN]. I vote "nay."

Mr. LEWIS. I again announce that I am paired with the junior Senator from North Dakota [Mr. GRONNA].

The roll call was concluded.

Mr. BACON (after having voted in the negative). I note that the senior Senator from Minnesota [Mr. NELSON] has not voted. Therefore I withdraw my vote.

I wish to state, while on my feet, that I voted on the last roll call, having inadvertently failed to note that the Senator from Minnesota had not voted, and therefore I did not withdraw my vote. It was an inadvertence. It did not, however, affect the result.

Mr. BANKHEAD. I am paired with the junior Senator from West Virginia [Mr. GORF] and withhold my vote.

Mr. THOMAS. I again announce my pair with the senior Senator from Ohio [Mr. BURTON] and withhold my vote.

Mr. REED. I have a pair with the Senator from Michigan [Mr. SMITH]. In his absence, I withhold my vote.

Mr. JAMES (after having voted in the negative). I have a pair with the Senator from Massachusetts [Mr. WEEKS], and in his absence I withdraw my vote in the negative.

The result was announced—yeas 29, nays 39, as follows:

YEAS—29.

Borah	Cummins	Lippitt	Sherman
Brady	Dillingham	Lodge	Smoot
Brandeggee	Fall	Norris	Stephenson
Bristow	Gallinger	Oliver	Sutherland
Catron	Jackson	Page	Warren
Clapp	Jones	Penrose	
Clark, Wyo.	Kenyon	Perkins	
Colt	La Follette	Root	

NAYS—39.

Ashurst	Kern	Ransdell	Smith, Md.
Bryan	Lane	Robinson	Stone
Chamberlain	Lea	Saulsbury	Swanson
Chilton	Martin, Va.	Shafroth	Thompson
Clarke, Ark.	Martine, N. J.	Sheppard	Thornton
Fletcher	Myers	Shields	Tillman
Gore	O'Gorman	Shively	Wardaman
Hollis	Overman	Simmmons	Walsh
Hughes	Pittman	Smith, Ariz.	Williams
Johnson	Pomerene	Smith, Ga.	

NOT VOTING—27.

Bacon	du Pont	McLean	Smith, S. C.
Bankhead	Goff	Nelson	Sterling
Bradley	Gronna	Newlands	Thomas
Burleigh	Hitchcock	Owen	Townsend
Burton	James	Polindexter	Weeks
Crawford	Lewis	Reed	Works
Culberson	McCumber	Smith, Mich.	

So Mr. LA FOLLETTE'S amendment was rejected.

Mr. LA FOLLETTE. I offer the amendment which I send to the desk. I will not ask to have it read, as it is precisely a part of the amendment upon which we have just voted. It is that portion of the amendment which starts with a duty on raw wool at 15 per cent and then makes the corresponding duties on the manufactured products as they should be in order to measure the difference in the cost of production on the manufactured products. I ask to have it incorporated in the RECORD. I will not take the time of the Senate to say anything upon it further than I have already said, but I will ask for the yeas and nays.

Mr. LA FOLLETTE'S amendment was to strike out paragraphs 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 318½, 427½, 652, and 653 and insert in lieu thereof the following:

1. All wools, hair of the camel, Angora goat, alpaca, and other like animals shall be divided, for the purpose of fixing the duties to be charged thereon, "into the two following classes":

2. Class 1, that is to say, merino and all wools containing merino blood, immediate or remote Down clothing wools, and wools of like character with any of the preceding, including Bagdad wool, China lambs' wool, Castel Branco, Adrianople skin wool, or butchers' wool, and such as have been heretofore usually imported from Buenos Aires, New Zealand, Australia, Cape of Good Hope, Great Britain, Canada, and elsewhere, Leicester, Cotswold, Lincolnshire, Down combing wools, Canadian long wools, or other like combing wools of English blood and usually known by the terms herein used, the hair of the Angora goat, alpaca, and other like animals, and all wools and hairs not hereinafter included in class 2.

3. Class 2, that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and all other native, unimproved wools such as have been heretofore usually imported into the United States from Turkey, Greece, Asia, and elsewhere, excepting improved wools hereinafter provided for; and the hair of the camel.

4. The standard samples of all wools which are now or may be hereafter deposited in the principal customhouses of the United States under the authority of the Secretary of the Treasury shall be the standards for the classification of wools under this act, and the Secretary of the Treasury is authorized to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other customhouses of the United States when they shall be needed.

5. Whenever wools of class 2 shall have been improved by the admixture of merino or English blood, from their present character as represented by the standard samples now or hereafter to be deposited in the principal customhouses of the United States, such improved wools shall be classified for duty as class 1.

6. The rate of duty on wools and hairs of class 1 shall be 15 per cent ad valorem.

7. Wools and hairs of class 2 shall be free of duty.

8. The rate of duty on wools of class 1 on the skin shall be 12½ per cent ad valorem, the quantity and value of the wool to be ascertained under such rules as the Secretary of the Treasury may prescribe.

9. On top waste, slubbing waste, roving waste, ring waste, and garnetted waste the rate of duty shall be 12½ per cent ad valorem.

10. On shoddy, wool extract, nolls, yarn waste, thread waste, and all other wastes composed wholly of wool or of which wool is the component material of chief value and not specially provided for in this section, the rate of duty shall be 10 per cent ad valorem.

11. On woolen rags, mungo, and flocks the rate of duty shall be 10 per cent ad valorem.

12. On combed wool or tops and all wools which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this section, the rate of duty shall be 25 per cent ad valorem.

13. On carded woolen yarns, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 30 per cent ad valorem.

14. On worsted yarns, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 32½ per cent ad valorem.

15. On cloths, knit fabrics, flannels, felts, women's and children's dress goods, coat linings, Italian cloths, bunting, and all other manufactures made wholly of wool or of which wool is the component material of chief value and not otherwise specially provided for in this act, valued at not more than 60 cents per pound, 40 per cent ad valorem; valued at more than 60 cents per pound and not more than \$1 per pound, 42½ per cent ad valorem; valued at over \$1 per pound, 45 per cent ad valorem.

16. On blankets and on flannels for underwear, composed wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 40 per cent ad valorem: *Provided*, That on flannels composed of wool or of which wool is the component material of chief value, valued at over 50 cents per pound, the rate of duty shall be the same as assessed by this section on women's and children's dress goods.

17. On clothing, ready-made, and articles of wearing apparel of every description, including shawls, whether knitted or woven, and knitted

articles of every description made up or manufactured wholly or in part, and not otherwise specially provided for in this act, the rate of duty shall be 45 per cent ad valorem.

18. On webbings, gorings, suspenders, braces, bandings, beltings, bindings, braids, galleons, edgings, insertings, flouncings, fringes, glimps, cords and tassels, ribbons, ornaments, laces, trimmings, and articles made wholly or in part of lace, embroideries and all articles embroidered by hand or machinery, head nets, nettings, buttons or barrel buttons or buttons of other forms for tassels or ornaments, and manufactures of wool ornamented with beads or spangles of whatever material composed, any of the foregoing made of wool or of which wool is the component material of chief value, whether containing india rubber or not, the rate of duty shall be 40 per cent ad valorem.

19. On hand-made Axminster, Aubusson, oriental, and similar rugs and carpets, made wholly of wool or of which wool is the component material of chief value, the rate of duty shall be 50 per cent ad valorem; on all other carpets and rugs made wholly of wool or of which wool is the component material of chief value, and not otherwise specially provided for in this act, including machine-made Axminster, moquette, chenille, Wilton, Brussels, tapestry, and Ingrain carpets and rugs, 30 per cent ad valorem.

20. Carpets and carpeting of wool, flax, or cotton, or composed in part of any of them, not otherwise specially provided for in this act, and on mats, matting, and rugs of cotton, 30 per cent ad valorem.

21. Mats, rugs for floors, screens, covers, hassocks, bed-sides, art squares, and other portions of carpets or carpeting made wholly of wool or of which wool is the component material of chief value, and not specially provided for in this section, shall be subjected to the rate of duty herein imposed on carpets or carpeting of like character or description.

22. Whenever, in any paragraph of this schedule, the word "wool" is used in connection with a manufactured article of which it is a component material it shall be held to include wool or hair of the sheep, camel, goat, alpaca, or other animal, whether manufactured by a woolen, worsted, felt, or any other process.

23. Paragraphs 1 to 11 of this schedule shall be effective on and after the 1st day of January, 1914, and paragraphs 12 to 22, inclusive, shall be effective on and after the 1st day of April, 1914.

The VICE PRESIDENT. The Senator from Wisconsin demands the yeas and nays on agreeing to the amendment proposed by him.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. BRYAN (when his name was called). I make the same announcement of my pair and its transfer as on the previous roll call and vote "nay."

Mr. JAMES (when his name was called). I have a pair with the Senator from Massachusetts [Mr. WEEKS]. In his absence I withhold my vote. If I were at liberty to vote, I would vote "nay."

Mr. LEA (when his name was called). I again announce my pair with the senior Senator from South Dakota [Mr. CRAWFORD] and its transfer to the Senator from Oklahoma [Mr. OWEN]. I vote "nay."

Mr. LEWIS (when his name was called). I again announce my pair with the junior Senator from North Dakota [Mr. GRONNA]. If he were present, I would vote "nay."

Mr. REED (when his name was called). I again announce my pair with the Senator from Michigan [Mr. SMITH]. If he were present, I should vote "nay."

The roll call was concluded.

Mr. THOMAS. I again announce my pair with the Senator from Ohio [Mr. BURTON] and withhold my vote.

Mr. GALLINGER. I was requested to announce a pair between the Senator from North Dakota [Mr. McCUMBER] and the Senator from Nevada [Mr. NEWLANDS].

Mr. REED. I transfer my pair with the Senator from Michigan [Mr. SMITH] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "nay."

The result was announced—yeas 29, nays 41, as follows:

YEAS—29.

Borah	Dillingham	Lodge	Sherman
Bradley	Fall	Nelson	Smoot
Brady	Gallinger	Norris	Stephenson
Brandegree	Jackson	Oliver	Sutherland
Bristow	Jones	Page	Warren
Clapp	Kenyon	Penrose	
Clark, Wyo.	La Follette	Perkins	
Cummins	Lippitt	Root	

NAYS—41.

Ashurst	Kern	Reed	Stone
Bacon	Lane	Robinson	Swanson
Bryan	Lea	Saulsbury	Thompson
Chamberlain	Martin, Va.	Shafroth	Thornton
Chilton	Martine, N. J.	Sheppard	Tillman
Clarke, Ark.	Myers	Shields	Vardaman
Fletcher	O'Gorman	Shively	Walsh
Gore	Overman	Simmons	Williams
Hollis	Pittman	Smith, Ariz.	
Hughes	Pomerene	Smith, Ga.	
Johnson	Ransdell	Smith, Md.	

NOT VOTING—25.

Bankhead	du Pont.	McLean	Thomas
Burleigh	Goff	Newlands	Townsend
Burton	Gronna	Owen	Weeks
Catron	Hitchcock	Polindexter	Works
Colt	James	Smith, Mich.	
Crawford	Lewis	Smith, S. C.	
Culberson	McCumber	Sterling	

So Mr. LA FOLLETTE's amendment was rejected.

Mr. PENROSE. I think this is the proper time for me to call up the amendment heretofore introduced by me to the wool schedule. The amendment has been read and is understood by the Senate. I will not, therefore, ask to have it reread, but will ask to have it printed in the RECORD, and will request the Chair to put the question on the amendment without calling the yeas and nays on it.

The VICE PRESIDENT. In the absence of objection, the amendment will be printed in the RECORD, as requested by the Senator from Pennsylvania.

The amendment referred to is as follows:

On page 87, line 15, insert the following:

SCHEDULE K.—WOOL AND MANUFACTURE OF.

1. All wools, hair of the camel, goat, alpaca, and other like animals shall be divided, for the purpose of fixing the duties to be charged thereon, into the three following classes:

2. Class 1; that is to say, merino, mestiza, metz, or metis wools, or other wools of merino blood, immediate or remote, Down clothing wools, and wools of like character with any of the preceding, including Bagdad wool, China lamb's wool, Castel Branco, Adriatic skin wool or butchers' wool, and such as have been heretofore usually imported into the United States from Buenos Aires, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, Egypt, Morocco, and elsewhere, and Leicester, Cotswold, Lincolnshire, Down combing wools, Canada long wools, or other like combing wools of English blood, and usually known by the terms herein used, and also hair of the camel and all wools not hereinafter included in classes 2 and 3.

3. Class 2; that is to say, the hair of the Angora goat, alpaca, and other like animals.

4. Class 3; that is to say, Donskoi, native South American, Cordova, Valparaiso, native Smyrna, Russian camel's hair, and all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Syria, and elsewhere, excepting improved wools hereinafter provided for.

5. The standard samples of all wools or hair which are now or may be hereafter deposited in the principal customhouses of the United States under the authority of the Secretary of the Treasury shall be the standards for the classification of wools and hair under this act, and the Secretary of the Treasury is authorized to renew these standards and to make such additions to them from time to time as may be required, and he shall cause to be deposited like standards in other customhouses of the United States when they may be needed.

6. Whenever wools of class 3 shall have been improved by the admixture of merino or English blood from their present character, as represented by the standard samples now or hereafter to be deposited in the principal customhouses of the United States, such improved wools shall be classified for duty as class 1.

7. If any bale or package of wool or hair specified in this act invoiced or entered as of any specified class, or claimed by the importer to be dutiable as of any specified class, shall contain any wool or hair subject to a higher rate of duty than the class so specified, the whole bale or package shall be subject to the highest rate of duty chargeable on wool or hair of the class subject to such higher rate of duty, and if any bale or package be claimed by the importer to be shoddy, mungo, flocks, wool, hair, or other material of any class specified in this act, and such bale contain any admixture of any one or more of said materials, or of any other material, the whole bale or package shall be subject to duty at the highest rate imposed upon any article in said bale or package.

8. The duty on all wool and hair of class 1 and class 2 shall be laid on the basis of the clean content. If imported in washed or unwashed condition, the duty shall be 18 cents per pound on the clean content; if imported scoured, the duty shall be 20 cents per pound on the clean content. The clean content shall be determined by scouring and conditioning tests, which shall be made according to regulations which the Secretary of the Treasury shall prescribe.

9. The duty on all wools and hair of class 3, imported in their natural condition, shall be 7 cents per pound; if scoured, 19 cents per pound: *Provided*, That on consumption of wools and hair of class 3, in the manufacture of carpets, druggets and bookings, mats, rugs for floors, screens, covers, hassocks, bed-sides, art squares, and portions of carpets or carpeting hereafter manufactured or produced in the United States in whole or in part from wools or hair of class 3, upon which duties have been paid, there shall be allowed to the manufacturer or producer of such articles a drawback equal in amount to the duties paid less 1 per cent of such duties on the amount of the wools or hair of class 3 contained therein; such drawback shall be paid under such rules and regulations as the Secretary of the Treasury may prescribe.

10. The duty on wools on the skin shall be 2 cents less per pound than is imposed upon the clean content as provided for wools of class 1, and 1 cent less per pound than is imposed upon wools of class 2 imported in their natural condition, the quantity to be ascertained under such rules as the Secretary of the Treasury shall prescribe.

11. Unwashed wools shall be considered such as shall have been shorn from the sheep without any cleansing; that is, in their natural condition. Washed wools shall be considered such as have been washed with water only on the sheep's back or on the skin. Wools washed in any other manner than on the sheep's back or on the skin shall be considered as scoured wool.

12. Top waste, slubbing waste, and roving waste, 28 cents per pound.

13. Ring waste, garnetted waste, and all other wastes composed wholly or in part of wool, and not specially provided for in this section, 20 cents per pound.

14. Nolls, carbonized, 15 cents per pound; not carbonized, 12 cents per pound.

15. Thread waste, yarn waste, wool waste, 16 cents per pound.

16. Shoddy and wool extract, 16 cents per pound.

17. Woolen rags, flocks, and mungo, 5 cents per pound.

18. Combed wool or tops, made wholly or in part of wool or hair, 29 cents per pound.

19. The word "number" appearing in this paragraph, whether applied to woolen or worsted yarns, shall be the number of hanks per pound, a hank being a measure of 560 yards of single yarn or roving.

On tops advanced by process of manufacture to any number of silver or roving or single yarn up to the single twelves the duty shall be 36 cents per pound.

On all numbers exceeding single twelves and up to and including single forties the duty shall be 36 cents per pound plus two-tenths of a cent per number per pound on all numbers in excess of single twelves.

On all numbers exceeding single forties and up to and including single sixties the duty shall be 42 cents per pound plus four-tenths of a cent per number per pound on all numbers in excess of single forties.

On all numbers exceeding single sixties the duty shall be 50 cents per pound plus six-tenths of a cent per number per pound on all numbers in excess of single sixties.

On all rovings and yarns advanced beyond the condition of singles by grouping or twisting two or more rovings or yarns together up to and including number twelve the duty shall be 2 cents per pound in addition to the foregoing duties on single yarns.

On all numbers exceeding twelve and up to and including forties the duty shall be 2 cents per pound plus one-tenth of a cent per number per pound on all numbers in excess of number twelve in addition to the duties on single yarns of corresponding numbers.

On all numbers exceeding forties up to and including sixties the duty shall be 5 cents per pound plus two-tenths of a cent per number per pound on all numbers in excess of number forties in addition to the duties on single yarns of corresponding numbers.

On all numbers exceeding sixties the duty shall be 9 cents per pound plus three-tenths of a cent per number per pound on all numbers in excess of number sixties in addition to the duties on single yarns of corresponding numbers.

Woolen yarns, in singles, or two or more yarns twisted together, shall be subject to a reduction of 7 cents per pound from the duties imposed by this paragraph on corresponding numbers of single or twisted worsted yarns.

On all of the above when bleached, dyed, colored, stained, or printed the duty shall be 5 cents per pound in addition to the other duties prescribed in this paragraph, and if singed or gassed there shall be a further addition of 3 cents per pound.

20. On cloths, knit fabrics, flannels, felts, and all manufactures of every description made wholly or in part of wool, not specially provided for in this section, valued at not more than 20 cents per pound, the duty shall be 12 cents per pound and in addition thereto 25 per cent ad valorem;

Valued at more than 20 cents and not more than 30 cents per pound, 16 cents per pound and in addition thereto 35 per cent ad valorem;

Valued at more than 30 cents and not more than 40 cents per pound, 20 cents per pound and in addition thereto 35 per cent ad valorem;

Valued at more than 40 cents and not more than 50 cents per pound, 26 cents per pound and in addition thereto 45 per cent ad valorem;

Valued at more than 50 cents and not more than 60 cents per pound, 30 cents per pound and in addition thereto 50 per cent ad valorem;

Valued at more than 60 cents and not more than 80 cents per pound, 32 cents per pound and in addition thereto 50 per cent ad valorem;

Valued at more than 80 cents per pound, 35 cents per pound, and in addition thereto 55 per cent ad valorem.

21. On blankets composed wholly or in part of wool valued at not more than 30 cents per pound, the duty shall be 16 cents per pound and in addition thereto 25 per cent ad valorem;

Valued at more than 30 cents and not more than 40 cents per pound, 18 cents per pound and in addition thereto 30 per cent ad valorem;

Valued at more than 40 cents and not more than 50 cents per pound, 22 cents per pound and in addition thereto 30 per cent ad valorem;

Valued at more than 50 cents per pound, 26 cents per pound and in addition thereto 35 per cent ad valorem: *Provided*, That on blankets over 3 yards in length the same duties shall be paid as on cloths.

22. On women's and children's dress goods, coat linings, Italian cloths, and goods of similar description and character, of which the warp consists wholly of cotton or other vegetable material, with the remainder of the fabric composed wholly or in part of wool, the duty shall be 7 cents per square yard; on women's and children's dress goods, coat linings, Italian cloths, bunting, and goods of similar description or character composed wholly or in part of wool and not specially provided for in this section, the duty shall be 11 cents per square yard, and in addition thereto on all the foregoing valued at not more than 50 per cent ad valorem; valued at above 70 cents per pound, 55 per cent ad valorem: *Provided*, That on all the foregoing weighing over 4 ounces per square yard the duty shall be the same as imposed by this schedule on cloths.

23. On clothing and articles of wearing apparel, knitted or woven, of every description, made up or manufactured wholly or in part, and composed wholly or in part of wool, the rate of duty shall be as follows:

If valued at not more than 60 cents per pound, the duty shall be 16 cents per pound and in addition thereto 35 per cent ad valorem;

If valued at more than 60 cents per pound and not more than \$1 per pound, 20 cents per pound and in addition thereto 40 per cent ad valorem;

If valued at more than \$1 per pound and not more than \$1.50 per pound, 26 cents per pound and 50 per cent ad valorem;

If valued at more than \$1.50 per pound and not more than \$2 per pound, 30 cents per pound and 55 per cent ad valorem;

If valued at more than \$2 per pound and not more than \$2.50 per pound, 32 cents per pound and 55 per cent ad valorem;

If valued at more than \$2.50 per pound, 35 cents per pound and 60 per cent ad valorem.

24. On all manufactures of every description made wholly or in part of wool, not specially provided for in this section, the duty shall be 35 cents per pound and in addition thereto 50 per cent ad valorem.

25. On knitted wearing apparel of every description and all knitted articles and manufactures thereof valued at 80 cents per pound or more, composed wholly or in chief value of wool, 24 cents per pound and in addition thereto 45 per centum ad valorem; if valued at less than 80 cents per pound, 24 cents per pound and in addition thereto 35 per cent ad valorem; on all the foregoing composed in part of wool, but in chief value of any other material, 60 per cent ad valorem.

26. On handmade Aubusson, Axminster, oriental, and similar carpets and rugs, made wholly or in part of wool, the rate of duty shall be 50 per cent ad valorem; on all other carpets of every description, druggets, bookings, mats, rugs for floors, screens, covers, hassocks, bed-sides, art squares, and portions of carpets or carpeting, made wholly or in part of wool, the duty shall be 40 per cent ad valorem.

27. Whenever, in any schedule of this act, the word "wool" is used in connection with a manufactured article of which it is a component material, it shall be held to include wool or hair of the sheep, camel, goat, alpaca, or other like animal, whether manufactured by the woolen, worsted, felt, or any other process.

28. The foregoing paragraphs, providing the rates of duty herein for manufactures of wool, shall take effect on the 1st day of January, 1914.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Pennsylvania.

The amendment was rejected.

Mr. GALLINGER. Mr. President, I am at this moment in receipt of a brief communication from the International Cigar Makers' Union of America, which I ask to have read by the Secretary. I simply desire to say that I am in hearty sympathy with the communication.

The VICE PRESIDENT. In the absence of objection the Secretary will read as requested.

The Secretary read as follows:

SEPTEMBER 8, 1913.

Hon. J. H. GALLINGER,

United States Senate, Washington, D. C.

DEAR SIR: We desire to again call attention to that clause in the pending tariff bill which provides for the importation of cigars duty free from the Philippine Islands. After the most careful analysis of the proposition we are thoroughly convinced that free cigars from the Philippines spells ruin to many thousands of cigar makers in the United States.

We are not unmindful of the fact that it is the purpose of the present Congress to enact a tariff law that will relieve the people of burdensome taxation, but it can not be held that a duty on cigars over and above the amount, 150,000,000, from the Philippines, as provided for in the present law, imposes any hardship or additional expense to any citizen of the United States.

This being the case we do not consider it fair to jeopardize the livelihood of 100,000 American working people. We have heretofore directed attention to the fact that it is absolutely impossible for the American cigar makers to compete with the poorly paid Filipino cigar maker, and it is therefore unnecessary to elaborate on that point at this time.

In view of these facts we are making this statement to the Senate, and trust that our appeal may not go unheeded when final action on the bill is taken.

Respectfully submitted,

J. E. FARRELL,

E. E. GREENAWALT,

Representing the Cigar Makers' International Union of America.

Mr. LODGE. I desire to offer an amendment to the hosiery schedule. That matter has been thoroughly discussed, and this is merely another amendment changing the brackets of that schedule. I shall not ask for the yeas and nays on the amendment, but will request the Chair to be kind enough to put the question on the amendment, after it shall have been read. The page referred to in the amendment is, of course, the paging of the old bill.

The VICE PRESIDENT. The Secretary will read the amendment proposed by the Senator from Massachusetts.

The SECRETARY. On page 80, line 8, after the word "unfinished," it is proposed to strike out "if valued at not more than \$1.20 per dozen pairs, 30 per cent ad valorem; if valued at more than \$1.20 per dozen pairs" and in lieu thereof insert the following:

If valued at not more than 60 cents per dozen pairs, 40 per cent ad valorem; if valued at more than 60 cents per dozen pairs.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Massachusetts.

The amendment was rejected.

Mr. CATRON. Mr. President, I offer the amendment which I send to the desk, and ask that it be read.

Mr. SIMMONS. I wish to inquire if the amendment has not already been read, and if the Senator from New Mexico would not allow it to be printed in the RECORD without reading?

Mr. CATRON. The amendment has not been read, though I gave notice of it several days ago.

The VICE PRESIDENT. The Secretary will read the amendment proposed by the Senator from New Mexico.

The SECRETARY. It is proposed to strike out all of paragraphs 295 to 318, both inclusive, and in lieu thereof to insert the following:

295. On wool of the sheep, hair of the camel, goat, alpaca, and other like animals, all wools and hair on the skin of such animals, noils, top waste, card waste, slubbing waste, roving waste, ring waste, yarn waste, bur waste, thread waste, garnetted waste, shoddies, mungo, flocks, wool extract, carbonized wool, carbonized noils, all other wastes, and on woolen rags composed wholly of wool or of which wool is the component material of chief value, and not specially provided for in this section, all combed wool or tops and roving or roping, made wholly of wool or camel's hair, or of which wool or camel's hair is the component material of chief value, and all wools and hair which have been advanced in any manner or by any process of manufacture beyond the washed or scoured condition, not specially provided for in this section, and all yarns made wholly of wool or of which wool is the component material of chief value, the duty shall be 35 per cent ad valorem.

296. On cloths, knit fabrics, flannels not for underwear, composed wholly of wool or of which wool is the component material of chief value; women's and children's dress goods, coat linings, Italian cloths, bunting, and goods of similar description and character; clothing, ready-made, and articles of wearing apparel of every description, including shawls, whether knitted or woven, and knitted articles of every description made up or manufactured, wholly or in part; felts not woven and not specially provided for in this section; webbings, gorings, suspenders, braces, bandings, beltings, bindings, braids, galloons, edg-

ings, insertings, flouncings, fringes, gimps, cords, cords and tassels, ribbons, ornaments, laces, trimmings, and articles made wholly or in part of lace, embroideries, and all articles embroidered by hand or machinery, head nets, nettings, buttons or barrel buttons, or buttons of other forms for tassels or ornaments, and manufactures of wool ornamented with beads or spangles of whatever material composed, and on all manufactures of every description made by any process of wool or of which wool is the component material of chief value, whether containing india rubber or not, not specially provided for in this section, the duty shall be 60 per cent ad valorem.

297. On all blankets and flannels for underwear, composed wholly of wool or of which wool is the component material of chief value, the duty shall be 45 per cent ad valorem.

298. On Aubusson, Axminster, moquette, and chenille carpets, figured or plain, and all carpets or carpeting of like character or description; on Saxony, Wilton, and Tournay velvet carpets, figured or plain, and all carpets or carpeting of like character or description, and on carpets of every description woven whole for rooms, and oriental, Berlin, Aubusson, Axminster, and similar rugs, the duty shall be 65 per cent ad valorem.

299. On Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, and on velvet and tapestry velvet carpets, figured or plain, printed on the warp or otherwise, and all carpets or carpeting of like character or description the duty shall be 55 per cent ad valorem.

300. On tapestry Brussels carpets, figured or plain, and all carpets or carpeting of like character or description, printed on the warp or otherwise; on treble ingrain, three-ply, and all-chain Venetian carpets; on wool Dutch and two-ply ingrain carpets; on druggets and bookings, printed, colored, or otherwise; and on carpets and carpeting of wool or of which wool is the component material of chief value, not specially provided for in this section, the duty shall be 45 per cent ad valorem.

301. On mats, rugs for floors, screens, covers, hassocks, bed-sides, art squares, and other portions of carpets or carpeting made wholly of wool or of which wool is the component material of chief value, and not specially provided for in this section, the rate of duty shall be the same as that herein imposed on carpets or carpeting of like character or description.

302. On manufactures of hair of the camel, goat, alpaca, or other like animal, or of which any of the hair mentioned in paragraph 295 form the component material of chief value, not specially provided for in this section, the duty shall be 60 per cent ad valorem.

303. On consumption of wools contained in paragraph 295, in the manufacture of carpets, druggets and bookings, printed, colored, or otherwise, mats, rugs for floors, screens, covers, hassocks, bed-sides, art squares, and portions of carpets or carpeting manufactured or produced in the United States, in whole or in part, from the wools mentioned in said paragraph 294, upon which duties have been paid, there shall be allowed to the manufacturer or producer of such articles a drawback equal in amount to the duties paid, less 1 per cent of such duties on the amount of wool contained therein; such drawback shall be paid under such rules and regulations as the Secretary of the Treasury may prescribe.

304. Whenever in this act the word "wool" is used in connection with a manufactured article of which it is a component material it shall be held to include wool or hair of the sheep, camel, goat, alpaca, or other like animals, whether manufactured by the woolen, worsted, felt, or any other process.

Mr. CATRON. Mr. President, the amendment to the wool schedule in this bill which I propose is not exactly as I would like it to be. I have used ad valorem rates in it instead of specific rates. I believe that the specific rate is the better way to impose the duty, but I have made my amendment so as to avoid as much objection from the framers of this bill as possible. It appears that they have adopted as their standard the ad valorem rate and that they must believe in it. Therefore I have attempted, against my own judgment, to conform my amendment to that idea, so that there would be less excuse for rejecting it on their part. I do not believe that the rates which I propose in this amendment are adequate. I believe that wool and woolen industries should be more fully protected. This amendment proposed by me would not give, in my judgment, full protection, but it would enable the wool grower and manufacturer to keep on their feet, carry on their business, and maintain their property, until in the near future when the people, repudiating the action of this Congress in the enactment of this bill into a law, shall, through their representatives, enact another law which will give adequate and ample protection.

The party in power which is proposing to enact this bill into a law have declared that they propose to do so because it is necessary for the purpose of raising revenue, and because it is intended to operate as a measure to reduce the high cost of living. It will produce revenue to help pay the expenses of the Government. Will it operate to reduce the cost of living? It is claimed by its advocates that the duty placed upon any article which is essential for the use of the people, to provide for their daily wants and comforts, increases the price or cost of that article by the amount of such duty. Experience has shown that while there may be some increase in the price of such articles, it does not generally reach the grade of being equal to the amount of the duty imposed. The articles mostly needed for the support of the people in comfort and health are foodstuffs and clothing. Our country is able to produce most of the food products required for our consumption. Our cotton products far exceed our needs. We produce nearly all of the raw material necessary for use. We provide enough meat for our wants.

We fall short mainly in a sufficient amount of wool and sugar. We produced for the last fiscal year in the United States over 300,000,000 pounds of wool and imported 238,118,350 pounds to supply the deficiency needed for the requirements of our people. If the woolen industry is destroyed—as this bill, when enacted into a law, will do—that 300,000,000 pounds of wool now produced here will have to be imported from abroad, and paid for not at the prices now ranging in foreign countries, but at greatly advanced prices over that amount, which will be placed upon wool by reason of the fact that we will have no control of the foreign market prices by reason of not having any competition. Combinations will be made against us and the prices will be raised higher. That 300,000,000 pounds of wool, if imported, will cost our people each year not less than \$45,000,000, money which, by preserving the sheep and wool industry, can be kept at home. By destroying them we must send it abroad. In addition to this we will lose the duties which would be collected on the amount of importations, which, according to the last fiscal year, were 238,118,350 pounds of wool, amounting to over \$16,000,000, which, if the wool industry is continued in this country as it now is, we would expect to collect every year.

The same condition, except in greater amounts, would prevail with reference to the sugar industry. We will lose over \$50,000,000 in duties annually which we now collect on sugar, and the amount which we will have to send out of the country in order to purchase 4,000,000,000 pounds of sugar, which we now produce, but which we will not be able to produce if this bill becomes a law, at the expiration of the three years' time which it allows for sugar to pay duties. In addition to that, we will lose greatly on the value of our sheep. They will have to go to the slaughter pen, and all the manufactories and machinery and other improvements which have been made for the production and manufacture of woolen fabrics will become a total loss, amounting to over half a billion of dollars in value. Five millions of people, it is estimated, are dependent upon the woolen industry. They will have to seek elsewhere to obtain a living or support. Three hundred thousand employees will be turned loose on the public to hunt labor in other channels, creating a competition with other labor which will necessarily cut down its price and efficiency. It will cut off their incomes and take away from the individual the means of support and the capacity to purchase the needed articles on which to live, even at the cheap rate which the party in power evidently are calculating that he shall live after this bill has become a law.

There are other articles of which we do not produce a sufficient amount to supply all that is demanded for our use. The amount of them is comparatively insignificant in quantity when we enumerate the articles composing them, but combined they are considerable in quantity. The duties heretofore imposed upon sugar and wool and the manufactured products thereof have been placed there as a protection to the sugar and woolen interests and the products manufactured therefrom and to encourage the production of the same in this country, thus giving employment to labor and incidentally increasing the amount of the same to be employed. All of which adds somewhat to the cost and value of the original products and the manufactured article.

When this bill shall be enacted into a law and the duty taken off sugar and wool and woolen products and other items of industrial production in this country, will it not open the door to the importation and use, instead of the same, of the cheaper products of countries abroad where they are produced by labor at half the price of that furnished in the United States? As in the case of sheep and wool, their lands abroad cost the sheep raiser less than one-fourth of what lands cost them in the United States. Such importation will curtail the amount of output of each article of similar kind produced in the United States and will compel us to procure large quantities in foreign countries and send away moneys for the same which we now keep at home. The quantity which may be provided here will have to be produced at a less expense than now. How is that expense to be lessened or cheapened? It is only by reducing the price or value of the grazing land, the quantity, price, and cost of the labor, and other necessary expenses connected with its production.

It is claimed by some of the representatives of the wool-growing States who favor this bill that the sheep are grazed upon the public domain without any cost to the sheep raiser. Such is not the case. The sheep and wool-growing industry gradually moved toward the Rocky Mountains onto the semi-arid and plains country as lands in the East became more valuable for other purposes. In the Western States most of the public lands exist; all of the waters and best grazing lands extend along the courses of the streams and into the foothills of the mountains, where the forests are. These have been cov-

ered by the Government into forest reserves and are now being rented at high prices to sheep and wool growers in such manner as to exclude many sheep growers and wool producers who have not been able to rent any land on the reserves from reaching the water for the use of their flocks, particularly during the lambing and shearing seasons. This has been causing a decrease in the number of sheep. There has been in the last year or two a decrease of about a million and a half of sheep in the United States. That decrease has been caused by the absorption into the forest reserves of nearly all the running waters and springs, so that, as before stated, many of the sheep growers and wool producers are unable to reach water for the use of their flocks and are necessarily compelled to dispose of them either in the meat markets or to their more fortunate neighbor who has been able to secure a range in the forest reserves and save his own flocks. Some of them have been able to get water by sinking wells and pumping. Many had not the means to sink wells and purchase and operate pumps. The extension of the forest reserves so as to include all the waters that were suited for the use of the sheep and wool industry has for several years last past paralyzed the sheep industry, so far as its increase in numbers is concerned, and accounts for the falling off of the quantity of sheep in the United States during the last 12 years from 61,000,000 to about 51,000,000 to-day. In the creation of the forest reserves in the various States there were included in them thousands of acres of land adjacent to or in the vicinity of the timberlands and forests and running waters which can in no manner be classified or denominated "forest lands." These lands generally are the best grazing lands. By taking them into the reserve and leasing them to sheep and cattle owners for grazing purposes, as has been done, those who are unable to obtain leases—and there were many of them—have been forced back from the vicinity of the waters and from the points where they could sink wells and obtain water at a shallow depth. It is well known that water can be obtained in wells at a shorter depth in the vicinity of or nearer to the running streams or near the mountain ranges than it can at the greater distances. When an individual can not produce a given article except at a loss beyond the cost of production he will cease to produce it, which in the case of sheep raising means that lands which are now used at great cost by the sheepman for the lucrative purpose of sheep and wool growing must either be consigned to nonuse or put into some other industry when this bill becomes a law, and the laborer in that particular industry will lose his employment and be forced to engage at the lowest wages in other occupations with which he will be unacquainted, in a field where he must compete with others.

It is by this means the price of labor can and will be reduced and the cost of living with them cheapened to their great sorrow.

Much has been said in the discussion on this bill about competition. There is an old saying that competition is the life of trade. In the main that is true. But is a competition which destroys the use of a large quantity of materials and land and throws hundreds of thousands or millions of laborers out of employment and forces them either into beggary, into the poorhouse, or into competition with others who are not thrown out of employment such a competition as will increase or stimulate trade? Is it not rather that competition which brings every article or product, every income from land, and the labor of every workman down to the lowest standard? It is possibly true, from that point of view, that the contentions of the Democratic Party that this bill will cheapen the cost of living may be somewhat realized. But while you are thus cheapening the cost of living you are destroying the comforts, the happiness, and the independence of the laborer by taking from him the means of obtaining them; you are reducing him to the grade of a serf or slave, forcing him into the most abject condition of human life, to eke out a scant existence, taking away from him his American manhood to which he has attained, robbing him of his ambition, and leaving him with but little respect for his country and its economic policies; in fact, you are sapping his patriotism, draining it to the very vitals, and putting upon it the most intense pressure, which he must by great endurance and effort overcome so as to remain a devoted or enthusiastic citizen. Do you want that condition of things? Is not the party in power, in the attempt to enact this bill into a law, forgetting the character of our people, their condition of life, the point to which they have reached or mounted in the progress of human affairs, their elevation in society, and their general well-being? I am not one of those who believe that by the passage of this bill we will have a reenactment of a panic like that which was commenced and existed on account of the proposed adoption of the Wilson-Gorman bill and its subsequent

enactment into law. Our country and our people were then prosperous, but not as prosperous as they are to-day. The amount of money in circulation in this country per capita at that time was \$24.56. The total population was 67,000,000. Business was then depressed. The amount in the country per capita August 1, 1912, was \$34.44, or \$10 more than it was in 1894. The population now is 97,000,000, or an increase of 30,000,000.

Every condition of business affairs is now prosperous in the highest degree. We must not expect that this condition will continue on the passage of this bill. In fact, we have already seen that the condition which existed prior to the last election has been changing, apparently to meet the proposed change in the tariff. Banks have been calling in their loans and making no new ones. People who are indebted are disposing of their property or curtailing their business so as to meet their obligations. This necessitates doing less business. It necessitates cutting down expenses and a greater exercise of economy. This brings about a cheapening of the cost of living. Had this special session of Congress not been called, and had we been left to consider this tariff proposition until the regular session in December next, with the prospect of enacting even this bill into a law about the 1st of next June, the people would have been better able to adjust their affairs so as to endure the privations that may come upon them as a result of this proposed enactment.

The great prosperity which they enjoy and means which they have accumulated will enable them in a very great degree to endure the condition of restricted business, the curtailment of the per capita circulation, and to exist without as intense suffering as might have been the case if they were less prosperous. Possibly they will be able to live, or subsist, without being compelled to go to the poorhouse until the people, in their wisdom, at the end of three years from next November, shall indicate, as I have suggested, their choice for a different kind of administration and different Representatives to constitute the majority in Congress. The fabricators and promoters of this bill claim they intend to reduce the cost of living, which is admitted to be high, by its enactment into a law. They propose to put meat and all food animals on the free list. They will import sheep and cattle, as well as meats, from foreign countries where they are produced at less than half the cost of production in the United States. They will bring these foreign importations into competition with our meats and our wool and drive down the prices until we can not afford to produce either cattle, sheep, or wool. They expect that by this bill, when it becomes a law, the cost of living will be lessened. They have not considered that it will make money, now plentiful, scarce and higher priced; that it will make food products, also, now plentiful, but commanding high prices, become less plentiful and lower in their prices. In fact, they will make money more valuable and food cheaper. Mr. Bryan, our Secretary of State and the apostle of the Democratic Party, who three times led its hosts to defeat, who is the apparent keeper of the conscience of that party, who is said to have dictated in the main the Baltimore platform, who brought about the nomination of President Wilson, and who ought to be authority with the Democratic Party, in one of his Chautauqua lectures, which he lately felt himself obliged to deliver so as to obtain the means of livelihood, because the Government does not pay him enough of its depreciated money to enable him to live comfortably, says:

Seventeen years ago those most active in behalf of reforms were, for the most part, men who felt an immediate pecuniary need of remedial legislation. This deep personal interest was manifested everywhere, and it is not strange; we were then at the end of the era of falling prices. For nearly a quarter of a century the dollar had been rising in its purchasing power and the price level falling; for nearly 25 years the money owner and the money changer had been drawing in an unearned increment, and the world was being forced into bankruptcy. It was not a national peril only, but a menace to the world.

Three times the leading nations had joined in great conferences, everybody everywhere admitting the seriousness of the situation, the only question being, How shall we escape? That was the situation then; now it is all changed. An unprecedented increase in the production of a precious metal has made such an enormous addition to the world's volume of standard money that conditions are now reversed.

The purchasing power of the dollar, instead of rising, is falling; the price level, instead of falling, is rising; the world, instead of going into bankruptcy, is coming out. If you are paying a debt contracted 16 years ago, you are paying it in dollars that will not, on the average, purchase more than two-thirds as much as the dollars that you borrowed. With this relief from the grinding process there has come an independence that was not then known—that was scarcely then possible.

That is the declaration of our Secretary of State, delivered a few months ago, as I am informed by the public prints. We see this patron saint of Democracy declaring that "for nearly 25 years the money owner and the money changer had been drawing in an unearned increment, and the world was being forced into bankruptcy," which, he says, "caused the leading nations three times to join in great conferences, everybody everywhere

admitting the seriousness of the situation," the question being, "How shall we escape?" He did not state that that condition was caused by a protective tariff.

He says that "for nearly a quarter of a century the dollar had been rising in its purchasing power and the price level falling"; that the whole "world," not the United States, "was being forced into bankruptcy." He did not attribute these conditions to the United States alone, but to the world. Surely, at the end of that "quarter of a century" we had a low cost of living. The dollar had been rising in its purchasing power and the prices had been falling. That condition of things then must have resulted in a low cost of living, so low that in many instances it amounted to beggary. The party in power would apparently return to that condition of things. They tell us they will, by this contemplated act, decrease the cost of living. Possibly they will. But I hope when this bill becomes a law it will not bring the condition of our people to the state of degradation and naked want of that period 17 years ago. Mr. Bryan tells us why things were cheap then when measured by the money standard; he also tells us why they are more expensive now when measured by the money standard. This high price in materials, he says, has been brought about by the "unprecedented increase in the production of a precious metal which has made such an enormous addition to the world's volume of standard money that conditions are now reversed." Money has now, he says, only two-thirds of its former purchasing value. Mr. Bryan, necessarily, from the life he has been living, that of a politician, a traveler, a student, an editor, a lecturer, and general disseminator of the information, which he must have gathered in the various avocations and pursuits he has occupied and followed, ought to be well qualified as to facts, especially from a Democratic standpoint. He does not, I say, blame the high prices on the protective tariff, but, on the contrary, he tells us it comes from an "unprecedented increase in the production of a precious metal," which has caused "the purchasing power of a dollar to fall instead of rise," and says that has brought about such a condition that "the world, instead of going into bankruptcy, is coming out." He declares:

If you are paying a debt contracted 16 years ago, you are paying it in dollars that will not, on the average, purchase more than two-thirds as much as the dollars that you borrowed.

I am inclined to believe Mr. Bryan was right. The statistics show that over \$7,500,000,000 of gold and more than \$4,000,000,000 of silver coinage has been added to the permanent circulating money of the world during the last 17 years. The gold coin produced during that 17 years is over half of the total amount produced since the discovery of America, and the silver coin produced during that time is nearly one-third of the total amount produced since the discovery of America. We also see by the statistics that the per capita of circulation is constantly increasing and that now it is at its highest notch—about \$34.50. The gold and silver coinage is increasing faster than the population and in the United States much faster than the population and all of the industries, manifold faster than the supply of all the necessities of life which enter into the cost of living. We know that money is more plentiful than it was 17 years since; the circulation is also greater. At that time, 17 years ago—1896—we were in the throes of the greatest panic the world has ever witnessed.

The Democratic Party held the reins of government. Well could it be said, "the world was being forced into bankruptcy"; but for that year the gold annually produced by the world for the first time passed the \$200,000,000 mark and has never since in any year fallen below it. On the contrary, it has gradually increased, until now it is nearly \$500,000,000 annually. The United States for 1912 produced one-fifth of the total output of the world's gold; yet we have only one-eighteenth of its population. In view of this great increase in gold and its consequent less purchasing value, we can accept the idea as a fact that necessities of life, particularly food and clothing, have risen in price. You say you will reduce that. The producer, on whom you must act, will have a sad fate when you have done so. The money which he receives for his product and labor has fallen one-third in value; his products have not increased that much, measured by the depreciated standard. You now propose without affecting the purchasing capacity of the money to put down the price of the products necessary to sustain the life and comfort of man; that is, after the money has been reduced one-third in its purchasing capacity or value, in turn you propose to reduce the selling price of the products needed to sustain life, measured by the depreciated standard. The candle is burning at one end; you are lighting it at the other end; and the poor producer will soon see his interests vanish.

If it is the purpose of the majority to make a reduction in the cost of living, why not strike at the real cause of it—the

"unprecedented increase" in money, which Mr. Bryan, their acknowledged leader, says is the cause? Why abuse the tariff? Why abuse the men who have grown wealthy by reason of their intelligence, perseverance, economy, and foresight? If they believe in their leader and his assertions, they should cut off the real cause, close the mints, make it a crime to labor underground and take gold from the bowels of the earth; they should prevent the mining of the precious metals and make treaties with foreign countries to stop the production of standard money.

The wool and sugar produced in the United States have kept more money in this country than the total amount of money which has been realized from the precious metals taken from the mines in the United States.

By the adoption of this bill as a law the majority will do as much injury to the people as if they closed the mines and shut up the mints. Would it not do more harm? The harm to the industries which will be affected by this bill as a law will be much more diversified, reach directly a greater number of our people, and will be in the aggregate much greater. I do not favor either proposition; but, between the two evils, would not reason require them to favor the lesser?

There can be no more complaint against the increased output of gold and consequent increase of wealth during the last 17 years than there was during the 400 years previous. While the cost of living has increased, the comforts and conveniences of living have kept pace with it. The capacity to do business has grown in like measure. We can accomplish as much in a day now as we could in a month 100 years ago.

When I first went to New Mexico in 1896 it took me 52 days to make the trip from Kansas City to Santa Fe; now it is made in less than 30 hours—with much more comfort. Is there not a good and natural reason for the high cost of living? Can we acquire any permanent benefit in the affairs of life without having to sacrifice something for it? If we become more capable to transact business and can do many-fold times more of it in a given period, and, at the same time, enjoy greater satisfaction and pleasure as well as comfort, should we not expect to give up something for it? We can not cut living down to lower prices and of a plainer kind and still keep up the same incomes, especially with the laboring man, whose work goes into the cost of everything produced, nor can we keep up the present mode of living and cut down prices of labor, which is nine-tenths part of the cost of every product. It costs the sheep raiser in New Mexico from \$1.75 to \$2 per head per annum to care for his sheep. They do not yield exceeding 6 pounds per head of wool each year. For that wool, prior to the present season, they were receiving from 17 to 20 cents per pound. Wool some three or four months since was down to 12 cents in New Mexico. After that, owing to the fact that the foreign wools were being held back and stored in the warehouses by the manufacturer, a bigger demand was made upon the wools of the Western States, so there was an increase in the price to about 15 cents a pound last month in New Mexico. It is known that the wool importer is storing his wool to get the benefit of the reduced tariff. He is unwilling to let in any stock or supply of wool or woolen goods beyond what he will need for use until the time when this bill shall go into effect as a law. The result is that the markets for wool abroad are, in a measure, for the present shut out. The American supply is being used up, but it is being used up at a less price than for years past. No wool producer or sheep raiser, with the tariff off both wool and sheep, can expect to realize over 10 cents per pound for his wool in the State of New Mexico.

Possibly some of the wools from the States of Wyoming and Montana, which are of a different grade, may sell for a slightly greater price, but no sheep raiser with his wool cut down to 10 cents per pound, and the market for his sheep as mutton thrown into competition with all the sheep of the world on a free-trade basis, can expect to realize as much for his mutton as he is receiving to-day. Should he dispose of all his sheep, the market will be flooded and prices cut down. That he must expect, and so much he certainly does expect. As I have suggested, he is selling his wool and sheep in markets to-day for money which is only worth two-thirds of what it was 17 years ago. You are undertaking to take off of the value of that sheep the \$1.50 which was imposed on it as a duty, and also the rate per pound which was imposed on the wool as a duty. This certainly takes off one-third of the value of the sheep and one-third of the value of the wool. With a depreciated currency and a depreciated wool and meat value, you will leave him little with which to pay his current expenses and to support himself and family. Can you expect that industry to last? It seems to me no sane man can do so.

You will destroy by this bill the entire sheep and woolen industry. It is true the sheepmen will not lose all the value of

their sheep, because they will put them into the meat markets and realize as much as possible, but they will not realize what they would have been able to realize had the duty on foreign meats and live stock not been taken off, as it will be, by this bill. The sheep of this country are worth to-day \$250,000,000. This industry employs three men on the average for each 1,500 head of sheep, at a salary of not less than \$400 per year and board. This bill will discharge 35,000 sheep employees, receiving each a salary of \$400 per annum. It will cripple the woolen manufacturers by reducing the duty upon their output. In fact, it is liable to destroy the entire business. In 1910 there were 1,124 establishments for the manufacture of woollens in the United States, paying annually wages to the amount of \$88,000,000 and turning out products of the value of \$507,000,000. They had invested in their business over \$500,000,000 of capital, all of which will practically be destroyed by the enactment of this bill into a law.

We imported last year—1913—238,000,000 pounds of wool, which paid a duty of about \$18,000,000 into the Treasury. That amount of duty will be lost to the Treasury except as it is made up by the income tax. We produced last year in the United States over 300,000,000 pounds of wool, every pound of which will have to be imported if you destroy that industry in this country. We will have to send to foreign countries moneys to procure it, which we would otherwise keep at home and also be able to keep on employing 300,000 wage earners now engaged in woolgrowing and the woolen manufactories.

It will be the same in regard to the sugar industry, except in a greater degree. That is an industry which in the last 20 years has increased many hundredfold. To-day it is supplying more than half the sugar needed by our people and the outlook for it 10 years from this day is that it will be supplying more than all the needs of our people. But by this bill at the end of three years it will be closed up. All the wage earners now occupied by it will be put out of employment. It will destroy the manufacturing plants, which can never be used for any other purpose. All the sugar which we produce now you will have to import and pay for by sending money out of this country which we should keep at home. You will lose the duty on the other half which we do not now produce. It is possible that the income tax will make good the duties which we will lose on wool and sugar, but it will not make good the duties which you will lose on other articles which you have placed on the free list and which were heretofore dutiable nor the amounts to which you have reduced hundreds of other articles from what they are under the present law. To supply that additional income to the Government we must rely upon increased importations. It is too uncertain to rely upon the income tax, the amount of which we can only guess at and not accurately calculate. The money for this additional importation must be sent from our supply at home, and that will be several hundred millions of dollars. You expect to reduce the value of every production in the United States to get cheaper living. You expect to do that by making it impossible to produce it in the United States at the present prices of labor and without reducing the price of our food products raised at home.

You expect, also, to reduce it by the importation of vast quantities of foreign products which we do not now have to import, but which we will then have to import to make up the amount of revenue required for the Government and to replace the products which we will have ceased to produce in the United States. You intend to stop the augmentation of our money supply and send away a portion of that we now have. To-day we are rich in the fact that we have a balance of trade to the amount of \$650,000,000 in our favor. That does not mean, however, that our wealth is increasing yearly by that amount; to that you can add the gold and silver coinage in this country, amounting to about \$130,000,000 each year; also, the amount of money investments yearly sent from foreign countries to be put into our railroads, buildings, and manufacturing establishments, and other industries, which may possibly reach \$350,000,000; and also about \$100,000,000 more from other sources, making a total of \$1,230,000,000 of increased wealth each year in the United States. But it must be understood that there will be taken from us annually at least \$250,000,000 spent by tourists of this country; \$200,000,000 paid to foreign shipping, the cost of transporting our ocean freight over and above the amount that we transport of foreign shipping; we also pay into foreign countries at least \$300,000,000 annually as dividends on stock and interest on bonds and other securities which we owe there. The foreign population which comes into our country sends back annually through the banks \$275,000,000, and about 230,000 of them annually return to the Eastern Hemisphere, taking with them another \$75,000,000. Last year we exported from the United States about \$40,000,000 more of gold and silver than we imported, making a total of \$1,140,000,000 which last

year we paid into foreign countries otherwise than for the amount of money brought into our country, showing a difference in our favor between the moneys which we received in this country by way of increase in our wealth and that we expended otherwise in foreign countries of \$90,000,000. This is based upon the business of the last fiscal year as far as I have been able to ascertain it. Of course, this does not constitute all the increase in the wealth of our country. We have the increase in the value of real and personal property, which runs into billions, but that is a species of wealth which can be of no particular benefit to us unless we have the circulation through which to utilize it. It makes no difference if a man's farm should double in value if he gets no greater crop or income from it. Or if his residence in the city should double in value all he gets out of it will be his living in it and no particular benefit from its double value except an increase of credit. In order to make up for the deficit which will be occasioned in closing up the many business establishments will not this bill take from us more than this \$90,000,000? The income tax will only help out so far as the revenue for the Government is concerned. So far as the interest of the people at large, the capitalists, the employer, and particularly the laboring man and his family who are dependent upon small incomes, this change in the financial condition will be felt very grievously. This bill, by closing up various industries, will operate to discharge large numbers of workingmen; and this simply to reduce the cost of living. Those men must either beg or compete at lower prices for the places of others. A crash necessarily must come in their line of business.

Industries will likewise not be able to support themselves and the vast amount of wealth invested in them will become worthless or idle. Some of it may be used in other directions so as to produce a profit and help build up the country. But the destroying of an industry is very much like the destruction of the house upon a lot for the purpose of building one of an inferior value or problematical value. You will lose the use of your lot and house for the time you are waiting, expend your resources and occupy the new house as a pauper rather than an independent individual. There is much danger that by the passage of this bill, immense wealth, great industries, and a great amount of labor must be destroyed or vastly lessened in its productive value. Wisdom and discretion would dictate a much more conservative bill than the one which the majority have resolved to enact. If duties are greater on any industry than its healthy maintenance requires, let them be reduced conservatively until their influence upon that industry is sufficient only for its proper support, and, at the same time, give it a fair competition.

The region of this country embracing the Rocky Mountains and the slopes thereof is peculiarly adapted to the raising of live stock because of its unsettled condition, but that country, owing to the activity, energy, and intelligence of our people, is fast being settled up. Water is the great desideratum there. By reason of the improvements in power and pumping machinery and the lessening of the cost of those articles our people are being rapidly made able to procure water profitably where it was never thought of 20 years ago. The vast plains, which have heretofore been scarcely considered possible for even dry farming, by the use of pumping machinery will be made valuable for live stock, especially sheep, goats, and cattle. By that means lands can be cultivated and such animal foods produced as will enable those people to support 10 head of live animals where they support 1 now. But they must be encouraged. Their industry must not be destroyed and broken down. They must not be driven out of business. They are fast adopting improved ways of getting water. The Government itself is enabling them by the use of the irrigation systems adopted to conserve much of the running water.

They are exploring, as western men always energetically do, the soils and going into and under the soils to find where they can reach underground flows and bring them to the surface. They are discovering that there are greater possibilities in that way than had ever been dreamed of, in this or in any other country, prior to the last 10 or 15 years. The Western States have always worked at a disadvantage. They were the last to have the railroads reach them, and when they did reach them railroad freights were at such enormous rates and prices so high that little aid was given to those people. But those rates are being systematically reduced. New railroads are being built and projected into that country. New resources are being developed. The great area of coal lying in this region is making fuel cheaper and bringing it to the door of the western farmer and producer, so that now he is beginning to have some of the advantages that his eastern progenitor enjoys and which they have enjoyed for more than 100 years. Time will bring down the prices of labor and the prices of commodities and the prices of the necessary cost of living to a nearer general level

throughout this country than it is to-day. That level can not be legislated down. To-day there is a greater difference between the cost of living in the Rocky Mountain portions of this country and that of the New England or Mississippi Valley States than that which exists between eastern United States and European countries on the average. It appears as if the majority in Congress is seeking, or is intending, without due consideration, to enact this bill into a law so that it will operate to turn back the progress of the Western States 20 years, unless it should be changed soon. We have confidence in the justness of the people at large, in their wisdom, and in their sound sense, and we are satisfied that when the effects of this bill are realized by them through their experience, which will be dearly bought, they will quickly return to the conditions under the present law or enact another and a different tariff which will encourage, aid, and elevate all of our industries and labor to a standard which will make our people easy in their circumstances, happy in their living, and proud of being citizens of the United States.

The PRESIDING OFFICER (Mr. LEWIS in the chair). The question is upon the amendment offered by the Senator from New Mexico [Mr. CATRON].

Mr. GALLINGER. Mr. President, I would suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from New Hampshire suggests the absence of a quorum, which exacts a roll call. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gallinger	Nelson	Smith, Md.
Bacon	Hollis	Norris	Smith, S. C.
Bradley	Hughes	O'Gorman	Smoot
Brady	Jackson	Overman	Stephenson
Brandegee	James	Page	Sterling
Bristow	Johnson	Polindexter	Stone
Bryan	Jones	Pomerene	Sutherland
Catron	Kenyon	Ransdell	Swanson
Chamberlain	Kern	Robinson	Thomas
Chilton	Lane	Saulsbury	Thompson
Clark, Wyo.	Lea	Shafroth	Thornnton
Clarke, Ark.	Lewis	Sheppard	Tillman
Colt	McCumber	Sherman	Walsh
Cummins	McLean	Shively	Weeks
Dillingham	Martin, Va.	Simmons	Williams
Fall	Martine, N. J.	Smith, Ariz.	Works
Fletcher	Myers	Smith, Ga.	

The PRESIDING OFFICER. Sixty-eight Senators having answered to their names, a quorum is present.

Mr. CATRON. I ask for the yeas and nays upon my amendment.

The yeas and nays were ordered.

Mr. BRISTOW. Mr. President, I desire to say, before the roll is called, that I intend to vote for this amendment, but in doing so I wish to state that the duties on some of the manufactured articles are higher than I think they ought to be, but as compared with the present provisions in the bill I think it better, because it puts a duty on wool. If I myself were fixing the duty, I would reduce the duty on wool somewhat and on a number of the manufactured articles, but, as it provides a substantial reduction from the present law and, as compared with the provision in the pending bill, I believe it more just, though, as I say, the duties are higher than they should be.

The PRESIDING OFFICER. The Secretary will call the roll on agreeing to the amendment of the Senator from New Mexico.

The Secretary proceeded to call the roll.

Mr. LEA (when his name was called). I again transfer my pair with the Senator from South Dakota [Mr. CRAWFORD] to the Senator from Oklahoma [Mr. OWEN] and vote. I vote "nay."

The PRESIDING OFFICER (when the name of Mr. LEWIS was called). The present occupant of the chair desires to state that he is paired with the Senator from North Dakota [Mr. GRONNA].

Mr. McCUMBER (when his name was called). I have a pair with the senior Senator from Nevada [Mr. NEWLANDS] whom I do not see in the Chamber. I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH] and vote "yea."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from California [Mr. PERKINS]. I do not see him in the Chamber and therefore withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. SMITH of Georgia (when his name was called). I have a general pair with the senior Senator from Massachusetts [Mr. LODGE]. That Senator has not voted, and I therefore withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. THOMAS (when his name was called). I have a general pair with the senior Senator from Ohio [Mr. BURTON], and therefore withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. WILLIAMS (when his name was called). I do not see the senior Senator from Pennsylvania [Mr. PENROSE], with whom I am paired. Has he voted?

The PRESIDING OFFICER. The Chair is informed that he has not.

Mr. WILLIAMS. Then I withhold my vote.

The roll call was concluded.

Mr. BRYAN. I have a pair with the junior Senator from Michigan [Mr. TOWNSEND], which I transfer to the Senator from Nebraska [Mr. HITCHCOCK], and vote "nay."

Mr. CHAMBERLAIN (after having voted in the negative). I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. He has not voted, and I therefore desire to withdraw my vote.

Mr. REED. I have a pair with the Senator from Michigan [Mr. SMITH], and in his absence I withhold my vote. If I were at liberty to vote I should vote "nay."

The result was announced—yeas 26, nays 38, as follows:

YEAS—26.			
Borah	Dillingham	McLean	Sterling
Bradley	Fall	Nelson	Sutherland
Brandegee	Gallinger	Page	Warren
Bristow	Jackson	Polindexter	Weeks
Catron	Jones	Sherman	Works
Clark, Wyo.	Kenyon	Smoot	
Colt	McCumber	Stephenson	
NAYS—38.			
Ashurst	Johnson	Ransdell	Smith, S. C.
Bacon	Kern	Robinson	Stone
Bryan	Lane	Saulsbury	Swanson
Chilton	Lea	Shafroth	Thompson
Clarke, Ark.	Martin, Va.	Sheppard	Thornnton
Fletcher	Martine, N. J.	Shields	Tillman
Gore	Myers	Shively	Wardaman
Hollis	O'Gorman	Simmons	Walsh
Hughes	Pitman	Smith, Ariz.	
James	Pomerene	Smith, Md.	
NOT VOTING—31.			
Bankhead	Cummins	Lodge	Reed
Brady	du Pont	Newlands	Root
Burleigh	Goff	Norris	Smith, Ga.
Burton	Gronna	Oliver	Smith, Mich.
Chamberlain	Hitchcock	Overman	Thomas
Clapp	La Follette	Owen	Townsend
Crawford	Lewis	Penrose	Williams
Culberson	Lippitt	Perkins	

So Mr. CATRON's amendment was rejected.

Mr. RANSDALL obtained the floor.

Mr. KENYON. Mr. President—

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Iowa?

Mr. RANSDALL. For what purpose?

Mr. KENYON. Mr. President, I voted on the amendment offered by the Senator from New Mexico [Mr. CATRON] under a misapprehension. I should like to change my vote from "yea" to "nay."

The PRESIDING OFFICER. The Chair is disposed to hold that the vote can not now be changed after the announcement of the result.

Mr. RANSDALL. Mr. President, I send to the desk an amendment, which I now desire to offer.

The PRESIDING OFFICER. The Senator from Louisiana tenders an amendment, which will be stated.

The SECRETARY. It is proposed to amend, on page 53, by striking out the proviso in lines 11 to 13, inclusive, as follows:

Provided further, That on and after the 1st day of May, 1916, the articles hereinbefore enumerated in this paragraph shall be admitted free of duty.

Mr. RANSDALL. Mr. President, if I understand the principles of the Democratic Party in regard to the tariff, they inculcate the idea that a tariff or duty should be imposed on articles brought into the United States from other countries in order to raise revenue, and it is not permissible or defensible to impose any duty on foreign importations unless a fair degree of revenue be thereby raised. If some incidental protection comes through such a course, that is all right, but the Democrats have never thought it permissible to impose a tariff primarily for protection. Their idea has always been that those articles should be selected for the imposition of tariff duties that would bring the greatest revenue and bear most lightly upon the consumers of the Nation. In seeking articles of that kind, from the very earliest day until this moment, with one brief exception, sugar was considered and found to be the ideal article for producing revenue and for bearing lightly upon the consumer.

SUGAR DUTY LESS BURDENSOME THAN OTHER DUTIES.

That fact, Mr. President, is well illustrated when I tell you that the total per capita cost to all the citizens of the United States of sugar is \$3.97. This includes what the farmer who raises beets and cane gets out of sugar, what the manufacturer who makes the sugar from beets and cane receives out of it, what the refiner who refines it receives from it, and, in addition

thereto, what the Government receives in the way of an annual revenue, which has averaged over \$54,600,000 a year for the last 10 years. Each citizen of this Nation pays on an average for sugar \$3.97, and the Nation has collected annually from sugar for the past 10 years something like \$54,600,000.

Another favorite article of revenue for many years has been wool and the manufactures thereof. The average annual cost to the consumer in America of woolen goods is \$6.39, and from wool we have received a revenue of \$21,000,000 a year.

Another favorite article of revenue has been the manufactures of cotton. Those manufactures cost the citizen \$8.15 per capita per annum, and from cotton goods we receive about \$38,000,000.

Another object for revenue has been steel and iron and the products thereof, and the citizens of this Nation pay an average every year for steel and iron and its products of \$15.85 per capita, while the revenue derived from import duties on steel and iron and the products thereof has been about \$12,500,000.

IDEAL REVENUE TAX.

Therefore, sir, we have sugar giving us \$54,600,000 revenue and imposing a burden on the citizen of something less than \$4 per capita; wool giving us a revenue of \$21,000,000 and imposing a burden upon the citizens of \$6.39 per capita; cotton manufactures giving us \$38,000,000 and placing a burden upon the citizen of \$8.15; iron and steel giving us \$12,500,000 a year revenue and a burden upon the citizen of \$15.85. Let me ask, does it require any difficult calculation to determine which of these commodities is the best revenue producer and which bears most lightly upon the citizen? Unquestionably it is sugar. A bare statement of these facts makes the proof beyond question. So that if the Democratic policy be, as I have stated, to have a tariff for revenue upon such articles as bear lightest upon the citizen, then one of those articles unquestionably is and has always been sugar.

APPROVED BY ALL PAST DEMOCRATIC ADMINISTRATIONS.

Mr. President, in 1789 the first tariff was laid on sugar of from 1 to 3 cents per pound. From that day to this moment, except under four years of the McKinley law, there has been a duty upon sugar, and under the McKinley law, as we all know, there was a duty of half a cent a pound on sugar above No. 16 Dutch standard and a bounty was paid to the sugar raisers of 2 cents per pound. Under that great man of whom all Americans are so proud, Thomas Jefferson, of whom all good Democrats are so fond, and whom they delight to call the founder of their party, there was a duty on sugar of from 1½ to 3 cents per pound; under those illustrious Democrats, Madison and Monroe, for the 16 years of their administrations, there was a duty of from 3 to 12 cents per pound imposed on sugar; under that old war horse of Democracy, Andrew Jackson, followed by his great pet, Martin Van Buren, there was imposed a duty of from 2½ to 12 cents per pound; under Mr. Polk, the Walker tariff of 30 per cent ad valorem; under Mr. Buchanan, another ad valorem tariff of 24 per cent; and under Mr. Cleveland, the last preceding Democratic President, a tariff of 40 per cent ad valorem and one-eighth of 1 cent a pound additional upon sugar over No. 16 Dutch standard.

The Democrats, Mr. President, have ruled this Nation during 56 of the 125 years of our national life. During every moment of the time when they were in power sugar was regarded as an ideal article of revenue and always bore a revenue duty.

DEMOCRATIC PARTY NOT PLEDGED TO FREE SUGAR.

When the Denver platform was adopted in 1908, what did we say about sugar? Nothing, so far as I have been able to find. The platform reads thus:

Material reductions should be made in the tariff upon the necessities of life, especially upon articles competing with such American manufactures as are sold abroad more cheaply than at home; and gradual reductions should be made in such other schedules as may be necessary to restore the tariff to a revenue basis.

That was the Denver platform.

At Baltimore last year we said:

We recognize that our system of tariff taxation is intimately connected with the business of the country, and we favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industry.

Sir, a short while ago, only a few days after the adoption of the Baltimore platform, the Democrats on the Finance Committee of the Senate presented a report to this body on the then pending sugar bill; and that report was signed by Senators Bailey, SIMMONS, STONE, WILLIAMS, KERN, and JOHNSON. Four of those men are now on the Finance Committee. One of them is the chairman of the Democratic caucus of the Senate. Let me read what those gentlemen said at that time, shortly after the Baltimore convention. It has been read in the Senate several times already, once by my distinguished colleague from Louisiana [Mr. THORNTON], once by myself, and perhaps by others;

but it is such good Democracy and bears so strongly upon the question at issue that I can not refrain from quoting from it again:

[Senate Report No. 763, part 2, Sixty-second Congress, second session.]

DUTIES ON SUGAR.

(July 27, 1912.—Ordered to be printed.)

The tariff on sugar is peculiarly a revenue tariff. Very much the major part of the tax levied upon the consumer of sugars and sweets goes actually into the United States Treasury for the use and behoof and benefit of the American people. A minor part of the tax goes into the pockets of the producers. Upon numberless articles in the Payne-Aldrich tariff bill the duties are either prohibitive, or very nearly prohibitive, or highly exploitive, and in all these cases very much the major part of the tax levied upon the consumer goes into the pockets of the American producers, a special and favored class, and very scantily, and sometimes not at all, reaches the Treasury. In the next place the majority of the tariff schedules which have been adopted by the House and sent over to the Senate during this Congress make a reduction of about one-third. In the face of its record in connection with other bills the House reduced the duties upon sugars and the products of cane and sugar beets 100 per cent; in other words, entirely canceled the existing duties. It seemed to us that this was not in keeping with the promise of Democratic platforms to reduce present protective duties "gradually" toward and finally to a revenue basis. We have seen no reason why sugar should have been excepted from the general policy advocated by the Democratic Party and believed by us to be right.

Again, in levying an import duty upon sugar for revenue purposes, we are imitating the time-honored and time-justified precedent.

We have not felt that it was wise to surrender fifty millions of public revenue at one swoop by putting sugar and sugar-cane and sugar-beet products upon the free list, especially in view of the fact that there exist numberless other import duties prohibitive in their character from which the people's Treasury does not procure any money at all, or else a negligible revenue, the practical operation of such taxes being to take money from the pockets of the consumer and put it into the pockets of the producer.

Mr. President, let me ask you and all those within the sound of my voice what change has come over the spirit of the dreams of these distinguished men, four of whom are now on the Finance Committee, when but a short time ago, following the adoption of the Baltimore platform, they declared in the most positive and emphatic manner for a duty on sugar, and now they say sugar must be placed upon the free list? What change has come over the country since then? What great exigency compels us to place sugar upon the free list now, when for 125 years it has borne a duty and been the most reliable revenue producer? What impelling force induces us now to change the policy under which we have worked so long and so successfully, at least so far as a revenue is concerned?

Echo answers What? Mr. President, I have been unable to find any answer, and I do not believe anyone can find any satisfactory answer to this question; and yet it is being done.

REFINERS' FALSE CLAIMS.

Sir, during the last campaign and prior thereto very extravagant claims were made to the American people about the great saving that would result to the citizen if sugar were placed upon the free list. Who made those claims, principally, at least? Mr. Claus Spreckels was largely responsible for them. Mr. Claus Spreckels told his man Friday, one Frank C. Lowry, "to go out and beat the drum and make a noise," and make the American people believe that the duty on sugar was an awful burden; that the duty should be removed from sugar. Friday went out, made the noise, and beat his drum very loudly—so loudly that a great many people in my own party helped him to beat it. According to his own testimony he succeeded in writing, to a great extent, the sugar "dope" which was used in the Democratic campaign book. I am sorry to make this admission, but that is what this gentleman said on oath before the lobby investigating committee, and as there has been no denial of it, so far as I am informed, I imagine it must be true.

Mr. Lowry sent innumerable documents among the American people to make them believe that if sugar were placed upon the free list there would be a reduction of 2 cents per pound in the cost thereof when he knew as well as he knew anything that the total effective rate of duty upon sugar—at least against Cuba, whence practically all of our foreign importations of sugar come—was only 1½ cents per pound, hence there surely could be no greater saving than the total amount of the duty, or 1½ cents instead of 2 cents per pound.

Suppose every American citizen should be relieved of this 1½ cents per pound, how much saving would it be to him upon the sugar he consumes? The Department of Commerce tells us that the per capita consumption annually is about 82 pounds of sugar.

The Bureau of Labor finds that 53.7 pounds per capita are purchased as sugar, to be consumed directly by the householder; that something like 29 pounds are consumed by confectioners, makers of sweet gum, soda water, preserves, jellies, and things of that kind. No one contends that articles of that sort would ever be sold for any less if there should be a slight reduction in the cost of sugar.

Hence the saving on 53.7 pounds, if the whole duty of 1½ cents per pound were calculated, would mean 72 cents per capita per annum.

But, as an offset to this, consider that sugar yields a revenue of \$54,000,000 per annum, and this loss in customs must be collected from the consumer in some other form of taxation. Estimating the population at 90,000,000, there would have to be collected to meet this deficit 60 cents per capita per annum.

This would leave a saving in our national sugar bill of 12 cents per annum per capita, or 1 cent per month for every man, woman, and child in the Union. But there would be no such saving, for the middleman would absorb it all.

Mr. President, why were Mr. Lowry and his principal, Mr. Spreckels, so anxious to have sugar go on the free list? Certainly not to save this 1 cent per month per capita; and they were not deluding themselves, no matter how far they may have fooled the people, when they falsely claimed the saving of 2 cents per pound on every pound of consumption in the United States.

REASON OF REFINERS' CAMPAIGN.

The reason is perfectly apparent. Mr. Spreckels is a refiner. There are a number of large refiners in this country who annually refine something like three-quarters of all the raw sugar brought into this country from Cuba, Porto Rico, Hawaii, and the Philippine Islands. They have made immense fortunes out of sugar refining. But not content with their fortunes, they falsified the weights at the customs warehouse in New York—at least the American Sugar Refining Co. and several other refining companies did so—and the proof of these frauds was so positive against them that they disgorged about \$4,000,000 to the United States Treasury on account of the frauds proved up against them. There has been no proof as yet of frauds committed by Mr. Spreckels's company, although a suit is now pending against him and his company for alleged frauds.

Why do these gentlemen wish to have sugar on the free list? They believe that if it goes on the free list the industry will be destroyed in Louisiana, where about 325,000 tons a year are made. They believe that the rapidly growing beet-sugar industry of the West, where about 700,000 tons annually are being made, will be crippled, and they will be freed from competition. They will control the importation, and do the refining of all this sugar before it is marketable, and will be able to put their own price upon it. It is very natural that they should like to get rid of the competition of the beet growers of the West and the cane growers of Louisiana.

MARVELOUS GROWTH OF BEET-SUGAR INDUSTRY.

While the Louisiana industry has not grown very largely in recent years, owing to unavoidable disasters, the beet-sugar industry has grown by leaps and bounds—from 30,000 tons in 1898 to about 700,000 tons during the last year. It has shown a marvelous growth; and, if the beet-sugar industry is given any chance to continue to grow and prosper as it has in the last 15 years, within 15 or 20 years more the refiners of the Atlantic coast will be literally driven out of business, because the beet factory owner manufactures white sugar out of the beet, and it is ready for the market when it leaves his factory.

The late Secretary of Agriculture, Mr. Wilson, stated that there were 274,000,000 acres of land in the United States well adapted to the cultivation of beets. If 4,000,000 acres out of these 274,000,000 acres were planted in beets and properly cultivated—4,000,000 acres being only a very infinitesimal modicum of the total area adaptable for the purpose—they would produce all the sugar we need in the United States.

If we should encourage this beet-sugar industry as we ought as progressive statesmen, in a few years we would be making not only every pound of sugar needed for home consumption, but would be shipping sugar to other lands. Then what would happen to the refining companies? What would happen to Mr. Lowry and his friends? They would be put out of business beyond any question. So they are exceedingly anxious to have the Democratic Party play into their hands and place sugar upon the free list in order that this competition may be destroyed and they may be permitted to continue in business and charge what they please for sugar. When that good time comes, as it seems to be coming, there will no longer be any necessity for these gentlemen to defraud the Government by false weights. It will cost them nothing then to import their sugar, and they can charge the American people what they wish.

This was forcibly illustrated in the summer of 1911, when there was a short crop in the world. In July and August of that year, before the beet sugar came in, the sugar refiners raised the price to 7½ cents per pound. They raised it over 2 cents per pound, and it stayed up until the beet sugar began to pour into the market, when with that competition they were forced to lower it again. The competition at that time of domestic cane sugar and of beet sugar saved the American people between twenty and thirty million dollars, which otherwise they would

have been forced to pay through the bulling of the market by the refiners, in which course they would have continued had not the natural competition of cane and beet sugar coming on the market destroyed their power.

CHEAP SUGAR INSURED BY ENCOURAGING DOMESTIC INDUSTRY.

Some of the greatest students and experts on this subject in this country, like Mr. W. P. Willett, of Willett & Gray, and Dr. H. W. Wiley, have stated that the only way to insure cheap sugar to the American people was to foster and encourage the growth of domestic sugar. If we could raise enough sugar at home to satisfy our demands, it would be very cheap, but if we destroy the domestic production and then should meet with another shortage in the world's crop, as there was in 1911, instead of getting sugar at 4½ to 4½ cents, as we are getting it now, we shall probably have to pay 7 to 7½ cents, as we did in the fall of 1911, and it may go to 8 cents.

One of the greatest statesmen this world has ever produced, Napoleon Bonaparte, was the first man to really and seriously encourage the production of sugar in the limits of his own country, in order that France might not be dependent upon the markets of the world. As the result of the encouragement at that time by Napoleon and the wise example set by him then, beet sugar has within the past century grown to such proportions that fully one-half of all the sugar consumed in the world to-day is made from beets.

THE PRICE OF FREE SUGAR.

I very much fear that my party, unconsciously I am sure, is playing into the hands of these refiners in placing sugar upon the free list. Beyond question we may have cheaper sugar for a brief term of years, perhaps three or four or five years, sufficiently long to destroy the Louisiana industry, sufficiently long to check and retard and put out of business a great many of the beet farmers of the West, sufficiently long to impoverish and force to the auction block a number of sugar planters of Hawaii and Porto Rico.

I do not say it will completely destroy the industry in the West. Some of the more favored factories may go on for awhile. I do not say it will completely destroy the industry in Hawaii and Porto Rico. But I do say it will give a terrible blow to sugar production in those islands and to beet sugar in the West.

What will it do to Louisiana? It will destroy our industry. It will completely ruin a business in which the people of that State have been employed for over a hundred years. Nearly 200,000 of them are engaged in the business directly and indirectly. There are fully half a million people dependent for a living upon it. There are fully \$100,000,000 invested in the industry. Yet, Mr. President, without excuse or justification, contrary to the practice of 125 years, without any serious demand made by the leaders of the party, without anything in the platform calling for it, without any real benefit to come to the American people, we by this legislation are going to ruthlessly destroy that industry.

Suppose we strike this blow, what is the very greatest benefit that can come in lieu of the \$54,000,000 revenue that we now receive from sugar? What benefit will the citizen get? At the very outside a saving of 12 cents per capita per annum. Is not this a princely sum? And in return for that great saving you are going to destroy a great legitimate American industry in which hundreds of millions of dollars are invested, the continuance of which was guaranteed by the Baltimore platform. You are going to make sad and forlorn the people of Hawaii and Porto Rico and many of the Western States, and you are going to strike a mortal blow at the prosperity of a Southern State which has never wavered in her loyalty to the Democratic Party. Are we justified in doing such a cruel thing? Ah, Mr. President, I can not believe it.

RAW WOOL DESERVING OF DUTY.

I have said that sugar was a legitimate industry. Wool is also a legitimate industry. My party, at the same time it strikes down sugar, is dealing a blow to another product of the farm—raw wool—which has paid to the Government an annual revenue of over \$20,000,000. We are treating the farmers of this country pretty roughly, Mr. President, when we refuse to ask any revenue in this bill from two of the greatest products of the farm—wool, which has given us over \$20,000,000 revenue, and sugar, which has given us \$54,000,000 a year revenue.

I thought we would be more solicitous for the farmers than that. I thought the Democratic Party was for fair play, equal and fair treatment to all the citizens of the Republic. Is it fair play, Mr. President, to place wool on the free list and place a duty of about 37 per cent, if I am correctly informed, upon all articles manufactured out of wool?

I can not wear raw wool. I can not use carpets in the raw woolen state. I can not use blankets in the raw woolen condition. Raw wool is not an article of consumption. It must be

manufactured before it can be consumed. Before the American citizen can buy the woollen article and use it for clothing and covering or for carpets on his floor it must be manufactured.

What is the effect of placing raw wool on the free list? It inflicts a serious blow on the farmer, for raw wool is his finished product. He has to labor hard in the heat of summer and in the cold and the snow of the wintry blasts to care for his sheep. He gets no duty, no modicum of protection or saving care from a solicitous guardian Government under this bill.

But the man who manufactures that wool is to have an opportunity to buy his raw material cheaper. What guaranty has the American citizen that he can buy woollen goods cheaper? Is he allowed to go into the markets of France, Germany, England, and other foreign countries to buy woollen manufactures? Oh, no. This bill imposes a duty on manufactured articles of wool of about 37 per cent.

So it seems to me, Mr. President, if our purpose is to lower the cost of living to the consumer we would have placed the woollen manufactures on the free list and not the raw wool, or at least we would have treated the manufactured article which the people consume in the same way that we treated the raw wool.

Mr. STONE. Mr. President, I should like to ask the Senator from Louisiana how he voted on the wool schedule when it was in committee?

Mr. RANDELL. I voted in committee for the wool schedule as reported, but I announced that I was going to oppose sundry items in the bill, and I repeatedly stated that I favored a duty on raw wool. I stand ready now, if anybody introduces a reasonable measure to put wool on the dutiable list, to vote in favor of it.

Mr. STONE. The Senator voted for the schedule as it was reported. Is that correct?

Mr. RANDELL. I did.

Mr. STONE. Did I understand the Senator to say that he voted in committee and in conference for something he was opposed to and intended to oppose on the floor of the Senate?

Mr. RANDELL. I voted in committee for the schedule and stated that I intended to support a duty on raw wool. Certainly I did. Is there anything inconsistent in that? If there be, the Senator can make the most of it.

ANXIOUS TO SUPPORT BILL.

I have been trying, Mr. President, to get this bill in as good shape as I could, in a shape in which I could support it. I want to support it, and I wish now that you would amend it by giving a reasonable rate of duty on raw wool and a reasonable rate of duty on sugar. These two great products of the farm should be placed on a par with manufactured articles, and if you will amend the bill in that way I will cheerfully vote for it. Indeed, if you will place a duty on sugar in proportion to the average rates carried in this bill—aye, even below the average—I will waive my objection to free wool and other

free agricultural products, as they are not of special interest to my people, and vote for the bill.

I repeat, Mr. President, in my judgment there has been a very unjust discrimination against the products of the farm in placing both wool and sugar upon the free list.

Mr. STONE. If the Senator will allow me—

Mr. RANDELL. Yes.

Mr. STONE. When the woolen schedule was up in the Senate and we were voting on the items—

Mr. RANDELL. I was not present when you voted on the items.

Mr. STONE. On none of them?

Mr. RANDELL. No, sir. I do not recall being present when the items were voted on. I voted against Mr. LA FOLLETTE's amendment, and told him that if he had put a duty of 15 per cent on wool I would cheerfully vote for it. I wanted the raw wool placed on a par with the other items protected.

Mr. STONE. Was not the Senator from Louisiana in his seat when the wool schedule was under consideration in the Committee of the Whole, and did he speak against it or vote against an item in it?

Mr. RANDELL. I do not recall that I voted against an item in it; I do not think I did; but I certainly stated in the committee that I reserved my right to oppose items of the bill of which I did not approve. I voted against several items touching the farm which had not been treated fairly, in my judgment, and I yet intend to vote for a duty on raw wool if I get an opportunity.

Mr. STONE. The Senator said in conference that he reserved the right, as I remember, to oppose the action of the conference on sugar because he was pledged to his people to oppose putting sugar on the free list.

Mr. RANDELL. That is true; and I did not promise to abide by the caucus in any respect unless it met my approval.

Mr. STONE. Was the Senator pledged to the people to vote against free wool or any other item in the wool schedule?

Mr. RANDELL. I made no pledge in regard to wool to my people.

Mr. STONE. Then the Senator is acting on his own motion at this late hour?

Mr. RANDELL. I said to the conference that I would vote on the schedules of this bill as I saw fit; that I could not approve the bill as a whole; that I would favor it in every particular that I could; and that, as I conceived there had been discrimination against some of the products of the farm, I reserved my right to vote not only on sugar but on other schedules—and I have voted several times—against the Democratic side of the Senate in the discussion of this bill.

SECTIONAL DISCRIMINATION.

Mr. President, I have stated that I thought there had been unfair discrimination against sugar and wool. I want to ask careful attention of the committee to a table I have prepared here, which, to my mind, shows some other discriminations in the bill.

Total value of annual products and duties (protection) thereon of all States represented by Democratic Members on the Finance Committee as compared with Louisiana.

[The data given below relating to manufactures and agricultural products are compiled from the last (Thirteenth) census, covering the year 1909, the latest available figures. The data relating to minerals are taken from Mineral Products of the United States, issued by the Geological Survey, and cover the year 1911. The census does not deal with minerals in full; hence the necessity for two sources of information.]

	New Jersey.	Missouri.	Kentucky.	Indiana.	North Carolina.	Georgia.	Maine.	Colorado.	Oklahoma.	Mississippi.	Louisiana.
Value of manufactures (last census, 1909).....	\$1,145,529,000	\$574,111,000	\$223,754,000	\$579,075,000	\$216,656,000	\$202,863,000	\$176,029,000	\$130,044,000	\$53,682,000	\$80,555,000	\$223,940,000
Amount of duty on same under proposed rates.....	171,430,854	74,956,141	87,121,485	81,041,320	77,051,891	20,774,871	16,210,330	2,241,462	1,463,067	1,605,450	8,751,975
Value of agricultural products (1909).....	81,496,519	430,794,006	240,065,837	324,450,550	174,278,611	263,713,786	79,944,539	125,511,941	229,688,621	201,814,398	111,108,436
Amount of duty on same under proposed rates.....	6,735,687	31,302,788	11,903,988	24,902,693	7,408,634	9,008,177	7,803,461	10,245,153	15,589,791	7,511,816	4,326,984
Value of mineral products (1911, Geological Survey).....	27,559,246	52,636,348	18,910,731	37,430,187	2,797,155	6,171,367	4,645,630	51,958,239	42,678,446	1,052,842	12,710,953
Amount of duty on same.....	3,169,804	7,240,002	716,342	2,252,531	472,273	977,695	886,448	1,718,087	504,882	180,895	79,792
Total value of products.....	1,254,574,765	1,107,541,444	482,730,568	940,955,737	393,731,766	472,748,153	200,619,169	307,514,180	306,049,067	283,422,240	347,868,444
Total duties on same.....	181,336,345	116,498,931	99,741,815	111,201,544	84,935,848	30,760,743	24,000,239	14,204,702	17,557,749	9,248,161	13,158,751

New Jersey, 3.6 times value of products; 13.8 times duties. Missouri, 3.2 times value of products; 8.79 times duties. Kentucky, 1.3 times value of products; 7.5 times duties. Indiana, 2.7 times value of products; 8.4 times duties. North Carolina, 1.13 times value of products; 6.45 times duties. Georgia, 1.3 times value of products; 2.3 times duties. Maine, 0.7 times value of products; 1.8 times duties. Colorado, 6.9 times value of products; 1.8 times duties. Oklahoma, 1.08 times value of products; 1.3 times duties. Mississippi, 0.8 times value of products; 0.7 times duties.

I find that in the State of New Jersey there is a total of manufactures and agricultural and mineral products amounting to \$1,254,000,000, with a total duty on these articles of \$181,336,000, if every one of them were imported into this country and if the rates under this bill were put thereon; the State is, therefore, incidentally protected to this imposing amount.

In the State of Missouri I find \$1,107,000,000 of manufactures and agricultural and mineral products. I refer to manufactures as shown by the last census, agricultural products under the same census, and mineral products from the report of the Geological Survey for 1912. The total duties on all of those aggregate products if the articles were imported into

this country and the full proposed rate of duty thereon paid would be \$116,498,000—incidental but quite effective protection.

In Kentucky the total is \$482,000,000 and the duty \$99,000,000—I will give the figures in round numbers; in Indiana the total is \$940,000,000, the duty \$111,000,000; in North Carolina the articles amount to \$393,000,000, the duty to \$81,000,000; in Georgia, \$472,000,000, the duty \$30,000,000; in Maine, \$260,000,000, the duty \$24,000,000; in Colorado, \$307,000,000, the duty \$14,000,000; in Oklahoma, \$366,000,000, and the duty \$17,000,000; in Mississippi, \$283,000,000, the duty \$9,000,000; in Louisiana, \$347,000,000, the duty \$13,000,000. I hope, Senators, you are carrying these figures in your minds, so that you can see the discrepancy.

I find that the manufactures of New Jersey amount to \$1,145,000,000 and the duty thereon to \$171,000,000. Let us compare it with the Louisiana manufactures, amounting to \$223,000,000 and the duty to \$8,700,000. New Jersey is only three and six-tenths times as productive in its annual manufactures, agriculture, and mining as is Louisiana, but the duty is thirteen and eight-tenths times as much.

In Kentucky the manufactures are \$223,754,000, with a duty of what? A duty of \$87,000,000. Louisiana has manufactured products of \$223,949,000, a little more than \$200,000 in excess of Kentucky, but in Louisiana the duty is only \$8,751,000—but one-tenth of the protection on the Louisiana products that there is on the Kentucky products of manufacture. On the Kentucky agricultural products, amounting to \$240,000,000, the duty is \$11,000,000. In Louisiana the agricultural products are \$111,000,000 and the duty \$4,000,000. So you see that the great Commonwealth of Kentucky seems to be much more favored than Louisiana even as to agricultural products.

In minerals Kentucky is credited with \$18,910,000 and a protective duty amounting to \$716,000, while Louisiana has \$12,110,000, with a protection of only \$79,000. So the same proportion keeps up. Kentucky favored ten times as much, through incidental protection, in the matter of manufactures and minerals as the State of Louisiana.

How about the Old North State—North Carolina? Her manufacturers amount to \$216,000,000, with a protective duty of \$77,054,000, as against Louisiana's protection of \$8,751,000, or more than nine times the protection on the North Carolina products that is accorded to the Louisiana products.

Of course, when I speak of Louisiana products I am treating sugar, now one of the greatest, as on the free list. The calculation is made with the idea that sugar is on the free list, as it goes there shortly—less than three years from the present time.

How does Mississippi fare in this bill? Why, she does not get quite as good treatment as does Louisiana. Mississippi's total is \$283,000,000, with a protection of \$9,248,000, as against the Louisiana total of \$347,000,000 with a protection of \$13,000,000. Mississippi is a great agricultural State, as is Louisiana.

Oklahoma does not receive very much protection in this bill. The total value of its products—agricultural, manufacturing, and mineral—is \$366,000,000, and all it gets is \$17,557,000 in the way of protection.

How is it with the State which many of its citizens love to call the Empire State of the South—old Georgia? It has \$472,000,000 in the total value of its manufactures, its agriculture, and its minerals, with a protection of only \$30,000,000.

Mr. President, I shall not take longer the time of the Senate to read this table, but I shall publish it with my speech, and I ask every Member of the Senate to consider that table carefully; and if he does consider it carefully, he will see that the manufacturing States are receiving much greater solicitude and care, inadvertently or in some way, I know not how, than are the purely agricultural States.

I shall also publish tables showing the great advantage given to the manufacturing States over the agricultural States. (Appendices A and B.)

FARM PRODUCTS ENTITLED TO FAIR TREATMENT.

Would it not have been wise to give agriculture the same kind of incidental protection by placing wool and sugar under as fair a degree of duty as we are meting out to the manufacturing States?

Why, let me repeat, were these great products of the farm singled out for slaughter while manufactures under this bill were taken such good care of by an average, if I mistake not, of about 29.4 per cent on cotton manufactures, an average on woolen manufactures of 37.23 per cent, and an average on steel and metals of 18.33 per cent? We have been particular for the manufacturing interests in this bill, but, I repeat, sir, we have not given the same degree of solicitude to the products of the farm.

COMPELLED TO OPPOSE BILL.

Mr. President, I have already spoken longer than I had intended. This is to me one of the saddest moments of my life. I little thought when the Baltimore platform was adopted and the campaign of 1912 was being conducted that I would be compelled to oppose my party in this the first great piece of constructive legislation which the Democrats have been enabled to enact in more than 16 years. For the past 14 years I was a Member of the House of Representatives, and I have a record for party loyalty and fealty which, in my judgment, does not suffer in comparison with that of any Senator in this Chamber; and I regret keenly the position in which I am placed with regard to this measure. I would not oppose it if not impelled so to do by a stern sense of duty, but I do not consider this bill framed along lines equitable and just to every portion of this Republic; especially is it not framed along lines fair and equitable and just to the State I have the honor in part to represent.

SUGAR AN ISSUE IN LOUISIANA CAMPAIGN.

Furthermore, Mr. President, as I have stated in the caucus of my party, when I was a candidate for the United States Senate against my predecessor, the Hon. Murphy J. Foster, the issue of a duty on sugar appeared in that campaign. I am a resident of extreme northeastern Louisiana, in the cotton section; there is not a pound of sugar raised within 150 miles of my home. Senator Foster was a resident of the sugar section, in the very heart of the sugar belt. He had been an eager and strong champion of legislation in behalf and for the benefit of sugar whenever there was any attempt to injure that great commodity. Southern Louisiana, where Senator Foster resided, has a much larger white population than has my portion of the State. It was thrown in my teeth and I was taunted with the charge that if elected to the Senate and there should be any attempt at adverse legislation I would not be true to the interests of sugar; that I would stand for cotton and not for sugar. I replied then, as I had stated in my opening speech made in north Louisiana—and I talked in the same way in every part of the State—that if elected to the Senate I would do everything a human being could do—that is, everything that one of my limited ability could do—to prevent the destruction of the great sugar industry.

But, said I, "Gentlemen, there is not the slightest danger that the Democratic Party, with its past record of 125 years of a revenue duty on sugar, will now change that policy and attempt to place sugar on the free list. If the party wins, as I hope and believe it will, sugar must stand a pro rata reduction along with other articles in the tariff bill, but there is not the least danger of it being placed upon the free list."

I believed that as sincerely as I ever believed any statement in my life. I was honest in making the statement. I had a right to believe my party would never attempt to place sugar on the free list. And having made that statement, not once, but time and again, during that campaign, and having received a great many votes from all portions of southern Louisiana on the faith of my promise to do everything possible for sugar, and feeling and believing, as I do, that the passage of this bill in its present form means the absolute destruction of that industry—believing the statement made by the distinguished Senator from Mississippi [Mr. WILLIAMS] that free sugar will dismantle every sugar factory within the State of Louisiana—I can not, as a man of my word, vote for this bill if it contains, when it comes to the final vote, the present sugar provisions.

COOPERATED WITH PARTY TO PERFECT MEASURE.

I am sorry to be obliged to take this step. I have hoped against hope; I have been with my party associates in the caucus, aiding as best I could to perfect the bill. In its consideration here I have voted 75 times with my Democratic colleagues and only 8 times against them. Of these 8 votes 1 was to place a small duty on hemp, another for a duty on potatoes, 3 for a duty on wheat, 2 for a Democratic duty on sugar and maple sugar, and 1 to prevent a duty from being imposed on bananas, which are now admitted free. All the time I have hoped that the bill might finally be so amended that I could give it my support, and I sincerely regret that I can not do it.

In conclusion, Mr. President, without claiming the gift of prophecy, I say unhesitatingly that, in my judgment, before the three years have rolled around which will place sugar upon the free list, dismantle the factories of Louisiana, condemn thousands of people there who are now in easy circumstances to poverty and distress, and bring ruin upon a great many engaged in sugar production in our Western States, Hawaii, and Porto Rico, the Democratic Party will hear from the people of this Nation in no uncertain tones.

APPENDIX "A," SHOWING THE RELATIVE AMOUNT OF BENEFIT DERIVED BY THE AGRICULTURAL AND MANUFACTURING SECTIONS OF THE UNITED STATES FROM THE IMPORT DUTIES UNDER THE BILL AS REPORTED TO THE SENATE.

RELATIVE AMOUNT OF DUTY ENJOYED BY THE TWO GROUPS OF STATES UNDER EACH SCHEDULE.

SCHEDULE "A" CHEMICALS, OILS & PAINTS	\$ 8,590,375
	\$ 3,608,457
SCHEDULE "B" EARTHES, EARTHENWARE & GLASSWARE	\$ 6,552,551
	\$ 2,133,183
SCHEDULE "C" METALS & MANUFACTURES OF	\$ 12,034,884
	\$ 1,564,253
SCHEDULE "D" WOOD & MANUFACTURES OF	\$ 471,709
	\$ 400,497
SCHEDULE "E" SUGAR, MOLASSES & MANUFACTURES OF	\$ 26,409,028
	\$ 13,306,974
SCHEDULE "F" TOBACCO & MANUFACTURES OF	\$ 15,765,008
	\$ 10,218,648
SCHEDULE "G" AGRICULTURAL PRODUCTS & PROVISIONS	\$ 7,061,888
	\$ 10,822,367
SCHEDULE "H" SPIRITS, WINES & OTHER BEVERAGES	\$ 13,331,746
	\$ 5,867,520
SCHEDULE "I" COTTON MANUFACTURES	\$ 8,155,950
	\$ 1,903,055
SCHEDULE "J" FLAX, HEMP & JUTE, & MANUFACTURES OF	\$ 7,665,293
	\$ 1,664,240
SCHEDULE "K" WOOL & MANUFACTURES OF	\$ 11,807,668
	\$ 677,392
SCHEDULE "L" SILKS & SILK GOODS	\$ 12,176,059
	\$ 125,406
SCHEDULE "M" PAPER, BOOKS, ETC.	\$ 2,702,376
	\$ 352,346
SCHEDULE "N" SUGAR	\$ 47,932,670
	\$ 7,105,315

In Schedules C, I, and K a small fractional percentage, almost negligible, was not shown in the compilation of the Census Bureau because of the regulations governing the publication of census returns.

Under Schedule G, covering "Agricultural products and foodstuffs," \$3,990,000 of the aggregate proposed to be raised is levied upon products—principally tropical fruits and seed—which are not grown in either section. This amount is carried in the "Not segregated" column of the table shown in Appendix B.

The Underwood bill, as amended by the Finance Committee and reported to the Senate, was intended to raise \$247,780,723 from import duties.

In the accompanying chart the benefit or protection derived from the bill by the agricultural and manufacturing sections of the United States is shown in striking fashion.

The chart and diagrams are based upon figures furnished by the Census Bureau. They indicate the relative importance of the industries that are to be benefited in the two sections and the amount of incidental protection they will receive from each of the schedules carried in the bill.

That section of the United States lying east of the Mississippi River and north of the Potomac and Ohio Rivers, in which the manufacturing industries of the country predominate, receives \$180,674,000 of the \$247,780,000 provided for in the bill.

The vast section south of the Potomac and Ohio Rivers and west of the Mississippi, stretching from the Atlantic to the Pacific Oceans, and which is devoted principally to agriculture, receives \$59,929,849.

And yet the vast agricultural section, which is to receive only a quarter of the benefits derived from the import duties to be raised, contains just twice as many States and maintains a larger population.

The benefits carried by the bill are as a matter of fact even more restricted than is indicated by the chart and diagrams. The Bulletin on Manufactures for the last census says on page 19: "The three Middle Atlantic States, New York, New Jersey, and Pennsylvania, together, reported more than one-third of the total value of manufactured products of the country."

APPENDIX B.

Showing the advantage given the manufacturing States over the agricultural States. Also the amount intended to be raised under each schedule that is not charged to either section.

State groups.

Schedule.	Dutiable list.	Entire United States.	North-eastern group.	Per cent.	Balance of the United States.	Per cent.	Not segregated.	Per cent.
A	Chemicals, oils, and paints.....	\$12,486,011	\$8,590,375	68.8	\$3,608,457	28.9	\$287,178	2.3

Mr. JAMES. Mr. President, the speech made by the Senator from Louisiana [Mr. RANDELL] in a great many respects is but a reiteration of a speech made by him two months ago. He explained to us then that he was making the race for Senator against Senator Foster, who was a devoted friend of sugar; that he lived in the cotton part of the State; and that he out-sugared Foster before the people of Louisiana. He told them he was devoted to sugar; that never so long as he stood on this floor would he vote to place sugar on the free list. But I am somewhat surprised to find now that my friend is not only leaving his party on one issue, but that he is also leaving it on many issues and is making haste to get into the ranks of the Republican Party, because he has joined them upon the question of opposition to free wool.

Now, the Senator tells us that \$4 per family is all that it will cost the people to have a tax upon sugar. This I deny. It will cost \$7 per family per year. But suppose it only cost \$4. Is that any justification for it? Can any man rise in the Senate of the United States or in the House of Representatives and say that "I want to take only a little from each consumer of the United States" and justify a wrong upon the theory that he only takes a little? The question is, Are you entitled to take it at all? You can not justify it upon the ground that you do not take all that a man has. The trouble in this land that pinches the consumer is that the Meat Trust wants to take just a little, the Wool Trust wants to take just a little, the Sugar Trust wants to take just a little, the Steel Trust wants to take just a little, and after all the trusts have taken just a little they have got all the consumer has. [Manifestations of applause in the galleries.]

The Senator tells us that in 1789 there was laid upon sugar a tax of a cent and a half a pound, and from that time on it has varied throughout all the years from a cent and a half to 3 cents, and that because the favor of the Government has been showered upon the sugar producers of Louisiana and other States for 125 years it must not be taken away from them. That is the old protection argument. When the industries were first protected it was said, "Do not take their protection away from them, because they are too young"; and now, after you have had it for 125 years, you say, "Do not take our pap from us, because we are too old." [Laughter.]

For 125 years they have had their hands in the pockets of the American consumer, taking just a little; that is all. Just a little from each of 20,000,000 breakfast tables; just 2 cents upon each pound of sugar that the poor man carried home; that was all. "But it is just a little, and therefore you ought not to stop us from petty pilfering." [Laughter.] It has mounted into millions, but they got just a little at the time.

For 125 years you have struggled. The favor of the Government has been given to you, and what do you tell us now? That if we take this taxing power of the Government from you, which is no natural right of the Louisiana cane-sugar producers, it will confiscate your property.

How many millions of dollars of the American consumer have you confiscated in 125 years—a confiscation that reached into the cabins and cottages of the poor, a confiscation that touched the tables of the humble? And yet, because we want to take from you the favor that was not yours by right, you say you have a vested right of taxation.

Wrong never did have and wrong never will have a vested right in this Republic. Confiscation of your property! How

much money is invested in the production of cane sugar in that State? I have here a statement issued by those interested in Louisiana, protesting against this law, and they say \$100,000,000 is the amount invested. How much of it is in land? Seventy million dollars. Will it confiscate the land? No; it will be as fertile after sugar is placed upon the free list as before. It will yield to the touch of the laborer in every other use to which it may be put, as much so as the blue-grass fields of Kentucky. It is the most fertile land in the world. It will grow cotton, it will grow corn, it will grow any other product that the soil of my own State will produce. The land will be left, even according to the Senator's argument.

They tell us that \$10,000,000 is invested in mules. Placing sugar upon the free list will not kill the mules; they will be left. [Laughter.] Seventy millions in land and ten millions in mules leaves twenty millions in your factories and in your plantation railroads. You say it will destroy them. For the purpose of the argument, I am willing to concede your premise. How much do you ask to have the American people taxed each year rather than confiscate twenty millions of factories and of plantation railroads? You ask that they shall be taxed to the extent of \$140,000,000 a year.

Since the Dingley bill was passed the amount of sugar taxes collected has been two thousand millions of dollars. Eight hundred millions of it went into the Treasury, and twelve hundred millions of it went into the coffers of the sugar monopoly. One hundred and forty-two million dollars a year is what it costs. Twenty million dollars is the amount, the Senator says, invested in sugar factories and in plantation railroads.

Mr. RANDELL. Mr. President, will the Senator yield for a question?

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Louisiana?

Mr. JAMES. I yield to the Senator.

Mr. RANDELL. Will the Senator kindly tell us how he gets those figures—\$142,000,000?

Mr. JAMES. Oh, it is well known to everybody how the amount of \$142,000,000 is arrived at. Everybody knows that the amount of sugar consumed in this country per capita is practically 80 pounds, and everybody knows that the amount of revenue derived is about \$52,000,000, and everybody knows that the \$1.90 per hundred pounds is the protective rate—which is the amount that is collected upon the refined sugar by the sugar monopoly—is placed in their pockets. That is the amount collected upon the amount of sugar that they themselves manufacture and sell to the consumer here. That makes the \$142,000,000.

Mr. RANDELL. Will not the Senator admit that the real protective rate of duty on sugar is 1.34 cents a pound paid to Cuba?

Mr. JAMES. Ah, Mr. President, that is too transparent for the Senator to ask me, for the Senator knows as well as I do that that is the protection against raw sugar. But what is the protection against refined sugar? There is no refined sugar imported here.

Mr. RANDELL. We do not import any refined sugar.

Mr. JAMES. Ah, certainly not. We imported into this country last year only 2,000 pounds of refined sugar. Consequently after the Sugar Refining Trust in this country have the raw sugar at 1.34 cents per pound and have refined it they raise the price to 1.90 cents per pound, the amount of the pro-

tection upon refined sugar. They have that protection against refined sugar that comes from the countries of the world in competition with them.

Mr. RANDELL. Mr. President, I want the Senator to state distinctly now, so that I can understand him, whether he differs from all of those students of the subject who say that as we import our sugar from Cuba and, the real rates of duty on sugar from Cuba is 1.34, the protection is 1.34.

Mr. JAMES. I will answer the Senator, if he will kindly permit me to proceed. I am perfectly willing to answer any and all questions that he may desire to propound, but I do not desire to delay the Senate unnecessarily. There has been made here speech after speech against free sugar, and I have not up to this time undertaken to reply. The Senator from Louisiana has made four speeches. I will say to the Senator that my position is this: There is no refined sugar imported into this country. The raw sugar comes from Cuba at 1.34, as he says; but the imported refined sugar has to pay 1.90 to get into our markets against the Sugar Trust, which refines the sugar and controls the market, so the amount of protection given the Sugar Trust is the amount placed upon refined sugar, which is 1.90 per pound. The Senator will not deny that sugar is controlled by a trust. If he did, the Senate would not reckon his denial as accurate.

Mr. RANDELL. What about the beet-sugar production of 700,000 tons?

Mr. JAMES. Ah, the Senator can ask me "What about beet sugar?" but the Senator knows as well as I do that a committee of the House of Representatives, composed of Republicans and Democrats, found that sugar in this country was controlled by a trust. But let us proceed.

Mr. President, as the Senator from Arkansas [Mr. CLARKE] said in the Democratic conference, sugar production in Louisiana has been civilized out of existence. Unless you will do away with your antiquated machinery, unless you will supplant with modern machinery for sugar manufacture those old, open-kettle mills, you can not hope to compete with the world. Sugar is produced in Cuba for 2 cents a pound. It is produced in Java for a cent and a half a pound. It is produced in Hawaii for about 2 cents per pound. It is produced in Porto Rico at about the same figure. How much does it cost in Louisiana? It costs 3½ cents a pound to produce it. Why? Because the sucrose matter of the sugar cane of Louisiana is but 6 or 7 per cent, while the sucrose matter of the sugar cane of Cuba is from 11 to 14 per cent. What you want is a tariff that will make the sucrose matter of your sugar cane, which is only 6 or 7 per cent, bring as much as the sucrose matter of the sugar cane of Cuba brings, which is from 11 to 14 per cent. What the Senator from Louisiana wants is not a tariff that will equalize the cost of production but one that will equalize the amount of the sucrose matter in the cane of Louisiana with that of the cane of Cuba. And why does that difference exist? In Cuba the cane has to be planted only once in every 10 years.

In Louisiana it has to be planted once in every year. Why? They have to cut the cane early in Louisiana, because they fear the frost. They do not have to do that in Cuba. What the Senator desires is that we shall write upon the statute book of this land a tax which shall be paid by the people who consume sugar, so as to make sugar-cane growing as profitable in a temperate climate as it is in a tropical climate. Nature itself has decreed, and its decree is beyond the effect of all law, that sugar is more easily and cheaply produced in tropical climates than in temperate climates. I am unwilling to deny the sugar-consuming millions of America the natural advantages that God gave to the soil of the world in the cheapness in the production of sugar. God Himself made Cuba, as he made Louisiana. He made Cuba a tropical climate, where the production of sugar is indigenous to its soil. The production of sugar in Louisiana is not indigenous to the soil to the same extent that it is in Cuba. That is the trouble with Louisiana. They have to cut their cane early for fear of the frost. In Cuba it is allowed to stand, and the sugar content in the cane is greater. I am unwilling, Mr. President, to make the sugar consumers of my country pay a protective tariff on sugar that is produced in a tropical climate as it comes in competition with sugar produced in a temperate climate.

But let us see further. My friend spoke of Thomas Jefferson. He spoke of him kindly. I am glad to hear that whatever may have been the waywardness of my friend from the highway of the old party of Democracy, he still has a hankering after Thomas Jefferson. [Laughter.] He tells us that Jefferson

would have said practically that a tariff upon sugar was a proper tariff. Mr. President, I only know what Jefferson would have said by what he has said, and here is what he did say:

Taxes upon consumption, like those upon capital or income, to be just must be uniform. I do not mean to say that it may not be for the general interest to foster for a while certain infant manufactures until they are strong enough to stand against foreign rivals, but when evident that they will never be so, it is against right to make the other branches of industry support them.

Mr. President, Thomas Jefferson said it would be against right to make the other branches of industries support them. When? When it had been demonstrated that they would not be able to stand alone. In God's name, how long would Jefferson have said it would be necessary to have demonstrated that to him? One hundred and twenty-five years? Certainly that is long enough. That is the length of time you have had a tariff upon sugar.

But he proceeded:

When it was found that France could not make sugar under 6 h. a pound, was it not tyranny to restrain her citizens from importing at 1 h.? Or would it not have been so to have laid a duty of 5 h. on the imported?

Suppose I had paraphrased that.

When it was found that Louisiana could not make sugar under 3½ cents per pound, was it not tyranny to restrain her citizens from importing it at 2 cents per pound; or would it not have been so to have laid a duty of 2 cents per pound upon the imported?

There is the language of Thomas Jefferson himself upon the question of sugar.

The Senator spoke of McKinley. McKinley was a great President. He wrought well for his country in every position to which he was called. But I desire to call my friend's attention to the fact that President McKinley, too, said something upon sugar. Here is what he said in a speech in the House of Representatives:

Last year we paid \$55,000,000 out of our pockets to protect whom? To protect the men in the United States who were producing just one-eighth of the amount of the consumption of our sugar. Now we wipe this out, and it will cost us to pay the bounty \$7,000,000 every 12 months, which furnishes the same protection at a very much less cost to the consumers. So we save \$48,000,000 every year and leave this in the pockets of the people. Sir, when we lift from the American people the vast sum of \$48,000,000 of taxes, they can put up every 12 months 48,000 houses, costing \$1,000 apiece.

So, in the language of the lamented and departed McKinley, I say to-night that we want to lift from the backs of the consumers of America not \$55,000,000, but \$140,000,000, and that vast sum saved to them will give them an opportunity to erect 140,000 houses that cost \$1,000 each.

But, our friend says, this is a revenue duty. How much revenue do you derive from it? You do not derive any revenue from the sugar produced in this country. Practically one-half of the sugar consumed in the United States by our people is produced in continental United States and in our insular possessions. Not quite one-fourth of the sugar consumed by our people is produced here. Notwithstanding 125 years of protection, notwithstanding 125 years of aid to the infant industry, not quite one-fourth of the sugar consumed by our people is produced here. A little more than one-fourth is produced in Porto Rico and Hawaii and the other half is imported from Cuba.

The sugar that we produce here, in Porto Rico, and in Hawaii does not pay a dollar of tax into the Federal Treasury. Only the sugar that comes from Cuba or from the other countries of the world pays any tariff.

Who gets the tariff from the sugar produced in continental United States and Hawaii and Porto Rico? The Sugar Trust gets it. You talk about its being a revenue measure. It is not even a 50 per cent revenue measure. A real revenue tax on sugar would be a consumption tax. But you dare not impose that, because all of the money paid would go to the people's Treasury, and as it is now \$90,000,000 of it goes into the pockets of the Sugar Trust and \$52,000,000 of it goes into the Federal Treasury every year.

Mr. RANDELL. Mr. President, may I ask the Senator a question?

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Louisiana?

Mr. JAMES. Certainly.

Mr. RANDELL. My friend seems to be troubled about the trust. I want to know, if he can tell me—I have never gotten a satisfactory answer to it—why it is that the trust is so anxious to have sugar on the free list?

Mr. JAMES. Oh, I hope the Senator will not undertake to deflect my argument from the one I am now making.

Mr. RANSDELL. I withdraw the question if it embarrasses the Senator.

Mr. JAMES. No; the Senator need not withdraw it. The Senator propounded that question to me the last time I spoke upon this question, and I answered it, I thought, to the entire satisfaction of the distinguished Senator.

You tell us the sugar refiners are a trust. If they are, why do you want to give them 1.90 cents per pound protection against the consumers of the United States?

Mr. RANSDELL. I want to make competition.

Mr. JAMES. Ah, you want to make competition. You want to give to the sugar refiners in the United States 1.90 protection against the other sugar refiners of the world. I want to open the markets of the United States and let sugar, whether it is refined in Germany, in Java, in Cuba, or in any other part of the world, come in here free of tax. You want \$1.90 protection per hundred pounds of refined sugar raised up in front of the Sugar Refining Trust of the United States.

But, Mr. President, the Senator told us that we would have cheaper sugar for two or three years. It is really refreshing to know that we would have cheaper sugar even for two or three years. They always argued that if you placed sugar on the free list the awful Sugar Trust, which does not exist in the world, will do what? Will immediately monopolize the sugar production and the sugar sale of the world and raise the price of sugar upon our consumers; that with all the different countries of the earth, speaking different languages, differing in habits, in religion, and in government, each one of them with an ambition to conquer the other one in the marts of trade, each one struggling against the others for the commerce of the world, the Senator tells us they will immediately monopolize the price of sugar, which they have never done and have never undertaken to do, just as quickly as we allow them to have 100,000,000 more consumers.

Mr. President, the very idea! When sugar all these years in the markets of the world has been unmonopolized, to say that because we give them 100,000,000 more consumers they will do what they never have done, and what they have never undertaken to do, to monopolize the price of the world's market, is preposterous. Why is it that during all the centuries of the past they have never undertaken to monopolize the world's production and sale of sugar? Why is it they should wait all these years to monopolize the world's production and sale of sugar?

But I have, as against your prophecy and against your prediction and against your conjecture, a Sugar Trust in the United States within the protected boundary found guilty by a committee of Congress, composed of both Democrats and Republicans. It was a unanimous report agreed to by all the members of the committee. So my statement as to a Sugar Trust existing in the United States is not a prophecy, but a reality. The trust that I am undertaking to deal with is one that does exist, against your trust about which you prophesy, about which you predict, about which you conjecture and that never has had, and it is impossible for it to have, an existence.

But the Senator from Louisiana [Mr. RANSDELL] tells us about beet sugar. He tells us that beet sugar will still continue, he believes. Mr. President, I want to read to the Senate the evidence taken by the Hardwick sugar investigating committee on the amount of profit made by sugar-beet farmers.

How much is the profit that we make upon corn and upon wheat? I have the report here from the Crop Reporter of June, 1911, published by the authority of the Secretary of Agriculture of the United States, on page 47, which is as follows:

The estimates of cost of producing oats in 1909 given in this number of the Crop Reporter are the results of the tabulation of about 5,000 reports from correspondents of the Bureau of Statistics. A similar statement in regard to cost of producing corn was published in the April Crop Reporter and wheat in the May Crop Reporter.

The schedule of inquiry called for the following information: Cost per acre of (1) commercial fertilizer, (2) preparing ground for seed, (3) seed, (4) planting, (5) gathering or harvesting, (6) preparing for market, (7) wear and tear on implements, (8) rent of land or interest on its value, (9) other items of cost, (10) total cost, (11) average yield of product per acre, (12) value per bushel, (13) value of crop per acre (not including by-products), (14) value of by-products, (15) average size of fields (acres), (16) average value per acre of land growing the crop reported upon.

The following note accompanied the schedule of inquiry: "The cost of labor and teams, whether owned or hired, should be estimated upon the basis of the prevailing rate of wages paid, whether the actual work is done by owner or hired labor. Under cost of preparing ground for seed include cost of applying manure, if any. Under cost of cultivation include all costs from the time the crop has been planted until it is ready to harvest. Include in cost of thrashing or preparing for market all costs from time crop has been gathered from fields until it is ready for use or market. Let estimates be for your own or any

typical farm in your vicinity. Add such remarks as will help to explain any figures given."

A summary of the principal items for wheat, corn, and oats is as follows:

Item.	Wheat.	Corn.	Oats.
Cost per acre, excluding item of rent.....dollars..	7.85	8.52	7.13

which shows that the farmer who grows corn made a net profit per acre in 1909 of \$7.82, that the farmer who grows wheat made a net profit per acre of \$5.44, that the farmer who grows oats made a net profit of \$3.17 per acre. Another issue of same reporter shows that the farmer who grows cotton made a net profit of only \$6 per acre. How much do you suppose the profit of the sugar-beet farmer was? I have the testimony here taken before the Hardwick committee. I hold it in my hand now. Fourteen of the first twenty-odd witnesses who testified show that the sugar-beet grower made an average net profit per acre of \$43 upon his production of beets. Yet the farmer who grows cotton in the South makes only \$6 as a net profit per acre. The farmer who toils in the wheat fields of the West and South only makes a net profit of \$5.44 per acre. The farmer who toils in the cornfields of the land makes only a net profit of \$7.44 per acre—

Mr. BRISTOW. Mr. President—

Mr. JAMES. They toil in the heat of the summer, and yet he wants to tax them in order to give a profit to the sugar-beet grower, who makes five times as much per acre as they do.

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Kansas?

Mr. JAMES. I yield.

Mr. BRISTOW. May I inquire of the Senator how much per acre the grower of tobacco makes on his crop?

Mr. JAMES. I thought you would bring in tobacco. Yes; I can tell the Senator. The farmers in Kentucky in the last 10 years have not made \$10 net profit per acre for their tobacco, and in many of the disastrous years when the Tobacco Trust controlled our market there they never made a dollar net profit upon their tobacco. I hope that is satisfactory to the Senator. [Laughter.]

Mr. BRISTOW. The Senator in this bill is giving a duty of about 169 per cent on tobacco; is he not?

Mr. JAMES. Mr. President, that was argued out. I discussed that with the Senator. There is no protection to Kentucky tobacco. There is an internal-revenue tax that is levied upon tobacco in Kentucky, which is a burden to our industry. Make our tobacco free of your internal-revenue taxes and take the tariff off the foreign product and we will compete gladly with all the world.

Mr. BRISTOW. The Senator has the opportunity to do it in this bill, for he is one of the Senators who is making it.

Mr. JAMES. Yes; and, Mr. President, the reasons why the internal-revenue tax is not taken off tobacco is because it helps to put into the Treasury of this country millions of dollars from Kentucky and other States. It is a luxury and not a necessity. The Democratic Party believes that luxuries should be taxed and as nearly as possible necessities left free.

Mr. BRISTOW. Why does not the Senator collect all the taxes as internal revenue instead of putting 169 per cent on the customs tax?

Mr. JAMES. O Mr. President, if the Senator from Kansas knew anything at all about tobacco, he would not ask that.

Mr. BRISTOW. The Senator from Kansas knows as much about tobacco as the Senator from Kentucky knows about sugar. [Laughter in the galleries.]

Mr. JAMES. Yes; the truth of it is, Mr. President, the Senator from Kansas was born in Kentucky, but he was not born in that part of it where they grow tobacco. The Senator would not ask me if he knew anything at all about tobacco why we put a tariff tax upon the importation of tobacco when we have an internal-revenue tax upon the home tobacco.

Would the Senator have us take off the tariff tax upon foreign tobacco and let the domestic tobacco pay the internal-revenue tax while the foreign tobacco would pay no tax at all?

Mr. BRISTOW. It is just as easy to make the foreign tobacco pay an internal tax as the domestic tobacco.

Mr. JAMES. That is all it does.

Mr. BRISTOW. If the Senator sees fit to do it.

Mr. JAMES. That is all it does pay under this bill. The tariff that is laid upon tobacco is laid upon it to equalize it with the internal-revenue tax placed upon the domestic product and nothing more.

Mr. BRISTOW. But it is put upon—

Mr. JAMES. If the Senator means to talk about Kentucky tobacco, practically all our tobacco is sold upon the markets of the world; but the Senator can not get me to consume all my time on the tobacco question. It is not half so sweet as sugar. [Laughter in the galleries.]

Mr. BRISTOW. Ah, Mr. President, the Senator from Kansas well knows that the farmer does not pay a cent of internal revenue tax on tobacco. That is paid by the dealers in tobacco.

Mr. JAMES. Of course the Senator knows that every tax you lay upon any product when it is an internal revenue tax is ultimately paid by the man who produces it.

Mr. BRISTOW. The Senator knows that when he imposes a customs tax on imported tobacco he is protecting the tobacco grower of Kentucky.

Mr. JAMES. Mr. President, I have answered that. I have said to the Senator that the tariff tax placed on tobacco is merely to equalize it with the internal-revenue tax paid on our home products, and we levy the tax upon our home products, as we levy a tax on the imported article, because tobacco is a luxury, and our party believe it is a proper subject of taxation in order that we may put a necessity like sugar upon the breakfast table free from any duty.

Mr. BRISTOW. The Senator from Kansas does not object to internal-revenue taxes being imposed upon the consumption of tobacco, but he does object to a protective duty of 169 per cent on the tobacco fields of Kentucky, when the sugar-beet farmer of the West and the wheat grower of the West have their products placed upon the free list.

Mr. JAMES. O Mr. President, of course the Senator can make that speech. He has made it several times; but I think everybody understands that it would be manifestly unfair to exact from the home producer an internal-revenue tax upon his product and let the product of the foreigner, who pays no taxes here, who does not love our country here, who does not stand ready to defend it, who has no interest in it, come in here and sell his product free of any taxation at all.

Mr. BRISTOW. I agree with the Senator, but why not—

Mr. JAMES. Then that settles it. [Laughter in the galleries.]

Mr. WARREN. Mr. President, I rise to a question of order. The rules of the Senate do not permit manifestations in the galleries of approbation or disapprobation.

The VICE PRESIDENT. The Chair would be glad to have the Senator indicate the particular rule. The Chair has been examining the rules, but he does not find it there.

Mr. WARREN. The Vice President probably knows the rule, and if he has examined the rules and says it is not there, I have nothing further to say at this time.

The VICE PRESIDENT. The Chair has been unable to find it.

Mr. WARREN. The Vice Presidents have always so announced the rule heretofore.

The VICE PRESIDENT. On the statement of a Senator some time ago the Chair so ruled, but on examining the rules the Chair was unable to find it.

Mr. BRISTOW. But why does he not treat the producer of sugar beets of the West with the same consideration that he treats the producer of tobacco?

Mr. JAMES. If you will—

Mr. BRISTOW. Why is the farmer who cultivates the soil for the growth of tobacco, a luxury, entitled to more consideration than the farmer who cultivates beets to produce a necessity of life?

Mr. JAMES. You talk about sugar beets. You are advocating a protection of \$1.90 upon refined sugar, and yet you have been advocating and allowing sugar beets of the Canadian farmer to come in here at 10 per cent, yet you give your sugar refiner, when he buys those beets to refine them in the market, eight times as much protection as you give the American farmer who grows the beets.

Mr. BRISTOW. The Senator from Kentucky is just as accurate in that statement as he has been in any that he has made here to-night. He can not point to a single utterance that the

Senator from Kansas has ever made on this floor in favor of a duty of \$1.90 per hundred pounds on sugar.

Mr. JAMES. I ask the Senator. Is he a Republican? The Republican Party stood for it. Tell me to what party the Senator claims allegiance.

Mr. BRISTOW. The Senator from Kentucky said that the Senator from Kansas did, or that "you did," and I say to the Senator from Kentucky that the Senator from Kansas does not and never has said that he favored a duty of \$1.90 per hundred pounds on sugar.

Mr. JAMES. Well, Mr. President, I, in that statement, was merely aligning the Senator with the Republican Party. The Senator has not told me to which party he claims allegiance. Mr. President, the Senator from Kansas is like an old fellow that lived in a small country town down my way during the Civil War who heard that there was a band of guerrillas coming into town. From his first information he thought it was a small one and organized the boys of the town to wage war upon them. And as they started out to meet them, with the courageous captain riding in front, a boy came running up the road greatly excited, and said to the captain, "My, don't go down there. There are thousands of them, and they will kill you all." The old fellow said, "Oh, my boy, we are going to meet them; we will look them over, and if there are fewer of them than there are of us we will lick them. If there are more of them than there are of us, we'll jine 'em." [Laughter and applause on the floor and in the galleries.]

Mr. BRISTOW. That is as intelligent an answer—

Mr. JAMES. That may be the Senator's position. He will be a Bull Moose if he sees he can lick them, and he will be a Republican if he sees they can lick him. [Laughter in the galleries.]

Mr. BRISTOW. That is as intelligent an argument upon the merits of the tariff bill as the Senator has made to-night.

Mr. JAMES. I do not—

Mr. BRISTOW. I do not propose to—

Mr. JAMES. I knew the Senator would get mad, Mr. President. That is always quite a tender spot with him. I have known for some time that he was ashamed to tell to what party he claims allegiance in this great struggle here.

Mr. BRISTOW. I assure the Senator that I am not half as angry as he seems to think I am.

Mr. JAMES. In all respect and kindness to the Senator, I do not desire to irritate him, though some of my retorts, purely kind, have seemed to do so very greatly, and to that extent that he has used language that in my judgment was not justified.

Mr. BRISTOW. If the Senator sees fit to make that answer in order to avoid any further criticism—

Mr. JAMES. I will yield to the Senator on one consideration, and that is that he tell us to what political party he belongs.

The VICE PRESIDENT. The Senator from Kentucky will proceed.

Mr. BRISTOW. If the Chair states that the Senator has not yielded to me—

The VICE PRESIDENT. The Chair understands that the Senator from Kentucky declines to yield.

Mr. BRISTOW. I thought he said he yielded.

Mr. JAMES. Yes; I yield to the Senator on the condition that he tell us to what particular party he belongs. Then I will know how to deal with the Senator in debate. I do not want to take the trouble to particularize him from his party. If I know to which party he claims he belongs, then I can understand him better. I am dealing with principles and parties, not with individuals.

Mr. BRISTOW. Mr. President, I desire to say to the Senator from Kentucky that as to what party I belong is my own concern, so far as the merits of this question are concerned.

Mr. JAMES. Then I refuse to yield. [Laughter in the galleries.]

The VICE PRESIDENT. The Senator from Kentucky will proceed.

Mr. JAMES. Mr. President, I was merely pointing out that the Senate is solemnly asked to tax all the farmers who grow wheat and corn and cotton and oats who make a net profit of from \$3 to \$7.50 per acre in order to give an artificial profit to the sugar-beet grower, who is making now, according to the proof taken by the Hardwick investigating committee, and I have the testimony here in front of me, showing that they make net profits all the way from \$25 to \$72 per acre on the production of sugar beets.

Is it fair, Mr. President, to tax the cotton farmer, who toils under the southern sun, and all farmers who grow corn and wheat and work as hard as the beet-sugar grower does—is it

fair to tax those men, who only make a net profit of from six dollars to seven and a half dollars per acre, in order to give an additional profit to the sugar-beet grower, whose average net profit runs all the way from twenty-five to fifty-odd dollars per acre?

But, Mr. President, I desire to say that the sugar-beet grower, great as his profit has been in the United States, has not enjoyed the rich benefit to which he was really entitled. Take the Great Western Sugar Co., of Michigan. It made in five years \$18,000,000. They paid taxes upon \$2,500,000. They have declared dividends all the way from 35 per cent on up to 100 per cent. How much does the farmer in the West get for his sugar beets? The farmer in the West gets for his sugar beets from about \$5.50 to \$5.75 per ton. How much does the sugar-beet grower in Germany get? I hold in my hand here a statement issued by one of the trade reports of Germany and one of her sugar factories, which is as follows:

Balance sheet and trade report of the Dirschau (Germany) Sugar Factory for the season 1911-12, as follows:

We have followed the example of other factories and have increased beet prices M. 40 per 100 kilos for 1912-13, viz:

"Five dollars and eighty cents per long ton, shipment by end of October.

"Six dollars and four cents per long ton, shipment first half November.

"Six dollars and twenty-eight cents per long ton, shipment from November 16 to closing down of factory.

"Rebates for freight will be paid as usual. The beet growers will receive additional payments if the profits of the stockholders amount to more than 6 per cent. During the past year, 1911-12, we have made additional payments to beet growers, as per contract, at the rate of 89 cents per ton, and we have voluntarily paid our regular shippers an additional rate of 79 cents per ton."

In the annual report of F. O. Licht, statistical bureau for the beet-sugar industry of the German Empire for the season of 1911-12, the following occurs:

The official (average) price of beets during the years 1910-11 were 5.44; 1911-12, 5.56.

So it develops that our beet-sugar factories themselves present the proof that the grower in this country is entitled to little or no protection.

Certainly it can not be successfully contended that the factory cost of manufacturing beet sugar is greater in this country than abroad. The operation is a mechanical one. The cost of labor per pound of sugar produced is very small. The cost of fuel here is less than in Europe and the average size of the factory is larger, so that operating expenses here are reduced in this way.

What a vast sum would be paid to the sugar-beet growers of the West if they had made a contract with the sugar-beet factories to divide with them all in excess of 6 per cent profit. What a great sum they would have received.

I can imagine now the Great Western Sugar Co., that made \$18,000,000 in five years, going out and dividing with the farmers in the West who grow the beets out of which it made those millions. What a vast sum it would be. In Germany they pay them upon an average \$6 per ton. In addition to that, they pay them a bonus upon their sugar beets if they make more than 6 per cent, and in many cases in Germany they have paid to them as much as 75 and 80 cents a ton on the additional amount exceeding the 6 per cent profit that went pro rata to the sugar-beet growers from whom they purchased beets; but over in this country the farmer grows sugar beets and sells them to the factory. The factory makes the enormous profit, and charges up to depreciation of value hundreds upon hundreds of thousands of dollars in order to conceal from the public the real amount of their profit; and yet we are told, Mr. President, that we ought to permit this to go on because it is just a little amount; that it will only cheapen sugar for a while.

In 1890, when sugar was placed upon the free list, within 30 days from that time it fell 2 cents a pound, and every farmer and every laborer in this land was enabled to buy it that much cheaper.

Mr. President, sugar is a great necessity of life. In this country our consumption per capita is 80 pounds; in Great Britain, before the Boer War, when sugar was free, the consumption was 110 pounds per capita. When sugar was placed on the free list in this country in 1890 its consumption increased 25 per cent per capita.

Mr. President, the sugar-beet grower of the West needs no protection. He is getting no more for his beets to-day than is paid to the farmer in Germany who produces beets. All of the profits of this protection have been absorbed and eaten up and have gone for many years to the sugar-beet factory owner. There is where it has gone.

Mr. President, our friend from Louisiana stated that in Mississippi and other Southern States there was an amount of so much protection which differed from other States. This is a

great Republic. In Mississippi there are practically no products that are protected.

Mr. WILLIAMS. Mr. President—

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Mississippi?

Mr. JAMES. Certainly.

Mr. WILLIAMS. Did I understand the Senator correctly that there was some protection to somebody in Mississippi?

Mr. JAMES. No; the Senator misunderstood me. I said there was practically no protection in Mississippi; but the Senator from Louisiana was seeking to make the argument that this bill was sectional. I have heard that argument made before, but it did not come from a Democrat. I heard Mr. Speaker Cannon once make the argument that the wool bill we had under consideration in the other House was sectional; but when the next bill came along, which was for free sugar, I saw him turn to the Representatives from Louisiana and heard him say to them: "Oh, Louisiana, Louisiana, how much longer will you kiss the Democratic hand that smites you?"

Upon the committee that formulated this bill there is a majority of southerners—the Senator from Mississippi [Mr. WILLIAMS], the Senator from Missouri [Mr. STONE], the Senator from Georgia [Mr. SMITH], the Senator from Colorado [Mr. THOMAS], who was born in Georgia, now a Senator from a Western State, the Senator from North Carolina [Mr. SIMMONS], the Senator from Oklahoma [Mr. GORE], and myself constituting a majority of Senators upon that committee, and surely the American people will not hear with tolerance any suggestion that southerners have legislated against their own section of the country, where they were born, that they love, and where those who love them live and those whom they loved lie buried.

Mr. President, one of the great products of Kentucky, hemp, had a tariff, I believe, of \$22.50 per ton upon it, and that article was placed upon the free list; but I am not going to leave the Democratic Party upon that account. I voted for the removal of that duty because other basic products, like cotton and wool, are placed upon the free list. So Kentucky hemp goes upon the free list. It is grown upon as rich a soil as there is in the world; and the Kentucky farmers, if they can not grow hemp profitably, can grow wheat or corn or tobacco profitably. They are not asking the protection of the Government or for the taxing power of the Government in order to make profitable a great agricultural product of theirs.

Mr. RANSDELL. Mr. President, will the Senator from Kentucky yield for a question?

The VICE PRESIDENT. Does the Senator from Kentucky yield to the Senator from Louisiana?

Mr. JAMES. I yield.

Mr. RANSDELL. I should like to ask if Kentucky whisky goes on the free list?

Mr. JAMES. Why, Mr. President, Kentucky whisky is taxed a dollar and ten cents per gallon; and that is because it is a luxury. [Laughter.] A dollar and ten cents internal-revenue tax is placed upon whisky, and that, I repeat, is for the purpose of getting revenue sufficient to run the Government. About \$250,000,000 is gathered from the internal-revenue taxes placed upon whisky and tobacco in order to sustain this Government. Would the Senator have sugar placed upon the tax list and whisky placed upon the free list? [Laughter.]

Mr. RANSDELL. I ask the Senator from Kentucky if there is not a duty of \$1.50 a gallon on whisky in addition to the internal-revenue tax, to which he has referred, of \$1.10 a gallon, making a total tax on whisky of \$2.60 per gallon?

Mr. JAMES. Mr. President—

Mr. RANSDELL. Wait a minute until I ask a question. I will ask the Senator whether the State of Kentucky does not manufacture annually about 43,000,000 gallons of whisky, which receives the benefit of this protection of a dollar and a half a gallon in addition to the internal-revenue tax of \$1.10 a gallon?

Mr. JAMES. This is the first time I ever heard the argument advanced that an internal-revenue tax placed upon whisky was a protection to whisky.

Mr. RANSDELL. I did not speak of the internal-revenue tax.

Mr. JAMES. But just allow me to answer, please.

Mr. RANSDELL. Very well.

Mr. JAMES. The Senator from Louisiana has not known much of Kentucky whisky, or he would know that it needs no protection from any whisky in the world. [Laughter on the floor and in the galleries.]

Mr. RANSDELL. Mr. President, I am glad the Senator acquits me of a knowledge of the famous corn juice for which his State is so famous, but he has not answered and he can not answer my question about a dollar and a half a gallon protection upon the corn of Kentucky. That is a wonderful protec-

tion his State gets. A bushel of corn makes 4 gallons of that Kentucky Bourbon that is so fine.

Mr. JAMES. So far as foreign whisky is concerned, Mr. President, the distilleries of Kentucky export more whisky than all the rest of the world exports into the United States of America. The Kentucky whisky is a peculiar brand; it stands alone; it fears no competition; and so far as a protective tariff being placed on whisky in order to protect whisky, it never entered the mind of a single man, except the Senator from Louisiana.

Mr. RANDELL. Some American citizens must like this other whisky, for it produces about \$25,000,000 a year revenue; that is, the internal-revenue tax and the import duty on these other whiskies.

Mr. JAMES. If the Senator wants to take the position—and while he is getting into the Republican Party, he had better get in good—the Republican Party once took the position in favor of free whisky. Now, if the Senator wants to take that position, we will understand that he has at last gotten beyond redemption. [Laughter.]

Mr. RANDELL. Mr. President, I am not taking a position for free whisky—I think it is a luxury, and I think it ought to be taxed—but I am taking the position that the Senator shall not get up here and try to put the products of Louisiana on the free list and make no mention whatever of the tremendous protection which his State is getting, of sixty-odd million dollars a year because of that tax on Kentucky whisky.

Mr. JAMES. So far as I am concerned, Mr. President, I am willing that the Senator from Louisiana or anybody else shall take away all the protection upon foreign whisky if you will only levy upon foreign whisky, as you do upon home whisky, an internal-revenue tax. The Senator knows very well that the tax laid upon the article of domestic production is an internal-revenue tax, and that you could not allow whisky to be imported into this country without any tax upon it at all.

Mr. RANDELL. The tax is a dollar and ten cents plus a dollar and fifty cents, making \$2.60—one dollar and a half protective duty and \$1.10 internal-revenue tax.

Mr. JAMES. So far as that dollar and fifty cents is concerned, it does not protect the Kentucky distiller. There is not a whisky producer in Kentucky who ever believed it did, and the Senator from Louisiana knows it does not. It is purely a revenue tax and brings millions into our Treasury from foreign whisky, which is a luxury and ought to be taxed. So far as I am individually concerned, I am willing to place a revenue tax upon whisky, because it is a luxury and not a necessity. I am willing to place a tax upon the foreign production.

The provisions of the bill in relation to whisky are of the same character as those that have remained in the law all along for the last 25 years. The spirits schedule was not mine; I had nothing to do with it; but I will say to the Senator that this bill contains an additional revenue tax upon whisky of \$1,000,000 that never was written in any other bill in the world. I reckon if whisky were a Louisiana product the Senator would leave the Democratic Party upon that account; but when we wrote a million dollars additional tax upon whisky I voted for it, because I believed that it ought to bear its burden of taxation because it is a luxury.

Mr. President, I took the floor merely to answer the argument made by the Senator from Louisiana upon sugar, but he branched off and made an argument for a tax upon wool. He says that a tax on wool is for the benefit of the farmer. How many farmers in the United States grow wool? Five-hundred-and-odd thousand farmers grow wool. How many farmers are there in this country? There are 6,300,000 farmers in the United States, of whom 5,700,000 produce no wool. I am the advocate of the farmer. You tell me that you want to protect the farmer, when in order to do so you tax 10 farmers to protect 1. One farmer has sheep, and you tax 10 of his neighbors who use wool. In the Senator's own State nearly 10,000,000 pounds of wool are imported in order to supply his own people in the State of Louisiana.

The population of Louisiana according to the census of 1910 was 1,656,388; wool produced in Louisiana, 573,500 pounds per annum. The wool consumed by the people of Louisiana was 10,300,883 pounds per annum. So the people of that State would have to pay the tax upon 9,700,000 more pounds of wool than is produced in that State every year. I speak, Mr. President, for the 5,700,000 farmers in the United States who do not produce wool as against the 500,000 farmers who do produce wool.

So upon sugar I speak for the ninety-odd millions of people who consume sugar, while the Senator speaks for the small number who produce sugar. How many farmers in the United States produce sugar beets? I would say that there were not

more than 10,000 of them engaged in the production of sugar beets. Against the 10,000 who produce beet sugar I stand for the 6,290,000 farmers who consume sugar.

Our Republican friends tell us that this bill is antagonistic to the interests of the farmer, that it places his corn and wheat upon the free list, that it removes from his productions the tariff rates that now exist upon those products. If there is one fraud above another, if there is one deception greater than all the rest, it is the theory advanced by them that the tariff upon corn and wheat increases the price of those products. There never has been a year in the history of the life of this great Republic in which we have not exported more corn and wheat than we have imported. For the last 10 years our exports have exceeded our imports by from 20,000,000 to 120,000,000 bushels of corn. Our exports of wheat have exceeded our imports during these last 10 years by from 70,000,000 to 234,000,000 bushels. Producing, therefore, more of both of these products than our people can consume, our surplus production must be sold in the open markets of the world. The price, therefore, of the surplus products of necessity fixes the price of the domestic product, and the conclusion irresistibly follows that the price of corn and wheat in this, as in all countries that produce more than they can consume, is fixed by the world's market price. No one would ship corn out of the United States to foreign countries of the world if he could obtain as much for it here as he could there, and certainly he would not ship it abroad if he could obtain more here than he could there.

This duty, therefore, placed upon corn and wheat is used as a great deception upon the farmers in order that the people who manufacture all the things that they use are enabled to say to the farmer, "Why, you share in this protection; you are benefited by the increased price of corn and wheat, and therefore the increased price that you pay for your plows, your harvesting machinery, your harrows, your rakes, your wagons, your harness, your boots and shoes, your clothes, your sugar, and all the other necessities of life is compensated to you by this tariff upon farm products." President Taft himself declared, when the Canadian reciprocity question was under consideration, that the price of corn and wheat was not increased by the tariff. Secretary of Agriculture Wilson, a distinguished Republican, made the same statement. I am frank to say, Mr. President, however, that if I did believe the tariff enhanced the value of corn and wheat I would still vote against it. The hand of taxation, in my deliberate judgment, should never be fastened upon the bread and meat our people eat. I could not find it in my heart to raise the price of bread, the staff of life, by the taxing power of the Government. I am unwilling to make it harder for the poor to feed hungry mouths with meat and bread by giving to them a fictitious value, by laying a tariff duty upon them. In this Republic of republics, this prosperous land of ours, with its myriad avenues of taxation, we should certainly be able to supply our revenue necessities sufficient to administer the affairs of this Government in economy and honesty without pinching the tables of the poor. Mr. President, meat and bread should be as free from taxation as the light that shines upon us, as the air we breathe, or the water we drink. I rejoice that in this great bill we take the tax off of the necessities of life and transfer it to the profits of the rich. We substitute a tax upon the income from millions of the rich for a tax upon those things that feed and clothe our people, and I rejoice that for the first time in half a century the wealth of this land will share the burden that would be borne by poverty—that the income tax, the most just of all taxes, will be written into the law.

It is a tax that never touches want, a tax that never burdens adversity, a tax that never causes sorrow, a tax that never hovers above distress, a tax that forecloses no mortgages, a tax that forces no sales; it is a tax that reaches only where prosperity dwells, a tax that is collected only where success abounds.

Instead of being called an income tax, it could be more properly and justly called a prosperity tax. Mr. President, it was a long, fierce struggle that Democracy made to have the income tax written into our Constitution, so that the right to tax wealth to make prosperity share the burdens of the glorious Republic that prospered them would be immune to the technical objection of shrewd lawyers, safe from the attack of the constitutional critic, and not unconstitutional, because we made it a part of the Constitution itself. For 50 years and more the numberless fortunes have been exempt; our Government has been run by what you might call a consumption tax. The great wealth of the land has been exempted. While demanding and receiving protection—a deceptive word they use, which only means that the Government farmed out to them the right to tax all the other people for their benefit—they stubbornly resisted

the payment of a single dollar of taxes upon their vast accumulations, upon their swollen, and oftentimes stolen, fortunes. But at last the people were victorious. The income tax was written as a part of the Constitution of this Government, and in conformity with that and by its authority we have written into this law a tax upon incomes that will bring into the Treasury of the Government more than \$100,000,000 per annum. I can not think there is a single honest American that will dispute the righteousness of this tax. If there be such, let him leave this land that has so prospered him and seek another, for he neither loves this country nor has the patriotism or courage to defend it.

The President, Woodrow Wilson, has been denounced as a dictator. Why? Because he has dared to stand for the faith as written in our platform. If he had been in favor of special privilege, if he had been in favor of the exactions that greed demanded, his position would not have been assailed as that of a dictator; he would have been hailed as a benefactor by those who now assail him. But because he believed in and advised in favor of free meat and free bread and free sugar and free wool, he is denounced as a dictator; but the American people will answer at the ballot box and say, "If that be dictation, then long live the dictator who stands for that doctrine in our American life." [Applause in the galleries.]

The VICE PRESIDENT rapped with his gavel.

Mr. JAMES. Mr. President, I rejoice that when this bill which we are now considering springs into life the Payne-Aldrich bill goes to its death. That measure was the greatest betrayal ever written into law, the most consummate piece of class legislation that ever found its way upon the statute books of the country or ever masqueraded under the cloak of a bill to raise revenue.

Mr. President, this bill has been framed in the interest of all the people. It is free from the corroding touch of special privilege. It frees from the heavy hand of taxation the necessities of life. It denies to trusts and monopolies the favor and assistance of Government aid. It does not farm out to a favored few the special privilege of taxation. It recognizes the only true and just principle upon which taxation can rightly rest, and that is to secure revenue sufficient to administer the affairs of the Government honestly and economically. In this bill there are no jokers to enrich members of the Finance Committee. In it no rates are written to burden the poor in order to enrich Members of this body. Within our council room no paid agent of monopoly sat giving daily reports of his triumph in writing the rates that greed desired. No schedule in this bill has been written by its chief beneficiaries. This bill is the work of sincere hearts, open minds, and untainted hands. It is responsive to the will of the American people, a will twice overwhelmingly expressed at the polls. It is the promise of Democracy faithfully written into law. This bill is free from intrigue, devoid of injustice. It is a bill to support this Government and not a bill to impoverish the people—a bill to raise revenue and not a bill to raise millionaires. I thank you. [Applause on the floor and in the galleries.]

Mr. BRISTOW obtained the floor.

Mr. THOMAS. Mr. President, will the Senator from Kansas yield to me?

The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Colorado?

Mr. BRISTOW. I do.

Mr. THOMAS. I do not intend to take more than a moment. I am not going to make a speech. I rose merely for the purpose of announcing that on Monday next, after the close of the morning business, I shall address the Senate upon Schedule E and its relation to beet sugar and beet-sugar production.

Mr. BRISTOW. Mr. President, for florid and violent statements, with little regard to fact or accuracy, the effort which the Senator from Kentucky [Mr. JAMES] has just made probably has no parallel in the history of this body.

The Senator has taken a few illustrations, gathered from an extensive investigation, as to the profits that are made by sugar-beet farmers in the United States, and has compared them with the profits made in other agricultural pursuits. He has given the amount made as profit by the sugar-beet farmers at about \$43 per acre. If the Senator from Kentucky had cared to state the facts, or if he had given any attention to the statistics that are available for him or any other Member of this body, he would have made no such statements.

It is well known to those who have taken the trouble to inform themselves that the average production of sugar beets in this country is only about 10 tons per acre, and the average price paid to the farmer who grows sugar beets is \$5.50 per ton,

making the gross receipts for each acre of sugar beets raised approximately \$55.

It is about all that a farmer can do to grow 10 acres of beets. His gross receipts on the average are \$55 per acre. Take out of that the expenses he has in growing his 10 acres of beets and his net profits are no greater than the net profits of the average agricultural crop, and this the Senator from Kentucky should have stated if he cared anything about facts in discussing the sugar tariff.

Mr. WILLIAMS. Mr. President—

The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Mississippi?

Mr. BRISTOW. I do.

Mr. WILLIAMS. I wish to ask a question, merely to get the Senator's idea of what the facts are. I do not myself know, because the evidence is so absolutely confusing that one can not find out. What is the Senator's idea of the net profit of the sugar-beet grower per acre?

Mr. BRISTOW. It varies; the same as in the case of every other agricultural product.

Mr. WILLIAMS. I understand that.

Mr. BRISTOW. Some of them make no profit; some have made, in rare instances, as much as the Senator from Kentucky says.

Mr. WILLIAMS. But what is the Senator's idea of the average net profit of the sugar-beet grower?

Mr. BRISTOW. The sugar-beet farmer can grow, as a rule, for each man about 10 acres, and he gets on an average in the United States \$55 an acre. He does well if he can average 10 tons per acre, making \$55 gross per acre for his crop. As to what his net profit is, nobody can tell. It depends upon the conditions.

Mr. WILLIAMS. But can not the Senator give me an approximate idea of the average net profit?

Mr. BRISTOW. I can not.

Mr. WILLIAMS. I ask, because if the average net profit, as has been asserted by some very conservative beet growers, is \$6 an acre—that being about the lowest estimate I have ever seen—I would undertake to grow rich in 10 years if I could make that on cotton.

Mr. BRISTOW. I believe the Senator from Mississippi is intellectually absolutely honest. If a sugar-beet farmer could grow as many acres of beets as he can of wheat or corn and make as much money per acre—

Mr. WILLIAMS. I am talking about the net profit.

Mr. BRISTOW. Well, net profit or any other kind of profit.

Mr. WILLIAMS. If the net income of growing sugar beets is \$6 an acre, I undertake to say that if I could make a net 10 years. So far, growing cotton has made me rather poor.

Mr. BRISTOW. It is not possible to estimate the average net profits of a farmer as it is of a business man. His work is entirely of a different character.

Mr. President, the Senator from Kentucky spoke of meat and bread, and said they should be as free as the air we breathe. But in this bill the Senator from Kentucky votes to put a duty on every stitch of clothing that a man wears, whether he be in the shop or the factory or upon the farm. If the meat and bread which the man eats should be as free as the water that he drinks and the air that he breathes, ought not the Senator from Kentucky also to favor making the clothing which the law compels him to wear as free as the meat and the bread? Yet the Senator taxes the clothing made in the mills and factories at from 25 to 50 per cent.

The Senator from Kentucky claims to be a friend of the farmer, yet on the article of flue spar, a mineral produced in the Senator's own county, in the State of Kentucky, he maintains in this bill a duty of 50 per cent, while the wool, the wheat, and the cattle which grow on the Kentucky farm he puts on the free list. That is the kind of a friend the Kentucky farmers have to represent them here on this floor.

The Senator defended the duty on whisky, and tried to make it appear that such duty was an internal-revenue tax and not a protective tax, when the Senator, who comes from the State which, he says, produces more whisky than any other State in the Union, knows that there is an internal-revenue tax of \$1.10 per gallon imposed on every gallon of whisky, foreign or domestic, that is consumed in the United States. He knows—and if he had been as frank as he expects other Senators to be he would have stated—that there is also a protective duty on every gallon of whisky that is imported into the United States of one dollar and a half a gallon in addition to the \$1.10 of internal-revenue duty. All of the tax on whisky could have been collected as internal-revenue tax as easily as to impose a customs duty upon it, but that would have left the distilleries of Ken-

tucky in competition with the world, and the Senator's kindly solicitude for them would not permit that.

Oh, no! This great patriot, who looms up so magnificently from the State of Kentucky to defend this tariff bill, imposes a protective duty of a dollar and a half per gallon on the whisky that is produced in Kentucky, a protection to the distilleries of the Blue Grass State, but he refuses to give the farmers who grow sheep in that State any protection upon the wool they grow. I would like for the Senator to answer me why he favors such an infamous policy, but as soon as I rise in my own right to answer his arguments this courageous Kentuckian leaves the Chamber.

The whisky distilleries of America are protected in this bill—oh, yes; but the farmers, upon whose industry and through whose toil the American Nation has been enriched, are turned over to the free competition of the earth, except those that may be growing tobacco or rice. The Senator would close the sugar factories of Louisiana and the beet-sugar factories of the West, but he would never close a distillery in Kentucky. Oh, no! The distilleries of the grand old Blue Grass State must have their protection. They are, without doubt, the friends of the Senator.

The Senator referred to the lamented McKinley; but he was not frank enough to tell the Senate of the United States that when the great McKinley uttered that statement there were but two beet-sugar factories in the United States; that it was after that date that the development of this great enterprise began. It was after the law which bears his signature had been placed upon the statute books that this industry began its wonderful development; and from the two factories that existed when the McKinley bill was passed there has grown a mighty industry, until to-day we have 73 factories, producing per annum about 700,000 tons of sugar, or one-fifth of the entire American consumption.

Ah, it may be broad-minded statesmanship to murder the great sugar industry which flourishes a thousand miles from the Senator's home State and protect the distilleries and the tobacco growers within his State, and, incidentally, a little flourspar in his home county, but I do not think so.

It has been the persistent policy of every great civilized nation, with one exception, to encourage domestic sugar production. Beginning, as I said in the Senate a few days since, with the great Napoleon, sugar-beet production has had the favor of every great commercial nation of the earth except one. But in the days of the development of this industry in France, Germany, Russia, Austria, and other European nations there was a different kind of statesman in control of the affairs of each of those countries from the statesmen that seem to flourish in this day in our country. It was under the mighty Bismarck that the German sugar-beet production was developed. Under the policies which he established it grew from practically nothing, until to-day the German Empire is supplying the entire demands of her own people and exporting more than a million tons of beet sugar per annum. In the development of her industrial life Germany had a Bismarck friendly to her people and proud of their enterprise, but she never had a James; that misfortune has fallen to us.

In France during the great administration of Thiers the sugar-beet industry grew, until to-day France is producing nearly every pound of sugar which her people consume. During that period there was no such statesman to interfere with the promotion of her prosperity and the development of her domestic industries as we have in control of our national affairs to-day. Her statesmen were not of the type of the latest arrival here from the grand old State of Kentucky.

The Senator, while he was explaining with such unctious the profits of the beet-sugar growers of the West, failed to state that beet culture is intensive farming; that one man can cultivate but comparatively a limited area; and that while one farmer may care for 100 acres of wheat or 50 acres of corn, he can care for only a comparatively small acreage of beets.

Senators, I think we should be frank in discussing the great economic questions that confront us—questions that ought to be settled here in the interest of a common country, and not through narrow partisan action.

The Senator refers to the Sugar Trust. Why, the Senator's action is what the Sugar Trust wants. The Sugar Trust refines sugar; it does not produce it. It buys the sugar that is grown in the Tropics. It imports it into the United States, refines it here, takes its toll, and then puts the refined product upon the American market. The refiners' trust desires free sugar because it will give it its raw material free. It does not want to pay a tax on its raw material. It takes the sugar that comes from the Tropics as its raw material, which under this bill comes in free, and then, by virtue of its great power, its monopoly, which

it has acquired through years of effort, it charges for its refined product whatever price it can. When the beet-sugar industry is destroyed, which the Senator from Kentucky desires to do, the American market is to be left to the Sugar Trust, to be plundered without domestic competition. This is what the Senator's bill favors.

The campaign for free sugar was started by the sugar refiners four years ago. It has been kept up continuously. The literature that has been circulated by the Senator himself and his political associates was largely prepared by representatives of the sugar refiners. Of course they want free sugar, for it is their raw material. I know that there are well-meaning men here, Senators on this floor, who would not favor the Sugar Trust, who have voted for free sugar; but, whether knowingly or inadvertently, when they cast that vote it was in the interest of the Sugar Trust and against the independent domestic producer.

Mr. WILLIAMS. Mr. President—

The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Mississippi?

Mr. BRISTOW. I do.

Mr. WILLIAMS. I should like to ask the Senator from Kansas one more question, and then I will not disturb him further. I thought he said a moment ago that a vote in favor of free sugar was a vote in favor of the Sugar Trust. Did I understand him correctly?

Mr. BRISTOW. My statement was, whether knowingly or inadvertently, that a vote for free sugar is a vote in favor of the Sugar Trust.

Mr. WILLIAMS. The Senator might just as well have answered my question categorically.

Mr. BRISTOW. The Senator from Mississippi asked me what I said, and I undertook to repeat it in substance.

Mr. WILLIAMS. The Senator might just as well have answered categorically by saying yes.

Now, I should like to ask the Senator to explain how permitting all the refined sugar in the world from Java, Sumatra, Cuba, Germany, France, wherever cane or beet sugar is grown, to come to the shores of the United States could be an advantage to the refiner of sugar in the United States?

Mr. BRISTOW. I will say to the Senator from Mississippi that the cheapest sugar-producing countries on earth are the tropical islands of Java, Cuba, Santo Domingo, and a few others. They produce raw sugar. There has never been a pound of sugar refined upon any of those islands.

Mr. WILLIAMS. But, Mr. President—

Mr. BRISTOW. If the Senator will just pardon me to answer his question, I will be glad to yield to him again. That raw sugar is purchased by the sugar refiner in New York, Philadelphia, and New Orleans, and it is taken to those sugar refineries and refined and placed upon the market, and they can compete with any refiner on earth in Germany, England, or any place else; and when they can get their raw sugar as they can from these islands they do not need any protection against the beet-sugar producers of Germany, because they can undersell them, and the beet-sugar producers will not send their sugar here, because they can not do so at a profit.

Mr. WILLIAMS. Mr. President, I understand that hitherto, of course, there has not been any refined sugar to any appreciable extent imported into the United States, and very little of it exported from the tropical islands to any country of the world.

Mr. BRISTOW. None of it.

Mr. WILLIAMS. Well, yes; the Senator must not go too far.

Mr. BRISTOW. I have not gone too far in that statement.

Mr. WILLIAMS. I understand the reason hitherto has been that every civilized country in the world, every European country in the world—and I mean by European country a country of European race—has fixed a duty upon refined sugar that renders it impossible for tropical countries to refine sugar and export it. But when we put refined sugar upon the free list, does the Senator pretend to tell the American people, as he is honest in purpose and honest in thought, that they will not refine sugar in Cuba and in Sumatra and in Java?

Mr. BRISTOW. I do.

Mr. WILLIAMS. If the Senator does pretend to tell us that, then I ask him if the reason why they can not refine sugar in those countries is because they have so much less to pay for labor?

Mr. BRISTOW. Oh, no. The reason why they do not refine it there is because the climatic conditions do not seem to invite it. The truth is that England refines the sugar that is consumed in England. It never has been refined in the British colonies. Canada refines her sugar. Even in our own country

we import it into continental United States to refine it from Hawaii and Porto Rico.

Mr. WILLIAMS. Then, if it be true that those countries which are afflicted with pauper labor can not refine sugar in competition with us, and the labor employed in sugar refinement is very unskilled labor, why is it that the Senator and his co-peers contend that pauper labor is dangerous to all of them?

Now, one minute before you answer that. I agree with you that when you bring a ton of raw sugar into an American refinery the American refinery can refine it cheaper than it can be refined in Cuba or Java. Yet the Senator must confess that the price of labor in Cuba and in Java and in Sumatra runs from one-half to one-fifth of the price of labor in the American market. Therefore, if it be true, as he has said, that our refiners can compete with the world in refining raw sugar it must be because of the superior ability of American labor and American machinery.

Mr. BRISTOW. The pauper labor which the Senator speaks of would be unfit, I take it, for the purposes of the refiners. At least we have the fact undisputed that refineries are not successful and never have been so in the Tropics.

Mr. WILLIAMS. But does the Senator contend that that is on account of climatic reasons?

Mr. BRISTOW. England has had her sugar—

Mr. WILLIAMS. Wait a moment. Does the Senator contend that the reason why sugar has never hitherto been refined in the Tropics and exported from the Tropics in a refined condition is because of climatic reasons?

Mr. BRISTOW. I think that was one of the reasons.

Mr. WILLIAMS. There is not the slightest basis for that opinion.

Mr. BRISTOW. I think there is.

Mr. WILLIAMS. Sugar can be refined as well when the thermometer is at 110 as when it is at 68. It must be because of labor conditions.

Mr. BRISTOW. The Senator may think that is the reason. It may not be—

Mr. STONE. If the Senator will pardon me to make a single observation, there is universal talk around here on both sides of the Chamber tending to a wondering anxiety to know when this sing-sing wrangle and mere repetition of what we have heard here in this Chamber forty times within the last two or three months is to end.

Mr. BRISTOW. I appreciate the very courteous—

Mr. STONE. We are getting impatient and weary. These colloquies, these conversations and orations, are not entertaining to Senators who are supposed to listen.

Mr. BRISTOW. I thank the Senator for his very courteous remark, made in my time, through my courtesy. I heard no such suggestions from him during the fulminations of the distinguished Senator from Kentucky.

Mr. President, I believe I have said about all I care to say upon this question at the present time. I oppose this bill because of its unwarranted and indefensible discrimination against certain American producers, especially the farmer of the West. The tobacco and rice growers have been tenderly cared for. But the western farmer has been treated as though he were unworthy the consideration of the American Congress. There are many schedules in this bill the duties of which I think have been fixed with fair consideration to the industries involved, but unfortunately those of us who seek fairness to our sections and a reasonable protective duty on all industries that need it are prevented from voting for the measure because it contains, from our point of view, iniquities which are indefensible, and for which we can not stand.

Mr. BACON. Mr. President, I shall occupy not exceeding two minutes of the Senate's time, but late as it is I think I or some other Senator ought to say a word in regard to the rules of the Senate.

Precedents are very serious things in the Senate, and I wish to say with the profoundest respect for the Vice President and with the greatest deference that I trust he will revise and reconsider the statement made from the Chair to-night that there is nothing in the rules of this body which gives to the presiding officer the power to preserve order in the Chamber either on the floor or in the galleries. I do not wish to elaborate it, Mr. President, and only allude to it now for the reason that if it passed without challenge it might be considered as a precedent in which the Senate had acquiesced.

I repeat that with the profoundest respect for the Vice President and with the utmost deference I differ from the opinion of the Chair that there is nothing in the rules which lodges that power in the hands of the presiding officer.

It is not necessary, Mr. President, that there should be a rule in words to that effect. It is a fundamental, inherent rule in

every parliamentary body that it shall protect itself against disorder, and that its proceedings shall not be interfered with or influenced by any action or by any word or by any sound from those who are not members of the body.

It is a fundamental, necessary, inherent rule. No sound, Mr. President, is authorized in a parliamentary body, no voice is authorized to be heard in a parliamentary body, except the voices of those who are members of that body, and any utterance or any sound of any kind whatsoever is an invasion of the fundamental right and the essential right of every parliamentary body, and only in so far as a parliamentary body may permit it by its custom can it at all be recognized. It is not necessary that there should be a rule against interference or interruption. It is not necessary that there should be a rule to permit it before it can be recognized.

Now, Mr. President, I repeat that I do this with the utmost deference for the presiding officer, and I only do so because not only myself but other Senators thought that the Senate should not adjourn with a precedent to that effect established which might come to plague us in the future.

I do not know that I should have said more than simply to have asked the Chair to revise and reconsider in order that this might not pass into the records of the Senate as a precedent.

I say this, I repeat, with the utmost deference and trust that it will be received in the spirit in which it is intended.

The VICE PRESIDENT. The Chair thinks that calls on the Chair to say something. The Chair proposes to say that the Chair has no predilection upon the subject whatever. Since the Chair has been presiding over this body the Chair has observed when there are manifestations of approval in the galleries that meet with the pleasure of Senators it would not be disorder, but if there are manifestations in the galleries that meet with the disapproval of Senators it is disorder.

The Chair has tried to have what he thought were the rules of the Senate enforced. What constitutes disorder the Chair has assumed was a question finally for the Senate itself to determine. The Chair may as well say right here that as much confusion has occurred among the Senators themselves as ever occurred in the galleries, and it very frequently occurs by those who are most desirous of having order preserved in the Senate.

Now, the Chair has not the slightest objection in the world, and would prefer to require that no manifestations should be made whatever in the galleries if the Senate will back the Chair up and order the galleries to be cleared if they do make any manifestations. But upon a pretty careful examination of what is called the precedents the Chair has found that where there was so-called disorder it has been suppressed at the instance of a Senator and not at the instance of the presiding officer. Motion after motion has been made by Senators to require the galleries to be cleared.

The Chair has not the slightest objection in the world, but it is personally agreeable to the Chair to suppress, if possible, every manifestation in the galleries. But whether that constitutes disorder or not the Chair would prefer to have the opinion of the Senate and not take his own opinion on the subject. The Chair desires to say to the Senator from Georgia [Mr. BACON] that the Chair has been trying since that ruling was made to investigate the question and not violate any rule and to endeavor to preserve, as far as possible, order in the Senate of the United States; and this will not be taken as any precedent, because the Chair is not one of those who is bound by any precedent. The Chair simply desires to do right.

Mr. BACON. Mr. President, there is a unanimous consent which requires that we should to-night have an executive session. I think it will require a very short one.

Mr. SIMMONS. I hope the Senator will not call that matter up at this time.

Mr. BACON. I will not if there is any purpose on the part of the Senator that the present session shall be continued.

Mr. GALLINGER. Mr. President, disclaiming, as the Senator from Georgia [Mr. BACON] has disclaimed, any purpose to criticize the Chair, because unquestionably the Chair acted as he construed the rules and precedents of the Senate, and differing somewhat from the Senator from Georgia in his suggestion that no rule is required to preserve order in this body, and especially in the galleries, I give notice of an amendment to the rules of the Senate, which will bring the matter directly before the Committee on Rules. Therefore, Mr. President, I offer what I send to the Chair.

The VICE PRESIDENT. The Secretary will read it.

The SECRETARY. Mr. GALLINGER gives notice that he will on to-morrow or some subsequent day present an amendment to the rules as follows.

Add to Rule XIX the following:

It shall be the duty of the presiding officer to preserve order both in the Chamber and in the galleries, and if disorder in the galleries is persisted in, the Sergeant at Arms shall exercise his authority even to the extent of clearing the galleries.

The VICE PRESIDENT. The notice will lie over one day under the rule.

Mr. BACON. Mr. President, I will say for my own justification that so far as applause in the galleries to-night was concerned, I was in sympathy with the sentiment which evoked the applause, and I simply rose because I thought the Chair announced a rule which I believe it would be dangerous to permit to remain to be thereafter accepted as a precedent.

Mr. STONE. Mr. President, I should like to add for the consideration of the committee, as this resolution goes to the committee, that the responsibility of clearing the galleries does not rest with the Sergeant at Arms. The language of the resolution is that the Sergeant at Arms shall preserve order even to the extent of clearing the galleries. That would be a very difficult and delicate responsibility to impose upon the Sergeant at Arms. I think the presiding officer or the Senate ought to do it.

Mr. GALLINGER. Mr. President, just a word. The proposed amendment, which I may modify to some extent when I offer it, will go to the Committee on Rules, and if it is not in proper form the Committee on Rules can shape it. I myself think that there are some words in it that ought to be changed, but I submit it to-night simply as a notice.

The VICE PRESIDENT. The question is on the amendment offered by the Senator from Louisiana [Mr. RANDELL].

Mr. THORNTON. I ask for the yeas and nays on the amendment.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. STERLING (when Mr. CRAWFORD's name was called). I announce the necessary absence of my colleague [Mr. CRAWFORD] and the fact that he is paired with the Senator from Tennessee [Mr. LEA]. If he were present and at liberty to vote, my colleague would vote "yea."

Mr. KERN (when his name was called). On account of my pair with the Senator from Kentucky [Mr. BRADLEY] I withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. OVERMAN (when his name was called). I have a general pair with the senior Senator from California [Mr. PERKINS], who is absent on account of sickness. He being absent, I withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. THOMAS (when his name was called). I transfer my pair with the senior Senator from Ohio [Mr. BURTON] to the senior Senator from Nevada [Mr. NEWLANDS] and vote "nay."

The roll call was concluded.

Mr. REED. I am paired with the Senator from Michigan [Mr. SMITH] and am unable to secure a pair. I therefore withhold my vote. If I were at liberty to vote, I should vote "nay."

Mr. LEA. I again announce my pair with the Senator from South Dakota [Mr. CRAWFORD]. I have been unable to secure a transfer. If at liberty to vote, I should vote "nay."

Mr. BRYAN. I am paired with the junior Senator from Michigan [Mr. TOWNSEND]. In his absence I withhold my vote. If at liberty to vote, I should vote "nay."

Mr. LEWIS. I beg to reannounce my pair with the junior Senator from North Dakota [Mr. GRONNA]. If he were here, I should vote "nay."

Mr. GALLINGER. I desire to announce the absence of the junior Senator from Maine [Mr. BURLEIGH] on account of protracted illness. I also desire to announce the pairs of the Senator from Delaware [Mr. DU PONT] with the Senator from Texas [Mr. CULBERSON], and the Senator from Wisconsin [Mr. STEPHENSON] with the Senator from South Carolina [Mr. TILLMAN].

The result was announced—yeas 36, nays 38, as follows:

YEAS—36.

Borah	Dillingham	McCumber	Root
Brady	Fall	McLean	Sherman
Brandegge	Gallinger	Nelson	Smoot
Bristow	Jackson	Norris	Sterling
Catron	Jones	Oliver	Sutherland
Clapp	Kenyon	Page	Thornton
Clark, Wyo.	La Follette	Penrose	Warren
Colt	Lippitt	Polindexter	Weeks
Cummins	Lodge	Ransdell	Works

NAYS—38.

Aslurst	Fletcher	James	Myers
Bacon	Gore	Johnson	O'Gorman
Chamberlain	Hitchcock	Lane	Owen
Chilton	Hollis	Martin, Va.	Pittman
Clarke, Ark.	Hughes	Martine, N. J.	Pomerene

Robinson	Shively	Smith, S. C.	Vardaman
Saulsbury	Simmons	Stone	Walsh
Shafroth	Smith, Ariz.	Swanson	Williams
Sheppard	Smith, Ga.	Thomas	
Shields	Smith, Md.	Thompson	

NOT VOTING—21.

Bankhead	Culbertson	Lewis	Stephenson
Bradley	du Pont	Newlands	Tillman
Bryan	Goff	Overman	Townsend
Burleigh	Gronna	Perkins	
Burton	Kern	Reed	
Crawford	Lea	Smith, Mich.	

So Mr. RANDELL's amendment was rejected.

The VICE PRESIDENT. What is the pleasure of the Senator from North Carolina [Mr. SIMMONS]? Shall the reservations of amendments be taken up in order?

Mr. SIMMONS. Mr. President, I ask unanimous consent that we vote on to-morrow upon this bill and all amendments thereto at 4 o'clock, or not later than 4 o'clock—

Mr. GALLINGER. Commence voting?

Mr. SIMMONS. And that when the Senate adjourns to-night, it adjourn to meet at 9 o'clock to-morrow morning.

Mr. GALLINGER. I assume the Senator from North Carolina means that we shall commence voting at 4 o'clock on all amendments pending and to be offered without debate.

Mr. SIMMONS. That is what I mean. Of course I was going to put it in some orderly form, but that is the proposition which I wish to submit.

Mr. GALLINGER. Not later than 4 o'clock.

Mr. SIMMONS. Not later than 4 o'clock.

The VICE PRESIDENT. The Secretary will state the request for the unanimous-consent agreement.

The Secretary read as follows:

It is agreed by unanimous consent that when the Senate adjourns to-day it will be to meet to-morrow at 9 o'clock a. m., and that on to-morrow, Tuesday, September 9, 1913, at not later than 4 o'clock p. m., the Senate will proceed, without further debate, to vote upon any amendment that may be pending to the bill, any amendments that may be offered, and upon the final passage of the bill—House bill 3321 to reduce tariff duties, and so forth.

The VICE PRESIDENT. Is there objection to the unanimous-consent agreement as read by the Secretary?

Mr. OLIVER. I object to meeting at 9 o'clock in the morning. I do not see why we can not meet at 10 o'clock a. m. and vote at 5 o'clock p. m.

Mr. SIMMONS. I will change the request for unanimous consent to conform to the request of the Senator without saying anything about meeting at 9 o'clock, if the Senator objects on that account. I will simply ask that not later than 4 o'clock to-morrow the Senate begin to vote upon the amendments and the bill.

Mr. OLIVER. I withdraw my objection.

Mr. SIMMONS. Then I return to my original proposition, Mr. President.

Mr. BRISTOW. Mr. President, I ask that the request for unanimous consent be amended so that any amendment may be offered after 4 o'clock and that the Senator offering the amendment may have not more than five minutes to explain its provisions. I make this request, because frequently upon occasions of this kind amendments are offered, and the one who offers them can not say a word about them, so that it is impossible to know just what effect an amendment will have upon a particular paragraph; and so Senators are compelled to vote blindly. This proposition will not delay the consideration of the bill any material length of time, and it will be a very great convenience. I should like to have that provision incorporated in the agreement.

Mr. SIMMONS. I accept the suggestion of the Senator from Kansas.

The VICE PRESIDENT. The Secretary will read the proposed agreement as modified.

The SECRETARY. The Senator from North Carolina asks unanimous consent that when the Senate adjourns to-day it adjourn to meet to-morrow at 9 o'clock a. m.; that on to-morrow, Tuesday, September 9, 1913, at not later than 4 o'clock p. m. the Senate, without further debate, will begin to vote upon any amendment that may be pending to the bill, any amendments that may be offered to the bill, and upon the final passage of the bill; and that a Senator proposing an amendment after 4 o'clock shall be given not more than five minutes in which to explain his amendment.

Mr. NORRIS. Mr. President, I should like to ask a question of the Senator from North Carolina. Why could we not make the hour 5 o'clock instead of 4 o'clock? What is the objection to making it 5?

Mr. SIMMONS. I will say to the Senator that it was largely to subserve the convenience of a Senator whom we all want to favor in a matter of very great importance to him. If we begin

voting at 4 o'clock to-morrow, I think ample time will be afforded for discussion. We can go on to-night.

Mr. NORRIS. Yes.

Mr. SIMMONS. I am willing to go on until 1 o'clock or 2 o'clock, if desired, and we will have ample time to finish the business and give every Senator an opportunity, I think, to discuss amendments to the fullest extent.

Mr. NORRIS. It occurred to me that if we began to vote at 5 o'clock it would give ample time for the Senate to adjourn at a reasonable hour.

Mr. SIMMONS. Certainly not with the provision that Senators will have 5 minutes in which to explain any amendment that may be offered.

Mr. NORRIS. There will be no disposition, I assume, to have that stipulation in a unanimous-consent agreement if the hour be fixed later and made 5 o'clock instead of 4 o'clock.

Mr. SIMMONS. I trust the Senator will not make an objection.

Mr. NORRIS. I am not going to make an objection; but I will say to the Senator that we would be more apt to get an agreement if the hour were fixed at 5 o'clock, and that there would be nothing unfair about it.

Mr. SIMMONS. I will say to the Senator that we have been discussing this matter for the last two or three hours, and it is about the best arrangement that we have been able to make.

Mr. NORRIS. But the objection always made is that much of the time, possibly, may be taken up by one Senator in debate and the remaining time will be too short. Personally I have an idea that we will get through before 4 o'clock, but some Senator may take the floor and keep the floor all day, in which case others who have short explanations to make would not be able to make them.

Mr. SIMMONS. I think I can assure the Senator that not an hour will be taken up in debate on the part of Senators on this side of the Chamber to-morrow unless some Senator shall decide to speak who has not done so up to this time and has not notified me.

The VICE PRESIDENT. Is it the pleasure of the Senate that the unanimous-consent agreement as read by the Secretary shall be entered into?

Mr. LA FOLLETTE. I should like to inquire how many amendments which have been offered to this bill are now pending and not disposed of?

The VICE PRESIDENT. There have been 28 reservations made, the Chair is informed.

Mr. LA FOLLETTE. If I can have the attention of the Senator from North Carolina, I suggest that he include in the proposed unanimous-consent agreement—

Mr. NORRIS. We are unable to hear the Senator.

Mr. ASHURST. Mr. President, would Senators on the other side object to taking this side into their confidence somewhat, and speak a little louder?

Mr. LA FOLLETTE. We would if that side would cease conversation and show an interest in what is going on.

Mr. ASHURST. This side has not indulged in any conversation, but has listened with great interest to try to hear what was being said on the other side.

Mr. MARTINE of New Jersey. I assure the Senator that we are deeply interested.

Mr. SIMMONS. Regular order!

Mr. LA FOLLETTE. I will suggest to the Senator from North Carolina that he amend his request for unanimous consent to include a disposition of all the pending amendments before the Senate adjourns to-night, and that the hour fixed for voting to-morrow be 5 o'clock instead of 4.

Mr. SIMMONS. Does the Senator mean that before we adjourn to-night we are to pass upon all the amendments?

Mr. LA FOLLETTE. Yes.

Mr. SIMMONS. Well, if we do that what is the necessity of taking up any time to-morrow?

Mr. LA FOLLETTE. I fancy that there may be some amendments offered to-morrow.

Mr. SIMMONS. But I understood the Senator to suggest that we conclude all amendments to night.

Mr. LA FOLLETTE. All amendments that have been offered.

Mr. MARTINE of New Jersey. Will the Senator from Wisconsin yield to me?

The VICE PRESIDENT. Does the Senator from Wisconsin yield to the Senator from New Jersey?

Mr. LA FOLLETTE. I have not the floor.

Mr. MARTINE of New Jersey. I desire to suggest to the Senator from Wisconsin that it would be wiser to make it 6 o'clock instead of 5. It would be nearer daylight at 6 o'clock in the morning than it would be at 5, and it would be in-

initely more comfortable for most of us to perambulate to our respective homes in daylight than in a miserable twilight. [Laughter.]

Mr. SIMMONS. I ask that the request be put to the Senate.

The VICE PRESIDENT. The question is, Shall the proposed unanimous-consent agreement as read be entered into? Is there objection?

Mr. POINDEXTER. I should like to hear the request for unanimous consent read again. There has been a good deal of discussion about the terms of the proposed unanimous-consent agreement.

The VICE PRESIDENT. The Secretary will again read the request for unanimous consent.

The Secretary read as follows:

It is agreed by unanimous consent that when the Senate adjourns to-day it will be to meet to-morrow at 9 o'clock a. m.; and that on to-morrow, Tuesday, September 9, 1913, at not later than 4 o'clock p. m., the Senate will proceed, without further debate, to vote upon any amendment that may be pending to the bill, any amendments that may be offered, and upon the final passage of the bill, House bill 3321, to reduce tariff duties, and so forth; and further, that the Senator proposing an amendment after the hour of 4 o'clock p. m. shall have not more than five minutes' time in which to explain such amendment.

The VICE PRESIDENT. Shall that unanimous-consent agreement be entered into?

Mr. WILLIAMS. Mr. President, it seems to me it would be clearer and better to have an hour fixed at which the voting must begin upon the bill and all amendments now pending or hereafter offered, and when the voting begins that the voting should continue without debate. It is perfectly possible that we might begin to vote at 4 o'clock, with an allowance of five minutes to everybody to explain his amendment—

Mr. SIMMONS. No; the Senator misunderstands that. It is only to the Senator offering the amendment after 4 o'clock.

Mr. WILLIAMS. I understand that. But if each Senator offering an amendment takes five minutes and 10 Senators offer such amendments, that is 50 minutes. I understood we were trying to fix this time so that one of our colleagues who must leave the Chamber at 5 o'clock may be able to leave at that time.

Mr. SIMMONS. Does the Senator from Mississippi understand that the request applies only to amendments offered after 4 o'clock?

Mr. WILLIAMS. I understand that.

Mr. SIMMONS. And that it would not apply to amendments offered before 4 o'clock or to amendments now pending?

Mr. WILLIAMS. As I understand, the agreement is that as to amendments not now pending the proponents of the amendments shall have five minutes apiece. Is that it?

Mr. SIMMONS. I understand that is satisfactory to the Senator from Virginia.

Mr. WILLIAMS. That is all right, then.

Mr. BRISTOW. Mr. President, just as it reads is the way I want it.

Mr. JONES. I wish to ask how the reserved amendments will be taken up—whether they will be taken up first, or whether any other amendments can be offered before the reserved amendments are disposed of?

Mr. SIMMONS. We are going to take them up to-night.

Mr. JONES. The reserved amendments are to be taken up and disposed of to-night?

Mr. MARTIN of Virginia. That is the purpose.

The VICE PRESIDENT. Is there objection?

Mr. MARTINE of New Jersey. Will the Chair please state the proposition?

The VICE PRESIDENT. If the Senate will be in order, the Secretary will again state the proposed unanimous-consent agreement.

The SECRETARY. It is agreed by unanimous consent that when the Senate adjourns to-day it will be to meet to-morrow at 9 o'clock a. m.; and that on to-morrow, Tuesday, September 9, 1913, at not later than 4 o'clock p. m., the Senate will proceed, without further debate, to vote upon any amendment that may be pending to the bill, any amendments that may be offered, and upon the final passage of the bill (H. R. 3321) to reduce tariff duties, and so forth; and, further, that the Senator proposing an amendment after the hour of 4 o'clock p. m. shall have not more than five minutes' time in which to explain such amendment.

The VICE PRESIDENT. Is there objection to entering into that agreement? The Chair hears none, and unanimous consent is given.

Mr. LA FOLLETTE. I offer an amendment at this time to the pending bill, which I ask may be printed and lie on the table.

The VICE PRESIDENT. The amendment will lie on the table and be printed.

Mr. SIMMONS. Mr. President, I ask that the next reserved amendment may be laid before the Senate.

The VICE PRESIDENT. Shall they be taken up in the order in which they were reserved, or in the order in which they appear in the bill?

Mr. SIMMONS. The order in which they were reserved, I should say, would be a good order.

The SECRETARY. The Senator from Washington [Mr. JONES] made the first reservation. The committee proposes to strike out "J," subsection 7, on page 263, or all the words printed in lines 11, 12, 13, and 14.

Mr. JONES. Mr. President, I offer an amendment in the nature of a substitute for that amendment.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. The Senator from Washington [Mr. JONES] offers, as a substitute for the words agreed to be stricken out, the following:

J. Subsection 7. That upon all goods, wares, and merchandise imported under the provisions of this act in vessels not built or not registered prior to the passage of this act under the laws of the United States, there shall be imposed and collected a duty of 10 per cent ad valorem in addition to the duties otherwise imposed by this act, and on such goods, wares, and merchandise as are otherwise admitted free there shall be imposed and collected a duty of 5 per cent ad valorem if imported in vessels not built or not registered under the laws of the United States; *Provided*, That the President is directed to cause to be abrogated without unnecessary delay, and in the manner therein provided, all treaties which contravene this provision; and, until so abrogated, this provision shall not apply to goods, wares, and merchandise imported in vessels affected by such treaties.

Mr. JONES. Mr. President, the provision stricken out is one of the most important in this bill. It provides in brief that a discount of 5 per cent on all duties imposed by this act shall be allowed on goods, wares, and merchandise imported in American ships. The purpose of it evidently is to do something to build up the merchant marine of this country, which is now in such a deplorable condition.

PURPOSE OF AMENDMENT.

The purpose of my amendment is to impose a duty of 10 per cent additional upon such goods imported in foreign vessels; that is, in vessels not built in this country or not registered prior to the passage of this act. It will be noted that the provision in the bill does not relate to vessels built in this country at all, but to vessels registered; so that it would apply not only to vessels registered before the passage of the act, but to any vessel registered afterwards, whether built in this country or not.

The House provision is an attempt—a slight one, I grant you, but an honest attempt—to remedy a situation which all patriotic citizens must deplore. It is to be regretted that the Senate committee has stricken out this provision and offered nothing in its place. It is incomprehensible to me that such action should have been taken by them, and I earnestly hope that they will not adhere to such action. This is not a party proposition and should not be made such. I am glad to support action along the lines of the House provision and will vote for that if we can not get something better.

GREAT GROWTH OF FOREIGN TRADE.

Our foreign trade has been increasing with wonderful strides notwithstanding the tariff barrier which our Democratic friends claim we have been maintaining; and while I do not intend to argue this question, the facts conclusively show such a claim to be absolutely unfounded.

Under the Dingley Act our imports in 1898 amounted to \$616,049,654 and our exports to \$1,231,482,330. In 1909 our imports had increased to \$1,311,920,224 and our exports had increased to \$1,663,011,104. Our total trade in 1898 was \$1,847,531,984, while in 1909 our total trade amounted to \$2,974,931,328, or an increase in 11 years in our total foreign trade of \$1,127,399,344.

Under the Payne-Aldrich Act in 1913 our import trade amounted to \$1,812,978,234, while our export trade amounted to \$2,465,884,149. Our total trade in 1913 amounted to \$4,278,862,383, or an increase in four years under the Payne-Aldrich bill of \$1,303,831,055.

NO NATION CAN EQUAL IT.

We have a right to be proud of the tremendous growth of our foreign trade. No nation in the world's history can equal it, but when we see how it is carried we are filled with shame. Practically all of this great trade is by the sea, over highways which are free to all. We have granted great land subsidies to encourage lines of land transportation, not alone to build up the country, but to enable products to get to market, realizing that returns will be slight if our people must depend upon the markets in the immediate vicinity of production. We seem to be satisfied, however, with getting our products to the seashore and are apparently willing to depend upon foreign ships,

foreign peoples, and foreign flags to take our products to the world's markets.

The farmer who depends upon his neighbor to get his crops to market would be considered foolish and no one would be surprised if his grain was not hauled at the proper time or put on the market in bad shape. The nations of the world must indeed laugh in their sleeves at the sorry spectacle presented by Uncle Sam in the transportation of his foreign commerce.

SOME STARTLING FIGURES.

In 1885 our ships carried \$194,865,743 of our foreign trade, while foreign ships carried \$1,274,384,309 or six times as much. In 1913 our ships carried \$378,234,924, while foreign ships carried \$3,375,284,022, or nearly ten times the amount carried in our own ships. The percentage of such goods carried in our ships was but 8.7. Since 1885—and I call special attention to this—foreign ships have carried over \$50,000,000,000 of our foreign commerce. Estimating the freight at 15 per cent, we have paid them over \$7,500,000,000 for getting our products to their markets and supplying our own. Of what benefit is a balance of trade in our favor if we pay out most of it for freight? We should have done at least 50 per cent of our foreign business, and this would have added two or three billions of dollars to our balance of trade and increased wonderfully our prosperity. Hired freight is just as expensive as so much of any other product, and freight saved by our people is freight earned.

CONDITION HUMILIATING, UNPROFITABLE, DANGEROUS.

Not only is this condition of things humiliating and unprofitable, but it is actually dangerous. British ships transport the greater part of our foreign commerce. Suppose England should engage in a war with a great power. Thousands of her ships would be taken for transports and other thousands might be destroyed. Our foreign commerce would be destroyed, and the products we now send abroad would be left on our hands, glutting our markets and bringing upon us industrial ruin and widespread commercial disaster. Farmers and manufacturers would suffer alike, and the laborer and his family would face the wolf of hunger in his home. We are at the very point where Thomas Jefferson, whom I have heard referred to to-night as the patron saint of the Democratic Party, said protective and defensive measures become necessary. He said:

If particular nations grasp at undue shares of our commerce, and, more especially, if they seize on the means of the United States to convert them into alimony for their own strength, and withdraw them entirely from the support of those to whom they belong, defensive and protective measures become necessary on the part of the nation whose marine resources are thus invaded; or it will be disarmed of its defense, its productions will be at the mercy of the nation which has possessed itself exclusively of the means of carrying them, and its politics may be influenced by those who command its commerce.

OUR POLITICS INFLUENCED BY OUR FOREIGN CARRIERS.

Our productions are now almost at the mercy of foreign nations and in a large degree they have influenced our politics. Their influence affects this very bill. Such a condition should no longer be tolerated; at least we should make some attempt to remedy it if we would merit our own self-respect.

NO SHIPS FOR AUXILIARY NAVAL PURPOSES.

We are building the Panama Canal at a cost of nearly \$500,000,000, and I have been reliably informed that much of the material used in its construction has been carried there under a foreign flag, and when it is completed the American flag passing through it in the foreign commerce will be a curiosity. A few years ago a great fleet of American battle-ships sailed from the Atlantic to the Pacific and around the world, but they were accompanied by foreign ships flying foreign flags, carrying the coal necessary to furnish the motive power to take them on their journey. To-day the coal for one naval station on the Pacific is carried in foreign ships. What a spectacle for the nations of the earth! If this one humiliating fact could ring in the ears of every true, patriotic American he would insist that some steps be taken at once by his representatives to prevent its recurrence.

If foreign ships must convoy our fleets in time of peace, what would we do in war, with the ships of neutral nations forbidden to assist us by the law of nations? Our battleships would be helpless; we would be "disarmed of our defense"; we are disarmed of it now.

OUR COURAGEOUS AND STATESMANLIKE ANCESTORS.

Has this always been our position? It was so at the close of the Revolutionary War, when only 17 per cent of our import trade and 30 per cent of our export trade was in the hands of our own shippers and under our flag. Did the fathers of the Republic accept this condition supinely? Not at all. They knew that the flag in a foreign port on a merchant ship is the ocean's commercial traveler and increases and develops its country's trade. They knew that the lack of a merchant marine was a great source of weakness, humiliating in time of peace,

dangerous in time of war, and a constant menace to commercial stability. They were patriots and men of action and took immediate steps to increase our tonnage in the foreign trade.

The first act passed by the American Congress was the act of July 4, 1789, and section 5 allowed a discount of 10 per cent of the duties provided therein on goods, wares, and merchandise when imported in American-built vessels.

THE EARLY SUCCESSFUL AMERICAN POLICY.

This is exactly in line with the provision inserted in the bill by the House, except that at that time the discount allowed was 10 per cent instead of 5, as provided in the bill, and only to vessels built in the United States. Sixteen days afterwards another act was passed imposing discriminating tonnage taxes, 6 cents per ton on American vessels, 30 cents on American-built vessels owned by foreigners, and 50 cents per ton on foreign-built-and-owned vessels. Another act was passed prohibiting any but American vessels from carrying the American flag.

In 1790 a new law was passed providing for an additional duty of 10 per cent on goods brought into the country in foreign ships.

This is substantially the provision of the amendment which I have proposed. Our fathers found that the act of 1789 was not bringing the most satisfactory returns, and consequently they changed it, and instead of allowing a discount of 10 per cent on goods imported in American ships they added 10 per cent on goods brought in in foreign ships. This provision proved wise, and was renewed from time to time with the approval and at the instance of the founders of the Democratic Party. In 1804 an act of this kind was signed by Thomas Jefferson, the political idol of the Senator from Mississippi. Another was approved by James Madison.

POLICY SHOULD BE READOPTED.

This is the policy which I should like to see adopted by the Senate. I think it is a policy that can well be adopted by our Democratic friends. They can well afford to return to the policy of the founders of their party, from which the results were so immediate and so gratifying and which abundantly proved the wisdom of the measures taken. In 1795 our ships carried 92 per cent of our imports and 88 per cent of our exports. The law of 1790, increasing the duties on all goods, wares, and merchandise imported in foreign ships by 10 per cent, was reenacted from time to time, a law of this kind being passed in 1804 and signed by Thomas Jefferson. Notwithstanding the embargo acts, orders in council, and the harassing of our shipping by England and France, our flag carried 93 per cent of our imports in 1810 and 90 per cent of our exports. In 1815, after the War of 1812, our ships carried 77 per cent of the imports and 71 per cent of our exports, and in 1826 95 per cent of our imports and 89.6 per cent of our exports were carried in our ships, and our flag waved over every sea and greeted the morning sun in every commercial harbor of the world. In 1830 we dropped to 93.6 per cent of the imports and 86.3 per cent of the exports; in 1835, to 90.2 per cent of the imports and 77.3 per cent of the exports; in 1845, to 87.3 per cent of the imports and 75.3 per cent of the exports; in 1850, to 77.3 per cent of the imports and 65.5 per cent of the exports; in 1860, to 63 per cent of the imports and 69.7 per cent of the exports, or a total decrease from 1825 to 1860 of 32.2 per cent in the import trade and 19.5 per cent in the export trade.

ANTE-BELLUM SHIPPING DECLINE.

I submit a table giving the percentages for the first and last years of each five-year period; and while some years the per centum was a little higher than others, there was a general decline, as shown above, and it clearly appears that the decline in our shipping began long before the Civil War. In 1865 our ships carried 27.7 per cent of our total foreign trade and in 1870 35.6 per cent, from which time there was a gradual decline, until now we do but a very little over 8 per cent.

Year.	Imports.	Exports.
1789.....	17.5	30.0
1795.....	92.0	88.0
1796.....	174.5	158.0

1856.....	78.1	70.9
1860.....	63.0	69.7

Why is it that our merchant marine is no more? Why was it that from 1826 down to the beginning of the Civil War our share of our carrying trade grew steadily less?

LAW AND TREATIES THAT DESTROYED OUR SHIPPING.

The answer is plain to me. The legislation of the fathers had been so successful in promoting our shipping trade and industry that our people came to the conclusion that we could command the seas against any competitor, and so in 1815 a treaty was entered into with England reciprocally removing the discriminating duties on goods brought into each country in the ships of the other and similar treaties were made with other countries. These treaties were usually made for a definite time and afterwards renewed to continue in force until abrogated by either party after a year's notice, the right of abrogation being expressly reserved to each party. Our shipping had received such an impetus from the encouragement given by the legislation of the fathers that it more than held its own, and in 1828 Congress passed an act which reads as follows:

THE ACT THAT HAS DESTROYED OUR SHIPPING POWER.

That upon satisfactory evidence being given to the President of the United States, by the Government of any foreign nation, that no discriminating duties of tonnage or impost are imposed or levied in the ports of said nation upon vessels wholly belonging to citizens of the United States, or upon the produce, manufactures, or merchandise imported in the same from the United States, or from any foreign country, the President is hereby authorized to issue his proclamation declaring that the foreign discriminating duties of tonnage and impost within the United States are, and shall be suspended and discontinued so far as respects the vessels of the said foreign nation, and the produce, manufactures, and merchandise imported into the United States in the same from the said foreign nation, or from any other country; the said suspension to take effect from the time of such notification being given to the President of the United States, and to continue so long as the reciprocal exemption of vessels belonging to citizens of the United States and their cargoes, as aforesaid, shall be continued, and no longer.

It will be noted that this simply provides for a suspension of this policy and our right to recur to it is fully recognized.

REPRESENTATIVE UNDERWOOD QUOTED.

This act not only permitted the ships of a nation to bring in the products of that nation, but also the products of all other nations free from discriminating duties. This act was intended to establish reciprocal equality between this Nation and all other nations. We complied with its letter and spirit, but other nations did not, and, as Representative UNDERWOOD, the present leader of the Democratic majority in the House of Representatives—I hope my Democratic friends will note this—said in 1910:

The passage of the bill proved the undoing of the merchant marine and the policy it inaugurated has never been changed.

If other nations who accepted the terms of this legislation had observed the spirit of it, we would, no doubt, have been able to maintain our position of superiority, but they did not.

"Shipping nations," said Mr. UNDERWOOD, "were not honest enough between themselves for the application of free-trade principles in navigation and most of our rivals, while professing to practice a policy of nondiscrimination against American ships, acted unfairly and resorted to some form of ship protection, either by granting subsidies or bounties or by adopting other methods of discrimination against American ships."

That is not a statement from me; it is not a statement from any Republican. It is a statement from the Democratic leader of the House of Representatives and the real author of the pending bill.

WISE POLICY OF THE FATHERS.

Some may contend that it was the use of iron and the Civil War that caused the loss of our merchant marine. They overlook the decline of 32 per cent in the import trade and 19 per cent in the export trade during the period from 1828 to 1860, or prior to the war. The seeds of destruction were sown before the war and before iron ships, and the results began to appear years before. You may say what you will, but the facts are that under the policy of the fathers our shipping trade increased until the act of 1828 was passed, and from that time on that trade gradually and continuously decreased. It may be

foolish in me to trace these results to the act of 1828 and the subsidies and discriminations practiced by Great Britain, but no candid mind can escape from such a conclusion.

HOW BRITISH SHIPPING HAS BEEN PROTECTED.

Great Britain was our greatest rival in the ship-carrying trade. She looked with a jealous eye upon our great fleets of fast merchantmen. It was humiliating to the "Proud Mistress of the Seas" to have her supremacy threatened by her former colonies. The people, statesmen, and rulers of Great Britain had early seen the importance of a merchant fleet and for centuries they had fostered and protected this industry, and it may not be amiss to notice briefly the means she had taken to become the "Mistress of the Seas." It ought to be instructive to us in the present condition of our shipping. In 1381 an act was passed providing:

That for increasing the shipping of England, of late much diminished, none of the King's subjects shall hereafter ship any kind of merchandise, either outward or homeward, but only in ships of the King's subjects, on forfeiture of ships and merchandise, in which ships also the greater part of the crews shall be of the King's subjects.

CROMWELL'S DRASTIC BUT SUCCESSFUL POLICY.

This act was not of the permanent benefit that it was hoped it would be and British shipping languished until 1651. The Dutch were masters of the sea. Their ships carried the world's products from port to port and they arrogantly carried at their mastheads brooms significant of their supremacy. Cromwell became Protector of England, and the action he took and the results are graphically told in the following language by a great student of navigation problems:

When Oliver Cromwell, a trifle more than two and a half centuries ago, had composed the differences that had previously existed in England and had brought about an orderly condition in that turbulent country, he paused for a moment to gaze seaward, and instantly he realized that he had but half completed the work high destiny had imposed upon him. Passing down what were then called "The Narrow Seas," now commonly called the English Channel, were numerous Dutch ships that, too arrogantly for Cromwell's gorge, flaunted at their mastheads a broom heralding to the world the fact that they "swept the seas," because at that time the maritime dominance of the Dutch was unquestioned.

Cromwell, happily for England, was a man of action. He was also a man of indomitable determination. He set about the task of removing the brooms from the mastheads of Dutch ships. It was some task, but Cromwell accomplished it, and he did it so thoroughly that since that time Dutch participation in maritime affairs has been of a minor character. The laws of England, under the guidance of the doughty Protector, were made to decree that any ship entering English ports from any part of the world other than the continent of Europe, if not English, commanded by an Englishman, and with three-fourths of the crew subjects of England, should be subject to forfeiture; and ships other than English, as described, entering England from ports of the continent of Europe should pay double aliens' duties upon whatever merchandise they brought; that no foreign fishing vessels would thereafter be permitted to enter English ports for trade under penalty of forfeiture. The blow was aimed straight at the Dutch and they resented it and went to war, and England whaled the everlasting tar out of them. Then the brooms disappeared from the mastheads of Dutch ships, Dutch maritime supremacy was thereafter referred to in the past tense, and ever since then England has been "the mistress of the seas." It took just 50 years for Raleigh's axiom that whosoever commands the sea commands the trade of the world, and therefore the world itself, to find concrete expression in England's laws, but when it did find such expression England took upon herself all of the dignities and emoluments of world dominance.

Doubtless in those old days there were timid souls who attempted to discourage Cromwell from undertaking such a transformation. Doubtless there were those who told him how well Dutch ships served English needs, and especially how cheaply Dutch ships did English carrying, and that England could not get along without the fish that Dutch fishermen daily brought to their ports. Perhaps there were those who advised Cromwell not to do anything drastic and who pointed out to him that the free-trade methods by which the Dutch had succeeded were the methods England should adopt if it ever expected to succeed upon the sea, that the boundless sea was the common arena of all peoples and all nations upon which coercive and protective methods would be unavailing. And it is not to be doubted that Cromwell was warned of the dire consequences of affronting the Dutch, whose friendship in emergencies might be so timely and so useful to England, and Cromwell's policies were such that he was more liable to make alien enemies than friends. All other deterring suggestions failing, Cromwell must have been told that the time he had selected for his drastic policy was not a good time; that a future time would be a better time to put into effect the English maritime renaissance he proposed, when conditions were more favorable for success.

Unfortunately, history has failed to preserve for us the arguments that may have been used upon Cromwell in opposition to his adoption of an English maritime policy at the time he did adopt it. Perhaps it is sufficient for us to know that he conceived the idea that to beat the Dutch upon the sea he would better adopt a policy somewhat at variance with the one that the Dutch had succeeded under—one that contained no such word as fail. And it is quite likely that once the idea of doing the thing had gripped Cromwell's mind he concluded that too much time had already been lost in going about it, and that no better time than that time was ever likely to arrive, besides which his experiences had doubtless taught him that he could better command the good will of other nations from the vantage point of supremacy, of dominance, than from that of dependence and weakness. To-day England has plenty of friends.

Figuratively speaking, there is not a nation whose ships enter and leave the ports of the United States that do not carry brooms at their mastheads. The trouble with the United States is that it hasn't a Cromwell.

BLAINE ON BRITISH SHIP PROTECTION.

Mr. Blaine, who took a great interest in the protective policy, and in the building up of the merchant marine said, with reference to England's policy:

On many points and in many respects it was far different with Great Britain a hundred years ago. She did not then feel assured that she could bear the competition of continental nations. She was therefore aggressively, even cruelly, protective. She manufactured for herself and for her network of colonies reaching around the globe. Into those colonies no other nation could carry anything. There was no scale of duty upon which other nations could enter a colonial port. What the colonies needed outside of British products could be furnished to them only in British ships.

Referring to the act of Parliament of 1651, which provided that no goods should be imported into England or exported abroad except in vessels belonging to British owners and built by British builders, an English historian says:

The result of that act far transcends the wildest dream of the Lombard and Venetian avarice, or the grandest schemes of Spanish and Portuguese conquest. It not only secured to the people who enacted it the greatest share of the world's carrying trade, but the trade also knew its master, and followed at once with becoming servility.

ACCEPTS THE LETTER AND VIOLATES ITS SPIRIT.

Such had been her policy for centuries. Every nation that has threatened to become a rival has had her marine crushed by threats, subsidies, discriminating regulations, specious diplomacy, or by war. She did not propose to surrender to us until she had exhausted every resource at her command. When we passed the act of 1828 she was not yet prepared to accept it. She feared it would injure her and she did not propose to take advantage of it until it would be a benefit to her, and it was not until 1850 that she took advantage of it. She was then prepared to accept its letter and violate its spirit. She had established her system of subsidies; private agencies, carrying out discriminating rules and regulations greater in effects than acts of Parliament, were in operation, and other discriminations were inaugurated under the operation of which "reciprocal equality" was worse than a farce. These agencies caused the decline of American shipping in the foreign trade before the Civil War and have brought about its practical extinction since the war. Secretary Windom in his speech at the banquet at which he died in 1891, stated clearly and concisely the causes of the destruction of our foreign shipping:

"Reciprocal liberty of commerce" is a high sounding, seductive phrase but the kind of liberty our foreign shipping interest has enjoyed for the past 50 years is the liberty to die under unjust discriminations of the London Lloyd's Register Association, the crushing powers of European treasuries, and the utter neglect and indifference of our own Government.

OUR CUSTOMS COLLECTIONS ABSORBED BY FOREIGN CARRIERS.

With a constantly increasing foreign commerce we have a decreasing merchant marine—excepting, of course, the coastwise trade, which is wisely reserved for our own ships—until it has almost reached the vanishing point. With England carrying the great bulk of our foreign commerce we are at her mercy or dependent upon her continued success. Shall we continue so? By this bill we raise over \$300,000,000 by tariff duties and we will pay to foreign shippers about \$300,000,000 for getting to market. If we would encourage the building of our own ships we would save much of that by a reduction in freight rates by competition and the remainder would go to our own people. Almost any effort to do this should meet with our approval.

WHAT OUGHT TO BE DONE.

The House provision is an honest attempt to rehabilitate our foreign merchant marine. It goes back to the policy of the first days of the Republic. It is a small step; it doesn't go far enough; it ought to be strengthened, but if we can get no better we should not reject it. This amendment ought to increase the duties on goods carried in foreign ships instead of reduce them on goods carried in our ships.

It ought to limit this discriminating duty to vessels registered prior to the passage of this act and to vessels built in the United States. Such provisions are included in the amendment which I have offered. Even though we may have vessels flying the American flag, we are not much better off if we are dependent upon foreign ship yards and builders for our ships. The shipbuilding trade should go right along with the ship-carrying trade. It would mean the use of millions of capital, the employment of thousands of laborers, the use of much of our raw material, the establishment of a marine-insurance business of large proportions and many other new lines of business, and above all it would insure stability in both the domestic and foreign trade so far as it depends upon freight facilities, and it would give to us that arm of the national defense which is now so sadly lacking.

"FREE SHIPS" AS THOMAS JEFFERSON DESCRIBED THEM.

Again I desire to quote, for the benefit especially of my friend from Mississippi, from Thomas Jefferson:

For a navigating people to purchase its marine afloat would be a strange speculation, as the marine would always be dependent upon the merchants furnishing them. Placing as a reserve with a foreign nation or in a foreign shipyard, the carpenters, blacksmiths, calkers, sailmakers, and the vessels of a nation, would be a singular commercial combination. We must, therefore, build them for ourselves.

PATRIOTISM, BUSINESS STABILITY, AND NATIONAL DEFENSE.

This is not a party question and should not be treated as such. No caucus action should prevent any Senator from voting to upbuild the merchant marine. It is neither a tariff nor a revenue question, but a question of patriotism, of business stability, and national defense, national pride and glory. England had her free traders and her protectionists, but upon the question of the necessity of building up her merchant marine there was no difference of opinion. Adam Smith said:

VIEWS OF EMINENT FREE TRADERS.

There seems to be, however, two cases in which it will generally be advantageous to lay some burden on foreign, for the protection of domestic industry. The first is, when some particular industry is necessary for the defense of the country. The defense of Great Britain for example, depends very much upon the number of its sailors and shipping. The act of navigation, therefore, very properly endeavors to give the sailors and shipping of Great Britain the monopoly of the trade of their own country, in some cases by absolute prohibitions, and in others by heavy burdens upon the shipping of foreign countries.

And John Stuart Mill wisely and patriotically said:

The navigation laws were grounded, in theory and profession, on the necessity of keeping up a "nursery of seamen" for the Navy. On this last subject I at once admit that the object is worth the sacrifice, and that a country exposed to invasion by sea, if it can not otherwise have sufficient ships and sailors of its own, to secure the means of manning in an emergency an adequate fleet, is quite right in obtaining those means, even at an economical sacrifice in point of cheapness of transport.

WILL DEMOCRATS REDEEM THEIR PLEDGES?

Our Democratic friends on the other side of this Chamber can well afford to put aside their free-trade ideas when dealing with our shipping and take whatever steps may be deemed necessary and wise to build up this great arm of the national defense. A Democratic House has passed this provision; the fathers of the Republic, Democrats and Federalists, favored it, and your party platform of 1912 declared as follows:

We believe in fostering, by constitutional regulation of commerce, the growth of a merchant marine which shall develop and strengthen the commercial ties which bind us to our sister republics of the south, but without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury.

This language is very significant when read in connection with the platform declaration of 1908, which is as follows:

We believe in the upbuilding of the American merchant marine without new or additional burdens upon the people and without bounties from the Public Treasury.

Of this last declaration Mr. UNDERWOOD said:

Shall the Representatives in Congress holding allegiance to the Democratic Party keep the faith and redeem the pledge? If so, how can the upbuilding of the American merchant marine be accomplished without new or additional burdens upon the people and without bounties from the Public Treasury? Let us follow in the footsteps of the fathers of our party and we will find the way.

REPRESENTATIVE UNDERWOOD'S APPEAL.

And he continued with this significant language:

Under these circumstances it seems clear to me that the constitutional and effective way to restore the American ships to the seas and carry American commerce in American bottoms is to return to the policy of the fathers and for Congress to adopt again a discriminating duty in favor of American ships.

REPUBLICAN DISCRIMINATING DUTY DECLARATION.

Much to my surprise I find no reference to the merchant marine in the Republican platform of 1912 and none in the Progressive platform. Why this strange omission I do not know. I do know this, however, that the only declaration by the Republican Party for a specific policy—and it then included the Progressives—was in the platform of 1896, which was as follows:

We favor restoring the American policy of discriminating duties for the upbuilding of our merchant marine and the protection of our shipping in the foreign-carrying trade, so that American ships—the product of American labor, employed in American shipyards, sailing under the Stars and Stripes, and manned, officered, and owned by Americans—may regain the carrying of our foreign commerce.

That was a wise and patriotic declaration and I regret to say that that is one of the few promises that we have not kept. This is an opportunity to keep it. Let us not neglect it, and I commend to you the wise and patriotic admonitions of William McKinley in his letter of acceptance urging Republicans to follow this course:

The policy of discriminating duties in favor of our shipping, which prevailed in the early years of our history, should be again promptly adopted by Congress and vigorously supported until our prestige and supremacy on the seas is fully attained. We should no longer contribute directly or indirectly to the maintenance of the colossal marine of foreign countries, but provide an efficient and complete marine of our own. Now that the American Navy is assuming a position com-

mensurate with our importance as a nation—a policy I am glad to observe the Republican platform strongly indorses—we must supplement it with a merchant marine that will give us the advantage in both our coastwise and foreign trade that we ought naturally and properly enjoy. It should be at once a matter of public policy and national pride to repossess this immense and prosperous trade.

SPEAKER CLARK FAVORS DISCRIMINATING DUTIES.

CHAMP CLARK, now the Speaker of the Democratic House, then the minority leader, said:

I do not want to interrupt your speech (HUMPHREY of Washington was speaking), but I will tell you what I do know. That by just exactly that proposition (discriminating duties) we built the second greatest merchant marine there ever was on the high seas, and we can do it again.

NOW IS THE TIME.

Are these men foolish? Are they making senseless declarations? Will you disregard their party cry? The provision which you have stricken out is the product of their labor and the outcome of their patriotism. They are keeping faith with their party promise. The platform of 1912 embodies these ideas and no one can reach any other conclusion than that the framers of that plank had specifically in mind this very method for aiding the merchant marine, and that side of the Chamber can not refuse to follow the House of Representatives without again repudiating a plank in your platform. You can not plead that this is not the time or the bill for the consideration of this question. The House of Representatives has acted, the first tariff bill that was ever passed by this Republic contained a similar provision, the necessities are imperative, and the way has been pointed out by your party in convention assembled as well as by your great leaders in the House of Representatives.

MR. UNDERWOOD AGAIN QUOTED.

According to Mr. UNDERWOOD the House provision would not be a burden upon any one. Your platform makers must have had his words in mind when it was written—I suspect that he wrote your platform in this respect—and I commend them to your careful consideration before you vote to sustain the action of the committee in striking out this provision and offering nothing in its stead. He said:

A reduction of the tariff of 5 per cent on all goods imported into the United States in American ships would give the American shipowner an advantage over the foreign shipowner in payment of duties of from \$10,000,000 to \$15,000,000 annually. This would not fall as a burden on anyone; it, of course, would enable the American shipowner to charge nearly the amount of the discriminating duty as additional freight rates, but it would not increase the cost of goods imported into this country a dollar over what they are to-day. It would not take a dollar out of the Federal Treasury and, in my judgment, it is the only effective remedy that can be adopted toward building up the merchant marine of our country and keep the profits that are derived from the transportation of our foreign commerce at home instead of paying it to foreign nations.

Mr. President, I believe in the policy of the fathers. I have supported it at every opportunity. Ten or 12 years ago I introduced a bill in the House to carry it into effect and told those advocating a subsidy that they would never get it through and that the only hope of building up our foreign merchant marine was to return to the early policy. I welcome this opportunity to do so and I trust that this bill will not leave this body without some provision in it along these lines.

FOREIGN PROTESTS HELPED KILL AMERICAN SHIPPING LEGISLATION.

I understand that this provision was stricken out upon the protests of the representatives of foreign countries. I hope this is not true. The Senate asked the State Department for copies of protests and representations of such countries regarding this provision.

Mr. WILLIAMS. In order that the RECORD may be kept clear upon that point, I wish to say that, while that was one of the reasons which led us to it, it was the least of all.

Mr. JONES. I am glad to hear that statement from the Senator from Mississippi, although I am sorry that it had any influence whatever.

The act of 1828 is an act of Congress and can be repealed without the advice or consent of any nation on earth, and any suggestion from any nation opposing its repeal should not be permitted by our Government. Any treaty that we may have with any country can be abrogated in the way provided in such treaty, and a declaration to this effect should be placed in this act.

PROTESTS SHOULD BE PUBLISHED.

I have a provision in my amendment, under which the President is directed to terminate in the way specified these treaties. Mr. President, I dare to say that, in answer to the resolution passed by the Senate a few days ago, there was transmitted from the Secretary of State a communication to the effect that he had transmitted to the chairman of the Finance Committee notice of protest made by 10 or 11 foreign governments calling the attention of the State Department to the fact—

Mr. WILLIAMS. Twenty-nine countries.

Mr. JONES. Surely not so many from the letters which I saw.

Mr. WILLIAMS. There were 29 countries with which we had treaties.

Mr. SIMMONS. The Senator from Mississippi did not understand the statement. The Senator from Washington said there were 10 or 11 governments that had written letters to the Secretary of State.

Mr. WILLIAMS. No; they did not all write to the Secretary of State.

Mr. SIMMONS. Not according to the records from the Secretary of State that I can find.

FRANCE THREATENS REPRISALS.

Mr. JONES. I do not think a proper response was made to the Senate's resolution. Copies of all correspondence should have been sent to the Senate and not a mere statement that copies had been sent to the chairman of the Finance Committee, but I do not complain or criticize this action. That will not make any difference now, because all those who were reported practically called the attention of this Government simply to the terms of the treaty, except one, and that was France, with whom we have no treaty of this character, and yet France presented a suggestion to the President and to the Secretary of State that it seems to me our Government ought not to have received. France suggested in effect, in almost so many words, that if we passed this provision they would retaliate. That was used as an argument. That was nothing more nor less than a threat of one nation to another with reference to a matter about which it was legislating, and while I do not criticize the administration, I do not believe suggestions of that kind ought to be received from the Government of any country on the face of the earth, and if handed in they should be returned.

I think it would be well to give the exact language of France, with whom we have no treaty. The French minister submitted a memorandum to the President, in which he says:

This—

Referring to the discrimination clause—

is the equivalent of the ancient "surtaxe de pavillon" long ago abolished everywhere. Article VI of the law of May 19, 1866, which suppressed it in France, states that if, under one form or another, such discrimination were resorted to again a countervailing duty would be placed on the ships of the nation thus discriminating.

In a communication to the State Department the French minister says:—

This—

Referring to the discriminating clause—

is tantamount to what was formerly styled the "flag surtax" that was given up because every nation availing itself of it realized there was no advantage in maintaining a system that was bringing inconvenience to all and profit to none. If such a clause were enacted reciprocal measures would unfailingly be taken.

And then suggests that under the French law such action would necessarily be taken.

FRANCE'S PROTEST SHOULD HAVE BEEN RETURNED.

This is a suggestion that should not have been received at all in regard to proposed legislation by an independent country. It was a direct threat to influence us in acting in relation to what we might deem best for our marine interests, and its reception should have been promptly and firmly refused.

IS OUR SOVEREIGNTY ABRIDGED?

No nation has any right to complain at the adoption of any policy we may deem wise and for our own interests so long as treaty provisions are scrupulously regarded. Will other nations retaliate? No. Why? Upon what ground? No nation can complain at the acts of another fully within its rights. We should regard our own interests. We should promote our own welfare. We should provide for our own safety. We should develop our own trade and our own industries, and we should do it without asking the consent or permitting the advice of any other nation. Surely the party which declared in favor of financial action "without waiting for the aid or consent of any other nation" will not hesitate to act freely and independently on this important subject.

COWARDLY FEAR OF RETALIATION.

"But," they say, "other nations will retaliate." That is the cry of weakness, of cowardice. Shall we heed it? I hope not. They can not very well pay subsidies and practice discriminating duties too. Their people can not stand such burdens. We can not meet them with subsidies, we can meet their subsidies with discriminating duties, and it is the only way we can meet them. Senators, let us not be scared by such threats. Let us follow the only constitutional way to restore our merchant marine to the sea. Other nations can not complain any more than we can complain at their system of subsidies. If they

want to pass similar legislation they have the right to do it, but with our resources and their necessities there can be but one outcome of such a contest and we will not be the loser.

On that point Capt. Bates, former Commissioner of Navigation, well says:

Some have advanced the idea that termination of these conventions would cause retaliation of some sort. That would be unjustifiable. It would be very uncivil treatment, a manifestation of malice, a breach of the peace. * * * The idea of "retaliation" because we act within our rights to regain our place on the sea—what is it? Nothing but a foolish appeal to cowardice. There will be no "retaliation" until the nations have lost their senses. Tell the world that we Americans dare not by proper legislation recover our lost place as a shipping nation if you will, but there is no brave nation governed by rulers so simple as to believe it.

ARE WE SUPINE OR COURAGEOUS?

Say what you will, we are face to face with the question of wholly abandoning any attempt to rehabilitate our merchant marine. Subsidies are out of the question. The people will not approve them. We have tried to grant them for 20 years, and the opposition is stronger than ever. The people will approve this method. Why not try it? Retaliation will increase their determination to succeed and they will sustain every patriotic effort to secure our proper place in the world's carrying trade. We are at the parting of the ways. We will either rid ourselves of the shackles of the act of 1828 and the treaties under which we have surrendered our rightful place on the seas or we acknowledge our helplessness, endure our shameful humiliation in peace and the inevitable in war, if it ever comes, which God forbid. Our action in this midnight hour will be far-reaching. Let us put fear behind and act boldly in behalf of our own interests, our own rights, and our own people.

HOW FOREIGNERS MONOPOLIZE OUR FOREIGN CARRYING.

Mr. President, there is one other phase of the foreign carrying business that I want to call to your attention briefly. We denounce monopoly most vigorously. We strike at domestic monopolies in the courts and through legislation, and yet we look with apparent indifference upon the foreign monopolies that control almost absolutely the carriage of the world's commerce. A committee of the House of Representatives has investigated this matter and held exhaustive hearings. Its report has not yet been submitted, but it seems to me that the evidence clearly establishes that the foreign trade is absolutely dominated by monopoly. Trusts, combinations, pools, and conferences have been established, and through these rates are controlled, territory distributed, and business apportioned. Certain lines are given a certain territory; a certain number of ships are allotted to certain ports and the number of voyages limited, and they dare not exceed them under severe penalties arbitrarily but effectively enforced; freight rates are fixed and uniform; passenger receipts are pooled and distributed according to definite agreements; shippers are restricted to certain lines and certain ships on penalty of not being able to secure any shipping facilities whatever; rebates are given on condition that shippers will use no other lines; discriminations are practiced toward certain interests, and especially toward great combinations and powerful interests like the Standard Oil, the Steel Trust, and the International Harvester Trust; "fighting ships" are maintained for the sole purpose of crushing and driving out of business any independent lines or ships; and the development of the markets and trade of their respective countries is very naturally favored as against our own. This, Mr. President, comes about under "mutually reciprocal" trade. Let us save ourselves from such "reciprocity."

DEMOCRACY'S GREAT OPPORTUNITY.

Mr. President, here is the opportunity to take a step toward restoring our flag to the seas without imposing any burdens upon our people; here is an opportunity to free ourselves from the grasp of foreign monopolies, which not only charge excessive rates for transportation but also discriminate against us in the world's markets; here is the opportunity to encourage the building of ships, the erection and maintenance of splendid shipbuilding plants of the greatest value in time of war as well as in times of peace, the employment of labor, and the creation of many other lines of business activity; here is the opportunity to safeguard the stability of our domestic as well as our foreign trade; here is an opportunity to reinvigorate that arm of the national defense without which no nation can be really safe and independent; here is an opportunity to resume the place in the world's carrying trade which we so proudly filled when as a small, struggling Nation our ships sailed every sea, unloaded their cargoes in every harbor, and floated the Stars and Stripes under every sky. Adopt this provision and it will not be long until our own ships will carry our own trade in times of peace and be our defense in times of war. Then, indeed, will we be a free and independent Nation and war's dangers will be greatly lessened.

Mr. GALLINGER. Mr. President, I desire to occupy a few moments in the discussion of this important question, and I shall be very brief.

Mr. President, during the past 10 years strenuous efforts have been made by some of us to secure aid to our vanishing merchant marine, either by the payment of a direct subvention from the Treasury or by a substantial increase of the ocean mail pay under the provisions of the act of March 3, 1891. Such efforts have been met by the suggestion from the Democratic Party that the only proper and constitutional way to rehabilitate the American merchant marine was to return to the ancient policy of discriminating duties as it was practiced in the early days of the Republic. I have been driven to the conclusion that under existing conditions that policy can not be made successful at the present time; but notwithstanding I hold that view, I have indulged the hope that the experiment would be tried. With that end in view, I was gratified to find in the bill as it came from the House the following provision:

That a discount of 5 per cent on all duties imposed by this act shall be allowed on such goods, wares, and merchandise as shall be imported in vessels admitted to registration under the laws of the United States.

It seemed that at last the Democratic theory was to be tested, but when the bill was reported to the Senate the paragraph was stricken out. I desire as briefly as may be to call attention to the question of discriminating duties, and also to say a word regarding the other Democratic doctrine of free ships, which under existing legislation has proved to be a total failure.

Mr. President, when the Merchant Marine Commission was created in 1904—composed of five Senators and five Members of the House of Representatives—a majority of the commission favored the doctrine of discriminating duties, but before the investigation ended the commission changed its mind and incorporated in its report its reasons for abandoning that doctrine.

During the investigation strong arguments were presented in favor of returning to the discriminating policy.

On the other hand it was pointed out that this country had entered into 30 or more commercial treaties with foreign countries, which, unless abrogated on notice, forbade the adoption of discriminating duties on our part. It was also argued that if the treaties were abrogated retaliation in connection with our export trade would doubtless result.

The earliest of these treaties now in force is that with Great Britain, concluded July 3, 1815, during the administration of President Madison. It contains (art. 2) the following clause:

The same duties shall be paid on the importation into the United States of any articles the growth, produce, or manufacture of His Britannic Majesty's territories in Europe, whether such importation shall be in vessels of the United States or in British vessels, and the same duties shall be paid on the importation into the ports of His Britannic Majesty's territories in Europe of any article the growth, produce, or manufacture of the United States, whether such importation shall be in British vessels or in vessels of the United States.

It will be observed that the policies of Washington and Jefferson, which operated to the great advantage of American shipping, were changed during the administration of Madison, and that fact is one of the chief stumbling blocks in the way of our legislation to-day.

It may be said in passing that when Great Britain and other foreign nations secured the commercial agreements to which I have alluded, they very cunningly nullified to a large extent their obligations under the agreements by granting subsidies to their vessels engaged in the foreign trade.

It was also pointed out in the report of the Merchant Marine Commission that to make discriminating duties effective the free list would necessarily have to be abolished. This was necessary from the fact that 98 per cent of our imports from Brazil, 96 per cent from Chile, 81 per cent from Colombia, 80 per cent from Venezuela, and 82 per cent from Ecuador were on the free list. In addition to this, 50 per cent of our imports from China, 64 per cent from Japan, and 69 per cent from India were also on the free list.

It was thus evident that unless the free list were abolished discriminating duties would not and could not sufficiently encourage American capitalists to warrant them in building ships to engage in commerce with the Republics south of us and the countries of the Orient.

DISCRIMINATING DUTIES.

Mr. President, in this connection I ask unanimous consent to insert in the RECORD a memorandum filed by the Merchant Marine Commission on the question of discriminating duties.

The PRESIDING OFFICER (Mr. THOMAS in the chair). Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

[From memoranda of the Merchant Marine Commission.]

The historic policy of discriminating duties which the United States maintained in full to 1815 and in part as late as 1828 and even 1849, occupied so large a place in the inquiry of the Merchant Marine Com-

mission that it is well to make at once a frank explanation why a return to this policy at the present time has not seemed wise to a majority of the commission.

It is probable that when the commission was appointed, in 1904, a majority of those Senators and Representatives composing it who had positive views favored another trial of the discriminating duty policy, and believed that that course would be recommended to Congress. Moreover, from the very beginning of the inquiry, powerful arguments for the discriminating duty plan were advanced, especially by the Maritime Association of the Port of New York, the largest shipping trade organization in America. This policy of the fathers of the Republic, as it was well described, was ably advocated not only by many practical shipowners and shipbuilders, but by many manufacturers and merchants—usually, however, in connection with the policy of mail subventions to regular lines, which may be said to have met with almost unanimous support in every section of the country.

TREATIES IN THE WAY.

These arguments had a very great effect upon the commission, but at the same time some very serious objections were disclosed in the radical difference of mercantile conditions between the first half of the nineteenth century and the first decade of the twentieth century. In the first place, there were the 30 commercial treaties with foreign Governments—the very foundation of our modern commercial relations—which prohibit both discriminating custom duties and discriminating tonnage dues. These treaties of course could be abrogated, but notice of this would have to be given a year in advance, and new treaties without a discriminating duty clause negotiated on terms as favorable as before. This, manifestly, would be a difficult though not an impossible undertaking.

THE RISK OF RETALIATION.

Far more serious than the abrogation and renegotiation of 30 commercial treaties would be the almost certain retaliation of foreign Governments. It is true that if they retaliated only against our shipping they could not do much harm, for an American vessel, even direct from the United States, is seldom seen now in European waters. But these foreign Governments would probably shape their retaliation where it would hurt and be effective—against our export trade in general—by discriminating duties on the products of our agriculture and our manufactures.

Indeed, certain important commercial associations of the Central West, while strongly favoring the development of the merchant marine, sent to the commission a formal remonstrance against the adoption of the discriminating duty policy because of the danger of foreign retaliation that would be provoked by it against the export trade of the United States. In this connection the fact is worth considering that in the years from 1789 onward, when the discriminating duty policy was practiced with so much success, the United States imported far more than it exported, so that discriminating duties were applicable to the larger part of our foreign trade, while now the United States exports very much more in both bulk and value than it imports, so that not only would discriminating duties be less effective for the encouragement of American shipping, but foreign retaliation would be far easier and more injurious.

ABOLISHING THE FREE LIST.

But the weightiest of all objections to a return to the discriminating duty plan is neither the treaties nor retaliation, but the fact that in order to apply these duties for the adequate encouragement of the merchant marine, the free list of the tariff, covering almost half of the foreign commodities we purchase and consume, would have to be abolished. It is safe to say that this consideration counted more heavily than any other in bringing the majority of the commission reluctantly to the conclusion that discriminating duties could not now be invoked for the object we all desire—the rehabilitation of the American merchant marine in foreign trade.

NEARLY HALF IN VALUE NOW FREE.

In the fiscal year 1903, 43 per cent, in 1904, 47 per cent, and in 1905, 46 per cent of our entire imports came in free of customs duty. This is in value; in bulk, inasmuch as these free imports were largely foods and raw materials, probably 60 or 70 per cent were free. In other words, unless the free list were abolished, discriminating duties could be applied to the encouragement of not more than 30 or 40 per cent of American shipping engaged in general foreign trade.

On the other hand, if the free list were abolished and these free articles made dutiable, the result would be an increase in the cost of certain foods of the American people and certain crude materials of their manufacturing, for those free articles are, as a rule, noncompetitive products, chiefly from tropical countries, which can not, even under a duty, be produced in the United States. In 1789 and afterwards, when discriminating duties were so successfully applied for the encouragement of our shipping, nearly all imports were dutiable, and such a thing as a free list was scarcely known to our own or any other Government.

THE INDIRECT TRADE.

There are strong political as well as commercial reasons why, if we are to have any American ships at all, we should have them in the trade with our sister republics of this continent and the great neutral markets of Asia. In fact, the specific form in which discriminating duties have been most often and earnestly advocated before the commission has been as applying to the so-called "indirect trade"; that is, not against a British vessel bringing British goods or a German vessel with a cargo from a German port, but against European craft that seek to invade our carrying trade with Brazil or China or other neutral nations. It has been urged that discriminating duties in this indirect trade will not be so likely to provoke European retaliation as if the duties were imposed against British or German ships bringing goods of their own country. And it has been urged also that discrimination in the indirect trade, while arousing the least possible resentment, would give our vessels entire control of our trade with the nonshipping peoples of South America and the Orient.

A LARGER PART FREE.

Unfortunately, however, it is this very trade with South America and the Orient that can not be gained for American ships unless the free list is abolished, for most of the products of those southern and eastern countries are now and long have been nondutiable in the ports of the United States. Thus, when the commission looked into this question it found that 98 per cent of our imports from Brazil, 96 per cent from Chile, 81 per cent from Colombia, 80 per cent from Venezuela, 82 per cent from Ecuador, or 82 per cent of all our imports from South America and 94 per cent from Central America were absolutely free of duty. In our import trade with China 50 per cent, with Japan

64 per cent, and with India 69 per cent are free of duty. Unless the free list were abolished discriminating duties could not adequately encourage American shipping to engage more largely in commerce with the republics to the south of us and the great markets of the Orient.

If conditions were everywhere as they are with our trade in Europe, where the free imports represent 28 per cent, or our trade with Cuba, whence we import chiefly sugar and tobacco and only 17 per cent of our purchases are on the free list, discriminating duties could be effectively applied for aid to American shipping. But the long series of public hearings before the commission has made it unmistakable that the American people desire American ships, not only in our Cuban trade, but also and especially in our trade with South America and the Far East. Discriminating duties would not give us American ships in these important trades unless the free list were abolished, and here is the most urgent of the several reasons why the discriminating-duty policy has not been recommended by the majority of the commission. The plan of mail and other subventions embodied in the bill of the commission was finally adopted because it is both more equitable and more effective.

Mr. GALLINGER. Mr. President, a word in reference to the condition of American shipping to-day, and I am done.

All told, according to the list for 1912, published by the Commissioner of Navigation, there are now only between 50 and 60 American steamships regularly engaged in the actual foreign trade of the United States—the trade carried on over the deep sea.

These include 6 steamships in the trans-Atlantic trade, the St. Louis, St. Paul, Philadelphia, and New York, of the American Line, from New York to France and England, carrying the mails under the law of 1891, and the Finland and Kroonland, of the Red Star Line, from New York to Belgium.

These American steamships in the foreign trade include also 10 steamships engaged in commerce across the Pacific Ocean—the Mongolia, Manchuria, Korea, Siberia, China, and Aztec, of the Pacific Mail Line, from San Francisco to Japan and China; the Minnesota, of the Great Northern Line, from Seattle to Japan and China; and the reestablished Oceanic Line from San Francisco to Australia—3 steamships, the Sonoma, Ventura, and one other. The Oceanic Line operates under the ocean mail law of 1891, and it is understood that it receives liberal mail compensation also from the Australian Government for the sake of a direct line to the United States.

Besides these 16 American steamers in transoceanic trade, other ships run from our Atlantic coast to the West Indies, Mexico, the Isthmus of Panama, and Venezuela, and from the Pacific coast to Mexico and the Isthmus of Panama. The American lines engaged in this trade are the Ward Line from New York to Cuba and Mexico, the Red D Line from New York to Venezuela, the Admiral Line from Boston or Philadelphia to Jamaica, the Clyde Line from New York to Haiti and San Domingo, and the Panama Railroad Line from New York to Colon. On the Pacific the service from San Francisco to Mexico and the Isthmus of Panama is performed by the smaller ships of the Pacific Mail Co. The Ward Line, Red D Line, and Admiral Line are operated under the ocean mail act of 1891.

Mr. POINDEXTER. Mr. President—

The PRESIDING OFFICER. Does the Senator from New Hampshire yield to the Senator from Washington?

Mr. GALLINGER. I yield.

Mr. POINDEXTER. I should like to ask a question of the Senator from New Hampshire, coming, as he does, from that section of the country which furnished so much enterprise and met with such great success in the earlier days of the Republic in the merchant marine which brought credit and distinction to the United States. I do not know whether this is an appropriate time in his argument to ask the question, but I will say that I am in perfect harmony and sympathy with the Senator from New Hampshire on this matter. I should like to ask his opinion as to the cause of the decline in that great merchant marine which we once enjoyed? It is a question which we have got to determine and settle sooner or later, and it occurs to me that the opinion of the Senator from New Hampshire as to the cause of our present state in that regard would be very valuable.

Mr. GALLINGER. Mr. President, I will answer in a very few words. In the first place, commercial agreements with the other countries of the world in which we entered into reciprocity with them and which were followed on the part of the other nations by the granting of subsidies had something to do with it. Then, again, the Civil War, it will be recalled, wiped out a very considerable portion of our merchant marine from the ocean. Following that came the construction of steel ships. We exceeded all the nations of the world in the building of wooden ships. Our clipper ships were the glory not only of our country but of all the countries of the world. When steamships came into use, however, England excelled us in being able to construct such ships at a less cost than we could, and in that way gained a very great advantage over us. These are the three chief reasons. I will call attention in a moment—and I am going to be very brief—to the reason why we can not

to-day compete with the other nations in the construction and operation of ships overseas.

In the fiscal year 1912 only 9.4 per cent of the imports and exports of this country were carried in American ships, as compared with 88.7 per cent in 1821 and 66.5 per cent in 1860.

Of course, that percentage was very rapidly reduced when our ships were destroyed on the ocean by the ships of the Confederacy, and there was a very rapid decline in our American merchant marine in consequence.

The Panama Canal act of August, 1912, provided for the free admission to American registry of foreign-built vessels owned by American citizens and engaged in the foreign trade—in other words, the free-ship policy.

More than a year has elapsed since the passage of that act. Not one ship of any kind has been added to American registry under the provision of this free-ship clause, which has proved an absolute failure.

It will be remembered, Mr. President, that in every debate we have had during the last 10 years on the question of the American merchant marine, it has been insisted, particularly by a leading Democratic Senator, that if we would adopt the free-ship policy it would go very far toward solving the problem that we are trying to solve. We adopted the free-ship policy one year ago in the Panama Canal act, but, as I have suggested, not a single ship has been added to our merchant marine by purchase from abroad.

When the Merchant Marine Commission in 1904-5 formally asked—and this will answer to some extent the question propounded by the Senator from Washington—the principal American companies owning steamships under foreign flags if they would bring their vessels under American registry if a free-ship provision were enacted they all replied, without exception, that they would not, because of the higher wages that would have to be paid under the American flag, and the certain loss of foreign bounties and subventions. Now that these companies have been given the opportunity not one of them has availed itself of the privilege—showing that their original statements to the Merchant Marine Commission were wholly sincere and conclusive.

The Merchant Marine Commission also put up the proposition to leading capitalists in Boston and New York whether, if the free-ship legislation were enacted, they would invest money in the building of American ships for the foreign trade, and the answer was promptly made that they would not do so because of the increased cost of running American vessels as compared to foreign vessels, and the further fact that foreign governments subsidize their ships while this Government does not grant direct subsidies. It will thus be seen that the Democratic doctrine of free ships has been completely exploded, and that a revival of the ancient system of discriminating duties is, under existing conditions, an utter impossibility.

The great industry of American shipping is under the blight of free trade, and the result is that the ships of Great Britain, Germany, France, Holland, Japan, and other foreign countries are transporting our over-seas commerce at an estimated cost to our people of between two hundred and three hundred million dollars annually.

Mr. President, this will not always continue to be so. The time will come when the people of this country will rise in their might and in some way break down the arrogant European shipping trusts and combinations and again put the American flag on American ships to traverse the seas of the world. Let us hope that that day is not far distant.

Mr. President, from what I have said it will be observed that the Merchant Marine Commission, of which I chanced to be chairman, went very thoroughly into the matter of discriminating duties. While they were conscious of the fact that under the early administrations, when almost everything was on the dutiable list at a low rate of duty, as I remember, it was a success, in view of the fact that to-day the free list is so far extended in the countries with which we must extend our trade if we extend it at all, and in view of the further fact that we have 30 or more commercial agreements that are in the way of applying this principle unless they are abrogated, the conclusion was reached that it was not wise to undertake to solve the problem of the American merchant marine by returning to the discriminating-duty principle.

For that reason I feel constrained to vote against the amendment the Senator from Washington [Mr. Jones] has offered, much as I regret to do so, because I want to try any reasonable method that can be thought of that will once more place our flag on the oceans of the world.

Mr. WILLIAMS. Mr. President, it having been agreed to take a vote on the bill to-morrow afternoon at 4 o'clock, I do

not feel as much scruple as I have hitherto felt about taking up a little of the time of the Senate.

I was glad to hear what the Senator from New Hampshire [Mr. GALLINGER] said, and I am glad he is opposed to this amendment. Gratiano was accused by the Merchant of Venice of uttering more infinite nonsense than any man in all Venice. Gratiano never uttered as much infinite nonsense as has been uttered upon the question of the restoration of the American merchant marine.

It is true that to some extent the committee was persuaded by the fact that the United States had 29 treaties with 29 different countries, pledging its word of honor to a certain policy with regard to equality of admission of ships and equality of treatment of imports coming in foreign ships with imports coming in our own. We thought we should be showing very scant courtesy to these 29 nations if, without the notice of abrogation provided in these treaties, we merely repealed the treaties by an act of Congress. But that was not our main purpose at all, because we could have reported an amendment to the bill providing for notice of abrogation.

The main reason was this: We knew, everybody knew, anybody of common sense might know, that if we said to France, to Germany, to Great Britain, to the balance of the world, "We are going to reduce our import duties 5 per cent when articles come to our country in our bottoms," they would have said, "Well, we will do the same thing when your exports come to our country in our bottoms as our imports." In other words, there would have been an endless retaliation, which would have amounted to no good to anybody.

Mr. JONES. Mr. President, will the Senator permit a question?

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Washington?

Mr. WILLIAMS. Certainly.

Mr. JONES. Why does the Senator assume that all of the countries would impose retaliatory duties upon us if we should do this, when we do not meet their bounties and subsidies ourselves?

Mr. WILLIAMS. I assume it because I assume they have common sense, and are actuated by common human motives.

Mr. JONES. Does the Senator assume, then, that our people have not common sense, and are not actuated by human motives, because we do not meet their subsidies with subsidies?

Mr. WILLIAMS. Oh, Mr. President, here comes a country that says: "I propose to build three dreadnoughts to fight." Here comes another country that says: "Well, if you do, we will build three dreadnoughts." Here is another country that says: "If both of you do, we will build three dreadnoughts." The first country that starts it starts the retaliation, and the rest of them take it up. If we say to Germany: "We are going to give a 5 per cent differential in favor of imports in American bottoms," it is absurd to contend that Germany will not say: "We will give 5 per cent differential in favor of the imports into our country from America in German bottoms."

Mr. LODGE. Mr. President, will the Senator from Mississippi yield to me?

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Massachusetts?

Mr. WILLIAMS. I do.

Mr. LODGE. They have a statute in France which requires the imposition of retaliatory duties in case of any such duty as this. It would go on automatically in France.

Mr. WILLIAMS. Automatically; and, by the way, the Senator from Washington said that France had threatened us. The French ambassador merely called our attention to the French law.

Mr. JONES. No, Mr. President; he went further than that.

Mr. WILLIAMS. I beg the pardon of the Senator.

Mr. JONES. I have here a copy—

Mr. WILLIAMS. The French ambassador merely served notice upon our State Department that under that law the French nation would be compelled to pursue that policy.

Mr. JONES. He went further than that, and he stated that they would retaliate. Then he went on to say that they would have to do it under the act.

Mr. WILLIAMS. Why, of course.

Mr. JONES. But he made the distinct statement—

Mr. SIMMONS and Mr. STONE rose.

Mr. WILLIAMS. I decline to yield to the Senator from Missouri, and I decline to yield to the Senator from North Carolina, because I will not take many minutes. By the way, I am not consuming the time of the Senate, because we have a time set to vote, anyway; but this matter ought to be settled right now.

Nobody would be better off if all the nations of the world began to pass laws to discriminate in favor of their own ships in the way of reduced duties on imports when brought in their own bottoms.

The Senator from Washington says the act of 1823 destroyed the merchant marine. No more absurd statement was ever uttered.

Mr. JONES. Mr. President—

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Washington?

Mr. WILLIAMS. I do not yield now, because I wish to get through if I can. If I understood the Senator, he said it was the act of 1823 that was the initiative of the destruction of the American merchant marine.

Mr. JONES. I quoted Representative UNDERWOOD to that effect.

Mr. WILLIAMS. I do not care who said it; the Senator stood sponsor for it.

Mr. JONES. Yes; I did.

Mr. WILLIAMS. If the gentleman from Alabama, in the House, said that, and the Senator from Washington repeated it, the gentleman from Alabama was not guilty of much more lack of knowledge concerning the subject than the Senator from Washington.

The truth is that prior to 1823 the sails of our ships whitened the seas and subsequent to 1823 the sails of our ships whitened the seas. When we were a colony of Great Britain the ships of America sailed to the West Indies and sailed to China. While we were a colony of Great Britain we had no such law upon the statute books. We did not have that law until some time afterwards, when this Government was founded. It was passed under George Washington's administration and renewed under Thomas Jefferson.

That act is frequently referred to as the reason of the prosperity of the American merchant marine; but in the thirties and in the forties and in the fifties, after the act of 1820, there was not a sea anywhere—the South Sea, the India Sea, the China Sea, the Gulf of Mexico, the Atlantic, the Pacific, the North Atlantic, where the whale ships went—where American ships were not to be found. American ships went everywhere, and they went everywhere because we had the cheapest ship timber in the world, and the best. That was not all. It was because we had at that time the most efficient shipbuilders in the world.

One of the reasons why Great Britain repealed her navigation act and permitted our ships to come in free was because she wanted to get the models of the Baltimore clippers and the three-masted schooners from New England. She did imitate the Baltimore clippers, their hulls, and all about them, and she imitated the three-masted schooners from New England in her own shipyards, and still she could not vie with us, because we had not only the most efficient shipbuilders, but the magnificent live-oak ship timber all over this country.

Mr. POINDEXTER. Mr. President—

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Washington?

Mr. WILLIAMS. I yield.

Mr. POINDEXTER. I only want to ask one question of the Senator from Mississippi, because I have asked substantially the same question of the Senator from New Hampshire, and the two Senators represent the two opposite sections of the country. I should like to get the opinion of those two sections, represented by Senators who are typically representative of them, upon this great question.

I should like to have the opinion of the Senator from Mississippi, if he is willing to express it now, as to the cause of the decline of American shipping. It is a question which forces itself upon the consideration of this country.

Mr. WILLIAMS. I am just approaching that question; but before I finish the other thought I want to say that upon the Gulf coast the United States Government had reserved I do not know how many townships of land filled with live-oak ship timber, for shipbuilding purposes.

Now I will come to the question asked by the Senator from Washington. The Civil War broke out. The Confederacy armed the *Florida*, the *Seminole*, and the *Alabama*. They were not fighting ships. They were ships of commerce. The Confederacy had no navy. All she could do was to send out privateers and naval ships that were commerce hunters, destroying the commerce of the United States. The shipowners of New England had to change the registry of their ships. They changed them to British and French registries. A great many of them were destroyed. Just about that time it was discovered that you could make a ship out of iron, and it would float. So

the *Virginia*, which had been the *Merrimac*, was clothed with railroad iron, and then that little cockleshell of a cheese box came down, and they had their fight, and after that time the shipbuilding business was revolutionized.

They first began to build iron ships and then they began to build steel ships, and the positions as between us and Great Britain were reversed. Up to that time we had had the cheapest shipbuilding material, which was wood, and live oak at that, the best in the world; but the shipbuilders then had to go to the iron works, and they began to build ships of iron and later on of steel. Great Britain at that time produced iron and steel at one-half in the one case and one-third in the other case, the price at which we could produce them. So naturally the ships began to be built on the Clyde and wherever else in Great Britain shipyards were located, and the Confederate cruisers having destroyed the United States merchant marine, it never was rebuilt.

That is the plain historical story, and there is nothing else to it; and I believe that is about all there is to be said upon the question.

Mr. SIMMONS. Mr. President, I ask that this matter go over until to-morrow and that the Secretary read the next reserved amendment.

The SECRETARY. The next reservation is that made by the Senator from Kansas [Mr. Bristow] of all of the amendments embraced in Schedule E, the sugar schedule, beginning on page 52 and ending on page 54. The first amendment in that schedule is on page 53, the proviso in paragraph 179.

Mr. BRISTOW. Mr. President, I have reserved the amendments in Schedule E; but to-night we have had a vote on the motion of the Senator from Louisiana [Mr. Ransdell] to strike out the three-year limitation, which would leave the duty as provided in the bill a continuing duty. That motion was voted down. I can not hope to get any larger vote for the amendment I offered in Committee of the Whole, and I see no occasion for burdening the Senate with another roll call on that amendment.

For that reason, the Senate having decided by a vote to continue the duties provided in this bill for three years only, I take it for granted they would refuse upon another roll call to adopt the amendment which I propose. Having had one roll call on the matter, I shall not ask for any vote upon those amendments.

The VICE PRESIDENT. The schedule, then, will stand as agreed to in the Committee of the Whole.

The SECRETARY. The next paragraph reserved is on page 55, paragraph 188. The Senate in Committee of the Whole agreed to strike out the paragraph, which reads as follows:

188. Cattle, 10 per cent ad valorem.

Mr. BRISTOW. On those agricultural paragraphs I shall want roll calls. We have not a quorum here to-night. I think the Senator from North Dakota [Mr. McCumber] feels just as I do about it.

Mr. SIMMONS. Do I understand the Senator from Kansas as saying he will want a roll call on each of the amendments he reserved, beginning on page 55?

Mr. BRISTOW. I shall want roll calls on those relating to wheat and agricultural products when we get to them.

Mr. SIMMONS. Does that go down to page 153?

Mr. BRISTOW. That takes in all the reservations; yes.

Mr. SIMMONS. It starts with page 55?

Mr. BRISTOW. Yes; it starts with paragraph 188 and goes to paragraph 652. It takes in those paragraphs. I shall also want roll calls on the income-tax amendments which I proposed.

Mr. SIMMONS. What I desire to inquire of the Senator is this: The last three are paragraphs 548, 646, and 652—

Mr. BRISTOW. Those are agricultural products that are placed on the free list, and they connect up with the agricultural schedule.

Mr. SIMMONS. The Senator wishes a roll call on each of those?

Mr. BRISTOW. I may not on all of them, but I shall on some of them.

Mr. SIMMONS. Then, on page 165, subdivisions 1 and 2, section 2; does the Senator desire a roll call on those?

Mr. BRISTOW. Yes; I shall desire roll calls on those. I wish to say to the Senator that I am not going to take any time of any consequence to discuss these amendments.

The SECRETARY. On page 207, subdivision O, was also reserved by the Senator from Kansas [Mr. Bristow]. It reads as follows:

O. That for the purpose of carrying into effect the provisions of section 2 of this act and to pay the expenses of assessing and collecting the income tax therein imposed, etc.

Mr. BRISTOW. That relates to the anticivil-service provision. We expect to have a roll call on that, too.

Mr. SIMMONS. Yes, Mr. President. I will state that I reserved that same section, and my reservation will go over if the Senator desires his to go over. Then we reach the next, on page 19, reserved by the Senator from Connecticut [Mr. Brandegee].

The SECRETARY. The committee amendment in line 4, page 19.

Mr. BRANDEGEE. I said that I would not inflict any remarks upon the Senate upon the amendments that I reserved, and that I would ask, however, to print in the Record, in connection with the amendment, a statement made by the constituent of mine at whose instance I offered the amendment. I am willing that the amendments should be submitted in the order in which they were reserved and take the vote.

The SECRETARY. On page 19, lines 4 and 5, the Senate, as in Committee of the Whole, agreed to strike out the paragraph, as follows:

74. Roman, Portland, and other hydraulic cement, 5 per cent ad valorem.

The VICE PRESIDENT. The question is on concurring in the amendment.

The amendment was concurred in.

The SECRETARY. On page 36, line 9, bicycles, and so forth, not including tires. The Senate, as in Committee of the Whole, agreed to strike out "40" and in lieu to insert "25" before "per cent."

The VICE PRESIDENT. The question is on concurring in the amendment.

The amendment was concurred in.

The SECRETARY. On page 41, line 21, there is no committee amendment at that point. It relates to screws, commonly called wood screws.

Mr. BRANDEGEE. The amendment I gave notice of was an amendment to the text of the bill. If the Senator is willing, I will submit it now and get it out of the way, and we will not have to consider it to-morrow.

Mr. SIMMONS. Yes, the Senator can submit it now.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. On page 41, line 21, after the words "ad valorem," at the end of the paragraph, insert a semicolon and the words "locks and builders' hardware, 35 per cent ad valorem."

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was rejected.

The SECRETARY. The next amendment reserved by the Senator from Connecticut [Mr. Brandegee] is on page 97, line 10, relating to sheathing paper, pulpboard in rolls, not laminated, and so forth, 5 per cent ad valorem.

Mr. BRANDEGEE. The amendment I submitted was to strike out those words.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Connecticut.

The amendment was rejected.

The SECRETARY. The next amendment reserved is the committee amendment to paragraph 331 and also in line 2, on page 99, the rate is made 30 per cent ad valorem. The paragraph relates to papers commonly known as copying paper, and so forth.

Mr. BRANDEGEE. I move to make the rate 35 per cent ad valorem.

The SECRETARY. It is proposed to strike out "30" and insert "35."

The amendment was rejected.

The SECRETARY. On page 144—

Mr. BRANDEGEE. Before that I offer an amendment to come in on page 101.

The SECRETARY. On page 101, paragraph 333, the committee amendment has been already agreed to.

Mr. BRANDEGEE. That was agreed to with the agreement of the committee that they would consider the question I raised and that I might offer an amendment to it if the committee did not report accordingly. The Senator from New Jersey [Mr. Hughes], I think, had it in charge.

The VICE PRESIDENT. The amendment will be stated.

The SECRETARY. In line 25, strike out the word "gelatin" and the comma; and on page 103, line 14, after the word "pound," insert "articles composed wholly or of chief value of paper printed by the photogelatin process and not specially provided for in this act, 3 cents per pound and 25 per cent ad valorem."

Mr. BRANDEGEE. I think I was mistaken in saying that the Senator from New Jersey had charge of that paragraph.

It was the Senator from Maine [Mr. JOHNSON], who was on the floor a minute ago. I will simply say that the effect of this amendment is to restore the present provision of the law as to the duty on photogelatin printed matter. I am willing to take a vote on the question.

Mr. SIMMONS. Let us have a vote, Mr. President.

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Connecticut.

The amendment was rejected.

The SECRETARY. On page 104, line 2, in the text of the bill as passed by the House, writing, letter, note, drawing, hand-made paper, and so forth, embossed, printed, lined, or decorated in any manner, 25 per cent ad valorem.

Mr. BRANDEGEE. I move, in line 2, to strike out "25" and insert "45."

The amendment was rejected.

The SECRETARY. On page 109, line 5, firecrackers of all kinds, 6 cents per pound.

Mr. BRANDEGEE. I move to strike out "6" and insert "8."

The SECRETARY. On line 5 strike out "6" and in lieu insert "8."

The amendment was rejected.

The SECRETARY. On page 124, line 15, which relates to agricultural implements. Line 15 reads "including repair parts."

Mr. BRANDEGEE. I will send to the desk the amendment which I offer.

Mr. SIMMONS. Let us have a vote, Mr. President.

The VICE PRESIDENT. The amendment proposed by the Senator from Connecticut will be stated.

The SECRETARY. On page 124, line 15, after the word "parts," strike out the period and insert:

When imported from any country, dependency, or other subdivision of government which imposes no duty on such articles imported from the United States.

The amendment was rejected.

The SECRETARY. The senior Senator from New Hampshire [Mr. GALLINGER] reserved, on page 40, paragraph 137, needles for knitting or sewing machines, latch needles, and so forth.

Mr. GALLINGER. I will address an inquiry to the Senator from North Carolina, if he will honor me with his attention.

Mr. SIMMONS. Yes; I am listening.

Mr. GALLINGER. I called attention the other day to the fact that latch needles have always heretofore borne a heavier rate of duty than the other classes of needles, and inquired of the Senator if he and his associates on the committee would take into consideration the propriety of striking out "latch needles," in lines 7 and 8, on page 40, and inserting after "ad valorem," in line 12, "latch needles, 30 per cent ad valorem."

Mr. SIMMONS. Mr. President, I am forced to say to the Senator that we were not able to meet his views with reference to that matter.

Mr. GALLINGER. I am very sorry, Mr. President, and am ready to have it voted on.

The VICE PRESIDENT. The amendment will be stated.

Mr. GALLINGER. I move as an amendment to strike out "latch needles" in lines 7 and 8, page 40, and to insert after the words "ad valorem," in line 12, "latch needles, 30 per cent ad valorem."

The SECRETARY. On page 40, lines 7 and 8, strike out the words "latch needles" and the comma, and after the words "ad valorem" and the semicolon, in line 12, insert "latch needles, 30 per cent ad valorem."

The amendment was rejected.

The VICE PRESIDENT. The paragraph is now concurred in in the Senate.

The SECRETARY. On page 117, paragraph 376, "harness, saddles, saddlery in sets or in parts, 20 per cent ad valorem," was stricken out by the committee from the House text and the action was agreed to as in Committee of the Whole.

Mr. GALLINGER. Mr. President, I address myself now to the Senator from New Jersey [Mr. HUGHES], if the Senator will give me his kind attention. This matter was discussed by the Senator from Connecticut and myself a few days ago. The Senator from New Jersey very kindly suggested that he would give it further consideration and call it to the attention of his colleagues on the committee. What we desire is that saddlery hardware shall be taken from the leather provision and inserted in the metals and made dutiable at 20 per cent, as the House made not only that but other articles. I will ask the Senator from New Jersey if he feels that that can be conceded?

Mr. HUGHES. My understanding of the matter was that I observed some negotiations were going on in the Chamber at the time and perhaps I misunderstood the purport of them, but

my notion of it was that whatever was to be done was to be attempted in conference.

Mr. GALLINGER. Mr. President, that, I think, was the suggestion which was made. I am ready to have the paragraph voted on and take my chances in conference to get what I have asked. The question will be upon the committee amendment.

The VICE PRESIDENT. The question is on concurring in the amendment made as in Committee of the Whole striking out paragraph 376.

The amendment was concurred in.

The SECRETARY. The next amendment reserved is on page 141, paragraph 534, striking out "all leather not specially provided for in this section and leather board or compressed leather," and so forth, and inserting.

Mr. GALLINGER. That involves the same question, and I am ready to have a vote on it.

The VICE PRESIDENT. The question is on concurring in the amendment agreeing to the paragraph as amended as in Committee of the Whole.

The amendment was concurred in.

The SECRETARY. The Senator from South Dakota [Mr. STERLING] reserves the paragraph in the House text on page 169. There is an amendment at that point.

Mr. STERLING. I should like to have that go over until tomorrow.

Mr. SIMMONS. Does the Senator desire a yea-and-nay vote on that amendment?

Mr. STERLING. I hardly think so; not on the first one.

Mr. SIMMONS. But the Senator desires to have it go over?

Mr. STERLING. Yes.

Mr. SIMMONS. Very well. Then there is paragraph O.

Mr. STERLING. The amendment to paragraph O is already covered by the amendment offered by the Senator from New Hampshire, and he has asked that it go over.

Mr. SIMMONS. The Senator from South Dakota desires to have that go over also?

Mr. STERLING. Yes sir.

Mr. SIMMONS. Very well.

The SECRETARY. On page 113, the Senator from Utah [Mr. SMOOT] reserved paragraph 367.

Mr. SMOOT. That was voted upon this morning.

Mr. SIMMONS. Yes; I have not that on my list. I suppose it was disposed of this morning.

The SECRETARY. The Senator from Colorado [Mr. THOMAS] reserved, on page 250, subdivision or subsection B.

Mr. THOMAS. I offer an amendment to subsection B beginning at the end of the subsection.

The SECRETARY. On page 250, line 20, after the word "same," insert a comma and the words "except in so far as paragraph 175, Schedule E, of section 1 thereof, may be determined to be in conflict with the proviso to article 8 of said treaty."

Mr. SMOOT. Did we not agree to that the other day?

Mr. THOMAS. I can not find it in the Record.

Mr. SMOOT. I believe it was agreed to the other day.

Mr. THOMAS. I presented it, but I can find no mention of it in the CONGRESSIONAL RECORD.

The VICE PRESIDENT. It was agreed to as in Committee of the Whole. The question is on concurring in the amendment.

Mr. HUGHES. Mr. President, a parliamentary inquiry. Where does it appear in the printed text?

The SECRETARY. After the word "same," in line 20, page 250.

Mr. HUGHES. It does not appear here.

Mr. SIMMONS. It does not appear in the old print.

The VICE PRESIDENT. It would not appear in the old print. It would be an amendment. The question is on concurring in the amendment.

Mr. THOMAS. It is in the print of yesterday, and no action is required.

The VICE PRESIDENT. The amendment will be concurred in.

The SECRETARY. The Senator from North Dakota [Mr. McCUMBER] reserved paragraph 646, page 155, relating to wheat flour.

Mr. McCUMBER. I ask that that may go over with the other amendments to the agricultural schedule referred to by the Senator from Kansas.

Mr. SIMMONS. That course is satisfactory.

The SECRETARY. The only other reservation is by the Senator from New York [Mr. ROOT], page 172, subdivision or subsection D.

Mr. SMOOT. I should like to ask the Senator from North Carolina that that go over.

Mr. SIMMONS. If the Senator desires it, I have no objection.

Mr. President, I have an amendment that I wish to offer, on page 284, at the end of line 2, to be known as subsection 2. I will not offer it to-night if it is necessary to read the amendment, because it is rather lengthy. I will explain the amendment and that will be satisfactory.

Mr. GALLINGER. On what page is it?

Mr. SIMMONS. I want to offer it at page 284, at the end of line 2.

The VICE PRESIDENT. There is no such page.

Mr. GALLINGER. There are not so many pages in the print.

Mr. SIMMONS. Then I have the wrong print.

The SECRETARY. Paragraph N, page 267.

Mr. SIMMONS. Yes; it is subsection 2, paragraph N. It is to come in at the end of subsection N, page 284 of the last print.

The VICE PRESIDENT. There is only one way for the Secretary to keep track of the amendments, and that is by using the former print.

Mr. SIMMONS. I will ask the Secretary what is the page in the old print that he is using?

The SECRETARY. On page 267 is subsection N.

Mr. SIMMONS. At the end of subsection N, page 267, I wish to insert subsection 2.

The SECRETARY. Subsection N begins with the words "That the works of manufacturers engaged in smelting or refining," and so forth.

Mr. SIMMONS. That is the one. At the end of that subsection I wish to insert as subsection 2 an amendment.

Mr. POINDEXTER. On what page is that of the last print?

Mr. SIMMONS. It is page 284 of the last print.

Mr. HUGHES. It is page 267 of the old print.

Mr. THOMAS. And of the last print 284.

Mr. SIMMONS. Mr. President, this is an amendment in the nature of a substitute for an amendment offered by the Senator from Oregon [Mr. LANE]. The amendment offered by the Senator from Oregon was submitted to the department and has the approval of the Commissioner of Internal Revenue with the amendment I now suggest.

The purpose of the amendment is to remove certain restrictions imposed under the present law on the manufacture of denatured alcohol, so as to make it possible for the farmers of this country to manufacture that article at a reasonable cost. At present it has been ascertained by experiments made by the Department of Agriculture that it is impossible to make this product with a plant costing less than about \$12,500, because it is required that the spirits be raised, in the first instance, to a proof of 180, which is impossible in a small distillery such as would be economical for use on the farm.

The only object of this amendment is to remove that and some other restrictions which have interfered with the manufacture of this product. If there is objection to it, I will wait until to-morrow, when the explanation can be made more fully than I care to make it at this time.

Mr. GALLINGER. It occurs to me that this is an opportune time to pass it.

Mr. SIMMONS. I should like very much to get it out of the way.

Mr. GALLINGER. If the Senator has a scheme that will make the manufacture of denatured alcohol possible to the farmer, I think that we ought to support it.

Mr. SIMMONS. I will state to the Senator that the farmers have sent a delegation here with reference to this matter. This amendment has been submitted to them and is very satisfactory, they say, and will enable them to make denatured alcohol, which it is impossible for them under the present law to do.

Mr. SMOOT. I should like to ask the Senator if the department has passed upon it?

Mr. SIMMONS. I stated that it had been submitted to the department, and the department has passed upon it. To-day the department sent Mr. Maddox, who has charge of this matter, up here and he had lengthy conferences with the Senator from Florida [Mr. BRYAN], the Senator from Oregon [Mr. LANE], and in part with myself.

Mr. POINDEXTER. I should like to ask the Senator from North Carolina what the other restrictions are? He mentioned the proof of 180 degrees and referred to other restrictions.

Mr. SIMMONS. The others were some restrictions with reference to bonds and inspection.

Mr. POINDEXTER. I dislike very much to consent to important legislation without knowing what it is, but if the Senator assures us that the purpose of the amendment is to liberalize the manufacture of denatured alcohol, I am willing to take his statement.

Mr. SIMMONS. That is its only purpose.

The VICE PRESIDENT. The Senator from North Carolina offers an amendment, the reading of which by unanimous consent will be dispensed with, but the amendment will be printed in the RECORD.

The proposed amendment is, at the end of subsection N, page 268, insert the following:

SUBSECTION 2. That from and after the 1st day of January, 1914, under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe, any farmer or association of farmers, any fruit grower or association of fruit growers, or other person or persons may manufacture alcohol free of tax for denaturation only, out of any of the products of farms, fruit orchards, or any substance whatever, on condition that such alcohol shall be directly conveyed from the still by continuous closed pipes to locked and sealed receptacles in which the same may be rendered unfit for use as an intoxicating beverage by an admixture of such denaturing materials as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe, or where such alcohol is of insufficient proof to be denatured, the same may be transferred in bond from such locked and sealed receptacles to a central distilling and denaturing plant as hereinafter provided.

That the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury may authorize the establishment of central distilling and denaturing plants to which alcohol produced under the provisions of this act, free of tax, may be transferred, redistilled, and denatured under such regulations, and upon the execution of such notices and bonds as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe.

That any central distilling and denaturing plant provided for in section 2 of this act may, in addition to the spirits produced under section 1 of this act, use any of the products of farms, fruit orchards, or any substance whatever for the manufacture of alcohol for denaturation only: *Provided*, That at such distilleries the use of cisterns or tanks of such size and construction as may be deemed expedient shall be permitted in lieu of distillery bonded warehouses under such rules and regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe.

That any person who under the provisions of this act shall fail to register, or shall falsely register, any still or distilling apparatus used by him, or who shall fraudulently remove or conceal any distilled spirits produced by him, or who shall fail to comply with all the requirements of this act, or any regulations issued pursuant thereto, respecting the production and denaturation of distilled spirits; and any person who shall recover or attempt to recover by redistillation or by any other process or means any distilled spirits after the same has been denatured, shall on conviction, for each offense, be fined not more than \$5,000 or be imprisoned for not more than five years, or both, and shall in addition thereto forfeit to the United States all real and personal property used in connection therewith.

That subsection 2 of section 3244 of the Revised Statutes of the United States shall not apply to stills and worms manufactured for use in distilling, provided for in section 1 or this act, but the manufacturer or owner of such distilling apparatus shall give notice to the collector of internal revenue of the district in which the said apparatus is made or to which it is removed, of each still or worm manufactured, sold, used, or exchanged under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe.

That section 4 of the act of March 2, 1907, amendatory of the act of June 7, 1906, is hereby repealed, and the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall exempt distillers operating under this act from the provisions of sections 3283 and 3309 of the Revised Statutes of the United States, and from such other provisions of existing laws relating to distilleries, including the giving of bonds, as may be deemed expedient by said officials: *Provided, however*, That the Commissioner of Internal Revenue shall assess and collect the tax on any spirits unlawfully produced or produced and not accounted for by any such distiller.

The VICE PRESIDENT. The question is on agreeing to the amendment.

The amendment was agreed to.

EXECUTIVE SESSION.

Mr. SIMMONS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After three minutes spent in executive session the doors were reopened, and (at 1 o'clock and 28 minutes a. m. Tuesday, September 9) the Senate adjourned until Tuesday, September 9, 1913, at 9 o'clock a. m.

HOUSE OF REPRESENTATIVES.

Monday, September 8, 1913.

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We lift up our hearts in gratitude to Thee, O God our heavenly Father, that Thou hast made it possible for us to come to Thee in prayer. We need the uplift, the ingathering of the spirit which comes through contact with Thee to enable us with confidence, patience, and perseverance to go forward to the duties before us. To this end strengthen, guide, and support us, that we may accomplish Thy purposes; in Jesus Christ, our Lord. Amen.

The Journal of the proceedings of Saturday, September 6, 1913, was read and approved.

LEAVE TO EXTEND REMARKS.

Mr. TALCOTT of New York. Mr. Speaker, I ask unanimous consent to extend in the RECORD remarks I made before the

Interstate and Foreign Commerce Committee last February concerning the use of steel cars on railroads.

The SPEAKER. The gentleman from New York [Mr. Talcott] asks unanimous consent to extend his remarks in the RECORD on the subject of steel cars on railroads. Is there objection?

There was no objection.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. O'Leary, for 10 days, on account of illness in his family.

URGENT DEFICIENCY APPROPRIATION BILL.

Mr. FITZGERALD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of H. R. 7898. The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill (H. R. 7898) making appropriations to supply urgent deficiencies in appropriations for the fiscal year 1913, and for other purposes, with Mr. Flood of Virginia in the chair.

The CHAIRMAN. The Clerk will resume the reading of the bill.

The Clerk read as follows:

The action of the Executive in directing the issue and the issuance by the Surgeon General of the Army of medical supplies out of the reserve supply for the field service of the Army, of the value not exceeding \$8,239.40, for the relief of sufferers from floods in the Mississippi Valley in 1913, is approved, and credit for all such supplies so issued shall be allowed in the settlement of the accounts of the Medical Department of the Army.

Mr. MANN. Mr. Chairman, I move to strike out the last word. I do not remember whether it was in the last Congress or in the preceding one that the Committee on Appropriations recommended a provision in one of the appropriation bills, practically providing that hereafter the President should never advance any supplies for the relief of distress. The President has issued supplies for that purpose on a number of occasions, and Congress has always approved and ratified the action of the President. At the time that I speak of, the committee, in approving and ratifying the action of the President—relating to the Mississippi floods, I believe—proposed to restrict the power of the President thereafter. I made a point of order against that provision, and it was stricken out of the bill on that point of order; so at least on one occasion a technical rule has been of great service, as is proven by the action taken by the President in reference to the Ohio floods.

Mr. FITZGERALD. Mr. Chairman, this does not restrict the power of the President. He has no authority to take any such action. The only other time that I can recall when the President issued supplies without authority having first been given was during the last session of Congress, when a disaster occurred in Alaska. That was done after conference with a number of Members of Congress, as was the action relating to the Mississippi floods just prior to the latest one.

At the time these Ohio and Mississippi Valley floods occurred Congress was not in session. It was between the end of the last session of Congress and the convening of the present session. The matter was called to the attention of the President and discussed with Senator MARTIN of Virginia, who, at that time, it was expected would be chairman of the Senate Committee on Appropriations, and he also communicated with me, because I had been chairman of the Committee on Appropriations of the House in the last Congress. He said he intended to take this action and hoped he would have the support of Congress. The committee thought it advisable to put in a provision legalizing this action. It was not with the intention of interfering with the Executive, although it was to deter people in communities where small catastrophes take place, where there would be ample means and authority in the States to take care of the situation, from feeling that the Federal Government existed for the sole purpose of relieving distress under such conditions. The disasters that took place in the Ohio and Mississippi Valleys were so extensive that, following what had been customary in the past, the United States took such measures as were possible to relieve them.

Mr. MANN. Mr. Chairman, evidently the gentleman from New York did not understand what I said.

Mr. FITZGERALD. I did not catch it exactly.

Mr. MANN. I was not criticizing the provision in the bill. Quite the contrary. I think the President did exactly what he ought to have done on this occasion in reference to these Ohio and other floods last spring. I took the liberty of calling upon the President and the Secretary of War and saying to each of them that I was very sure that no one on the minority side of

the House would criticize the President or the department if they furnished relief to these sufferers.

I was referring to a provision which my distinguished friend from New York [Mr. FITZGERALD] inserted in an appropriation bill reported to the House a session or two ago, declaring practically that Congress hereafter would not legalize such action by the President or the Executive if taken without authority of Congress. I took the liberty of making a point of order against that provision, and it went out on the point of order. I think what has taken place since fully justifies the making of that point of order.

Mr. FITZGERALD. Mr. Chairman, I am glad the Federal Government did what was done during the recent floods, although I think it is unfortunate that it is necessary that such enormous loss should happen from these catastrophes in order to justify any action on the part of the gentleman from Illinois and the House.

Mr. MANN. Mr. Chairman, that was not necessary to justify the action. The action was justified by the majority of the House at the time, and I take it it is now justified by the gentleman from New York, who then opposed the action.

The CHAIRMAN. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

The Secretary of the Treasury is authorized and directed to credit certain appropriations under control of the Engineer Department of the Army with expenditures for the relief of sufferers from floods in the Mississippi Valley in 1913, as follows:

Mr. MANN. Mr. Chairman, I move to strike out the last word. Just what is meant by this direction to credit certain appropriations with expenditures for the relief of sufferers from floods in the Mississippi Valley?

Mr. FITZGERALD. Mr. Chairman, in some of these cases enumerated under this language supplies were used and boats were utilized. Men were detailed to work and were paid out of a permanent appropriation for the operation of locks and canals, and in order to permit the accounts to be straightened out, instead of making an appropriation to reimburse such appropriations, the committee thought it more advisable to authorize the crediting of the amounts so that the books might be kept straight. In some of the appropriations for the improvement of the Mississippi River and the Ohio River, instead of making another appropriation to reimburse the appropriations that were used the committee thought it would be advisable to simply authorize the crediting off of these sums.

Mr. MANN. I still do not understand. I may be thick headed. What is done in reference to the improving of the Mississippi River to the extent of \$10,125?

Mr. FITZGERALD. Nothing. Out of an appropriation for that purpose certain forces are engaged in doing this work, and they were diverted from that work to the flood relief work, and, instead of reimbursing the appropriations, the provision in this way enables them to legalize the accounts in their books.

Mr. MANN. It is intended, then, that this appropriation for improving the Mississippi River really loses this amount.

Mr. FITZGERALD. Yes, to that extent; and in some of the others it is out of the permanent indefinite appropriation, and there was no necessity to reimburse it.

The Clerk read as follows:

Interior Department.

Mr. FOSTER. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read.

The Clerk read as follows:

After the words "Interior Department" add, as a new paragraph:

"The Secretary of the Interior is hereby authorized, in his discretion, to accept and expend such funds, not to exceed the sum of \$500,000, as may be contributed by the State of Pennsylvania or other parties for the purpose of extending and improving the site transferred by the authorities of the city of Pittsburgh to the United States in accordance with the act of Congress making appropriation for public buildings and grounds, approved March 4, 1913, and for the erection for the use of the Bureau of Mines of appropriate structures on the lower portion of said site adjacent to the Carnegie Institute of Technology: *Provided*, That the acceptance of such contributions and the improvements made therewith shall require no expenditures by the United States additional to those already authorized by Congress."

Mr. FITZGERALD. Mr. Chairman, on that I reserve the point of order.

Mr. FOSTER. Mr. Chairman, I just want to say a word in respect to this. I realize, of course, that this is subject to the point of order. It will be called to mind that the Department of the Interior came into possession of some land in the city of Pittsburgh for the use of the Bureau of Mines, which they received in a trade with the War Department; that is, the War Department owned some land which was given to the city of Pittsburgh as a park, and the Congress made a transfer of this land to the city of Pittsburgh, and in consideration they re-

ceived the land which is now the property of the Bureau of Mines. At the last session of Congress there was authorized an appropriation of \$500,000 for a building on this property. On one side of the property near the Carnegie Technical Institute there is a ravine, in which there are a number of railroad tracks.

The Carnegie Institute Building, which has been erected there, stands very high from the ground on account of this ravine, and what they desire to do is to assist in filling in this ravine, covering over the railroad tracks in such a way that the cars may run underneath. That protects their own building, which they think needs this very much, and the State of Pennsylvania in the last session of the legislature passed an appropriation of \$50,000 for that purpose. When the bill went to the governor, Gov. Tener was attempting to economize as much as he could, and he reduced it to \$25,000, so that there is now available from the State of Pennsylvania \$25,000 for this purpose, and it is expected that other donations will be made so that this ravine may be filled in, and the Bureau of Mines and the Government consequently will get the benefit of this expenditure of money. It requires no additional expense on the part of the Government in accepting these donations, whatever they may be, and we have reason to believe that if this authorization is made that there will be sufficient funds to cover this ravine in the way I have indicated and in that way the Government will get the benefit from it.

Mr. MANN. Will my colleague yield?

Mr. FOSTER. Yes.

Mr. MANN. Has not the Senate passed a bill?

Mr. FOSTER. I think they have. Senator WALSH, I think, introduced a resolution, but whether it was passed or not I am not sure, but I think it has. I know it has been introduced over there and I understand there is no opposition so far as it, at least, is concerned.

Mr. MANN. I may be mistaken, but I was under the impression that the Senate had passed the bill.

Mr. FOSTER. The gentleman's recollection may be correct as to its passage, but I rather think there was a favorable report on it by the committee, but whether it has passed or not I am not sure.

Mr. MANN. As far as the gentleman knows has anyone any opposition to it?

Mr. FOSTER. I do not know of anyone who has any opposition to it.

Mr. MANN. I understand this is a site the Bureau of Mines wants.

Mr. FOSTER. This site now belongs to the Bureau of Mines. This 11½ acres is on a hill sloping down into a ravine on which there are a number of railroad tracks. Now, what is proposed is to build up in connection with the Carnegie Institute, say, for instance, over here [indicating], and here is the land belonging to the Bureau of Mines. That fills in this ravine and makes it so an elevator can be put in there, for instance, to conduct from the railroad tracks up to the top of the hill and in that way get a greater benefit from it.

Mr. MANN. I did not hear all my colleague said, but my recollection was that the State of Pennsylvania was to contribute half a million dollars.

Mr. FOSTER. They contributed last winter \$50,000, but that appropriation was reduced by the governor to \$25,000. That is all the appropriation that they have made so far, but I understand the Carnegie Institute there, in connection with their work, was willing to help make this donation in the sum of something like half a million dollars, and it would be of great benefit to the Government, to their property, if they were permitted to accept this donation. They can not do it, of course, without authorization from the Congress.

The CHAIRMAN. The time of the gentleman has expired. The point of order is sustained.

The Clerk read as follows:

GENERAL LAND OFFICE.

The unexpended balance on June 30, 1913, remaining to the credit of the appropriation of \$4,500 contained in the deficiency appropriation act approved August 26, 1912, for the completion during the fiscal year of 1913 of the examination and classification of lands within the limits of the Northern Pacific grant under the act of July 2, 1864 (13 Stats., 365), is continued and made available to meet the expenses pertaining to such examinations and classifications as may be incurred during the fiscal year ending June 30, 1914.

Mr. MONDELL. Mr. Chairman, I move to strike out the last word. Mr. Chairman, the Secretary of the Interior submitted an estimate to the committee of \$50,000 for the employment of 3 lawyers at a salary of \$5,000 per annum, 10 lawyers at a salary of \$2,500 per annum, and some additional clerks and stenographers in the office of the Assistant Attorney General for the Interior Department. This appropriation was asked for on the

ground that there was a large accumulation of appealed cases in the Secretary's office, largely from the General Land Office. The committee gave careful consideration to this item, and I believe was justified in not allowing it at this time in total, though I am of the opinion that it would have been the part of wisdom to have given the Secretary of the Interior some money to employ additional force in his office for the purpose of bringing up the appealed cases. For a number of years past, owing to the rulings in the Secretary's office and in the office of the commissioner relating to land matters, there have been an unusually large number of appeals, so that at this time there are many appealed cases which have been before the Secretary's office for some time and that ought to be passed upon. The committee, on interrogating the officials of the department, came to the conclusion that possibly after the present Secretary and his assistants have had more time to acquaint themselves with the work of the office they will be better qualified than now to recommend whatever reorganization or addition to the force may be necessary to care for the increased work which comes to the Secretary's office from the Land Office.

I regret that the Secretary did not ask for a smaller sum, or that the committee, after considering the matter, did not feel justified in giving the Secretary at least a portion of what he asked. And yet, taking everything into consideration—and I shall not take up the time of the committee to go into the matter in detail—I think the committee was justified in not allowing the full estimate at this time, although it is very certain that the Secretary's office will require increases in the future, and I trust that they may provide in the next appropriation bill for the constantly increasing work of that office.

Mr. Chairman, there was also presented to the committee an estimate of \$8,100, for the purpose of employing two clerks in the office of the Commissioner of the General Land Office, at the rate of \$1,400 per annum; 2 clerks, at \$1,200; 2 clerks, at \$1,000; and 1 copyist. I think the committee should have allowed that item. I reserved the right to offer an amendment providing for it; but after thinking the matter over, I have concluded that it would be useless to do so, and therefore I shall not offer an amendment.

There is no question, however, but that the commissioner's office needs this additional help and more. The fact is that the General Land Office has long been one of the neglected offices under the Government in the matter of salaries and office force. The commissioner's office was established a long time ago. The salaries are those which were current 20 years ago. Since that time, as we have provided new departments and new bureaus, we have fixed salaries more in harmony with the prevailing conditions of the time, and we now have many bureau chiefs under the Government who have infinitely less responsibility and very much less work than has the Commissioner of the General Land Office who receive a much larger salary than does the commissioner.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. MONDELL. Mr. Chairman, I ask that I may have five minutes more.

The CHAIRMAN. Is there objection to the gentleman's request.

There was no objection.

Mr. BARTLETT. Mr. Chairman, may I ask the gentleman just one question before he proceeds?

Mr. MONDELL. Yes.

Mr. BARTLETT. Is it not a fact that this same application was made in the last Congress to the last Appropriations Committee and the one before? It is not an application for a deficiency, but is it not simply a supplemental estimate and a thing they have been trying to get from Republican and Democratic committees, and neither one of them has allowed it?

Mr. MONDELL. I will say to my friend that I did not rise to criticize the committee or anyone else, or to raise the issue as to whether or not a Republican Congress had performed its duty or whether this Democratic Congress would perform its duty, but rather to give a little information with regard to a matter with which I am familiar. I want to express the hope that the committee having charge of the legislative appropriation bill will go into the question of entirely reorganizing the office of the Commissioner of the General Land Office. I have a bill which has been before Congress for some time to accomplish that purpose. It was not reported in the Republican Congress, partly because it was introduced just before our party ceased to have the power to legislate, and the Democratic Congress thus far has not seen fit to take the matter up. But I trust that Democratic economy will not stand in the way of the much-needed reorganization of the office of the Commissioner

of the General Land Office and provide for an increase of salaries and of officers. While it is true that we are disposing of the public domain quite rapidly and the amount of public lands which remain open for disposition is much smaller than it was a few years ago, it is also a fact that, right or wrong, properly or improperly—and that is largely a matter of opinion—we are exercising a closer scrutiny and supervision over the disposal and use of the public domain than we have in the past, and the result is that the same number of cases handled now that were handled in the past require much more consideration and require a larger force than the same number of cases would have required a few years ago.

In addition to that, we are administering the public domain under much more complicated legislation than in years past, with the result that this office, whose force has not been increased to any considerable extent in many years, is greatly overburdened with the volume of business it is called upon to transact. While we have been increasing salaries elsewhere—and this is what I particularly desire to emphasize—while we have been increasing salaries elsewhere very considerably, salaries of chiefs and assistant chiefs of bureaus, chiefs of divisions, and so on, we have not increased the salaries in the office of the Commissioner of the General Land Office for many years, and we have any number of officials of the Government receiving nearly twice the salary that the commissioner and his assistants receive for work of no greater importance.

Mr. COX. What does the commissioner receive?

Mr. MONDELL. \$5,000. There are officers receiving much higher salaries who occupy positions that do not require the preparation and ability that is required to fill these positions and that do not have anything like the responsibility these men have.

Mr. COX. Will the gentleman yield for a question?

Mr. MONDELL. Yes; I will yield.

Mr. COX. I want to say to the gentleman that there has been no dearth of applicants for that position since the 4th of March, and no complaints have been made about the salary.

Mr. MONDELL. Oh, my friend knows that that really does not answer the proposition at all. There are men who are willing to serve the Government even at a loss.

Mr. COX. They are patriots.

Mr. MONDELL. Yes; patriotic men. There are lots of such men. Then there are men who may not be worth \$5,000 or \$4,000 or \$3,500 who would be perfectly willing to secure an office which has that salary attached to it. What I desire to emphasize is, first, that the force in this office is inadequate in number; and, second, that the salaries paid are not sufficient either in the case of the positions filled by appointment of the President or many of those under civil service. I believe that the men now occupying those positions are worthy and well qualified; but I do not believe they are receiving the salaries that men of their ability and qualifications are entitled to, and it is only fair and just that we should bring this long-neglected bureau up to the standard of other bureaus in pay and in the size of the force. There should be a considerable increase in force and a marked increase in salaries as a matter of justice and good administration.

Mr. FITZGERALD. Mr. Chairman, without taking the time to discuss the appropriations for the General Land Office, I shall insert in the Record a brief statement showing the appropriations for that office for the last few years. It shows that that service has been more than liberally treated by Congress.

The CHAIRMAN. If there be no objection, the statement referred to by the gentleman will be printed as a part of his remarks.

There was no objection.

The statement is as follows:

APPROPRIATIONS FOR GENERAL LAND OFFICE.

For the fiscal year 1909 the appropriation for the clerical force in the General Land Office was increased from \$560,900 for 1908 to \$572,450, or by \$11,550. For the fiscal year 1910 there was appropriated \$572,450. For 1911, \$572,450 was appropriated, and in addition thereto 51 places, with salaries aggregating \$49,220, were provided for in the sundry civil act. For the fiscal year 1912, \$572,450 was provided, and the \$49,220 carried in the sundry civil act for 1911 for employees was taken up and made a part of the regular force of the Land Office, making for that year \$621,870. For the fiscal year 1913 the appropriation was increased from \$621,870 to \$630,650, or by \$8,780, and 37 additional temporary employees, with salaries aggregating \$32,620, were provided for in the sundry civil act. For the fiscal year 1914 the appropriation was increased from \$630,650 to \$631,250, or by \$750, and in addition thereto authority was given to expend \$15,000 from the sum appropriated "to prevent depredations on the public timber," for clerical services in bringing up and making current the work of the General Land Office.

In addition to the foregoing specific employments in the General Land Office clerical services were further authorized under the appropriation for preventing depredations upon the public timber, as follows:

Prior to 1909 the largest appropriation made for preventing depredations upon the public timber was \$250,000.

For the fiscal year 1909, \$500,000 was given, of which \$250,000 was made available for bringing up the work of the General Land Office thereunder and making it current.

For the fiscal year 1910, \$1,000,000 was appropriated, of which \$750,000 was made available to bring up current the work of the General Land Office and \$50,000 was made available for employment of clerks and other expenses at district land offices.

For the fiscal year 1911, \$750,000 was appropriated, of which \$500,000 was made available to bring the work up current and \$25,000 made available for clerks and other expenses at district land offices.

For the fiscal year 1912, \$650,000 was appropriated and \$250,000 made available for making the work current in the General Land Office and \$25,000 made available for clerks and other expenses at district land offices.

For the fiscal year 1913, \$500,000 was appropriated and \$25,000 made available for making the work of the General Land Office current.

For the fiscal year 1914, \$500,000 was appropriated and \$15,000 made available for clerical services in making current the work of the General Land Office.

For clerk hire and other expenses of district land offices appropriations have been made as follows:

1908.....	\$295,000
1909.....	301,250
1910.....	295,000
1911.....	295,000
1912.....	320,000
1913.....	410,000
1914 (as estimated by General Land Office).....	320,000

The CHAIRMAN. If there be no objection, the pro forma amendment will be considered as withdrawn, and the Clerk will read.

The Clerk read as follows:

GEOLOGICAL SURVEY.

For the purchase of instruments, equipment, apparatus, supplies, file cases and other furniture, and lumber, and the reprinting of maps and folios, to replace certain ones destroyed by the fire of May 18, 1913, in the building occupied by the United States Geological Survey, including the repairs to instruments and equipment made necessary by said fire, these emergency purchases to be made under such rules as the Secretary of the Interior shall prescribe, to continue available during the fiscal year 1914, \$50,000.

Mr. BARTON. Mr. Chairman, I move the adoption of the amendment which I send to the Clerk's desk.

The Clerk read as follows:

Amend, page 17, after line 21, by inserting as a new paragraph the following:

"For gauging the streams and determining the water supply of the United States, and for the investigation of underground currents and artesian wells, and the preparation of reports upon the best methods of utilizing the water resources of southwestern Nebraska, \$100,000, to remain available during the fiscal year 1914."

Mr. FITZGERALD. Mr. Chairman, I make a point of order against the amendment.

Mr. MANN. Does the gentleman make it or reserve it?

Mr. FITZGERALD. I will reserve it.

Mr. BARTON. Mr. Chairman, there is no greater asset to the people as a whole than a prosperous, productive, agricultural country; no greater work that the Government can do than to convert semiarid lands into dependable agricultural regions. We have the best soil in the world, plenty of sunshine, and a most industrious people, and all we need to make them prosperous, contented, and happy is an abundant supply of water to irrigate their land. We may have within easy access a possible plan of subirrigation. It may be possible to dam up the watercourses and make reservoirs or lakes. It may be possible in some other manner secure this much-needed water. We do not know. We are asking for a doctor to diagnose our case. We believe the Government should determine the practical thing for us to do, as we are entitled to the benefit of the knowledge of the people and the departments who have made these matters a life study at Government expense. If some practical plan can be determined in this district, the same plan would apply to a vast area of the lands of the Middle West, and great tracts of land now uncertain would be transformed into the granaries of the great Middle West.

You Members who preach conservation, can you conjure a greater conservation than is contained in this amendment, which means if a practical plan is evolved, full granaries, happy homes, and a prosperous condition? And again I say, all that we ask is an expert to make proper investigation to determine the best means of bringing about this so much desired condition of a plentiful water supply.

You Members who helped vote out of the National Treasury \$4,000,000 to construct a park in Washington, and who from time to time vote great sums for the purpose of beautifying parks and building memorial bridges, can surely lend your support to this amendment, which means so much to an agricultural people and to the consumers of this country.

Mr. FITZGERALD. Mr. Speaker, I insist on my point of order.

The CHAIRMAN. The point of order is sustained.

MESSAGE FROM THE SENATE.

The committee informally rose; and Mr. McKellar having taken the chair as Speaker pro tempore, a message from the Senate, by Mr. Tulley, one of its secretaries, announced that the President had on the following dates approved bills of the following titles:

On July 9, 1913:

S. 2272. An act providing for an increase in number of midshipmen at the United States Naval Academy after June 30, 1913.

On July 15, 1913:

S. 2517. An act providing for mediation, conciliation, and arbitration in controversies between certain employers and their employees; and

S. 1353. An act to authorize the board of county commissioners of Okanogan County, Wash., to construct, sustain, maintain, and operate a bridge across the Okanogan River at or near the town of Malott.

On August 28, 1913:

S. 1620. An act to provide for representation of the United States in the Fourteenth International Congress on Alcoholism, and for other purposes.

The message also announced that the Senate had passed joint resolution of the following title, in which the concurrence of the House of Representatives was requested:

S. J. Res. 68. Joint resolution authorizing the Secretary of the Senate and the Clerk of the House of Representatives to advance to the chairman of the commission appointed under the act approved June 30, 1913, such sums of money as may be necessary for the carrying on of the commission, etc.

SENATE JOINT RESOLUTION REFERRED.

Under clause 2 of Rule XXIV, Senate joint resolution of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. J. Res. 68. Joint resolution authorizing the Secretary of the Senate and the Clerk of the House of Representatives to advance to the chairman of the commission appointed under the act approved June 30, 1913, such sums of money as may be necessary for the carrying on of the commission, etc.; to the Committee on Indian Affairs.

URGENT DEFICIENCY APPROPRIATION BILL.

The committee resumed its session.

The Clerk read as follows:

Platt National Park: For maintenance, bridging, roads, and trails, fiscal year 1914, \$8,000.

Mr. FOSTER. Mr. Chairman, on that I reserve the point of order.

Mr. CARTER. Mr. Chairman, this is not subject to a point of order. It is one of the regular parks provided for by the act of July 1, 1902; and if this item is subject to a point of order any item for a national park is subject to a point of order.

Mr. FOSTER. This is a park for which, I think, up to this time the Government has stopped appropriating.

Mr. CARTER. No; it has not. It failed to appropriate for it last year, but that does not make this item subject to the point of order.

Mr. FOSTER. I understand this is only a health resort down there, which the National Government is maintaining, and it is not a national park at all.

Mr. CARTER. Oh, yes; it is.

Mr. FOSTER. In one sense of the word it is not.

Mr. CARTER. It is one of the most beautiful of all of the national parks.

Mr. THOMPSON of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. FOSTER. Certainly.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I know as well as any man who is a Member of this Congress or as well as any man in the United States the conditions that exist at the Platt National Park. On the 1st of July, 1902, about 1,000 people built the town of Sulphur, Okla., near where are located the Sulphur Springs and the Medicine Springs in Oklahoma. At that time the then Secretary of the Interior, Mr. Hitchcock, without any request on the part of these people, asked the Congress of the United States to segregate, because of the medicinal properties of the water of these different springs, 628.89 acres of land. Mr. Chairman, on the request of the Secretary of the Interior these lands were segregated from allotments to the Chickasaws and Choctaws, the people who owned the land. Very small remuneration was paid to the people who occupied the lots and who were in possession of the land around these springs; but the people of Sulphur with good grace submitted

to this appropriation by the Federal Government. In 1904, on April 18, the Congress of the United States, acting on information given it by the Secretary of the Interior, Mr. Hitchcock, appropriated a further amount of land, amounting to 219.33 acres, making in all \$48.22 acres of land. The people of Sulphur did not ask this appropriation of the public domain. They had moved off the land that was appropriated in 1902 and had moved on the land that was not appropriated at that time, and occupied that land, so that when the Federal Government came along in 1904 and appropriated an additional 219.33 acres they were in that appropriation.

They submitted to that, Mr. Chairman. They were very poorly paid for the improvements they had put upon this land, and they moved across to another part of Oklahoma. There are two reasons why the Platt National Park should be continued. In the first place, Mr. Chairman, it is the only unappropriated public domain of the Chickasaws and Choctaws in the great State of Oklahoma. The Choctaws and Chickasaws have given up all of the public domain of the two tribes located in that State. They have surrendered their pride of tribe; they have surrendered their pride of nation, and these 848.22 acres of land are all of the land of these two great tribes of Indians, now fast vanishing, that has not been segregated and divided among the people of the Chickasaws and Choctaws in common.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. THOMPSON of Oklahoma. Mr. Chairman, the National Government has set aside 12 parks in the present boundary of the United States. The object of the Government in setting aside these national parks was for playgrounds for the people of the country, to promote their health and their happiness. In the State of Oklahoma this is the only playground, the only national park, that has been set aside for the people by the Government of the United States. We have nearly 2,000,000 people in that State, and they, with nearly 1,000,000 people in the State of Texas and a half million people in the State of Kansas, use the Platt National Park as the playground of the people of that section of our country.

Now, if the policy of the National Government is to be continued, if the idea of the National Government to set aside national parks is to be continued, I can prove to this Congress and to the people of this country that the Platt National Park is the most important of all the national parks in this country.

I want to say to the Congress and to the American people that the Government of the United States has established the following national parks and appropriated for the purpose of maintaining these parks the following sums of money:

The Yellowstone National Park, Wyoming, \$2,744,903.84
The Yosemite National Park, California, \$474,599.25.
The Glacier National Park, Montana, \$259,200.
The Sequoia National Park, California, \$178,939.69.
The General Grant National Park, California, \$29,558.65.
The Mount Rainier National Park, Washington, \$63,300.
The Crater National Park, Oregon, \$177,855.
The Wind Cave National Park, South Dakota, \$26,900.
The Mesa Verde National Park, Colorado, \$77,000.
Platt National Park, \$40,500.
The Hot Springs National Park, Arkansas, \$442,244.30.

Now, Mr. Chairman, I want to call the attention of the Congress to the amount of land granted to these national parks by the Government of the United States:

The Yellowstone National Park, 2,142,720 acres.
The Yosemite National Park, 719,622 acres.
The Sequoia National Park, California, 161,597 acres.
The General Grant National Park, 2,536 acres.
The Mount Rainier National Park, 207,360 acres.
The Crater Lake National Park, Oregon, 159,360 acres.
Wind Cave National Park, 10,522 acres.
Platt National Park, Oklahoma, 848.22 acres.
The Mesa Verde, Colorado, 42,376 acres.
Hot Springs National Park, Arkansas, 911.63 acres.
Glacier National Park, in Montana, 981,681.

Mr. Chairman, I desire to incorporate as a part of my remarks the location, area, and characteristics of the national parks as will be found in the report of the Secretary of the Interior to the Congress of the United States for the fiscal year ending June 30, 1912.

The CHAIRMAN. The gentleman from Oklahoma asks unanimous consent to incorporate the matter mentioned in his remarks. Is there objection?

There was no objection.

Mr. THOMPSON of Oklahoma. Mr. Chairman, the report of the Secretary of the Interior for the fiscal year ending June 30, 1912, with reference to the location, area, and characteristics of national parks is as follows.

Location, area, and characteristics of national parks.

Name.	Location.	When established.	Area (acres).	Private lands (acres).	Visitors, 1912.	Special characteristics.
Yellowstone.....	Wyoming, Montana, and Idaho.	Mar. 1, 1872	2,142,720	None.	22,970	Wonderful scenery, geysers, boiling springs, mud volcanoes and springs, mountains, grand waterfalls, brilliant-hued canyons, great lake 8,000 feet above the level of the sea; wild animals.
Yosemite.....	California.....	Oct. 1, 1890	719,622	19,827	10,884	Mountain scenery, magnificent waterfalls, the Hetch Hetchy and Yosemite Valley, ice-sculptured canyons, glacier lakes, forests.
Sequoia.....	do.....	Sept. 25, 1890	161,597	3,716.96	2,923	The home of the "Big Tree" (<i>Sequoia gigantea</i>), growing to a height of 300 feet with a diameter of 30 feet, the bark being 2 feet thick; rugged and picturesque scenery, beautiful cascades and falls, and wonderful caves.
General Grant.....	do.....	Oct. 1, 1890	2,536	160	2,240	Glaciers and wild mountain scenery.
Mount Rainier.....	Washington.....	Mar. 2, 1899	207,360	18.2	8,946	Rugged mountain scenery, beautiful lake within the crater of an extinct volcano, etc.
Crater Lake.....	Oregon.....	May 22, 1902	159,360	2,458.11	5,235	Well known for a cavern having many miles of galleries and numerous chambers of considerable size containing many peculiar formations.
Wind Cave.....	South Dakota.....	Jan. 9, 1903	10,522	160	3,199	Noted for its bromide and other springs, the waters of which have medicinal qualities; park well wooded; scenery picturesque.
Platt.....	Oklahoma.....	(July 1, 1902) (Apr. 21, 1904)	848.22	None.	31,000	Set aside to preserve the prehistoric ruins of an ancient people; rugged scenery.
Mesa Verde.....	Colorado.....	June 29, 1906	42,376	880	230	Famous for its thermal springs, having wonderful medicinal qualities.
5-mile strip for protection of ruins.	do.....	do.....	175,360			Famed for its beautiful lakes derived from glaciers, lofty mountains clad with forests, magnificent glacial formations, numberless waterfalls. Game, fish, and birds abound.
Hot Springs Reservation.....	Arkansas.....	June 16, 1880	911.63	None.	135,000	Small rugged hills containing prehistoric ruins. Practically a local park.
Glacier.....	Montana.....	May 11, 1910	981,681	16,668.11	6,257	These ruins are one of the most noteworthy relics of a prehistoric age and people within the limits of the United States. Discovered in ruinous condition in 1894.
Sullys Hill.....	North Dakota.....	Apr. 27, 1904	780	None.	1200	
Casa Grande Ruins.....	Arizona.....	Mar. 2, 1889	480	None.	450	

* Estimated.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I would like about three minutes more.

Mr. Chairman, notwithstanding the fact that the Platt National Park contains only 848.22 acres, and is therefore the next smallest of all the 12 national parks located by the Federal Government, in point of visitors and real intrinsic value, to the people of our country, it is the most important national park in the United States. There is only one national park in our country that compares with it in the number of visitors per year, and that is the great Yellowstone National Park, that contains an area of 2,143,728 acres, and for the purchase and maintenance of which the Government has appropriated the sum of \$2,744,903.84. The report of the Secretary of the Interior for the fiscal year ending June 30, 1912, shows that the visitors to the national parks from the year 1907 to the year 1912, inclusive, were as follows:

Visitors to national parks, 1907 to 1912.

Name of park.	1907	1908	1909	1910	1911	1912
Yellowstone National Park.....	16,414	19,542	32,545	19,575	23,054	22,970
Yosemite National Park.....	7,102	8,850	13,182	13,619	12,530	10,884
Sequoia National Park.....	900	1,251	854	2,407	3,114	2,923
General Grant National Park.....	1,100	1,773	798	1,178	2,160	2,240
Mount Rainier National Park.....	2,068	3,511	5,968	8,000	10,306	8,946
Mesa Verde National Park.....		80	165	250	206	230
Crater Lake National Park.....	2,600	5,275	4,171	5,000	4,500	5,235
Wind Cave National Park.....	2,751	3,171	3,216	3,387	3,887	3,199
Platt National Park.....	28,000	26,000	25,000	25,000	30,000	31,000
Sullys Hill National Park.....	400	250		190	200	200
Hot Springs Reservation.....				120,000	130,000	135,000
Glacier National Park.....					4,000	6,257

By reference to this table it will be seen that the visitors to the Platt National Park during the periods mentioned, exclusive of the Yellowstone National Park, were more than four times as many as the visitors to any other of the national parks established by this Government, and that the visitors to the Platt National Park, notwithstanding the great area contained in the Yellowstone National Park and the enormous sums expended by the National Government for the establishment and maintenance of said park, were nearly twice as many as to the Yellowstone National Park.

Mr. Chairman, the report of the watchman of the Bromide and Medicine Springs for the period beginning July 7, 1913, and ending August 4, 1913, and the amount of water used during said period and the period beginning August 1, 1913, and ending August 31, 1913, and the amount of waters taken from said springs during said time is as follows:

Date.	Visitors.	Bromide water used.	Medicine water used.	Total water used.
July 7.....	456	227	113	333
July 8.....	575	217	108	325
July 9.....	505	200	100	300
July 10.....	545	220	100	220
July 11.....	503	250	150	400

Date.	Visitors.	Bromide water used.	Medicine water used.	Total water used.
July 12.....	621	200	167	367
July 13.....	1,258	329	315	644
July 14.....	1,130	282	283	565
July 15.....	556			
July 16.....	777	194	185	379
July 17.....	746	161	175	336

Aug. 26.....	750	300	550
Aug. 27.....	816	300	625
Aug. 28.....	713	455	606
Aug. 29.....	697	250	544
Aug. 30.....	662	300	556
Aug. 31.....	706	200	520
Total.....	26,909	8,921	17,516

Many hundred thousands of dollars have been expended by our people for preparations to receive people from all parts of the United States who have come to Sulphur for the wonderful curative powers of the waters of these springs. It would not only be an injustice to the people of Sulphur, but it would be a great crime against the afflicted of all the States of this Union if this appropriation were not continued and the wonderful curative properties of these wonderful springs not continued for the benefit of all the people of all the States and all the Nation.

I therefore ask the gentleman to withdraw his point of order and let us have the sense of the Congress of this country as to whether or not a few thousand dollars shall be expended in order that the people of this country may receive, free of charge, the waters that are furnished by nature in the Platt National Park, which will restore them to health and vigor.

Mr. FOSTER. Mr. Chairman, in view of the statement of the gentleman from Oklahoma and the fact that the National Government has attempted two or three times to give the park to Oklahoma, in view of the statement that the gentleman has made at this time in reference to this park, and with the hope that in the course of another year or two Oklahoma may be able to take it, I withdraw the point of order.

Mr. THOMPSON of Oklahoma. Mr. Chairman, I ask unanimous consent to extend my remarks in the Record.

The CHAIRMAN. The gentleman from Oklahoma asks unanimous consent to extend his remarks in the Record. Is there objection?

There was no objection.

Mr. MANN. Mr. Chairman, I would like to ask the chairman of the committee what is the necessity of appropriating \$8,000 for the Platt National Park? The appropriation heretofore has been about eight thousand and some odd dollars for the year.

Mr. FITZGERALD. My recollection is \$8,924.

Mr. MANN. Eight thousand and nine hundred dollars was the estimate.

Mr. FITZGERALD. It is for the purpose of paying certain employees.

Mr. MANN. I understand the estimate says that it is not desired to allow the park or the buildings to go into decay. Thereupon it is proposed to appropriate in the middle of September, so that the appropriation will not go into effect before the second quarter of the year, as much money as has heretofore been appropriated for the entire year, taking in all the employees. Are the employees in service now contrary to law?

Mr. FITZGERALD. They are not.

Mr. MANN. Then why should we appropriate for back pay for them?

Mr. FITZGERALD. The estimate was cut nearly \$1,000.

Mr. MANN. July, August, and the most of September will have gone before the bill becomes a law.

Mr. FITZGERALD. The gentleman from Illinois understands that it is impossible to accurately estimate just how much will be required.

Mr. MANN. I understand; but if \$8,000 is appropriated the chances are ninety-nine to one hundred that it will all be spent.

Mr. FITZGERALD. The gentleman is mistaken; the chances are one hundred in one hundred.

Mr. MANN. Well, that is very likely. Why not reduce the amount here? If there is no occasion for appropriating it, why should we appropriate a larger sum than should be required?

Mr. FITZGERALD. The estimate is much less than the department has frequently estimated, and the estimate submitted for the current year was about—

Mr. MANN. Well, my recollection is we have had a good many fights over the Platt National Park, and I think it is fairly good recollection to state that they have asked about \$8,000.

Mr. FITZGERALD. They had \$8,000 in 1913, \$17,500 additional in the Indian appropriation bill—

Mr. MANN. Oh, well—

Mr. FITZGERALD. And in 1912—

Mr. MANN. That was a duplicate and never was expended.

Mr. FITZGERALD. No; it was an addition.

Mr. MONDELL. Will my distinguished colleague yield?

Mr. FITZGERALD. Yes.

Mr. MONDELL. The gentleman from Illinois perhaps notices this is for maintaining bridges, roads, trails, and while salaries will be less yet there are improvements there which will consume all of this appropriation.

Mr. MANN. This is what the estimate says; this is the basis of the estimate:

There is a large amount of public property in this park, consisting of houses, pavilions, barns, benches, bridges, building materials, tools, wagons, harness, mules, records, etc., which will be left in a wholly un-

protected condition after the 1st of July, since this department has no appropriation under its control which could be used in providing for the protection and improvement of this park.

And this estimate was made for the purpose of taking care of this property. Why should you make a larger appropriation than they have asked for?

Mr. FITZGERALD. Not larger than they have asked for.

Mr. THOMPSON of Oklahoma. May I submit to the gentleman from Illinois that the appropriation requested was \$8,924?

Mr. MANN. I have already stated that five times, I will say to my friend, but that was for the full year.

Mr. THOMPSON of Oklahoma. Now, the appropriations for the two years previous to that time was \$10,000 under a Republican Congress, and \$9,999 of that appropriation was used. I have the figures here in my hand if the gentleman desires to see them.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MANN. The gentleman from Oklahoma and the gentleman from New York can settle the amount of the appropriation between them, but I can not see any use of giving them a larger appropriation than necessary. I move to strike out \$8,000 and insert \$7,000.

The CHAIRMAN. The pro forma amendment is withdrawn, and the gentleman from Illinois moves to strike out \$8,000 and insert \$7,000.

Mr. MURRAY of Oklahoma. Mr. Chairman, I hope the gentleman will not insist upon that because the Secretary of the Interior asked for \$8,924. We requested him to make it as close as possible in view of the fact—

Mr. MANN. But he estimates for the full fiscal year.

Mr. CARTER. No; estimated on July 17.

Mr. MANN. No; the estimate was made June 30 for the full fiscal year.

Mr. MURRAY of Oklahoma. The estimate I hold is of July 3.

Mr. MANN. Well, I have the estimate in my hand.

Mr. MURRAY of Oklahoma. Well, if the gentleman will allow me to interrupt him, the purpose of a portion of this fund is in order to utilize this machinery, those mules there, and further improve the park, complete the trails and roads in the park to these bridges, and things of that kind—the Lincoln Bridge and other bridges constructed by the Government. We want to complete those trails. We are at some cost in order to maintain the park, and we really ought to have the \$8,924 to do this work.

Mr. MANN. The gentleman has not graced the Congress with his presence in former Congresses, but the Committee on Appropriations for years has been endeavoring to give away this park. I have sympathized with the park myself, but when they come in and say they want an appropriation for one purpose and the committee allows that, why not allow them the amount that is needed for that purpose?

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Illinois [Mr. MANN].

Mr. CARTER. Mr. Chairman, I want to call the attention of the gentleman from Illinois [Mr. MANN] to a statement compiled by the Secretary on July 17, in which he said that it was necessary to have \$8,000, and that was after this fiscal year had begun. He evidently knew at that time as much as we know now about when to expect the passage of this bill, and he must have expected that he would need this money through the remainder of this fiscal year after the submission of the statement.

Mr. MANN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Oklahoma yield to the gentleman from Illinois?

Mr. CARTER. I yield.

Mr. MANN. On June 30 the Secretary estimated that they would need \$8,964 for the fiscal year, and on July 17 he estimated that he would need \$8,000 for the balance of the fiscal year. But the appropriation will not go into effect until at least the middle of September, giving them the amount they need for the balance of the fiscal year.

Mr. CARTER. Undoubtedly the Secretary took that into consideration when he made this estimate on July 17. He knew enough about the practice of the House to know that it would take from 30 to 60 days to pass a bill of this character, as it always does.

Mr. MONDELL. Mr. Chairman, will the gentleman from Oklahoma yield to me?

The CHAIRMAN. Does the gentleman from Oklahoma yield to the gentleman from Wyoming?

Mr. CARTER. I yield to the gentleman.

Mr. MONDELL. The estimate was \$8,000 for improvements alone, so that the amount appropriated can be utilized for improvements and salaries for the remainder of the year, and still

make the amount appropriated some \$4,000 less than the department asked for.

Mr. CARTER. Well, I wish that were true, but the gentleman from Wyoming is mistaken. I notice that in his estimate the Secretary includes the salaries of park employees, watchmen, laborers, etc., on page 296 of the hearings on the urgent deficiency bill.

Mr. MONDELL. I think I am correct, that the department estimated that they could use \$8,000 for improvements alone, and in any event the amount which could be used there would more than exceed the amount that is appropriated.

Mr. DAVENPORT. Mr. Chairman, will my colleague yield to me?

The CHAIRMAN. Will the gentleman yield to his colleague?

Mr. CARTER. I do.

Mr. DAVENPORT. I want to say, Mr. Chairman, that so far as the needs of that national park are concerned, at present it would require a greater amount than had the appropriation been made before the 1st of July. There has been no work done there, and nothing has been kept up since that time. The improvements have been standing there for some time. Less would have been needed if it could have been supplied before the 1st of July, because the committee knows that when you neglect roads and buildings they go into decay much more rapidly than if they are in use and cared for.

Mr. FOSTER. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield.

Mr. FOSTER. I notice that in the hearings it is stated they raise alfalfa and corn down there.

Mr. CARTER. Yes; we do. And we raise not only alfalfa, but we also raise alfalfa statesmen. [Laughter.]

Mr. FOSTER. What do the crops amount to?

Mr. CARTER. They are inconsiderable.

Mr. FOSTER. How many mules do they have?

Mr. CARTER. I could not say, but I know they have several.

Mr. FOSTER. I wanted to inquire, Mr. Chairman, of the gentleman from Oklahoma in reference to some of the property. It seems we have several mules there, and it is necessary to feed them.

Mr. MANN. Apparently they have not been fed since July 1. [Laughter.]

Mr. DAVENPORT. And they have two squirrels there.

Mr. FOSTER. I notice in these hearings it is not stated whether they have been fed or not. They have no employees there to feed them, and I suppose the mules are running loose in the park and drinking the health-giving water of the springs, which, of course, would do the mules good.

The CHAIRMAN. The time of the gentleman from Oklahoma has expired.

Mr. FITZGERALD. Mr. Chairman, I move that all debate on the pending paragraph and amendments thereto be closed in five minutes.

The CHAIRMAN. The gentleman from New York [Mr. FITZGERALD] moves that all debate on the pending paragraph and amendments thereto be closed in five minutes.

The motion was agreed to.

Mr. WEAVER. Mr. Chairman, I ask unanimous consent to extend my remarks in the Record.

The CHAIRMAN. The gentleman from Oklahoma [Mr. WEAVER] asks unanimous consent to extend his remarks in the Record. Is there objection?

There was no objection.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Illinois [Mr. MANN] to strike out "\$8,000" and substitute "\$7,000."

The question was taken, and the amendment was rejected.

Mr. MANN. There is no use in practicing economy with a Democratic House.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

DEPARTMENT OF JUSTICE.

Office of the Attorney General: For salary of the Assistant to the Attorney General, which is hereby fixed at the rate of \$9,000 per annum, in addition to the \$7,000 heretofore appropriated, for the fiscal year 1914, \$2,000.

Mr. KELLY of Pennsylvania. Mr. Chairman, I make the point of order against that paragraph that it changes existing law and does not reduce expenditures. I shall be glad to be heard on it, if the Chair desires.

The CHAIRMAN. The Chair would like to hear the gentleman from Pennsylvania.

Mr. KELLY of Pennsylvania. Mr. Chairman, the rule under which I make the point of order is Rule XXI, which provides that—

No appropriation shall be reported in any general appropriation bill or be in order as an amendment thereto for any expenditure not previously authorized by law, unless in continuation of appropriations

for such public works and objects as are already in progress. Nor shall any provision in any such bill or amendment thereto changing existing law be in order, except such as being germane to the subject matter of the bill shall retrench expenditures by the reduction of the number and salary of the offices of the United States, by the reduction of the compensation of any person paid out of the Treasury of the United States, or by the reduction of amounts of money covered by the bill.

There are a multitude of precedents to uphold my contention, and it is unnecessary for me to quote them. With complete unanimity they show that this paragraph is out of order, and I am assured that the Chair will so rule.

The CHAIRMAN. The point of order is sustained, and the Clerk will read.

The Clerk read as follows:

Detection and prosecution of crimes: For the detection and prosecution of crimes against the United States; the investigation of the official acts, records, and accounts of marshals, attorneys, clerks, and referees of the United States courts and the Territorial courts, and United States commissioners, for which purpose all the official papers, records, and dockets of said officers, without exception, shall be examined by the agents of the Attorney General at any time; for the protection of the person of the President of the United States; for such other investigations regarding official matters under the control of the Department of Justice as may be directed by the Attorney General, including not to exceed \$10,000 for necessary employees at the seat of government, to be expended under the direction of the Attorney General for fiscal years that follow:

For 1913, \$20,000.

For 1912, \$866.62.

Mr. DYER. Mr. Chairman, I move to strike out the last word for the purpose of asking unanimous consent to insert at this point a statement prepared by the Department of Justice, showing the number of prosecutions that have been instituted under the white slave traffic act of June 25, 1910, to and including March 31, 1913.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to extend his remarks in the manner indicated. Is there objection?

There was no objection.

The statement referred to is as follows:

Summary of prosecutions instituted under the white-slave traffic act of June 25, 1910, to and including Mar. 31, 1913.

The CHAIRMAN. If there be no objection the pro forma amendment will be considered as withdrawn.

Mr. MURDOCK. I renew the amendment, for the purpose of asking a question. I should like to know why the item for the protection of the person of the President of the United States is carried in a deficiency bill.

Mr. FITZGERALD. There is a deficiency in the appropriation for the detection and prosecution of crimes, and a deficiency appropriation is always made in the language of the original appropriating provision. This provision, relative to the protection of the person of the President of the United States, has been carried in this item for a great many years.

Mr. MURDOCK. You merely preserve the text of the item?

Mr. FITZGERALD. Yes.

Mr. MURDOCK. It is not intended to increase the expenditure for that purpose?

Mr. FITZGERALD. This appropriation has not been used for that purpose in years, but in case it should be necessary to make an expenditure for that purpose, this would be available.

The CHAIRMAN. If there be no objection the pro forma amendment will be considered as withdrawn, and the Clerk will read.

The Clerk read as follows:

Commerce Court: For expenses of the Commerce Court during the first half of the fiscal year 1914, namely: Clerk, at the rate of \$4,000 per annum; deputy clerk, at the rate of \$2,500 per annum; marshal, at the rate of \$3,000 per annum; deputy marshal, at the rate of \$2,500 per annum; for rent of necessary quarters in Washington, D. C., and elsewhere, and furnishing same for the Commerce Court; for books, periodicals, stationery, printing, and binding; for pay of bailiffs and all other necessary employees at the seat of government and elsewhere, not otherwise specifically provided for, and for such other miscellaneous expenses as may be approved by the presiding judge, \$17,500; in all, \$23,500, or so much thereof as may be necessary: *Provided*, That in the event of the enactment of a law discontinuing or abolishing said court, any balance of this appropriation remaining after the date of such abolition shall lapse and be covered into the Treasury.

Mr. MANN. Mr. Chairman, I reserve a point of order on the proviso. What is the effect of the proviso, and what is the necessity for it?

Mr. FITZGERALD. The gentleman understands that the next paragraph provides for the abolishment of the court on December 31.

Mr. MANN. I understand that.

Mr. FITZGERALD. It is possible that that provision might be amended so as to fix an earlier date, in order that there might be no question as to whether this appropriation would lapse after the date of the abolishment of the court, this proviso is inserted.

Mr. MANN. The only effect of this proviso is that if the Commerce Court be abolished, this money will lapse into the Treasury at once instead of waiting two years.

Mr. FITZGERALD. The language of the appropriating provision covers the first half of the fiscal year; the provision abolishing the court takes effect December 31. The belief was that if a different date was fixed for the abolishment of the court it would remove any controversy or claim that these employees were specifically appropriated for for a definite period.

Mr. MANN. Let us see what the effect of the proviso is. It says:

Any balance of this appropriation remaining after the date of such abolition shall lapse and be covered into the Treasury.

Supposing the court is abolished to take effect on some date in December which does not happen to be pay day. Unless these officers are paid up to that date there is no way for them to get

their money without making another deficiency appropriation hereafter.

Mr. FITZGERALD. Oh, I think the gentleman is mistaken about that.

Mr. MANN. Because on the date of the abolition of the court this money lapses into the Treasury and could not be used to pay the officers who had rendered service prior to that time.

Mr. FITZGERALD. I think the construction would be, "remaining after discharging the obligations that were due."

Mr. MANN. I do not see how you could make that construction when it says "remaining after the date of such abolition." Officials can not construe language of this sort directly the reverse of what it says.

Mr. FITZGERALD. But they do.

Mr. MANN. They would not in this case, and as this money would necessarily lapse into the Treasury, I do not think it is safe to leave it so that these officials in all probability would have to wait for their pay for two weeks or a month's time until a deficiency appropriation was made in December.

Mr. BROUSSARD. Will the gentleman permit an interruption?

Mr. MANN. Certainly.

Mr. BROUSSARD. Let me suggest along the line of the gentleman's argument that if this bill appropriating for salaries that have been incurred since the 1st day of July and the amendment becomes the law, if the provision to abolish the court is incorporated in it, the salaries of all these employees would cease at once and would not be paid.

Mr. MANN. I think not, unless it fixes the date of the abolition of the court.

Mr. FITZGERALD. If the gentleman from Illinois insists on the point of order, we are indifferent to it.

Mr. MANN. I make the point of order on the proviso.

Mr. BARTLETT. We concede the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent that the provisions of the bill beginning on the next page, 21, line 4, down to and including line 17, page 25, be passed until the rest of the bill has been disposed of.

The CHAIRMAN. The gentleman from New York asks unanimous consent that beginning with page 21, line 4, down to and including line 17, page 25, be passed until the rest of the bill is disposed of. Is there objection?

There was no objection.

The Clerk read as follows:

UNITED STATES COURTS.

For payment of salaries, fees, and expenses of United States marshals and their deputies, including the office expenses of United States marshals in the District of Alaska; to include payment for services rendered in behalf of the United States or otherwise, and including services in Alaska and Oklahoma in collecting evidence for the United States when so especially directed by the Attorney General, \$4,500.

Mr. BARTLETT. Mr. Chairman, I offer the following amendment as a new paragraph.

The Clerk read as follows:

Page 25, line 25, strike out the figures "\$4,500" and insert "\$4,499," and add the following: "All Executive orders heretofore made placing the positions of deputy marshal and deputy internal-revenue collectors in the classified service, and all regulations made thereunder, are hereby revoked, and hereafter appointments to said positions shall be made in the same manner as obtained prior to the making of such Executive order."

Mr. FITZGERALD. Mr. Chairman, I reserve a point of order on the amendment.

Mr. BARTLETT. Mr. Chairman, the proposed amendment is offered to repeal the Executive orders that place deputy marshals who serve in the United States court and also deputy marshals who serve under internal-revenue collectors placed there by the order of Mr. Taft under the civil-service law, to take them out from under the civil-service law. Under these orders as now existing all deputies except those who serve processes are under the civil-service law. Now no appointments can be made in the office of the United States marshal or in the office of the United States internal-revenue collector except from an eligible list furnished after examination in the office of the Civil Service Commission or those now in office by reason of these orders. There was a change recently in the office of the internal-revenue collector in my State. The new incumbent wanted to fill the places of the deputy collectors and deputy United States marshals. He found that they had to be taken from the civil-service list or be furnished by an examination after the appointment of the new incumbent.

I happened to see some of those examination papers. They had made an effort to have appointed deputy United States marshals who have served processes, who go out and arrest people for the violation of the law, in some instances, frequently in my State, to make raid against illegal distillers—to arrest people

who are violating that law—and in order to become eligible imagine some of the questions that were put to them. For instance, to reduce vulgar fractions to decimal fractions, to give certain incidents in history—ancient and modern—and to locate some town in Ohio which even I, with my experience and association with Members from Ohio, do not know where it is. Then one of the requirements was to write a composition of 100 words upon the usefulness of women clerks. [Laughter.]

Just imagine the situation. A man who could not secure the necessary information as to where a particular town in Ohio was located, who could not take a vulgar fraction of a certain amount and reduce it to a long string of roots or to decimal fractions, who was not proficient in geometry and other things, would not be fit to serve process or go out into the mountains and arrest a moonshiner and bring him before the court. That is the preposterous and ridiculous civil service that we have in this matter. We have had for 16 years and more upon the rolls of the Government deputy marshals in the office of the collector of internal revenue who were appointed by Republican officeholders in that State, as they are in other States. Many of them were not efficient and in order to get rid of them, in order that the people to whom have been restored the right to have efficient officers from that dominant party in that State, which constitutes and has constituted since 1863 the intelligence and virtue of the people—in order that the officers thus appointed by the Democratic administration may be selected from the intelligent and efficient people, be they deputy United States marshals or deputy revenue collectors, to enforce the law, to serve process, I have offered this amendment.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. BARTLETT. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BARTLETT. Mr. Chairman, I have only this to say with reference to the point of order. Of course I have endeavored to comply with the rule, paragraph 2 of Rule XXI. I have reduced the amount carried in this bill by \$1. The rule does not say whether you shall reduce it by \$1 or by \$1,000,000. Of course I frankly state to the Chair that I have done that in order to comply with the rule, but if this amendment passes, Mr. Chairman, then the appropriations for the Civil Service Commission necessary to hold these examinations in order to fill these offices will not be used, and, therefore, I say it reduces expenditures and reduces the amount carried in the bill.

Mr. CULLOP. Mr. Chairman, will the gentleman yield?

Mr. BARTLETT. Yes.

Mr. CULLOP. At the time the Executive order was made placing the deputy marshals and assistants in the marshal's office and in the office of collector of internal revenue under the classified list, had these men obtained their positions through competitive examinations?

Mr. BARTLETT. No; and they could not have obtained them under any sort of examination in a number of cases. They obtained them because of political reasons. They had obtained them because every four years they were necessary, when it came time to select delegates to Republican national conventions. It was necessary to give these little offices in many instances to members of the colored population in order to hold the colored brother in a particular district in line, so that he could accompany his white United States marshal or internal-revenue collector to Chicago, or wherever the convention was held, and be in line. The last time they wanted something else, and they got something else, as was demonstrated by the fact that when they returned to Georgia and other Southern States their wealth had somewhat increased, and those who went there in a very impecunious condition came back rather flush. That is the answer to the gentleman from Indiana. These men obtained these positions by reason not of civil-service examination but of political preferment, and it does not satisfy me to have gentlemen now say, "You want to return to the spoils system of the Republicans." We want an opportunity for the intelligent officeholder now in office—the collector of internal revenue and the United States marshal, who are Democrats, who have been appointed by this administration because of the fact that they represent the intelligence and worth and virtue of the people of that State—and they could not do anything else, being Democrats—we want these men, selected by a Democratic administration on account of their prominence and intelligence, to have an opportunity to select these officers from the intelligence and worth of the white Democratic population.

Mr. LANGLEY. Mr. Chairman, will the gentleman yield?

Mr. BARTLETT. Yes.

Mr. LANGLEY. Will the gentleman be opposed to those Democrats when they are appointed to these places, having anything to do with politics, especially in his district?

Mr. BARTLETT. I would certainly rather they would do that and attend to their business and leave politics alone.

Mr. LANGLEY. I hope the gentleman will stick to that.

Mr. BARTLETT. The gentleman knows I do not generally dodge and do not generally recede from any position. It is not necessary with me to do it, as is often the case with the gentleman from Kentucky, and occupy two positions upon the same question.

Mr. LANGLEY. Oh, the gentleman certainly does not mean that, because he knows I have never done that in my life, and I did not mean to infer that he did.

Mr. BARTLETT. No, I do not. I withdraw it. It was not said seriously.

Mr. LANGLEY. I have even consistently admired the gentleman from Georgia for many years, and that is a pretty fair test of my stability; and I—

Mr. BARTLETT. I withdraw the remark. I do not believe it anyhow, as the gentleman well knows and can feel assured.

Mr. LANGLEY. I thank the gentleman; I was sure he did not mean it.

Mr. FITZGERALD. Mr. Chairman, I am a believer in the merit system. [Laughter and applause.]

Mr. MANN. Will the gentleman reserve the point of order?

Mr. FITZGERALD. I am going to argue the point of order.

Mr. MANN. Will the gentleman reserve the point of order?

Mr. FITZGERALD. Yes; I am a believer in the merit system. That seems to have occasioned some doubt—

Mr. MANN. I want to take the floor for a moment.

Mr. FITZGERALD. Well, maybe I had better wait.

Mr. MANN. Mr. Chairman, I do not wish to discuss the point of order. Mr. Chairman, it is quite within the power of any newly appointed Democratic marshal or other official, with the consent of the Treasury Department and the Department of Justice, to discharge deputy marshals, internal-revenue collectors, or any other officer under them. There is nothing in the civil-service law or Executive order which will prevent the discharge of anyone who is incompetent or of anyone who is competent if the authorities desire to discharge them. There is nothing in the argument of the gentleman from Georgia [Mr. BARTLETT] in that respect, because the authority to discharge already lies in the departments, but the proposition of the gentleman from Georgia is that in making new appointments men shall not be appointed because they are qualified, but because he or somebody else wants them appointed for political reasons. If they had the qualification they can take the examinations and pass them. I do not believe there will be a Republican, not one in a thousand, appointed to any of these places under the civil-service laws or under the so-called merit system. I should advise a Republican who is taking one of these examinations for an internal-revenue collectorship or a deputy marshalship that he might do it to pass away the time if his time was hanging heavily on his hands, but if he desires to accomplish anything he had better go and dig on the road, because he would have no chance of appointment. But what the gentleman seeks to avoid is to have men who are to be appointed have some intelligent qualifications. The difference between the spoils system and the merit system is not a matter of discharge; it is a matter of appointment. Under the merit system a man has to show some qualifications outside of being a political bruiser; under the spoils system a man's chief qualifications are that he can rob a ballot box and prevent voters from voting, either by force or fraud, and pay by political services—

Mr. HARDWICK. The gentleman, I suppose, of course refers to conditions under a Republican administration, to former experiences?

Mr. MANN. Oh, that is what the gentleman from Georgia is seeking to avoid, to prevent the application of the merit system which has been in force. Mr. Chairman, the most disgusting exposition which I have ever heard of—

Mr. BARTLETT. May I interrupt the gentleman?

Mr. MANN (continuing). In a great parliamentary body, if the newspapers are correct, took place in this Hall on Friday last when the Democratic Members of a great body, hungry and thirsty for pap, passed a resolution to fire out every employee of this body, regardless of past services, in order that some one on the Democratic side of the House should have the pleasure of putting into office some peanut pimple somewhere to draw pay from the Government. [Applause on the Republican side.]

Mr. HARDWICK. Will the gentleman yield? I was not present at the caucus.

Mr. MANN. And neither was I.

Mr. HARDWICK. And I can establish an alibi—

Mr. MANN. Though I came very near it—

Mr. HARDWICK. The resolution to which the gentleman refers did not at all affect the minority employees of the House, and those are about all the Democrats we got when the gentleman's party had the House.

Mr. MANN. My understanding is that it did affect minority employees of the House.

Mr. HARDWICK. No. No minority employees of the House were affected.

Mr. MANN. Minority employees so understand and say it did.

Mr. HARDWICK. I want to reassure the gentleman. He is mistaken on that point.

Mr. MANN. I hope so.

Mr. HARDWICK. I know so.

Mr. FOSTER. Mr. Chairman, I agree with my colleague from Illinois [Mr. MANN] that men who are appointed to office should have the necessary qualifications to fill the office to which appointed. I had occasion lately to look up some matters in relation to the civil service in the State of Illinois during the last administration, and my investigation has shown me that in all the civil-service boards in the twenty-third congressional district, which I have the honor to represent, not a single, solitary Democrat has been placed on any board for the examination of any applicant to any position. And yet the law provides that these examining boards shall be nonpartisan.

It has been so in the country in which I live that whenever a number of applicants came up for examination invariably a Republican received the appointment, until finally it came to pass that a Democrat did not go and take the examination any longer because he realized, as my colleague has just said, that he might just as well go out and dig in the earth.

Talk about the merit system. Under the past administration there has been none of that under civil service.

Mr. LANGLEY. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Kentucky?

Mr. FOSTER. Yes.

Mr. LANGLEY. Does the gentleman mean to say that these men who have been holding these examinations have willfully violated the law and have rated papers wrongly?

Mr. FOSTER. I have not charged that they have done that.

Mr. LANGLEY. Well, the gentleman's language means as much as that.

Mr. FOSTER. I charge this, and the records show it: That in every examining board that has been established every single examiner in the twenty-third congressional district of Illinois—and I am not speaking for others—has been a Republican.

Mr. LANGLEY. That is a nonpartisan board. That is what "nonpartisan" means.

Mr. FOSTER. I contend that the men who as Republicans are attempting to hold positions under a Democratic administration ought to have courage to resign and get out of the service. This is a Democratic administration. A letter which was written by a Republican postmaster in the State of Illinois that has come to my attention, in which he said to a Senator:

SHELBYVILLE, ILL.

MY DEAR SENATOR: Noting from the Washington news in the metropolitan press to-day that a number of Republican postmasters are appealing to you "to save them from the wrath of the present administration," I am constrained to arise and inquire "Are they patriots or merely professional pap suckers?"

"To the victor belongs the spoils," and it strikes your Uncle Dudley that the whimpering and whining of such so-called leaders of the G. O. P. is discreditable to them and a disgrace to the party responsible for their elevation to the position they hold.

Save 'em, Senator, from the wrath of the powers that be, otherwise they will be minus a few thousand in salary. And to the man up the sapling it looks much as though it is the fear of this that is driving them to the limit of exposing the yellowish disgusting streaks in their composition. And sympathy expended on the "yellow," whether in man, monkey, or canine, is sympathy wasted.

Very respectfully,

H. M. MARTIN,
Postmaster.

(Resignation filed.)

[Applause on the Democratic side.]

Mr. CULLOP. Mr. Chairman, I take it that the amendment offered by the gentleman from Georgia [Mr. BARTLETT] is not subject to a point of order, for the reason that it does provide, although in a small sum, for the reduction of the appropriation.

Now, the amendment of the gentleman from Georgia does not preclude persons who are hereafter appointed to these important places from being examined. The only effect of this order is to set aside the Executive order covering these men in the classified service who were appointed for their political service and as political henchmen. The President, in making new appointments, may require the applicants to be examined just as provided now; but I take it that the amendment ought

to be passed for the good of the service. I am astonished at the gentleman from Kentucky [Mr. LANGLEY] when he asked the gentleman from Georgia whether these men could take part in the political affairs of the country. What objection could be urged to an official taking part in our political affairs? As a citizen he has that right, and, in my judgment, should exercise it.

They have been doing so under the civil service, and the civil service has constituted the greatest political machine that was ever erected in this or any other country. [Applause on the Democratic side.] The rural route carriers are, and have been for the last 15 years, the greatest auxiliary that the Republican Party has had in this country. They take the polls; they report the political conditions; they examine into the political affairs along their routes, and report them to their county committees. They are the main sources from which the funds for political purposes are collected in every State in the Union. You will not keep men out of politics by giving them office, and should not do so. They are politicians still, and the machine has been operated under the civil service for the purpose of putting in office the most astute politicians they have and to work the political games all over the country. These men have done it with telling effect in the past and will continue to do so in the future.

As the gentleman from Georgia [Mr. BARTLETT] has said, the examination is a farce. For what would you examine a man who is to carry the mail along the public highway? What qualification would it take other than the ability to read and write? Yet an examination is held for the appointment of rural mail carriers. It has been used for the purpose of picking out the best political workers the party in power had, and they have worked the game most successfully all over the country. I hope the amendment of the gentleman from Georgia [Mr. BARTLETT] will be adopted. I believe that a Member of Congress is more interested in good public service in his district than is a political machine or the Civil Service Commission wherever it may act. Other considerations than education alone enter into the qualifications for office. It sometimes is the least important. Business and executive ability are always of prime importance and form an important function in the selection of officials. All these elements are essential in the selection of a public official.

Mr. STAFFORD. Do I understand the gentleman to say that in the appointment of rural carriers, until the recent change whereby the postmaster was allowed to make a selection of one from the three highest candidates, any political consideration whatever was given to the appointments under the civil service?

Mr. CULLOP. I can not tell whether he examined to find out the politics of the applicant or not, but I will say it has been the most remarkable coincidence I have ever known that a chapter of accidents seems to have always come along and the best Republican worker was selected for the place. That has been the result since the order was made.

Mr. LANGLEY. Perhaps that was because he was the smartest man.

Mr. STAFFORD. That was because the best qualified men in the State of Indiana happened to be Republicans, but it has not been the fact that politics was taken into consideration so far as the appointment of rural carriers under the civil service is concerned.

Mr. CULLOP. As the gentlemen are both woefully mistaken, both as to Indiana and elsewhere, the Republican was not the smarter or the better, but the Republicans had the civil-service machine and worked the Republican in office every time until the people knew civil service as practiced by the Republican Party was a farce.

Mr. STAFFORD. I am only referring to the gentleman's district.

Mr. CULLOP. No; nor in my district, either. The gentleman will understand that my district has more intelligent and able Democrats in it than it has Republicans. That is the reason it is Democratic. [Applause on the Democratic side.]

Mr. STAFFORD. That does not apply to the rural carriers.

Mr. CULLOP. Yes; it does; and I will say it will compare favorably with any district in the country; but the Republican Party operated the civil-service machine, and that is how it controlled the examination. The manner in which it has been operated is to be deplored by all high-minded people. I am sure there are quite as many people in my district of as great intelligence as in the gentleman's district, able and competent to serve the people, who belong to the Democratic Party, and who could not succeed, though, because of the partisan political machine as operated by the Republican Party. [Applause on the Democratic side.] The Democrats in my district are intelligent, and that is the reason they are Democrats.

Now, take the men selected in the Internal-Revenue Service. They have not been selected for competency. Take the men in the Federal marshalship. They have not been selected for competency. They have been selected for their political service, as a political reward, and then the blanket order of the civil service was spread over them and they were placed in the classified service. Now, I want to know if anybody can contrive a greater political machine than that which resulted from the order that put these men in the classified civil service. Yet that is upon a par with all civil-service procedure for the last 15 years in the United States.

Mr. LANGLEY. Will the gentleman yield for a question?

Mr. CULLOP. Certainly.

Mr. LANGLEY. Does not the gentleman recall that under a previous Democratic administration there were thousands of men appointed in the various Government departments as a reward for political service who were afterwards covered into the classified service by Executive order?

Mr. COX. But they were taken out.

Mr. LANGLEY. No. I beg the gentleman's pardon, most of them are still in.

Mr. CULLOP. If that was done, I assume that they were competent, and if they were not competent then it ought not to have been done. One wrong is never a valid excuse for the commission of another wrong, and if this was done, as the gentleman from Kentucky asserts, then it furnishes another evidence of the great farce that is made of the civil-service law. He furnishes, by the example cited, splendid proof of the great frauds committed under the guise of civil service. It is about time the fraud was exposed.

Mr. LANGLEY. It was done nevertheless, and they have never stood any civil-service test.

Mr. CULLOP. What service?

Mr. LANGLEY. Why, in every department of the Government service.

Mr. CULLOP. Further and better proof of the deception practiced under it. Now, if ever a better example was furnished for the exposure of the deception which has been practiced under the name of civil service I have never heard of it, and I am sure I do not know where it could be found. Oh, how indefensible the conduct has been under it. No wonder the people all over the country denounce it as a fraud, and its administration a great farce.

Whenever an attempt is made to correct the great evils grown up under it the attempt is met with the cry of spoils-men, hungry horde, and such odious unfounded cries, but the people care not for these.

Mr. Chairman, I can conceive of no higher purpose, no more laudable ambition of any man than a desire to serve the people faithfully and well. To aspire to public office is laudable, is noble, and it is no disparagement to any person to have such aspirations. To serve one's country well and attempt to better the conditions of the country and of the people is worthy of the best efforts of any man, and the best men the country has produced have spent their energies and talents in the public service, hoping by so doing to improve conditions and earn a place famous in public history. We accord them the full measure of praise and point with pride to their achievements. Because they aspire to public office does not brand them as party spoils-men, as public plunderers, but, on the contrary, as worthy, patriotic, public-spirited citizens, who endeavor to improve public conditions and advance public welfare.

It is not against the civil service we advocate this amendment for the annulment of this Executive order it will, if adopted, set aside. We are for good civil service. We believe in efficiency in public office. We believe in the improvement of the public service. We know, however, in order to secure good public service, efficient service, it is essential that this order be annulled and set aside. Those who are sheltered by it in their tenure of office did not obtain their positions by competitive examinations, but solely because of their political services and as reward for the same. They were selected as political henchmen, and, when appointed, then by Executive order were placed in the classified service by a Republican President. It was the act in so doing of a political spoilsman to protect his political henchmen and reward them for their political services. The issuance of the order was for political purposes and for the benefit of fellow partisans. It is indefensible and should be set aside. President Wilson would never be guilty of such partisan politics or strike such a blow at public service. He is too high minded and too patriotic to stoop to such partisan methods.

It is not against the civil-service law we contend so much as it is against the partisan and unfair administration of the

same. For 16 years it has been used to build up a strong and impregnable partisan machine and has been most successfully operated for that purpose all over the country. It has been used for the purpose of placing party workers in office for life, to pay party debts, and to continue the operation of party methods. In this respect it has been most successfully operated, from the highest to the lowest, and its maladministration deserves the severest condemnation of all good citizens, irrespective of party, who believe in good public service and desire the intelligent administration of the same.

For what reason we are unable to conceive that all of the subordinates in the internal-revenue collectors' offices, in the Federal marshals' offices of the country, after being appointed for their partisan services should be, by Executive order, placed under the classified civil service. We think no man on this floor will attempt to explain, defend, or justify it. It had but one object in view and that was to fortify the administration in power and strengthen the machine to be operated for its continuation.

Men should be selected for these places who are practically adapted to the service. Some may be better adapted to the service who are not so highly educated as others who would win over them in a civil-service examination, and especially when the examination was a farce, such as has usually been the case for the last decade or more.

It is useless to talk about a man divesting himself of his politics when he is appointed to office. This he will not and could not do if he wanted to. It has not been done in the past and we do not believe it will be done in the future. Every citizen of this Republic should take an interest in the political affairs of the country, and most assuredly one who does not take such an interest would not be the best person to be selected to administer a political office under any administration. This is a Government of parties, and the majority party which is to form the policies of the Nation should most assuredly have as its subordinates in office men who are in sympathy with its policies, men who believe in the success of its policies and who would help carry them out, men who believe the party in power is right and would lend every honorable effort in their power to make it a success.

No business management in this country would attempt to run the same with all of the subordinates opposed, to the policies and whose greatest ambition was to make the same a failure. The management would not permit this to exist and would immediately discharge the subordinates and place in their stead persons who were in full accord with the policies of the management of the same. This is true of a government as well as of a business. The management of this great Government is a great business and the subordinates in office should be in hearty accord and full sympathy with the management of the same, and unless they are they will not be enthusiastic for its success, but, on the other hand, will rejoice in its failure and quietly lend their efforts to that end.

Mr. Chairman, there is another feature about the civil-service office-holding class which should not be underestimated and should at all times receive consideration. For the last four years the great army of officeholders under the civil service in this Government have had the most powerful lobby operating at this Capitol that was ever known in the history of the Government. The purpose of this lobby was to secure the passage of an old officers' pension law, one that would eventually, at an age to be fixed by law, retire them from office on a salary. Once pass this law and this Government will never be able to secure the repeal of the same, and no man could approximate the cost to the people it would entail.

To-day in this Government there is an office-holding class of 500,000. What will the number be in 10 years from now with the business of the country growing by leaps and bounds? With new responsibilities being added almost daily, all requiring an increase of the officeholders of the Government no man, therefore, would attempt to approximate the great cost, the enormous burden, such a law would be upon the citizenship of this Republic.

When we contemplate it, when we view the conditions as they are existing to-day with this great force of officeholders pleading with Congress to pass such a law we can realize to some extent, but only to a small extent, the enormous burden this would impose upon the American people—a burden to continue for all time.

For one, I am opposed to a life tenure of office. I do not believe it is good for the service. On the contrary, I believe it is a detriment to the public service. Once a person has secured an office for life, free from all duty to answer to the public for its administration, such officeholder no longer has

aspirations to forge to the front or to improve the conditions of his office. Since I have been a Member of this House at least \$500,000 has been appropriated for the Secretary of the Treasury to employ experts for the purpose of installing in that great department of the Government up-to-date methods. On each occasion when such appropriation was made it was stated that the business methods of that, the greatest business department of our Government, were antiquated and altogether out of date. It is to be remembered that nearly all of the employees in that office are under civil service, holding their office for life, and for this reason the conditions there existing can be attributed more to this fact than to anything else. If they had been holding office for a term of four years, with the opportunity for re-appointment, it would have been an inspiration to them to improve the conditions in that department, to forge forward, and to make greater endeavor to make that great business place a model for all other business institutions in the country; but, content with the places they held, knowing the same were for life, they have had no ambition to forge to the front and to improve the conditions in that great department. Instead of securing good public service, the history of the operation of this law I think will clearly demonstrate that it has operated rather against than in favor of good service. The example of the Treasury Department of the Government is only one of many of the examples to be found in other departments regarding the public service. It has operated more to the deterioration of the service than to the improvement of the same.

The people last fall voted for a change not only in the Presidency, in the Cabinet, but in all of the departments of public service as well. They expect this change, and they will not be satisfied unless the same is made. I sincerely hope this amendment will be adopted, the Executive order of President Roosevelt against which it is directed set aside, and these subordinate places open for appointments to fill the same. This, in my judgment, will improve the public service and be of a very great advantage to the country. It will infuse new blood, new energies, and better ability in the public service, and the country then will realize that a public office is a public trust and not alone a private sinecure, as now is found too often to be the case. It is not fair, I assert, to ignore the people who were public-spirited enough, patriotic enough, to bear the burden of the great political conflict which raged all over the country, and waged and won the battle to redeem this Government from the political bandits who were prostituting it to selfish purposes at the behest of the special interests, and now leave those same officials in office. The people will not be satisfied if this is done, but they demand and are entitled to changes all along the line in order that the policies for which they then stood shall be successfully carried into execution and the men who fought for those policies inducted into office to assist in the administration of public affairs.

Mr. BORLAND. Mr. Chairman, I am going to oppose the amendment if it gets past the point of order. I would not undertake to defend the civil service as it has been conducted under the Republican régime. I would not undertake to defend nor do I regard as defensible the order of the President of the United States, in the closing days of his administration, on the eve of a national election, covering into the civil service a lot of political employees. Nobody can defend the order of President Taft of October, 1912. I believe thoroughly in the modification of that order made by President Wilson requiring those men to go before an examining board and show their qualifications.

Mr. BARTLETT. Let me say to the gentleman that this does not refer to fourth-class postmasters.

Mr. BORLAND. I am well aware of that, but the discussion has taken a wide range. I understand that this amendment applies to deputy United States marshals and deputy internal-revenue collectors. Irrespective of all talk about good Democrats being found to fill the offices of deputy marshals, which unquestionably is true, in spite of all this dust that has been kicked up over the Executive order, I believe that what the people of the United States are demanding is an extension of the civil-service system rather than the curtailment of it.

Mr. HARDWICK. Will the gentleman yield?

Mr. BORLAND. Yes.

Mr. HARDWICK. Does the gentleman regard it as an extension of any correct civil-service principle to cover people into offices who have never been examined?

Mr. BORLAND. What is the use of taking up my time in that way with a question about a statement I had just covered?

Mr. HARDWICK. That is a legitimate question.

Mr. BORLAND. I just covered that matter. I believe the order of President Wilson compelling these parties to take an examination is in the direction of the extension of the system,

and that the order of President Taft was a gross violation of the letter and the spirit of the civil-service law. If I did not make that clear at first, I will make it clear now, even to the gentleman from Georgia.

I believe the people of the United States are going to demand the extension of the civil service rather than its curtailment. They are not going to demand the extension of the Republican doctrine, "To the victor belongs the spoils," irrespective of the fact that we have been accused for a number of years of originating the doctrine 100 years ago.

Here is the fact about the matter: The greatest plums of a political sort are going to men of no experience in the office they seek to fill. The postmaster at St. Louis gets \$8,000 a year—more than any one of the four Assistant Postmasters General. Eight thousand dollars a year! There has recently been appointed a postmaster at St. Louis, after a fight that took the time and energy of 100 politicians and all the delegations from the State of Missouri. This fight took time and energy, to the total eclipse of public business, public interest, or party policy, as I believe. Much energy was devoted to seeing who got the \$8,000 job for four years in the city of St. Louis. Was there a single applicant for the office who claimed to know anything about running a post office? Why, every kind of an indorsement and inducement was offered in favor of a candidate except that they had qualifications or experience for the office. The postmaster gets \$8,000. The First, Second, and Third Assistant Postmasters General get \$5,000. The postmaster at St. Louis has not the discretion to fire a colored janitor without instructions from Washington. The governor of Missouri gets \$5,000. The United States district judge in St. Louis, who stands at the head of the bar and must have a technical and professional education, gets \$6,000. The circuit judge who sits in the circuit court of appeals gets \$7,000. The counselor of the State Department, who is a man big enough to run any Cabinet office and who is big enough to run any kind of a position, gets \$7,500. The postmaster in St. Louis gets \$8,000. Is it any wonder that that job becomes the vortex of every political fight in the State of Missouri?

What sane business man would hire a man for \$8,000 to run his business at St. Louis, discharge him at the end of four years, and hire another man who had never served a day in a post office? Would any sane business man run a business in that way? The American people are not going to run their business in that style.

The American people are going to demand that the men who fill these places, the United States postmasters, United States marshals, and United States collectors of internal revenue, be men qualified by experience to discharge the duties of the office that is committed to them.

Mr. BARTLETT. Mr. Chairman, will the gentleman yield?

Mr. BORLAND. I will very gladly yield if I can get an extension of time.

Mr. BARTLETT. What did the gentleman say to this proposition? These men affected by this amendment have never stood any civil-service examination, and were covered into the civil service by Executive order.

Mr. BORLAND. Yes; and that is a violation of the letter and spirit of the civil-service law, and will be so recognized by the American people; but I say that it is no defense for the Democrats to repeal that order, and put nothing in its place that extends the real virtue of civil service. I say it is our duty to correct the evil and not to continue it. Take the collector of internal revenue at a place like St. Louis or Kansas City. Under the new income-tax law a large amount of work will be added to that office. They tell me down at the Treasury that they are holding back appointments of these men until the income-tax law passes, because they will have to have men of a great deal bigger caliber to hold that office than formerly. I know that the collector of internal revenue of Kansas City was so densely ignorant of the plain provisions of the corporation-tax law that it cost hundreds of dollars of loss in fines and penalties and repetition of work on the part of business men. There was not a shadow of excuse for the way that office was run.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. MURDOCK. Mr. Chairman, I ask unanimous consent that the gentleman be permitted to continue for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. BORLAND. We are now confronted with a situation where the collectors of internal revenue will have not only the corporation tax to impose, but the income tax. Of course the corporation tax affects only the corporations of the country, and none of us have very much sympathy with them, it is true, but

the income tax will affect every citizen, and every business man will be interested in seeing that the man who is the United States collector of internal revenue is a man who understands the business that he is called upon to do. This idea of picking up a man who never had a day's experience in any counting-house, who has no knowledge of the law under which he acts, who has no elementary knowledge of bookkeeping, necessary to examine a statement and tell whether it is correct, and putting him in a position of responsibility is going to be in direct violation of the will of the American people. The American people are going to demand the same degree of technical training for these positions that they do now for the judiciary, and that they do in many cases, and I believe in most cases, for the legislative office. A man who goes before the people as a candidate for legislative office must in some way demonstrate that he is fit and able to hold the office. A man who goes before them for a judicial office must demonstrate that he has some ability as a lawyer, and that his brother lawyers have confidence that he will be able to properly handle the office, but a man can be put in as postmaster who never saw the inside of a post office and can draw \$8,000 a year, which is supposed to be the salary of an experienced and technical man.

Mr. DYER. Mr. Chairman, will the gentleman yield?

Mr. BORLAND. Certainly.

Mr. DYER. What suggestion does the gentleman have to make to remedy that condition? Having had four years' experience as a postmaster, does the gentleman not think that the man should be kept in office?

Mr. BORLAND. If we had any good postmasters in office at the present time that would be a very good remedy, but inasmuch as the postmaster of St. Louis was nothing but a Republican chairman when he was appointed, that remedy would not hold good.

Mr. DYER. The entire business public of St. Louis, regardless of politics, have commended him for his administration of the office.

Mr. LANGLEY. And a lot of Kentuckians are familiar with it also. They have even heard of him over there and have heard how efficient he is.

Mr. BORLAND. I recognize the pleasantry the gentlemen are indulging in, but I am satisfied that a \$2,500 or a \$3,000 Government clerk could have run the office just exactly as well, and I say that the American people are going to demand the extension of the civil service to the position of collector of internal revenue and the first and second and third class postmasterships.

Mr. SIMS. Is it not the understanding of the gentleman that our present Postmaster General desires an extension of the civil service to first, second, and third class postmasters?

Mr. BORLAND. I have no knowledge of that, but am glad to hear it.

Mr. SIMS. I understand that to be the fact.

Mr. BORLAND. I hope that to be true. I believe in that he will have the American people back of him. You can talk about getting good Democrats for jobs in place of bad Republicans, but when you put it up to the tribunal of public opinion they are going to look to the question of efficiency and economy, and that is the only argument that will go with them. It is not a question whether A, B, or C gets a job; it is a question of whether the business of the Government is transacted in the way the people want it transacted. In the past it has not been so transacted, and I believe the time is coming when the American people will demand a change, and they will want the man who will have a job calling for \$8,000 who will have experience and technical ability, and not \$8,000 worth of politics.

Mr. DYER. Will the gentleman permit a brief question?

Mr. BORLAND. Yes.

Mr. DYER. The gentleman has referred to the new postmaster appointed at St. Louis a day or two ago by the President.

Mr. BORLAND. Yes.

Mr. DYER. And spoke of the qualifications for a man for that position. I want to say to the gentleman that the gentleman whom the President has appointed postmaster, a Democrat living in my district, is a most efficient man and in my judgment will give splendid service in that position. [Applause on the Democratic side.]

Mr. BORLAND. I do not know but that is a doubtful compliment coming from a Republican, but I will accept it as a real compliment. I will accept it that he is a satisfactory man for the place. For my own part I should not be surprised that he is satisfactory to the Republicans. But it does not alter the situation at all. Mr. Selph never saw the inside of a post office. That office if it is worth \$8,000 to the American people is worthy of an \$8,000 man of technical training and experience, because the men who draw \$5,000 salaries under the Federal Gov-

ernment here in Washington are men of the highest training. The Director of the Geological Survey, one of the greatest scientists in the Union, gets \$6,000. The Commissioner of Public Lands, the Commissioner of Patents, the Indian Commissioner, all get \$5,000—men who are expected to have technical training. You can not pick up any lawyer, any ex-candidate for Congress, any county chairman of a committee and make him postmaster at \$8,000. Either the salary does not fit the job or the job does not fit the salary. Now there are only five offices in the United States that pay \$8,000—New York, Boston, Philadelphia, Chicago, and St. Louis. There is no reason why they should, absolutely no reason. There are some others that pay \$6,000—Kansas City, Cleveland, and so forth. There is no reason why they should. There is no doubt in any man's mind that a \$3,000 man promoted by civil service can do all the work. We have a Republican postmaster at Kansas City who has been there six years. We got under law an assistant postmaster who was a Republican politician who got up the Roosevelt Club No. 1, and the assistant postmaster had to go because Taft was still in office. They could not agree and he was dismissed, and the postmaster promoted a man from the ranks by the name of Dan Clawges. There is not a man in Kansas City who knows what the politics of Clawges are, but the Kansas City post office is run well and run by a man at a salary of \$2,500 a year. Why, there are plenty of men in the civil service in St. Louis who can run the post office better than Mr. Akin or Mr. Selph.

Mr. DYER. Mr. Chairman, I ask that the gentleman have additional time on account of the interruptions.

Mr. BORLAND. Mr. Chairman, I do not desire any further time.

Mr. FITZGERALD. I will object. Mr. Chairman, I stated a little while ago that I was in favor of the merit system, and yet I have great sympathy for the gentleman from Georgia [Mr. BARTLETT] in this amendment. These officials give bond to their immediate superiors, and there is a personal liability which places them in a different category. As an illustration of how this matter was conducted under the Republicans, I wish to read a part of a letter which I have just received from a constituent:

On September 10, 1896, I entered a competitive examination for the position of deputy collector of internal revenue, held in Brooklyn, N. Y., and having passed with a general average of 93.10 was duly appointed on January 27, 1897, a deputy collector for the first district, State of New York.

A certificate to that effect was issued and signed by John C. Kelley, then collector of said district.

I served continuously in that position until December 31, 1899, when I was dismissed by Frank R. Moore, the succeeding collector. No charges whatsoever were preferred against me. I was dismissed solely for political reasons and none other.

Collector Moore's action was the outcome of several conferences with a Republican delegation from Suffolk County, who urged him to appoint as deputy collector one A. M. Darling, of Suffolk County, to be assigned to that county. At that time I was detailed to the Suffolk County district.

The visits of this delegation occurred immediately after the suspension of the civil-service rules applicable to deputy collectors of internal revenue, and in consequence of which Collector Moore asked for my resignation. He stated at the same time that he had no fault to find with my work, but he was obliged to give some recognition to the Suffolk County Republican delegation and wanted to appoint in my stead one whom it recommended. I refused to resign, and thereupon he directed my removal, to take effect December 31, 1899.

That is how this matter operated when it was to the advantage of the Republicans.

But, Mr. Chairman, this amendment under the rules of the House is not in order on this bill. However much I might sympathize with it, I must insist upon the point of order.

The pending paragraph is one to supply a deficiency for the payment of salaries, fees, and expenses of the United States marshals and their deputies for the fiscal year 1913. The proposed amendment is not germane to that paragraph, for the reason that it applies to an entirely separate and distinct matter; that is, the method of appointment of deputy marshals and deputy collectors of internal revenue in the future, and under the rule such amendments, so as to be in order under the so-called Holman rule, must not only affect the amount carried by the bill, but must be germane to the paragraph to which they are attached. There is nothing in this paragraph at all except supplying a deficiency. This amendment purports to annul Executive orders relative to the manner of appointment of deputy marshals in the Department of Justice and deputy collectors of internal revenue in the Treasury Department and to regulate the manner of their appointment in the future.

Mr. THOMAS. Mr. Chairman, I move to strike out the last word.

Mr. FITZGERALD. That is not in order.

The CHAIRMAN. A point of order is pending. The Chair is ready to rule. The Chair sustains the point of order. The

Chair does not think the amendment is germane to the subject matter of the bill.

Mr. THOMAS rose.

The CHAIRMAN. For what purpose does the gentleman from Kentucky rise?

Mr. THOMAS. Can I have five minutes in my own right?

The CHAIRMAN. The gentleman can move to strike out the last word.

Mr. THOMAS. Yes; I move to strike out the last word.

The CHAIRMAN. The gentleman from Kentucky [Mr. THOMAS] is recognized for five minutes.

[Mr. THOMAS addressed the committee. See Appendix.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

For miscellaneous expenditures in the discretion of the Attorney General, including the same objects specified under this head for this institution in the sundry civil appropriation act of August 24, 1912, \$8,004.01.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. The gentleman from Kentucky [Mr. THOMAS] asks unanimous consent to revise and extend his remarks in the RECORD. Is there objection?

Mr. FOSTER. Mr. Chairman, I hope the gentleman will not ask for revision, but just for extension.

Mr. MURRAY of Oklahoma. It is fine enough as it is, you know.

Mr. THOMAS. Only extension.

The CHAIRMAN. Does the gentleman from Illinois [Mr. FOSTER] object?

Mr. FOSTER. No; I do not object. I simply suggest that the gentleman ask unanimous consent to extend his remarks in the RECORD.

Mr. THOMAS. I make that request, Mr. Chairman.

The CHAIRMAN. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

POST OFFICE DEPARTMENT.

The bequest of the late C. F. Macdonald of \$2,000 to the Secretary of the Treasury for the service of the Post Office Department, to be used by the Postmaster General for the improvement of the postal money-order system of the United States, is accepted, and an appropriation of said amount is hereby made, to be expended under the authority and direction of a commission of three persons, who shall be appointed by the Postmaster General and serve without compensation.

Mr. MURDOCK. Mr. Chairman, I should like to ask the chairman of the committee what is the meaning of the paragraph providing for the acceptance of the bequest of the late C. F. Macdonald?

Mr. FITZGERALD. C. F. Macdonald was the father of the postal money-order system. He died some years ago, and in his will bequeathed \$2,000 to the United States, to be used by the Post Office Department in perfecting and improving the postal money-order system. The money can not be covered into the Treasury and it can not be used without authority from Congress. The Third Assistant Postmaster General, Gov. Dockery, said that if the provision were inserted in this bill the Postmaster General would appoint a commission of three employees of the department to take up the matter and to utilize this money in attempting to improve the postal money-order system, and that he considered that it was a wise thing to do.

The Clerk read as follows:

BUREAU OF FOREIGN AND DOMESTIC COMMERCE.

Investigating cost of production: For salaries and all other actual necessary expenses, including field investigations at home and abroad, compensation of special agents, clerk hire, and rental of quarters in Washington, D. C., purchase of books of reference and manuscripts, to enable the Bureau of Foreign and Domestic Commerce of the Department of Commerce to ascertain at as early a date as possible, and whenever industrial changes shall make it essential, the cost of producing articles at the time dutiable in the United States, in leading countries where such articles are produced, by fully specified units of production, and under a classification showing the different elements of cost of such articles of production, including the wages paid in such industries per day, week, month, or year, or by the piece; and hours employed per day; and the profits of manufacturers and producers of such articles; and the comparative cost of living, and the kind of living; what articles are controlled by trusts or other combinations of capital, business operations, or labor, and what effect said trusts or other combinations of capital, business operations, or labor have on production and prices, fiscal year 1914, \$50,000.

Mr. MANN. Mr. Chairman, I move to strike out "\$50,000" and insert "\$100,000."

The CHAIRMAN (Mr. HARRISON). The gentleman from Illinois offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, page 29, line 19, by striking out "\$50,000" and inserting in lieu thereof "\$100,000."

Mr. MANN. Does the gentleman from New York desire to limit debate?

Mr. FITZGERALD. Will 10 minutes be sufficient?

Mr. MANN. The gentleman had better make it 20 minutes.

Mr. FITZGERALD. I ask unanimous consent that debate on this paragraph and all amendments thereto be limited to 20 minutes.

The CHAIRMAN. The gentleman from New York asks unanimous consent that debate on this paragraph and all amendments thereto be limited to 20 minutes. Is there objection?

There was no objection.

Mr. MANN. Mr. Chairman, at times there has been considerable controversy in and out of this House concerning the creation of a tariff board or tariff commission and concerning the information which was necessary in order properly to determine what tariff rates should be. In recent years the Republicans have urged a tariff board, and the other side of the House have protested against it.

During the recent tariff debate, when we offered an amendment to create a tariff board, to which amendment the gentleman from Alabama [Mr. UNDERWOOD] made a point of order, it was stated, as at other times, upon the Democratic side of the House, that the Bureau of Foreign and Domestic Commerce was the means now established by the Democrats which took the place of a tariff board or a tariff commission. The gentleman from Alabama [Mr. UNDERWOOD] on May 6 last said:

This House within a year has established the machinery of government by which the President of the United States can assemble the facts desired; and through that machinery already established can give Congress not only the information that we call for in this bill, but can give Congress all the information called for in this so-called Tariff Board amendment. The Bureau of Foreign and Domestic Commerce was builded for that purpose. (CONGRESSIONAL RECORD, May 6, 1913, p. 1234.)

Mr. MURRAY of Oklahoma. Mr. Chairman—

Mr. MANN. I do not yield.

Mr. MURRAY of Oklahoma. A point of order. And reserving the point of order, I want to say—

Mr. MANN. I decline to let the gentleman reserve a point of order.

Mr. MURRAY of Oklahoma. The—

Mr. MANN. Mr. Chairman, the gentleman from Oklahoma has not the floor. If he wants to make a point of order, let him state it.

Mr. MURRAY of Oklahoma. I want to say this—

Mr. MANN. I decline to yield. Let the gentleman make his point of order.

Mr. MURRAY of Oklahoma. I make the point of order that the gentleman's discussion of this question is not any more germane than the discussion I had the other day with reference to this same bill, when he made a point of order against me three times.

The CHAIRMAN. The point of order is overruled.

Mr. MURRAY of Oklahoma. Having made that statement, I withdraw the point of order, to call the gentleman's attention to fair play.

Mr. MANN. The point of order is overruled, and I do not yield.

Mr. MURRAY of Oklahoma. I simply want to inform the gentleman that this is a game two can play.

Mr. MANN. The point of order is overruled, and I do not yield. The gentleman knows no more about points of order than he does about the point he was discussing the other day, and that is nil in both cases.

In April last the gentleman from Alabama [Mr. UNDERWOOD], in discussing this question, said:

Now, I want to say to the gentleman on that side of the House that you need not worry about this question. The Democratic administration and the Democratic House in the near future is going to vitalize that bureau by the necessary appropriations and extend its powers to get information that will be of use to the committees whether they are Republicans or Democrats in the future. (RECORD, Apr. 29, 1913.)

Here was the leader of the House, who holds the Democratic side of the House almost in the hollow of his hand, declaring that the Democrats had created the Bureau of Foreign and Domestic Commerce for the purpose of obtaining this information and then declaring that the Democratic side of the House proposed to make the necessary appropriations to vitalize the bill. There ought to have been appropriated for this purpose one-quarter of a million dollars. The department estimated for \$100,000, but under the skillful questioning of the gentleman from New York [Mr. FITZGERALD] Secretary Redfield admitted that he could do the field work for \$50,000. If you meant it, if you were sincere in creating this bureau, as I believe the gentleman from Alabama [Mr. UNDERWOOD] was, you ought to give them sufficient money to make these investigations, and they can not do it with \$50,000. You ought at least to give them the

amount of the estimate, \$100,000. [Applause on the Republican side.]

Mr. FITZGERALD. Mr. Chairman, a Democratic House created the Bureau of Foreign and Domestic Commerce. In doing so it demonstrated its capacity to organize in the departments of the Government such service as would provide the necessary facilities to obtain the information it desired.

The estimate of \$100,000 was submitted by the Secretary of Commerce to vitalize this bureau. Although it was created at the long session of the last Congress, no estimate was transmitted to Congress by the last Republican administration until some time in January after the bill had left the House and gone to the Senate. If I recollect correctly, the estimate was only for about \$20,000. This present estimate was prepared some time in May or June and sent to Congress in June requesting the \$100,000. The Secretary of Commerce when before the committee made this statement:

Secretary REDFIELD. This \$100,000. For present purposes this might be reduced to \$50,000. I will state to the committee that Mr. Baldwin can go into further details in regard to this matter and show just exactly how this amount is being used. I have a detailed statement showing the men who are at work.

Mr. GILLET. Did you say it is being used? Have you got it now? Secretary REDFIELD. I will explain that to you fully. This is used for the purpose of utilizing the powers of the department granted by law in 1912, but which were never heretofore used and for which no appropriation has ever heretofore been made.

The committee recommended what the Secretary of Commerce said would be necessary.

Mr. HARDWICK. Will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. HARDWICK. Where did you get the language that is in this bill—from the recommendation of the Secretary of Commerce?

Mr. FITZGERALD. The language in the paragraph is transmitted in the estimates and is the language of the statute which creates the bureau.

Mr. HARDWICK. On what theory are we investigating into the cost of production abroad? What has that to do with the Democratic theory? Why do we need to spend thousands of dollars as to what things cost abroad—on what theory?

Mr. FITZGERALD. That is one of the provisions in the bill creating the bureau.

Mr. HARDWICK. It is one of the doctrines of the Republican Party, but never one of the Democratic Party.

Mr. FITZGERALD. It is in the paragraph because it was the language of the organic law creating the bureau.

Mr. HARDWICK. That was the Republican proposition; it was not a Democratic proposition.

Mr. FITZGERALD. Yes; it was; a Democratic House created it in the second session of the last Congress.

Mr. HARDWICK. If I had known that that language was in I would have asked the same question.

Mr. FITZGERALD. It was created at a time when it was thoroughly discussed.

Mr. HARDWICK. It is funny that the gentleman can not answer the question now.

Mr. FITZGERALD. Democrats voted for it. This language was in the provision, and it has been authorized ever since 1888 and had been conferred upon the Bureau of Labor.

Mr. HARDWICK. That was under a Republican theory as to the tariff.

Mr. FITZGERALD. It had nothing to do with the tariff question at that time.

Mr. HARDWICK. I do not see why we should investigate the cost of production abroad compared with the cost of production in this country. I do not see why we should spend money for that purpose.

Mr. FITZGERALD. We do not intend to spend it for that.

Mr. HARDWICK. I am very glad to hear the gentleman say so.

Mr. FITZGERALD. The purpose of this appropriation is to enable the Secretary of Commerce to make certain investigations.

Mr. HARDWICK. What investigations?

Mr. FITZGERALD. Regarding methods of manufacture.

Mr. HARDWICK. And the cost of producing articles?

Mr. FITZGERALD. The cost of production.

Mr. MURDOCK. Articles controlled by the trusts?

Mr. FITZGERALD. And certain investigations now being made of the pottery industry, the methods of which are shown to be obsolete and inadequate, and very material benefit will result to the industry. I do not agree with some that it is the function of government to make the investigations that a private individual should make in order to perfect his business, but there are certain general fundamental phases of these matters that properly belong to the Government. That was one

reason for the investigation; and the other is, as was stated by the gentleman from Alabama [Mr. UNDERWOOD] during the discussion of the tariff, that this bureau would be given ample funds, so that if after the tariff law was enacted certain manufacturing establishments attempted by cutting wages or shutting down their plants to charge that a business depression had resulted from Democratic legislation this bureau would be equipped to make investigation to determine whether those charges were justified or whether they were a part of the old Republican policy of attempting to attribute all of the financial evils of the country to the Democratic Party.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. FITZGERALD. Mr. Chairman, how much time is remaining?

The CHAIRMAN. Ten minutes.

Mr. MONDELL. Mr. Chairman, the jurisdiction of the Bureau of Foreign and Domestic Commerce is a very broad one, and the work which it is expected to do covers a very wide field and is exceedingly important, not only the work of inquiry as to the cost of production at home and abroad, which is exceedingly important, and on which we could advantageously expend much more than \$50,000 during the balance of the fiscal year, but in addition to that this is the bureau that is expected to carry on that work which the chairman of the Committee on Ways and Means assured us at the time of the passage of the tariff bill this administration proposed to carry on for the purpose of investigating as to the methods of such American manufacturers as found they could not conduct their business under the new tariff law without loss. There has been one very conspicuous example in the Democratic ranks of a gentleman who has been so unmindful of the warning given by the chairman of the Committee on Ways and Means, reiterated by the Secretary of Commerce, that he has actually been unpatriotic enough to move his factory into Canada, and a large portion of this \$50,000 might properly be used for the purpose of investigating why this distinguished Democrat found it impossible to operate in the United States under Democratic tariff law.

Mr. HARDWICK. Mr. Chairman, will the gentleman yield? Mr. MONDELL. Yes.

Mr. HARDWICK. The gentleman also moved his politics into the Republican Party while doing that?

Mr. MONDELL. Not yet.

Mr. HARDWICK. He went to a Republican convention and we are no longer responsible for him.

Mr. MANN. But there has been no Republican convention.

Mr. MONDELL. He has been edging a little, but he has not yet gotten into the Republican ranks.

Mr. MANN. We will welcome him if he comes.

Mr. MONDELL. We are glad to have anybody come into the Republican ranks when they finally get their eyes open.

Mr. HARDWICK. That is not to be wondered at. There are so few of you left that you need some help.

Mr. MONDELL. Here we have a measly sum of \$50,000 appropriated for the purpose of investigating the relative cost of production at home and abroad, and also for that broad and exhaustive work which the chairman of the Committee on Ways and Means assured us and which the Secretary of Commerce has assured us is to be carried on for the purpose of compelling American manufacturers to carry on their business without regard to how much they may lose under the Democratic tariff law. We desire the Democratic administration to be furnished with a sufficient amount of funds so that it can and may do the very thing that it has said it proposes to do. We desire that you shall carry out your threat, if threat it was, and not make a mere bluff. If your investigation shall develop the fact that American manufacturers are not using proper methods, it may be helpful to them to suggest possible means of improvement; but what we believe your investigation, if properly carried on, will prove is that it will be impossible to carry on many lines of industry in this country under your tariff bill without a loss unless there shall be a reduction in wages. As we do not want to see a reduction of wages, we desire that you shall have a sufficient sum of money to carry on this important work that you have mapped out for yourselves. All will agree that \$50,000 is nowhere near enough if the work is to be thoroughly prosecuted. We hope when you find the harm your tariff bill has done you will be inclined to help us to remedy its faults.

The CHAIRMAN. The time of the gentleman has expired.

Mr. UNDERWOOD. Mr. Chairman, I wish to state that I think this bureau is one of the most important bureaus in the Government. I am heartily in favor of its having all the money it needs to carry out its purposes. The appropriation of \$50,000

In this bill is carried on the recommendation of the Secretary of the Department of Commerce, who presides over and controls this bureau, as well as the others of that department. If he had asked for more money at this time to vitalize this bureau, I would have voted for it. I recognize the fact that he can not organize the work of this bureau at once. It has to be entirely reorganized. I hope and expect by next winter that the reorganization will be perfected and that the Congress by that time will give the necessary money to entirely vitalize this bureau. Now, in reference to the work of the bureau, the language that is adopted by this bill really comes down from the Cleveland administration. It was inserted during Mr. Cleveland's time in the Bureau of Labor, authorizing the head of that bureau to make these investigations. Shortly after its enactment the Democratic Party went out of power. The Republican Party came in, and the law was never vitilized by an appropriation to carry it into effect, so that the language is nothing new.

Mr. HARDWICK. Why is it necessary or desirable to find out the cost of production in foreign countries of articles dutiable in the United States under any Democratic theory of the tariff?

Mr. UNDERWOOD. Well, the Democratic theory of the tariff, of course, is not to place a tariff on the difference in the cost at home and abroad, but to write a competitive tariff—

Mr. HARDWICK. No; that is not the Democratic theory.

Mr. UNDERWOOD. Well, it is to write a tariff for revenue only, which of itself means a competitive tariff—

Mr. HARDWICK. Not necessarily.

Mr. UNDERWOOD (continuing). Because there can not be a tariff for revenue only unless it is competitive; I mean as to articles that are produced both in this country and abroad. Of course as to articles only produced abroad it can be, but that is not competitive, because there is nobody to compete with.

Now, there is a good reason for inserting this language in here, even under the Democratic theory. In the first place, when you go to write a competitive tariff or revenue tariff the best guide you have on which to base your tariff and base your rate is the competition at the customhouse; but as an incident to that it is of real value to the committee that is writing to determine at what point a tariff for revenue, a competitive tariff, can be written to understand the difference in cost, so that they can use that as a guide and adjust their rates. But that is not the important point why this language should be in this act. When we write a tariff for revenue we want to collect the revenue just as much as our Republican friends want to write a tariff for revenue when they write a tariff for protection, and in ascertaining whether there is a correct valuation of goods that are coming into this country, whether there is an undervaluation, whether anyone is attempting to defraud the customhouse. It is of great value to the administration of the customs laws that there is a bureau in this Government that has the power to ascertain the difference in the cost of production at home and abroad, or, in other words, to ascertain the value of the foreign article, so that our customs officials may have something on which to base their findings.

Mr. Chairman, I feel that it is of the utmost importance that this appropriation should pass. I feel, though, that it is not necessary for this House to make an appropriation at this time that exceeds the amount requested by the head of this great department. He knows what money he can expend. I know from personal conversation with him that he is as earnest in his idea to vitalize this bureau as I am, and that he will ask for all the money that is needed at this time. And if, as he states in his testimony, \$50,000 is all that is required at this time for the use of his bureau, I am sure that that is all the money that can be used. I am further confident that as soon as he can finish the reorganization of the bureau he will ask for more money, and I hope this Congress will give it to him.

The CHAIRMAN (Mr. HARRISON). The time of the gentleman from Alabama has expired. All time has expired. The question is on agreeing to the amendment offered by the gentleman from Illinois [Mr. MANN].

The question was taken, and the Chairman announced that the "noes" seemed to have it.

Mr. MANN. Mr. Chairman, I ask for a division.

The committee divided; and there were—ayes 28, noes 45.

Mr. MANN. Mr. Chairman, I ask for tellers.

Tellers were ordered, and the Chairman appointed Mr. FITZGERALD and Mr. MANN.

The committee again divided; and the tellers reported—ayes 31, noes 53.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Hereafter inspectors and other employees in the Steamboat-Inspection Service shall be allowed, in lieu of mileage, only their actual necessary traveling expenses while traveling on official business assigned them by competent authority.

Mr. COX. Mr. Chairman, I move to strike out the last word. The CHAIRMAN. The gentleman from Indiana [Mr. Cox] moves to strike out the last word.

Mr. COX. I do this for the purpose of submitting a few observations at this point.

The Department of Commerce and Labor, in its report last December, made the following recommendation, found on page 145:

Traveling expenses. If inspectors were placed on actual expenses in traveling and not upon mileage, a large saving in traveling expenses would undoubtedly result, and it is recommended that such a change in the practice be given the sanction of law.

Mr. Chairman, that was a recommendation made by Mr. Nagel, a Republican Secretary of the Department of Commerce and Labor. As soon as I read his report making the recommendation I wrote him a letter in which I called his attention to it, and asked him how many employees it would affect and how much the saving would amount to. I have his reply in my possession, dated December 23, 1912, and I ask unanimous consent to incorporate it in the RECORD and make it a part of my remarks.

The CHAIRMAN. The gentleman from Indiana [Mr. Cox] asks unanimous consent to insert a letter in the RECORD. Is there objection?

There was no objection.

Following is the letter referred to:

DEPARTMENT OF COMMERCE AND LABOR,
Washington, December 23, 1912.

Hon. W. E. Cox,

House of Representatives, Washington, D. C.

DEAR MR. COX: I beg to acknowledge the receipt of your communication of the 18th instant, in which you so kindly commend the recommendations made in my last annual report that inspectors in the Steamboat-Inspection Service be placed upon actual expenses when traveling, and not upon mileage, as now provided for by law.

There are now in the Steamboat-Inspection Service approximately 185 inspectors who would be affected by the recommended change in the law, and it is estimated that of an approximate expenditure of \$60,000 annually for traveling expenses for these inspectors about \$15,000 would be saved were the method of reimbursing travel expenses changed from mileage to actual necessary traveling expenses.

The inspectors in the Steamboat-Inspection Service are the only employees in the Department of Commerce and Labor whose traveling expenses are reimbursed in the shape of mileage. With reference to the service of the department at large I beg to state that any one of the employees of the Department of Commerce and Labor may be called upon to travel on official business. All such employees, except those in the Steamboat-Inspection Service or employees in bureaus where a portion of their traveling expenses, the expense for subsistence, is reimbursed by an allowance of a certain sum as per diem in lieu of subsistence, are reimbursed for their actual necessary traveling expenses, the subsistence portion of which must not exceed \$5 per day.

The reimbursement of actual necessary traveling expenses is made under the acts of June 16, 1874, and March 3, 1875 (18 Stats., 72, 452), and the limit of \$5 per day is fixed by departmental regulations.

The services of the department in which per diem in lieu of subsistence is allowed, either by express provision of law or by the terms of departmental appointments, are the Bureau of Labor, the Bureau of Corporations, the Bureau of the Census, and the Immigration Service. An estimate of the total number of employees of the department traveling, based upon records of travel made in the past year, would indicate that 185 persons traveled with a mileage allowance in lieu of traveling and subsistence expenses, 900 with a per diem allowance in lieu of subsistence and actual necessary traveling expenses, and 615 whose actual and necessary traveling and subsistence expenses are reimbursed them on vouchers.

In addition there are each year in the Immigration Service about 350 cases where an attendant with a party of aliens travels under writs of deportation and who receive reimbursement for their actual and necessary expenses of travel and subsistence.

The differences in the method of payment of subsistence expenses of employees of the department arise from practical reasons. It is found that in some bureaus of the department where many employees in connection with their official work travel for a considerable portion of their time, the payment to them of a per diem allowance in lieu of subsistence is advantageous for the reason that it presents a simpler accounting problem, in the long run saves money to the Government, and the employee receives reimbursement for the actual outlay which he makes on account of his travel on Government business. Such an allowance, however, can only be made in bureaus where Congress by express provisions of law, such as are contained in appropriation acts, authorized the payment of a per diem in lieu of subsistence, or where the department in its contract of employment agrees to pay compensation at a certain fixed rate and in addition thereto a certain fixed additional compensation per day when the employee is absent from his official station traveling on Government business, such additional compensation to be in lieu of subsistence.

The providing for additional compensation in lieu of subsistence is possible only in those cases where the department has by law the authority, without limitation by Congress, to fix compensation of the employee. Such an allowance can never be made where the law fixes the salaries of employees.

In all cases where per diem is allowed the Government pays the actual railroad, steamship, and other transportation fares, and the subsistence allowance covers meals and lodging.

Very truly, yours,

CHARLES NAGEL, Secretary.

Mr. COX. A few days after that correspondence, when the Army bill was going through, I took occasion on the floor of the House to submit some observations on the mileage proposition. I made some statements then in reference to the recommendation made by the Secretary of the Department of Commerce and Labor, but my statements were not entirely accurate. A few days after that time I received a letter from the Department of Commerce and Labor, calling my attention to the inaccuracies of my statement. That letter I have in my possession, dated January 18, 1913, and I ask permission to incorporate it also and make it a part of my remarks.

The CHAIRMAN. The gentleman from Indiana [Mr. Cox] asks unanimous consent to incorporate another letter in his remarks. Is there objection?

There was no objection.

Following is the letter referred to:

DEPARTMENT OF COMMERCE AND LABOR,
Washington, January 18, 1913.

Hon. W. E. Cox, M. C.,
House of Representatives, Washington, D. C.

MY DEAR MR. COX: Referring to your statement on the floor of the House of Representatives, as reported on page 1647 of the CONGRESSIONAL RECORD, in connection with the debate on the payment of mileage to officers of the Army, I beg to advise you that your statement contains two inaccuracies, which, however, do not affect the value of your argument, but which I desire to call to your attention merely for your information.

In your remarks you state that the persons to be affected by the recommendations contained in my annual report, as you understood it, were Army officers, and also that you thought mileage was paid at the rate of 7 cents per mile. The employees affected by the recommendation in my annual report, as stated in my letter to you of December 21, 1912, are inspectors in the Steamboat-Inspection Service, who are not in any way connected with the military service, and the mileage paid to them under the law is at the rate of 5 cents per mile.

I appreciate very much the complimentary notice of the recommendation in my last annual report with reference to this matter given to the House of Representatives in your remarks.

Very truly, yours,

CHARLES NAGEL, Secretary.

Mr. COX. Mr. Nagel was the first Secretary of any of the departments that I have any knowledge of or know anything about that recommended that all of his employees be put upon the actual-expense basis, and that they be taken from the mileage basis. He answered me, and makes the statement in his letter that the department could save \$15,000 per year, and that his employees received only 5 cents a mile while traveling.

This question is closely allied to another question which, in my judgment, deserves careful consideration. Last winter I called attention to the mileage of the Army, wherein officers received 7 cents a mile while traveling under orders. It was argued then, and presumably it will be argued in the future, that 7 cents a mile is cheaper than it would be to allow them their actual traveling expenses. The query comes to my mind, if by putting the steamboat inspectors, who only get 5 cents per mile, on an actual-expense basis, we can save \$15,000 per year, why can not we save money by putting Army officers, who get 7 cents per mile while traveling under orders, on an actual-expense basis? We can save anywhere from \$300,000 to \$400,000 per year if we will cut out this 7 cents per mile and put them on the actual-expense basis. I shall await with pleasure the recommendation of a Democratic Secretary of War on this line with the hope that he will recommend putting all officers of the Army on the actual-expense basis.

Mr. MANN. The gentleman will wait a long time.

Mr. COX. I am afraid so. I will await with pleasure the recommendation of a Democratic Secretary of War with the view of seeing whether or not he will recommend that the Army mileage be reduced to actual traveling expenses.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COX. I ask unanimous consent for five minutes more.

The CHAIRMAN. The gentleman from Indiana asks unanimous consent for five minutes more. Is there objection?

There was no objection.

Mr. COX. I want to relate this incident which came under my own personal observation, about three months ago, while coming from Indianapolis to Washington on a Saturday evening. It occurred in Ohio. We traveled that day with a young Army officer, who, with a friend, was on board the train. As I gathered from their conversation, they had traveled from San Francisco or from some point in the extreme West. After supper, in the smoking compartment of the car the two men had a heated controversy as to which of them should pay the bill for their dinner, which, as I recall, amounted to \$3.25, including drinks, as they expressed it. The young man who was not an Army officer insisted on paying the bill. Finally the Army officer suggested that this trip netted him \$115. His friend inquired how that was, and he said he "was traveling under orders," and that he got 7 cents a mile. I gathered

from the conversation—though I did not enter into it—that they were traveling from San Francisco and were going either to Washington or New York. I wonder whether the American people are willing to pay Army officers 7 cents a mile, making a net profit of \$115 for traveling from San Francisco to Washington or New York City, in addition to their salaries? Therefore I will await the recommendation of a Democratic Secretary of War when he comes to make his recommendation upon this point, because it involves an item of \$550,000, and this bill carries a deficiency of something like \$50,000 for mileage for officers. I shall await with pleasure the recommendation of a Democratic Secretary of the Navy, because his officers while traveling under orders draw 7 cents a mile; and I will not stop there, but I will await with pleasure the recommendation of a Democratic Secretary of the Treasury of the United States, who has a large number of employees in the Revenue-Cutter Service who draw mileage which, if I remember correctly, is 6 cents a mile. I wonder whether or not it is going to remain for a Republican Secretary of a great department of the Government to call attention to this fact alone or whether the Democratic Party, that has burned paper in all its platforms for the last 16 years preaching economy, will take the initiative on this line. Let us wait and see.

I have sought this opportunity for the sole purpose of doing what I think is my duty, in calling the attention of the country to the service of Mr. Nagel, who had this question investigated and who made this important recommendation. And great credit is due this important Committee on Appropriations for following out the advice of Mr. Nagel. I hope, Mr. Chairman, that when our Secretaries and the heads of our great departments come to look into this question they will not hesitate, as Mr. Nagel did not hesitate, to send a recommendation to Congress to put these employees upon an actual-expense basis.

If they will do it we can save anywhere from \$700,000 to \$800,000 per year and work no hardship upon anyone in the Army, Navy, or the Revenue-Cutter Service. Here is a splendid opportunity to economize. We have promised it; let us fulfill and redeem the promise made in our platform at Baltimore and on which we swept this country from ocean to ocean.

The Clerk read as follows:

LIGHTHOUSE ESTABLISHMENT.

Aids to navigation, Atchafalaya Entrance Channel, La.: For aids to navigation in Atchafalaya Entrance Channel, La., \$50,000.

Mr. BARTLETT. I move to strike out the last word. Mr. Chairman, the Bureau of Lighthouses is a recent bureau in the Government of the United States, and a reorganization of the system was brought about a few years ago mainly through the efforts of the gentleman from Illinois [Mr. MANN], then chairman of the Committee on Interstate and Foreign Commerce, which had jurisdiction over the Department of Commerce and Labor. A reorganization was obtained by which it was hoped that the expenditure of money in that establishment might in some way be diminished and a more careful and economical administration might be had than was then being carried on under the old and not very satisfactory system. I think I can give the gentleman from Illinois due credit for a desire to reorganize that bureau of the service, and I think he will accord to me the statement that I assisted him as much as I could in making this great reform and in the desire to have that service changed from the way in which the public money was then extravagantly expended and for which no account seemed to have been rendered.

Mr. MANN. If the gentleman from Georgia will permit me, I have on many occasions stated before that the gentleman from Georgia [Mr. BARTLETT] rendered great service to the Government in connection with the legislation affecting that reorganization.

Mr. BARTLETT. I endeavored to do so. But, Mr. Chairman, it is because of the fact that I took a small part in the reorganization of that service, following the gentleman from Illinois [Mr. MANN] in endeavoring to reform this service and put it where there would be both efficient and economical service, that I have still continued to hold my interest in the service and in the administration of affairs of that particular service. Judge, then, of my surprise when the head of this service was before the committee asking for the items of expenditure to find out from the head of that service and elicit from him information with reference to the details of the expenditure of money of the Government on certain lines we were unable to get it. When he was asked by me, as the hearings will show, the cost of particular things used, such as buoys and different kinds of buoys, the chief of that service could not give it to us. He could not in the committee room give answers as to the amount that had been expended or the cost of particular buoys

and other equipment purchased by the Government, and was compelled to send to the committee a statement which was so technical, so apparently covered up with figures, that we could not arrive at any conclusion in regard to it.

I undertook to find out in regard to the A. G. A. buoys, which is the American Gas Accumulator buoys—I undertook to find out when they apportioned the money, how they apportioned it, how many of these buoys were purchased, whether a certain amount was on hand or not, and I was unable to find out from him, the head of the service, anything in regard to it.

[The time of Mr. BARTLETT having expired, by unanimous consent his time was extended five minutes.]

I asked him if they kept a supply of these buoys on hand. I have not time to go into the details, but I will say that I propose to introduce a resolution and have it referred to the proper committee, so that the House may be informed as to the manner in which the money of the people has been expended in this service, and I will give the reason for that.

The Commissioner of Lighthouses stated to the committee that he did not have on hand and did not keep on hand a supply of certain buoys, the buoys manufactured by the American Gas Accumulator Co. I have statements coming from employees in the service which will prove that that very day and to-day there lie in Tompkinsville, N. Y., at the lighthouse depot, as many as 30 that have been bought and are not in use. I undertook to show that there were more buoys bought from the American Gas Accumulator Co. than was necessary for the service. I undertook to ascertain from him that these buoys of the American Gas Accumulator Co., of which a former employee, a deputy commissioner of lighthouses, is vice president, if they did not purchase more buoys of that character than of any other kind, and I was informed that they did not. I have now information that they do, and that there is a supply on hand of at least 30 not in use.

So I state to this House that the information given to this committee seeking to appropriate money for this establishment was so unsatisfactory as to the way the money had been expended and the cost to the Government of these buoys that we were compelled, because we were in the dark as to the way in which the money had been expended, to leave to another committee of the House any investigation on this subject.

I desire simply at this time to call the attention of the House to the inability of the head of this service to give the Appropriation Committee any sufficient, succinct statement of the cost of this material. As an example of what I have been stating, I asked him with reference to the manufacture and the cost of manufacture of certain buoys known as the American Gas Accumulator buoys. I asked him if he did not pay \$4,200 or \$4,000 for buoys that only cost to manufacture \$1,250. He said he did not know; he did not think it was correct. He says, "I think they cost them much more than that." I asked him if the Government did not pay the difference between that sum and \$1,250 for the patent on these buoys. He said he did not think so.

Mr. Chairman, I have a letter here from a man who manufactures the buoys for the American Gas Accumulator Co., and I will incorporate it in the RECORD; he states that they are manufactured and sold to the American Gas Accumulator people for the sum of \$1,250. There are 30 of them in the Tompkinsville depot for which the Government has paid \$4,200 each, I am informed, and they cost to manufacture only \$1,250, so that the Government pays \$4,200 for buoys that cost only \$1,250.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. BARTLETT. Mr. Chairman, I ask unanimous consent to insert the letter in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Light station on Navassa Island, West Indies: For a light station on Navassa Island, in the West Indies, \$125,000.

Mr. ADAMSON. Mr. Chairman, I move to strike out the last word.

"There is a great rock in the ocean"—not the stone of classic lore, but a gigantic creation which bared its hoary head to tropical storms and repelled the lashings of turbulent seas for untold ages before the classics were inspired. Navassa lifts its awful form in the Windward Passage directly in the track of commerce following all paths and currents of the seas in quest of markets old and new. "When seas are calm and skies are clear" Navassa is visible many miles far out and around over the waste of waters, but when clouds and fog bewilder the storm-tossed mariner old Navassa becomes an object of terror. Delays, both expensive and harrowing, become necessary to avert threatened wreck amid the breakers raging and roaring in the crush of Caribbean storms and billows against that horrible rock. This lighthouse was first suggested by our late colleague, Gen. Gordon, of Memphis, as a

memorial to Commander Maury, the pioneer nautical scientist who discovered, traced, and mapped the currents, courses, and channels of the oceans for the safety of all "who go down to the sea in ships." All the medals, commissions, correspondence, and reports of that great naval scientist, the most eminent geographer of the seas, have been presented to the Government of the United States. Among the papers is a letter from the Grand Duke Constantine, of Russia, dated August 8, 1861, in behalf of the Russian Government, extending to Commander Maury a formal invitation to remove with his family to Russia and enter the service of the Russian Government and there continue his scientific researches, one sentence of the grand duke's letter reading:

Your indefatigable researches have unveiled the great laws which rule the winds and currents of the ocean and have placed your name among those which will ever be mentioned with feelings of gratitude and respect, not only by professional men, but by all those who pride themselves in the great and noble attainments of the human race.

The papers also reveal the interesting fact that it was he who first planned the trans-Atlantic cable. Commander Maury died in Virginia, his native State, February 1, 1873.

That accidents such as befell the *Titanic* are of such rare occurrence is undoubtedly due in large measure, scientists say, to the researches and discoveries of Commander Maury, who was the first scientist to track the sea. He was honored by many crowned heads.

In agreeing upon the final form of the bill for aids to navigation, including the Navassa light, the memorial feature which had been incorporated in the first form was eliminated, but if such a structure can brighten the fame of Maury it will always be known as the Maury light without the formality of a name plate. Tablets and shafts are not necessary to his fame, which will outlast the crumbling stone and shine when all flickering lights are dim, inspiring admiration and gratitude for his achievements as long as men can read and sail and human hearts can throb.

There is no doubt of the urgent necessity for the light as an aid to navigation, situated in a main roadstead of commerce; but, important as it may be to commerce, under existing circumstances its importance will be greatly enhanced when the operation of the Panama Canal shall invite universal commerce to take that course, which it will do if we conclude to act honestly and fairly with our own people and the rest of the world in the treatment of vessels at the canal. Mere prose, however, can not do justice to this subject. The purpose of these remarks is to give to the committee and the country a production of another and greater genius, more worthy and able to deal with this important theme. We have on the Committee on Interstate and Foreign Commerce a statesman of lofty attainments and infinite versatility of genius. In his lucid intervals he is master of commerce and statecraft, but on frequent occasions his soul takes fire from the lofty mount of song and usually bursts into a conflagration. At such times, when the divine afflatus is upon him, he mounts old Pegasus and rides him hard and rides him high. When the Hon. JOHN J. ESCH, of the State of Wisconsin, gazed in awe and admiration on old Navassa and his mind ran back over the history of those southern seas, buccaneer robbers, and stormy countries, at the same time swelling with pride in contemplation of our own glorious history and still brighter future, he, the poet-statesman, golden-hearted gentleman and friend, delighted his fellow passengers by breaking forth into the following inspiring verses:

What subterranean power, now at rest
Beneath the Caribbean's storm-ridden breast,
Caused thee to rise with dangerous shore
Athwart our course from days of yore?—Navassa.

Or art thou, with thy tree-topped crown,
All that the eroding tempest's frown
Has left of some great island of the sea
Or fabled Atlantis? Solve this mystery—Navassa.

Must thou be mute because no human soul
Within the circle of thy billow's roll
Can thrive and find the means of life
With all thy solitude and want of strife?—Navassa.

No bubbling fount of water pure
To shipwrecked mariner can assure
The quenching draft. No fruitful tree
Or root supplies him food from thee—Navassa.

Tell us the tragedies of thy rocks;
Can one be guiltless who ever mocks
The prayers of those in stress and pain
Who thought to shun thee, but in vain?—Navassa.

Inhospitable thou art, and to be feared
As much as those embattled rocks that reared
Their rugged fronts at far off Roncador
Or at Manila's sentry at Corregidor—Navassa.

No wealth of soil, or mine, or seed,
Has been sufficient to excite the greed
Of nations to possess themselves of thee,
Thou ownerless waif of this southern sea—Navassa.

Soon may thy reign of terror end
And welcome lights their rays extend
To gladden the weary storm-tossed sailor's sight
On ships that pass by in the night—Navassa.

[Applause.]

So we built the lighthouse; the memorial tablet can be provided later.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield?

Mr. ADAMSON. Certainly.

Mr. MURDOCK. Does the rock belong to the United States?

Mr. ADAMSON. Yes.

Mr. MURDOCK. How did we acquire it?

Mr. ADAMSON. We have acquired it in the regular way. I can furnish the gentleman with an abstract of title if he desires it.

Mr. MURDOCK. Did we purchase it or did we discover it?

Mr. ADAMSON. We did not "take it"; we just gained it by legitimate means.

Mr. MURDOCK. I notice from the effusion that this island is ownerless.

Mr. ADAMSON. I hope the gentleman will withdraw the epithet "effusion."

Mr. MURDOCK. Well, this epic. I notice that the poet says the land is ownerless.

Mr. ADAMSON. That may have been in the days of the buccaneers, but titles have been settled in that country lately.

Mr. FITZGERALD. Mr. Chairman, I just want to say to the gentleman that one of the things that has been noted is the fact that no ship has ever been found stranded on Navassa Island, but on nearly every island on the route from here to Panama and back that has a light there is a wrecked steamship.

Mr. ADAMSON. I will ask just a moment to explain the reason for that. In fair weather, "when the seas are calm and the skies are clear," that rock can be seen for miles away; but when storms come and waves dash in their fury, there is danger in going near it, and mariners either go away around it or stop until things clear up, thus occasioning great delay.

The only reason there have not been any wrecks there is that great precaution against a known and absolute danger, and the object of this light is to facilitate navigation and help commerce.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. ADAMSON. Certainly.

Mr. MANN. I dislike very much to ask an embarrassing question, but I understood the gentleman to say that when it is clear one can see this island?

Mr. ADAMSON. Yes.

Mr. MANN. If it is foggy, you can not?

Mr. ADAMSON. That is true.

Mr. MANN. Then what good will the light do in the fog when there is no fog signal?

Mr. ADAMSON. Mr. Chairman, I will say to the gentleman from Illinois that this lighthouse is not an exclusive remedy at all, but may be cumulative. We may do something else. Furthermore, I will say to him that the studies which I have made, largely in company with him, as to headlights and other lights have led me to believe that just as a flash of lightning can be seen in the darkest storm and clouds, so electric lights can be seen in fogs when other lights can not be located at all.

Mr. MANN. Well, the gentleman has made a very entertaining answer to a question that paralyzes the whole proposition on its merits.

Mr. ADAMSON. It can not paralyze me; if it did, I would not let the gentleman know it. [Laughter.]

Mr. BARTLETT. Mr. Chairman, I move to strike out the last word. Mr. Chairman, a few moments ago as my time was about expiring I said I had a letter, which I desire to offer now, in reference to the cost of certain buoys of which the Lighthouse Establishment purchases a great number. I asked this question of Mr. Putnam:

Mr. BARTLETT. Do you know what it costs the American Gas Accumulator Co. to produce one of those buoys, outside of the patented parts?

Mr. PUTNAM. What it costs to manufacture one of those buoys?

Mr. BARTLETT. Yes; they have them manufactured, do they not?

Mr. PUTNAM. I think so. I can not give you the cost.

Mr. BARTLETT. About \$1,250, is it not?

Mr. PUTNAM. I do not know.

Mr. BARTLETT. The buoy that you pay \$4,200 for costs the American Gas Accumulator Co. about \$1,250—is not that correct?

Mr. PUTNAM. I do not think that is correct; I think it costs them much more than that.

In that connection I now desire to have this letter read.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

UNION BOILER & MANUFACTURING CO.,
Lebanon, Pa., August 5, 1913.

HON. CHARLES L. BARTLETT,
Committee on Appropriations, Washington, D. C.

DEAR SIR: Replying to inquiry of August 4, 1913, requesting information relative to the cost of manufacturing gas buoys similar to those we have been making for the Lighthouse Service, we take pleasure in

advising you that our contract prices with the American Gas Accumulator Co., who furnish these buoys to the Government, are as follows:

For one buoy designated as "B. W.—600/II," \$1,200, complete, excepting two gas tanks, whistle and valve, bottom casting, flasher and lantern, and the necessary small gas piping leading from the two tanks to the flasher.

For one buoy designated as "B. K.—600/II," \$800, complete, excepting bell frame and bell, gas tanks, flasher and lantern and necessary small gas piping leading from the two tanks to flasher.

The bottom casting of the "B. W.—600/II" buoy would cost \$125 additional, should one be used instead of the submarine bell attachment.

Relative to the cost of manufacturing the gas tanks, will say that we did not make the tanks for these buoys; if, however, we should be asked to furnish these tanks without the composition filling therein our price would be approximately \$75 each.

We are not prepared to furnish any flashers or lanterns such as are used on these buoys; we believe they are made by the American Gas Accumulator Co., Philadelphia, Pa.

Trusting the above information is all that is desired, we remain,
Very truly, yours,

W. A. SCHOOLS, Superintendent.

Now, these buoys which the American Gas Accumulator Co. sells to the Government at \$4,200 and \$4,600 cost \$800 and \$1,200, and the head of the service, who expends this large amount of money, was not able to tell the committee how much the Government was paying in excess of the proper cost. That is what I am complaining of.

Mr. MURDOCK. What excuse did he give for not offering this testimony?

Mr. BARTLETT. Why, he did not know. He is so competent an official he did not know.

The Clerk read as follows:

Necessary additional land for light stations and depots authorized to be acquired under the act of Congress approved March 4, 1913, may hereafter be purchased from the appropriation "General expenses, Lighthouse Service," no single acquisition of such additional land to cost in excess of \$500, the total sum to be expended for this service not to exceed \$3,000 in any one fiscal year.

Mr. MANN. Mr. Chairman, I reserve a point of order. This is a proposition to let the department purchase additional land for light stations and depots out of the general expense fund so that no one will know anything about it. I do not say that is the reason it is proposed.

Mr. FITZGERALD. The last lighthouse act gave this authority without any limitation upon the amount to be expended. The Secretary requested this limitation be placed upon it.

Mr. MANN. I will withdraw the point of order.

The CHAIRMAN. The point of order is withdrawn, and the Clerk will read.

The Clerk read as follows:

Contingent expenses: For additional amounts for contingent and miscellaneous expenses for the offices and bureau of the Department of Labor, to be available for the objects named in the appropriation for contingent expenses for the Department of Commerce and Labor, contained in the act approved March 4, 1913, and for all other miscellaneous items and necessary expenses not included therein, fiscal year 1914, \$5,000.

Mr. KELLY of Pennsylvania. Mr. Chairman, I move to strike out the last word. I would like to ask the chairman of the committee a question. I notice in the hearings that the matter of an appropriation of \$10,000 for an international congress on social insurance was before the committee and the matter was left very much in doubt as to a final determination of whether or not an appropriation of \$10,000 already made could be applied to the purpose desired by the Secretary of Labor. I would like to ask the chairman in regard to that. It is a matter of very great importance.

Mr. FITZGERALD. My recollection is that this convention is to be held a year from this fall.

Mr. KELLY of Pennsylvania. In 1915.

Mr. FITZGERALD. Under a prior joint resolution, passed early in the session, all appropriations made under the Secretary of Commerce which would properly belong to the Department of Labor would be transferred to the Secretary of Labor, and they will now pass to the appropriations under the Secretary of Labor.

Mr. KELLY of Pennsylvania. Now, does the gentleman mean to say that the \$10,000 will be available to the Secretary of Labor and can be used in this coming year?

Mr. FITZGERALD. That is my understanding. That is the impression of the committee.

The Clerk read as follows:

Commissioners of conciliation: To pay the expenses of commissioners of conciliation in labor disputes, whenever appointed in pursuance to section 8 of the act creating the Department of Labor, \$5,000, or so much thereof as may be necessary.

Mr. MANN. Mr. Chairman, I move to strike out, line 4, page 35, "\$5,000" and insert "\$25,000."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 35, line 4, strike out "\$5,000" and insert "\$25,000."

Mr. MANN. Mr. Chairman, a very short time ago the House, the Senate, and the President, under considerable stress,

passed a law providing for the appointment of commissioners in arbitration between railroads and their employees. I forget how much the appropriation carried by that law is, but it is more than \$25,000.

That is a good law, and the money will be well expended. In the creation of the Department of Labor at the last session we provided that the Secretary of Labor might appoint commissioners of conciliation, and he has got authority in all cases except those involving transportation companies and their employees. Now, we have provided for a board of mediation and conciliation under this law to which I have just referred, so far as railroad employers and their employees are concerned. The Secretary of Labor has the same power as to all other industrial disputes. He sent in an estimate of \$50,000, which was small enough, and the committee, with a liberality which was truly generous, proposed to give him \$5,000.

Mr. BARTLETT. Mr. Chairman, may I interrupt the gentleman?

The CHAIRMAN. Does the gentleman yield?

Mr. MANN. Certainly.

Mr. BARTLETT. If the gentleman will examine the hearings he will see that the Secretary of Labor wanted to establish a permanent board, which he was not authorized to do under this act of labor conciliation.

Mr. MANN. Oh, I have read the hearings, and the gentleman is mistaken about what the Secretary of Labor wanted to do. The Secretary of Labor wanted to employ somebody here in charge and somebody under him, just as he will in the case of the board of mediation and conciliation. There must be some one in Washington to keep charge of the questions in relation to these industrial disputes; and then, having these people here, they could be named as the mediators or conciliators if that should be agreeable to the parties involved, or the Secretary would have the power to name other conciliators.

Now, what is \$25,000 or a great deal more than that as between bringing employers and employees together without either strike or lockout? These disputes are occurring everywhere over the country from time to time. They almost invariably cover matters affecting interstate commerce. One of the very best reasons for creating the Department of Labor was that the Secretary of Labor should have this power. He can not do it with \$5,000. He ought certainly to be prepared to pay \$5,000, if necessary, to commissioners of conciliation in one case. But he will have no machinery. He ought to have the machinery here, and then when cases arise in New York or San Francisco or New Orleans or elsewhere in the country, where trouble is threatened between employer and employee, the products of the factory going into interstate commerce, he can appoint somebody to endeavor to bring the employers and employees together without a strike.

Twenty thousand dollars. Do you gag on that sum for the purpose of giving your Secretary of Labor the opportunity to carry into effect this law? We are willing to trust him in the hope that he will develop through this system a method of settling industrial disputes. You passed the law, but you gag when it comes to carrying it out. You would rather give the extra thousand dollars to the Platt National Park in Oklahoma. That is what you voted for, and that will be used purely for political patronage. We ask you to give money where it will be used for the benefit and welfare of the whole people. [Applause on the Republican side.]

Mr. FITZGERALD. Mr. Chairman, I am surprised that the applause is not much more vociferous on that side of the House. Such an entertaining speech was entitled to much more enthusiastic support from the gentleman's following.

We do not indulge, Mr. Chairman, in the unnecessary expenditure of public money either under a Democratic or a Republican administration. They look alike to us with respect to unnecessary expenditures unless they demonstrate to us the propriety of the situation in each case.

The act under which these commissioners of conciliation are to be appointed provides—

That the Secretary of Labor shall have power to act as mediator and to appoint commissioners of conciliation in labor disputes whenever, in his judgment, the interests of industrial peace may require it to be done, and all duties performed and all power and authority now possessed or exercised by the head of any executive department in and over any bureau, office, officer, board, branch, or division of the public service by this act transferred to the Department of Labor, or any business arising therefrom or pertaining thereto or in relation to the duties performed by and authority conferred by law upon such bureau, office, officer, board, branch, or division of the public service, whether of an appellate or revisory character or otherwise, shall hereafter be vested in and exercised by the head of the said Department of Labor.

Mr. MANN. That provision has nothing to do with it.

Mr. FITZGERALD. Yes; it has.

Mr. MANN. The authority granted was new in the act creating the Department of Labor.

Mr. FITZGERALD. The gentleman does not seem to be aware of the fact that I am reading from the act.

Mr. MANN. I understand that, but—

Mr. FITZGERALD. I am reading the authority under which these commissioners may be appointed.

Mr. MANN. The gentleman is not reading the authority at all. He is reading about something else.

Mr. FITZGERALD. What I have read is the authority under which the Secretary of Labor can appoint commissioners of conciliation.

Mr. MANN. If the gentleman will permit, the first provision is the authority. The latter provision transfers to the Secretary of Labor certain authority theretofore conferred upon the Secretary of Commerce and Labor.

Mr. FITZGERALD. It is all one paragraph taken from the act creating the Department of Labor. I have read it so that it will be in the Record for the information of the House and of that intelligent part of the public that reads the CONGRESSIONAL RECORD.

Mr. MONDELL. Mr. Chairman, will the gentleman yield?

Mr. FITZGERALD. Do not interrupt me for one moment, please. The Secretary of Labor submitted an estimate of \$50,000 to pay the expenses that might arise under this authority. After the estimate was submitted, Congress passed the Newlands-Clayton Act, as I think it is called, under which a special board was created with authority over disputes arising between employers and employees in connection with interstate transportation. They have the disposition of cases of the greatest magnitude and difficulty with which the Department of Labor might have to do. The Secretary of Labor outlined his plan. It was to create a permanent division in the Bureau of Labor. There seemed to be no need for it. He proposed to appoint commissioners of conciliation permanently, and whenever a dispute arose, assign them to this work. The Committee on Appropriations believed that the true purpose intended by this provision of the statute was that when a dispute should arise the Secretary of Labor should offer his friendly services, or suggest the appointment by him of commissioners of conciliation, and the committee recommended such sum as it believed would be sufficient to pay the expenses of the commissioners during the current fiscal year. It did not provide that they should receive compensation, because it believed that experience had demonstrated that it is much better in matters of this character to select men of such standing in a community that they will gladly volunteer their services and not provide a number of places for which there might be active competition on the part of men unfit for the work, merely because of the compensation to be paid. The committee believed that \$5,000 would be ample for this year. If a situation should arise where additional money was required during this year, I am sure Congress will give it. Now I yield to the gentleman from Wyoming.

Mr. MONDELL. The gentleman has expressed his opinion on the point on which I wished to interrogate him.

Mr. FITZGERALD. There was no dissension in the committee. The committee believed that this was ample, and that it would be more serviceable to carry out the law in the manner which I have outlined.

Mr. MANN. Will the gentleman yield?

Mr. FITZGERALD. Certainly.

Mr. MANN. Does Secretary Wilson think it will be ample?

Mr. FITZGERALD. Mr. Chairman, I do not know; but I have never permitted the head of any department, Democrat or Republican, to control my judgment. I am charged with responsibility for my own actions, and if my mature judgment happens to differ, as it unfortunately sometimes does, with the heads of the departments, it is a misfortune from which, I regret, I can not relieve myself.

Mr. MANN. But the gentleman yielded his judgment in the case that we had up awhile ago.

Mr. FITZGERALD. What matter was that?

Mr. MANN. Where Secretary Redfield was quoted. Now, why does not the gentleman quote what Secretary Wilson says about this case?

Mr. FITZGERALD. After Secretary Redfield had submitted his estimate, he reached the conclusion that I had arrived at before he did, that \$50,000 would be ample. I was very glad to point out the fact that the head of that department had come to the same conclusion as myself.

If he had not I should have regretted very much that I had not sufficiently formed my conclusions to coincide with those of the distinguished gentleman who presides over the Department of Commerce. [Laughter.]

The CHAIRMAN (Mr. HARRISON). The question is on the amendment offered by the gentleman from Illinois.

The question was taken, and the Chairman announced that the noes had it.

Mr. MANN. Mr. Chairman, I ask for a division. I want to see if there are any friends of labor on the Democratic side.

The committee divided, and there were 23 ayes and 54 noes. So the amendment was lost.

The Clerk read as follows:

Any unexpended balance on July 1, 1913, of the \$100,000 appropriated for the Commission on Industrial Relations for the fiscal year ending June 30, 1913, is made available for the fiscal year 1914.

Mr. MANN. Mr. Chairman, I move to strike out the last word. I would like to ask the chairman for what reason this is put under the head of Department of Labor. It is not a branch of the Department of Labor. It is a commission created by Congress and appointed by the President, and ought properly to be under the head of "The President."

Mr. FITZGERALD. The request for the appropriation came from the Secretary of Labor, and he also requested certain control over the appropriation.

Mr. MANN. He was asking for control over the appropriation, but this Commission on Industrial Relations is not under the Department of Labor nor would it be under his control. It is under the control of the President.

Mr. FITZGERALD. It just happened to fit here better than in any other place.

Mr. MANN. And it happens in this way that Congress would indicate that it is under the control of the Department of Labor.

Mr. FITZGERALD. I think not.

Mr. MANN. Anyone who took the bill, knowing how we make up appropriation bills, would come to the conclusion that it was under the Department of Labor.

Mr. FITZGERALD. No; no Member of Congress would be misled.

Mr. MANN. Any man who knows the custom of the committee to segregate items under proper heads would not suppose that a commission under the control of the President was put under the heading of the Department of Labor. He would suppose that it would be put under the head of "The President," where the Civil Service Commission is and other commissions of that sort in appropriation bills. This commission is wholly under the control of the President.

The CHAIRMAN (Mr. Flood of Virginia). The pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

Whenever aliens arriving at any port of the United States are temporarily removed from a vessel in accordance with the provisions of section 16 of the immigration act approved February 20, 1907, the transportation lines which brought them and the masters, owners, agents, and consignees of the vessel on which they arrive shall pay all expenses of such removal and all expenses arising during subsequent detention pending decision of the eligibility of such aliens to enter the United States and until they are either allowed to land or returned to the care of the line or to the vessel which brought them, and such expenses shall include those of maintenance, medical treatment in hospital or elsewhere, burial in the event of death, and charges for transfer to the vessel in the event of deportation, excepting only where such expenses arise under the terms of any of the provisos of section 19 of the said immigration act; and aliens shall not be temporarily removed from any vessel unless the master, owner, agent, or consignee thereof shall guarantee in a manner prescribed by and to the satisfaction of the Secretary of Labor that said expenses will be paid.

Mr. MURDOCK. Mr. Chairman, I want to ask the gentleman from New York if this is not existing law?

Mr. FITZGERALD. It was supposed to be, but Judge Meagher, of New York, very recently handed down a decision holding that the steamships were not liable. It has been the practice right along, and at the request of the department we compel the companies to pay the expenses, as they should.

The Clerk read as follows:

The Superintendent of the Capitol Building and Grounds is authorized to pay, out of the appropriation for Capitol power plant, fiscal year 1913, the sum of \$438, amount of demurrage on shipments of coal for Capitol power plant between the dates February 17 and April 14, 1913.

Mr. MADDEN. Mr. Chairman, I move to strike out the last word in order that I may ask the gentleman from New York a question. How many carloads of coal were involved in this demurrage for which you appropriate the sum of \$438?

Mr. FITZGERALD. I do not remember. What happened was this: Prior to the inauguration, in anticipation of the congested condition of transportation facilities, the Superintendent of the Capitol ordered an additional amount of coal to be delivered. At that time the switch at the Capitol power house was completely occupied and it was impossible to move the cars from the company's switches to our track within the time allowed. I believe there were 90 cars, with demurrage at the regular rates.

Mr. MADDEN. Mr. Chairman, I do not understand the reason why a railroad company should be allowed to charge demurrage because they were not able to place the cars on the switch.

If these switches were occupied by cars that were not being unloaded—

Mr. MANN. Will my colleague yield?

Mr. MADDEN. Yes.

Mr. MANN. I do not know how far this explanation will go, but the Superintendent of the Capitol ordered the coal in connection with the inaugural ceremonies, with the idea that with the large amount of railroad traffic to Washington at the time, the large number of cars that would be on the tracks, that he should get coal in season to be available at that time, and he ordered an extra supply. Otherwise the coal comes and is delivered at the switches down here in regular order so that there is no demurrage. Owing to the way that this coal was ordered, it came in so that there would be no possibility of our being without coal so far as the Capitol Building is concerned at that time.

Mr. MADDEN. The only point about the matter is this: First, do we own the switch, and was the switch occupied by cars of material that we were to unload, or was the switch occupied by cars of the railroad carrying other material, or was it occupied by passenger cars that were held here on account of the expected traffic, due to the inauguration?

Mr. FITZGERALD. Our switch was occupied by coal, to be unloaded at the Capitol power plant, and the number of cars was increased to 90 that week. We could not take care of them on the switch and the charge is for the additional cars. It is the usual charge.

Mr. MADDEN. It is \$1 a day.

Mr. FITZGERALD. And it amounted to this sum of money.

Mr. MADDEN. It seems a large amount of money to pay for demurrage.

Mr. FITZGERALD. I do not know how much they charge.

Mr. MADDEN. They charge \$1 a day. That is the rule of the railroads. They charge a dollar a day for every car occupying the track after 48 hours has elapsed. Every car has 48 hours allowed it, and if it is not unloaded within the 48 hours, demurrage begins at the rate of a dollar a day. If we paid \$438 for demurrage within the space of a single month, there is somebody to blame.

Mr. FITZGERALD. It is between February 17 and April 14.

Mr. MADDEN. That is too much. If we pay \$438 in a year, it is too much.

Mr. MANN. Of course it would be too much under ordinary conditions, but, as I stated, these conditions arose because the Superintendent of the Capitol desired to take no chances of being short of coal at the time of the inauguration ceremonies.

Mr. MADDEN. It does not matter what the cause was. There is negligence somewhere, or extravagance, or bad management. I ship on the average 100 carloads of material every day, and I will take my oath that I have not paid \$438 demurrage in a year or two years, and if the Government of the United States is so negligent in the transaction of its business—

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MADDEN. Mr. Chairman, I ask unanimous consent to proceed for two minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MADDEN. If the Government of the United States is so negligent in the transaction of its business that it can afford to pile up \$438 demurrage in 60 days, then somebody ought to be censured for it, and a bill of this kind ought not to be paid.

Mr. CULLOP. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. CULLOP. If these cars were placed on a switch where they could not be unloaded, then they were not available for the emergency for which they had been ordered, and in that event certainly the Government should not pay demurrage.

Mr. MADDEN. Of course not; and what we ought to do is through the proper agents negotiate with the local officials of the railroads to prevent the collection of such a sum of money as this for demurrage. I do not know how much a ton we pay for coal, but whatever the sum is, this demurrage is added to it, and there is no reason on earth that should appeal to anybody why an additional 90 or 100 carloads of coal should be ordered in simply because we were going to have an inauguration for two or three days. If we knew we were going to have a possibility of crowded railroad tracks and that it might not be easy to transfer trains promptly, that information was in our possession three months before the inauguration.

Mr. COX. Why did he not order it sooner?

Mr. MADDEN. That is what I say.

Mr. MANN. Where would you put it?

Mr. MADDEN. Unload it.

Mr. MANN. The gentleman understands that this coal is loaded from the car down here at the steam-power plant into automatic stokers?

Mr. MADDEN. We did not put it anywhere. We just paid demurrage.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

The Clerk read as follows:

For miscellaneous items and expenses of special and select committees, exclusive of salaries and labor, unless specifically ordered by the House of Representatives, \$60,175.

Mr. MANN. Mr. Chairman, I move to strike out the last word. May I ask—this is for the last fiscal year—how much will this make the total appropriation for the miscellaneous items and expenses of special and select committees, which is commonly called the contingent fund of the House?

Mr. FITZGERALD. This will make \$210,000.

Mr. MANN. That is, I suppose, considerably the largest appropriation that ever has been made in the history of the Government?

Mr. FITZGERALD. No; I would not say that.

Mr. MANN. I think the gentleman will if he will look at it.

Mr. FITZGERALD. In 1905 it was \$170,000.

Mr. MANN. Yes.

Mr. FITZGERALD. In 1900, \$115,000; 1910, \$115,000; in 1911, \$150,000; and in 1912, \$200,000.

Mr. MANN. That is a Democratic administration.

Mr. FITZGERALD. And in 1913 it would be \$210,000.

Mr. MANN. Well, I do not desire to say, "I told you so." I have no desire at all to make useless criticisms of the Democratic side of the House because it apparently has no effect upon you gentlemen who come in with the plea of economy. The contingent fund of the House has constantly increased—

Mr. FITZGERALD. If the gentlemen on that side join with gentlemen on this side in authorizing committees of the House to make certain investigations you must expect to pay for it.

Mr. MANN. Well, but the truth is, we have not usually joined with gentlemen on that side of the House. They have not needed or wanted us. They have an ample number over there to go into this extravagance without our help.

Mr. FITZGERALD. I know, but unfortunately the gentleman from Illinois [Mr. MANN] and the gentleman from Kansas [Mr. MURDOCK] have taken a new tack, and they have voted together to increase items in this bill, and it is because of this new combination working that the amount increases.

Mr. MANN. We acted against that side of the House for the good of the country and have no apology to make for that. Of course, I understand that the Democratic side of the House last Friday endeavored to divide their pork barrel in the House; but, as I say, here is a contingent item making a total of \$210,000. The ordinary appropriation for contingent expenses of the House has usually been \$75,000 a year in a regular appropriation bill. Now, of course, if you need the places, appropriate the money. The \$210,000 was for the last Congress. You have not got your places yet. You are only asking or insisting upon your places now, but mind you, the \$210,000 contingent fund for the last Congress will pale into insignificance when the total appropriations for the contingent fund of this House for this Congress shall be added together. Now, Mr. Chairman, I desire to have read in my time an article from the Star of last Saturday giving and commenting on what took place in the Democratic caucus. I believe authentic, as far as the resolutions are concerned; or I would ask leave to extend my remarks by inserting it.

Mr. FITZGERALD. All right, let it go in.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to extend his remarks by incorporating in it an article from the Star. Is there objection?

Mr. DONOVAN. Mr. Chairman, reserving the right to object, the gentleman ought to be informed there has been no Democratic caucus held; not any held. I would be surprised to have anyone impose upon him information of that character. No caucus has been held of the Members of the House as yet; not last week or the week before.

Mr. MANN. I do not wonder the gentleman repudiates the caucus.

Mr. DONOVAN. No; there has been no repudiation; there has been none held of Members last week or the week before.

Mr. MURDOCK. What does the gentleman call the meeting the other day?

Mr. DONOVAN. And every able parliamentarian technically knows it. I had no idea such an able and distinguished character as the gentleman from Illinois [Mr. MANN], a Member of this and other Congresses for 20 years or more, should try to im-

pose upon the public news of that character, which will not bear investigation and which is without a particle of truth.

The CHAIRMAN. The time of the gentleman from Illinois [Mr. MANN] has expired.

Mr. MURDOCK. Mr. Chairman, I move to strike out the last two words.

Mr. MANN. Mr. Chairman, I ask for two minutes more.

Mr. FITZGERALD. Does anybody object to the gentleman's request?

The CHAIRMAN. Does the gentleman from Connecticut [Mr. DONOVAN] object to the request of the gentleman from Illinois [Mr. MANN] to extend his remarks in the Record?

Mr. DONOVAN. I object to his extending his remarks. I certainly would object to anyone making a fool of himself. [Laughter.]

The CHAIRMAN. Does the gentleman from Connecticut object to the request?

Mr. MANN. Oh, no; he does not.

The CHAIRMAN. Without objection, the request will be granted.

There was no objection.

Following is the newspaper article referred to:

[From the Washington Evening Star, Sept. 6, 1913.]

REPUBLICANS TO GO, DEMOCRATS DECREE—HOUSE MAJORITY DECIDES IN CAUCUS TO MAKE CLEAN SWEEP OF C. O. P. EMPLOYEES—MEMBERS WANT PLACES FOR MEN OF OWN PARTY—PATRONAGE PIE ABOUT TO BE SLICED SO THAT NEW MEN WILL EACH GET A SHARE.

Democrats of the House woke up this morning with the glorious taste of patronage pie. They had gone to bed last night with large slices of this delicious political pastry in their mouths, figuratively speaking, for, following the long and exciting caucus of yesterday afternoon, when the patronage committee presented its report, the party in power went on record as saying that every job connected with House patronage that can possibly be filled by a Democrat should be given to a Democrat, no matter how long and how faithfully any Republican incumbent has served. The resolution showing the sense of the caucus on that particular point was presented by Representative FRANK CLARK, of Florida, and from within the closed doors of the secret session the loud applause of the pie-hungry Democrats could be heard in vociferous volume.

Many things were done to bring about a clean sweep of employees of the House, wherever it is possible. Colored barbers will probably be taken out of their places and white barbers will be put on their jobs. While this point was being discussed, a southern Member made an impassioned speech in which he said:

"I see many places around this House being held by colored men, and I know they are Republicans, because I never saw a colored Democrat in my life."

OLD EMPLOYEES TO GO.

An attack was made on William R. Woolley, custodian of the House Office Building, and all the Republicans under his charge, and despite the defense of this particular employee, made by Speaker CLARK and Representative FITZGERALD, the caucus broom swept clean, and with the House Office Building Republicans will go George W. Sabine, assistant librarian of the House, an old and experienced Republican employee.

The caucus was called to settle the long-standing grouches of many Members, especially the new men, who have complained bitterly that they have been deprived of their rightful patronage. The matter has been brooding in the House for a long time, and a committee on organization, composed of Representatives HUMPHREYS of Mississippi, COVINGTON of Maryland, and DOREMUS of Michigan, was charged with the responsibility of a plan for dividing up the jobs around the Capitol. That committee worked over the problem a long time and then decided that it would be physically impossible to slice up the jobs so that each man got exactly as much as his neighbor.

RESOLUTIONS FOR CLEAN SWEEP.

Therefore, when the caucus met yesterday afternoon this committee presented the following resolution, which was adopted:

"It is the sense of this caucus that it is neither practicable nor possible so to distribute the patronage of the House as to give to all members of the caucus places of equal importance or salary. The committee on organization should be given broad discretion in the selection of the employees upon whom we must depend for the efficient conduct of the business of the House; and in securing and maintaining this efficiency as a first consideration, as well as for the equitable distribution of the patronage of the House, we must trust to the wisdom and sense of fairness of the committee. No hard and fast rules can be prescribed. Therefore be it

Resolved, That the committee on organization be, and it is hereby, authorized to nominate to the officers of the House all employees not hereafter excepted, and the officers are hereby directed to appoint all and only such employees as may be so nominated to them.

"That said committee shall apportion the patronage of the House among the members of this caucus, having in view, first, the efficiency of the House organization, and, second, the fair distribution of the patronage among the members of the caucus.

"That said committee shall keep a register of all employees of the House appointed or retained by them, which shall show the name of the employee, the position held, the salary paid, and the name of the Member, or Members, if any, to whom each employee is charged. Such register shall be properly indexed and shall at all times be open to inspection by any member of this caucus.

"That employees of the standing committees of the House, the journal clerk, cloakroom men, and the appointees of the Speaker at the desk are excepted from the employees to be apportioned by the committee.

"That all employees appointed by the officers of the House shall be subject to dismissal by the officer making the appointment, the fact that such employee has been appointed in pursuance of a nomination by the committee on organization notwithstanding.

"That chairmen of standing committees of the House, except the committee on mileage, shall not be allotted patronage."

DISAGREES WITH COMMITTEE.

The resolutions had not been read more than a few seconds when Representative WINGO of Texas, a new Member, declared he did not believe in the committee's contention that it would be impossible to divide up the jobs, and challenged the preamble of the resolution, but the committee was upheld after a strenuous word battle. Representative FINLY GRAY, of Indiana, who has been "sore" on the patronage subject for a long time, made a speech that drew the yells from the throats of the newer and hungrier Members. Mr. GRAY said he had been done out of patronage long enough and he wanted to get what was coming to him. He had surrendered his patronage, he explained, in the beginning of the Sixty-second Congress so that E. Stokes Jackson, an Indiana man, could be made Sergeant at Arms. Mr. GRAY did this, he said, simply as an accommodation, and not because Jackson had been of help to him in the campaign.

Mr. Jackson died, and when Representative GRAY tried to get back what he believed was his rightful patronage he was told, "No; you already have had a Sergeant at Arms, and that is enough." "I do not believe in the assumed wisdom of these older Members," said Mr. GRAY. "I think the new men make better Congressmen." "Better not let that remark get back to your district, then," advised a Democrat.

AMENDMENT TO OUST REPUBLICANS.

The sweeping amendment by Representative CLARK of Florida to oust all Republicans must be taken as "the sense of the caucus." It shows the temper of the Democrats, but is not the final action. The amendment was vigorously defended by the author, and reads as follows:

"It is the sense of the caucus that the committee on organization shall not allow any Republican to hold any position which should be included in Democratic patronage, no matter how long he may have served, as we believe a Democrat can be found who is fully capable of discharging the duties of any place in the House organization."

This amendment was adopted, and would oust Custodian Woolley and Assistant Librarian Sabine and other old Republicans. It was sharply combated by Representative FITZGERALD, speaking for Mr. Woolley. Mr. FITZGERALD is a member of the commission of Congressmen in charge of the House Office Building, and he has dealt with Custodian Woolley ever since his appointment, which was made, it was stated, in a nonpartisan manner following Mr. Woolley's position as superintendent of some of the construction work on the building.

Mr. MANN. Now, Mr. Chairman, I ask unanimous consent for two minutes more.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] asks unanimous consent for two minutes more. Is there objection?

There was no objection.

Mr. MANN. Mr. Chairman, of course, in view of the statement of the distinguished gentleman from Connecticut [Mr. DONOVAN], I beg to say that I am not informed as to how far or to what extent the Democratic caucus was held on last Friday. But on that day the House adjourned before 3 o'clock on the announced statement that the Democrats were to hold a caucus then. If I recollect correctly, I sat in a seat over here—that was last Friday—with a distinguished Senator, who was talking with me about a personal matter, until, looking around, I saw that every eye in the House, almost, was directed at me, the owners evidently wondering why on earth I did not get out. [Laughter.] The distinguished Senator being a Democrat, I suppose he, of course, could have remained. I walked out.

What took place after that I do not know. My friend from Connecticut [Mr. DONOVAN] repudiates it as a caucus; but they looked at me mightily like they were going to caucus. [Laughter.]

Mr. MURDOCK. What does the gentleman from Connecticut call it?

Mr. ADAMSON. Mr. Chairman, I presume that the explanation of the denial offered by the gentleman from Connecticut [Mr. DONOVAN] would be that the caucus was supposed to be secret and confidential, and that anybody who reported anything that occurred in it would violate confidence and therefore was unworthy of belief; and that whatever he said was not true, and therefore there was no caucus. [Laughter.]

But what I desired to say is that I hope the apparent relapse of the gentleman from Kansas [Mr. MURDOCK] into concord with the standpatters, indicated by his accord with the gentleman from Illinois [Mr. MANN], is not chronic, but only intermittent.

Mr. BARTLETT. Spasmodic—

Mr. ADAMSON. Because if it becomes chronic I shall be compelled to lament, in the language of the Scripture, "Ye are fallen from grace." [Laughter.]

Mr. MANN. Yes; and if it becomes chronic, and we stick together, there will not be enough left on your side to make two grease spots. [Laughter and applause on the Republican side.]

Mr. ADAMSON. That is not in the Scripture, nor anything to sustain the idea. [Laughter on the Democratic side.]

Mr. MANN. It is just as truthful as Scripture. [Applause on the Republican side.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

To reimburse the official reporters of debates \$490 each and the official stenographers to committees, M. R. Blumenberg, Frank H. Barto, and R. J. Speir, \$205 each for moneys actually expended by them for clerical assistance to August 31, 1913, \$3,555.

Mr. FITZGERALD. Mr. Chairman, I offer the following amendment.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 38, after line 5, insert "For services of substitute telephone operators when required, at \$2.50 per day, fiscal year 1914, \$250."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from New York.

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk resumed and completed the reading of the bill.

Mr. FITZGERALD. Mr. Chairman, the provision relating to the Commerce Court, on page 20, was passed over.

The CHAIRMAN. The Clerk will read on page 20.

The Clerk read as follows:

Commerce Court: For expenses of the Commerce Court during the first half of the fiscal year 1914, namely: Clerk, at the rate of \$4,000 per annum; deputy clerk, at the rate of \$2,500 per annum; marshal, at the rate of \$3,000 per annum; deputy marshal, at the rate of \$2,500 per annum; for rent of necessary quarters in Washington, D. C., and elsewhere, and furnishing same for the Commerce Court; for books, periodicals, stationery, printing, and binding; for pay of bailiffs and all other necessary employees at the seat of government and elsewhere, not otherwise specifically provided for, and for such other miscellaneous expenses as may be approved by the presiding judge, \$17,500; in all, \$23,500, or so much thereof as may be necessary: *Provided*, That in the event of the enactment of a law discontinuing or abolishing said court, any balance of this appropriation remaining after the date of such abolition shall lapse and be covered into the Treasury.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent that this whole matter referring to the Commerce Court be read and considered as one paragraph.

The CHAIRMAN. The gentleman from New York asks unanimous consent that all the matter in the bill referring to the Commerce Court be read and considered as one paragraph. Is there objection?

There was no objection.

The Clerk read as follows:

The Commerce Court, created and established by the act entitled "An act to create a Commerce Court and to amend the act entitled 'An act to regulate commerce,' approved February 4, 1887, as heretofore amended, and for other purposes," approved June 18, 1910, is abolished from and after December 31, 1913, and the jurisdiction vested in said Commerce Court by said act is transferred to and vested in the several district courts of the United States, and all acts or parts of acts in so far as they relate to the establishment of the Commerce Court are repealed.

The venue of any suit hereafter brought to enforce, suspend, or set aside, in whole or in part, any order of the Interstate Commerce Commission shall be in the judicial district where some or all of the transportation covered by the order has either its origin or destination, except that where the order does not relate to transportation the venue shall be in the district where the matter complained of in the petition before the commission arises, and except that where the order does not relate either to transportation or to a matter so complained of before the commission the matter covered by the order shall be deemed to arise in the district where one of the petitioners in court has either its principal office or its principal operating office. In case such transportation relates to a through shipment the term "destination" shall be construed as meaning final destination of such shipment.

The procedure in the district courts in respect to cases of which jurisdiction is conferred upon them by this act shall be the same as that heretofore prevailing in the Commerce Court. The orders, writs, and processes of the district courts may in these cases run, be served, and be returnable anywhere in the United States; and the right of appeal from the district courts in such cases shall be the same as the right of appeal heretofore prevailing under existing law from the Commerce Court. No preliminary injunction, or restraining or stay order, suspending the enforcement, operation, or execution of, or setting aside, in whole or in part, any order made or entered by the Interstate Commerce Commission shall be issued or granted by any district court of the United States, or by any judge thereof, or by any circuit judge acting as district judge, unless the application for the same shall be presented to a circuit or district judge, and shall be heard and determined by three judges, of whom at least one shall be a circuit judge, and unless a majority of said three judges shall concur in granting such application. When such application as aforesaid is presented to a judge he shall immediately call to his assistance to hear and determine the application two other judges. Said application shall not be heard or determined before at least five days' notice of the hearing has been given to the Interstate Commerce Commission, to the Attorney General of the United States, and to such other persons as may be defendants in the suit. The hearing upon such application shall be given precedence, and shall be in every way expedited and be assigned for a hearing at the earliest practicable day after the expiration of the notice hereinbefore provided for. An appeal may be taken direct to the Supreme Court of the United States from the order granting, after notice and hearing, a preliminary injunction, or restraining or stay order, in such case if such appeal be taken within 30 days after such preliminary injunction or restraining order or stay order is granted, and upon the final hearing of any suit brought to suspend or set aside, in whole or in part, any order of said commission the same requirement as to judges and the same procedure as to expedition and appeal shall apply. A final judgment or decree of the district court may be reviewed by the Supreme Court of the United States if appeal to the Supreme Court be taken by an aggrieved party within 60 days after the entry of such final judgment or decree, and such appeals may be taken in like manner as appeals are taken under existing law from the Commerce Court to the Supreme Court. The provisions of this section shall also apply to the issuing and granting of preliminary injunctions and restraining or stay orders suspending the enforcement, operation, or execution of, or

setting aside, orders made by any administrative board or commission created by and acting under the statute of a State. And in such case the notice required shall be served upon the defendants in the case and upon the attorney general of the State. All cases pending in the Commerce Court at the date of the passage of this act shall be deemed pending in and be transferred forthwith to said district courts except cases which may previously have been submitted to that court for final decree. Each of said cases and all the records, papers, and proceedings shall be transferred to the district court wherein it might have been filed at the time it was filed in the Commerce Court if this act had then been in effect; and if it might have been filed in any one of two or more district courts it shall be transferred to that one of said district courts which may be designated by the petitioner or petitioners in said case, or, upon failure of said petitioners to act in the premises within 10 days after the passage of this act, to such one of said district courts as may be designated by the judges of the Commerce Court. The judges of the Commerce Court shall have authority, and are hereby directed, to make any and all orders and to take any other action necessary to transfer as aforesaid the cases and all the records, papers, and proceedings then pending in the Commerce Court to said district courts.

Any case hereafter remanded from the Supreme Court which but for the passage of this act would have been remanded to the Commerce Court shall be remanded to a district court, designated by the Supreme Court, wherein it might have been instituted at the time it was instituted in the Commerce Court if this act had then been in effect, and thereafter such district court shall take all necessary and proper proceedings in such case in accordance with law and such mandate, order, or decree therein as may be made by said Supreme Court.

All laws or parts of laws inconsistent with the foregoing provisions relating to the Commerce Court are repealed.

Mr. FITZGERALD, Mr. CULLOP, and Mr. BROUSSARD rose.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana.

Mr. BROUSSARD. Mr. Chairman, I make the point of order that this provision is not in order.

Mr. MANN. There is a rule providing that it shall be in order.

Mr. FOSTER. There is a rule making it in order.
Mr. BROUSSARD. I understand there is, Mr. Chairman, but I want to make a point of order beyond the rule.

Mr. FOSTER. I suggest that the gentleman can not do that.

Mr. FITZGERALD. What is the gentleman's point of order?

Mr. MURDOCK. Let the gentleman state his point of order.

Mr. BROUSSARD. I make the point of order that this legislation has not been referred to any committee having authority to legislate upon the question involved in the proposition and that there has been no report from any committee of this House of Representatives warranting the insertion of this legislation in this appropriation bill.

Mr. FITZGERALD. Mr. Chairman, no rule of the House makes that a sufficient ground.

Mr. BROUSSARD. I should like to explain what my proposition is.

The CHAIRMAN. The Chair will hear the gentleman from Louisiana. The Chair thought the gentleman had yielded the floor.

Mr. FITZGERALD. The gentleman has stated the grounds of his point of order. The rule provides that this particular provision will be in order on this bill.

The CHAIRMAN. The Chair will hear the gentleman from Louisiana if he desires to be heard.

Mr. FITZGERALD. I hope the gentleman will not take up much time.

Mr. BROUSSARD. I will only take up a moment.

Mr. MANN. Will the gentleman from Louisiana yield for a question?

Mr. BROUSSARD. Certainly.

Mr. MANN. Is the gentleman familiar with the special rule we adopted the other day, providing that these paragraphs were in order?

Mr. BROUSSARD. I was not here at the time, but have been informed of what that rule is. But "the gentleman from Louisiana" takes the position that there has been no report of any committee having jurisdiction over this subject matter except the Rules Committee, which has jurisdiction to report a bill already reported by the proper committee and to make that in order in a bill wherein it is not permissible to insert it except for the rule.

Mr. MANN. The Committee on Rules may report making a red apple in order on the Clerk's desk, and if the House adopts the rule it is in order, no matter how much it would be out of order otherwise.

Mr. BROUSSARD. That is the gentleman's opinion. I want the ruling of the Chair upon it.

The CHAIRMAN. The Chair will hear the gentleman from Louisiana.

Mr. BROUSSARD. Mr. Chairman, the rules of the House require, not as a matter of permission, but as a matter that is mandatory upon the House, that every bill introduced in this House shall be referred to the committee having jurisdiction of the subject matter of the bill. There has been some controversy as to whether the jurisdiction concerning this particular

bill belongs to one or other of two committees of the House. There has been a report from neither of these committees, and the point of order which I raise is that until there is such a report it is incompetent for the Committee on Rules to authorize the Committee on Appropriations, or for the Committee on Appropriations on its own volition to report any particular bill which is not germane. This is not germane to the appropriation involved. It is not competent for the Rules Committee to bring in a rule without such a report from a committee having jurisdiction of the subject matter.

I should like to refer the Chair to a rule of the House defining the powers of the Rules Committee of the House, and to call attention to the fact that this provision not only violates the rule with reference to the question as to whether it is germane—which violation of the rules, of course, is cured by any special rule—but that without a report from the committee having jurisdiction of the subject matter it is not in the power of the House to act upon it.

In other words, if any committee of the House has reported any particular proposition, germane or not, to any appropriation in this bill, the Rules Committee can make it germane by simply reporting a rule making it in order.

The House has never through any committee considered this matter. It has never vested the Commerce Court jurisdiction in the district courts of the United States until such a committee of the House, either by virtue of the rule itself fixing jurisdiction or by the action of the House committee, referred it to the appropriate committee or to the Rules Committee, and a rule does not lie to permit it to be considered in Committee of the Whole House on the state of the Union, without such report.

I do not want to delay the consideration of this matter, but I would like to refer the chairman of the committee to Rule XI, defining the duties and powers of various committees.

On page 337, Rule XI, it is provided that all proposed legislation shall be referred to committees of the House.

And then follows the various committees and their jurisdiction. The first paragraph of this rule recites that this rule is mandatory upon the Speaker in reference to public bills and upon Members in reference to private bills and petitions under Rule XXII. Not that it is optional with the Speaker; not that the committee has the power to set aside this mandatory rule of the House; but that it shall be mandatory upon the Speaker and upon Members.

The bill abolishing the court was introduced and referred to the Judiciary Committee of this House, but that committee has made no report. Now, when we turn over to page 339, we find this:

On judicial proceedings, civil and criminal law, to the Committee on the Judiciary.

Now, I hold that if that rule is mandatory, any general legislation shall be referred by the Speaker if the bill is about a general law, or by any Member if it is a private bill, it is not proper for the Appropriation Committee to embody it in an appropriation bill, even though backed up by the Rules Committee, because the Rules Committee is powerless to set aside a law of the House. If the bill provided for by the proper committee had been reported to the House by the Judiciary Committee it would have been proper for the Rules Committee to have brought in a rule making that bill in order. But there being no report from the Judiciary Committee, and as this rule is obligatory upon the Speaker and on the House, I claim that my point of order should be sustained.

The CHAIRMAN. The special rule making these paragraphs in order is a sufficient reason for overruling the point of order. It is not a question whether the Rules Committee had a right to report the rule to the House for the House adopted the rule, and the House has a right to suspend any rule that it has adopted and to adopt another in its place, and that is what the House did. The Chair overrules the point of order.

Mr. FITZGERALD. Mr. Chairman, in order to facilitate matters, I ask unanimous consent that this provision be debated for an hour and a half, and that amendments be offered during that time, and at the close of the discussion to vote on the amendment.

Mr. BROUSSARD. How is the time to be divided?

Mr. FITZGERALD. One-half to be controlled by the gentleman from Louisiana, who is opposed to the proposition, and one-half by myself.

Mr. MANN. How much time does the gentleman from Louisiana wish?

Mr. BROUSSARD. I do not want much time, but on the four propositions I think I would like about an hour.

Mr. FITZGERALD. Oh, the gentleman does not want to take an hour.

Mr. BROUSSARD. I should want at least 25 minutes to explain my amendment.

Mr. ADAMSON. Will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. ADAMSON. If the gentleman's amendment that he speaks of is offered and a point of order disposed of, we might decide more intelligently as to the time wanted.

Mr. FITZGERALD. Oh, I want to complete the bill to-night.

Mr. BROUSSARD. Then I would like 20 minutes.

Mr. FITZGERALD. I have no desire for any time myself.

Mr. BROUSSARD. On the whole, I would like 25 minutes.

Mr. BORLAND. And I would like 15 minutes.

Mr. FITZGERALD. I will take no time myself, I am willing to yield my time.

Mr. BARTLETT. Mr. Chairman, I have an amendment which I propose to offer.

Mr. FITZGERALD. I am trying to find out how much time is wanted on both sides. I suggest that we take an hour and a half in all.

Mr. MANN. As far as the opposition to the bill is concerned, the gentleman from Louisiana is on that side and so am I. I think we will be willing to agree to 45 minutes on this side, of which the gentleman from Louisiana may have 25 minutes.

Mr. FITZGERALD. Yes; and the gentleman from Illinois 20 minutes.

Mr. MURDOCK. I am on the gentleman's side. I am for the abolition of the court.

Mr. FITZGERALD. How much time does the gentleman from Illinois want?

Mr. MANN. I suggest that we take 45 minutes, as far as I am concerned, in opposition, the gentleman from Louisiana [Mr. BROUSSARD] to have 25 minutes, and I to control 20 minutes.

Mr. FITZGERALD. The gentleman from Georgia [Mr. BARTLETT] wishes to offer an amendment.

Mr. BARTLETT. I have an amendment that I desire to present.

Mr. FITZGERALD. Mr. Chairman, I ask unanimous consent that there be an hour and a half of discussion on this provision, that amendments may be offered during that time, and that at the end of an hour and a half a vote be taken on the amendments, the gentleman from Louisiana [Mr. BROUSSARD] to control 25 minutes, and the gentleman from Illinois 20 minutes, and I 45 minutes.

Mr. ADAMSON. Mr. Chairman, reserving the right to object, if I correctly apprehend the substance of the amendment proposed by the gentleman from Louisiana [Mr. BROUSSARD], if it should not be ruled out of order on a point of order, I might desire 10 or 15 minutes in which to reply to that proposition.

Mr. MANN. But the gentleman could get that on the point of order.

Mr. MURDOCK. Mr. Chairman, I would like to have the gentleman from New York yield me some of his time. I shall have to get it from him.

Mr. FITZGERALD. Yes.

Mr. BORLAND. Mr. Chairman, reserving the right to object, the gentleman from Louisiana proposes to offer an amendment giving shippers a right of appeal, which I intend to favor, and I would like to have 15 minutes on that.

Mr. FITZGERALD. I can not consent to 15 minutes for one gentleman upon this matter.

Mr. BORLAND. Then I shall have to object.

Mr. FITZGERALD. I can do the other thing. I can have the amendments offered and close debate on the amendments in much shorter time.

The CHAIRMAN. The gentleman from New York asks unanimous consent that debate on this provision be limited to one hour and a half, 25 minutes to be controlled by the gentleman from Louisiana [Mr. BROUSSARD], 20 minutes by the gentleman from Illinois [Mr. MANN], and 45 minutes by himself, that during that time amendments be offered, and that at the end of that time the amendments be voted on. Is there objection?

Mr. BORLAND. Mr. Chairman, I object.

Mr. BARTLETT. Mr. Chairman, I have an amendment which I desire to offer.

Mr. FITZGERALD. Mr. Chairman, I intend to close debate on this amendment and all amendments.

Mr. ADAMSON. Mr. Chairman, I ask as a compromise that 1 hour and 40 minutes of debate be allowed.

Mr. FITZGERALD. I am willing to consent to that. The gentleman from Missouri [Mr. BORLAND] is opposed to the abolition of the court, I understand?

Mr. MANN. Oh, no; I think not. I think nobody knows how the gentleman stands. He is straddling it.

Mr. ADAMSON. Mr. Chairman, I ask that my proposition be submitted, compromising on 1 hour and 40 minutes.

The CHAIRMAN. What is to be done with the additional 10 minutes?

Mr. FITZGERALD. Mr. Chairman, I suggest that the Chair control the time.

Mr. MANN. We can not make that arrangement, because the gentleman from Louisiana [Mr. BROUSSARD] desires more time than five minutes.

Mr. FITZGERALD. He is in opposition, and ought to be given more time.

Mr. MANN. I am perfectly willing to give it to him, but he could not have it if the Chair controlled the time.

Mr. ADAMSON. Make it an hour and 50 minutes.

Mr. MANN. I do not think that all of the time should be given to that side of the House, which favors the abolition of the court.

Mr. FITZGERALD. Is the gentleman opposed to the provision in the bill?

Mr. MANN. Why does not the gentleman ask me if I am living? I have opposed the abolition of the court a number of times.

The CHAIRMAN. The Chair will put the request as made by the gentleman from Georgia, that debate on the provision be limited to an hour and 40 minutes—25 minutes to be controlled by the gentleman from Louisiana [Mr. BROUSSARD], 30 minutes by the gentleman from Illinois [Mr. MANN], and 45 minutes by the gentleman from New York [Mr. FITZGERALD]. Is there objection? [After a pause.] The Chair hears no objection.

Mr. BROUSSARD. One moment, Mr. Chairman.

Mr. FITZGERALD. Mr. Chairman, the Chair has not accounted for all of the time.

Mr. ADAMSON. I want the gentleman from New York to have as much as the other side.

Mr. FITZGERALD. I do not think that I should be deprived of any of my time.

Mr. ADAMSON. I want an equal division of the hour and 40 minutes.

Mr. MANN. I will yield 10 minutes to the gentleman from Missouri [Mr. BORLAND].

Mr. ADAMSON. There would be one easy way out of this and that would be for the gentleman from Missouri [Mr. BORLAND] to speak five minutes on each side. [Laughter.]

Mr. BORLAND. I do not know but what I can accommodate the gentleman from Georgia.

Mr. FITZGERALD. I ask the Chair to submit the request to see if there is objection.

Mr. MANN. It has not been objected to.

The CHAIRMAN. That gives the gentleman from Illinois [Mr. MANN] 30 minutes, of which he is to yield 10 minutes to the gentleman from Missouri [Mr. BORLAND].

Mr. MANN. I do not want that in the request.

The CHAIRMAN. The request is that debate be limited to 1 hour and 40 minutes, 25 minutes to be controlled by the gentleman from Louisiana, 30 minutes by the gentleman from Illinois, and 45 minutes by the gentleman from New York. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. FITZGERALD. And during that time amendments may be offered and voted on at the conclusion of the discussion.

The CHAIRMAN. The Chair understood that to be included in the request.

Mr. MANN. Of the 30 minutes allotted to me I now yield 10 minutes to the gentleman from Missouri [Mr. BORLAND], to be occupied by him when he gets the floor.

The CHAIRMAN. The gentleman from Georgia now offers an amendment.

Mr. CULLOP. I ask that the amendment of the gentleman from Georgia be reported.

The CHAIRMAN. Does the gentleman from Georgia desire now to have his amendment reported?

Mr. BARTLETT. I do.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend by adding, on page 21, in line 15, after the word "repealed," the following: "The five additional circuit judgeships provided for by the act of Congress approved June 18, 1910, and by chapter 9 of the act entitled 'An act to codify, revise, and amend the laws relating to the judiciary,' approved March 3, 1911, are hereby abolished and the authority in said acts of Congress for the President, by and with the advice and consent of the Senate, to appoint 5 additional circuit judges is hereby repealed, the number of circuit judges is hereby reduced to 29. So much of the act of June 18, 1910, and of March 3, 1911, as

authorizes or directs the said 5 judges to preside in the circuit or district courts of the United States or in the circuit courts of appeals or to exercise any of the powers, duties, or authority of circuit or district judges or of said circuit or district courts or of said circuit courts of appeals is hereby repealed."

Mr. MANN. Mr. Chairman—

The CHAIRMAN. For what purpose does the gentleman from Illinois rise?

Mr. MANN. To offer an amendment.

Mr. FOSTER. Mr. Chairman, I reserve a point of order.

The CHAIRMAN. The gentleman from Illinois reserves a point of order on the amendment offered by the gentleman from Georgia.

Mr. FITZGERALD. Mr. Chairman, I ask for a ruling on the amendment. I do not want time wasted if it is in order.

The CHAIRMAN. What is the point of order?

Mr. FOSTER. The point of order is that this amendment offered by the gentleman from Georgia is not germane to this particular section, because this deals with the court and not with these particular judges. Then another is that this amendment changes the law as it now exists with reference to these judges and is not germane as to this paragraph.

Mr. BARTLETT. Mr. Chairman, in reply to that, if it needs reply—

Mr. FOSTER. And further, that the judges are independent of the court and are only designated as Commerce Court judges temporarily as circuit judges of the United States.

Mr. BARTLETT. Mr. Chairman, this is germane to this particular section because it proposes to repeal the act itself. The paragraph commencing in line 4 and ending in line 15 itself repeals. It repeals part of an act which this paragraph itself repeals the law establishing the court. If you will examine the law, the establishment of the court and the appointment of the judges is under paragraphs 1 and 2 of the act of 1910, and it goes further than that and repeals the law as contained in the judiciary act of 1911. So it is germane to this particular section. It can not be said not to be in order because it changes existing law, because the whole paragraph and the whole section about the Commerce Court itself changes existing law and is made in order upon this bill. The rule that reported this amendment which made it not subject to the point of order provided that you should not offer an amendment to the site-agents section of the amendment, but it did not say you should not offer an amendment to this part of it, and the debate upon the rule will show that I inquired of the gentleman from Georgia [Mr. HARDWICK] when he was presenting the rule if it was the intention of the committee to prevent amendments to this paragraph, and he said not. Now, the rule is well established that when there is a bill which would change existing law and the bill is made in order that amendments to it which change existing law are not subject to the point of order, and I apprehend the Chair will not at this time undertake to determine whether this is a valid amendment in law that we propose to pass, whether it is subject to the point of order as not being germane to this section.

Mr. MANN. Mr. Chairman, I would like to be heard on the point of order.

Mr. Chairman, the amendment is so clearly subject to a point of order that I would like to call the attention of the Chair to the situation. Any germane amendment to this paragraph is in order, the paragraph itself having been made in order; but the paragraph is to be treated as though, being subject to a point of order, no point of order had been made to it. The amendment would have to be germane to the provision.

Now, would the Chair or anyone else think that it was germane to this provision to abolish all the circuit judges of the United States? There is no provision in here for abolishing a judge.

Now, is it germane to provide for the abolition of all the circuit judges of the United States? Yet the gentleman from Georgia [Mr. BARTLETT] offers an amendment fixing the number of circuit judges hereafter at 29. His amendment, if it is permitted to go in, is plainly subject to amendment. You could reduce the 29 to 1 or to a cipher if you wished to, because if his amendment is in order an amendment to that is in order, fixing the number different from the number he has indicated.

It is not in order on this bill, on this proposition, to change the number of circuit judges or to abolish the circuit judges or to fix the number of circuit judges. It might be as easily claimed, if the gentleman from Georgia can offer his amendment, that we might increase the number of circuit judges to 39. The gentleman proposes to reduce the number from 34 to 29. It is germane to his proposition to increase the number from 29 to 39. Yet no one would claim that upon the consideration of the bill to abolish the Commerce Court it was a germane amendment

to increase the number of circuit judges in the United States by 5. There is no escape from the logic of that.

Mr. CULLOP rose.

The CHAIRMAN. For what purpose does the gentleman from Indiana rise?

Mr. CULLOP. I desire to address myself to the point of order.

I submit, Mr. Chairman, that the point of order is well taken; that the amendment is out of order, and does not come within the purview of the special rule that enables new legislation to be carried in this bill.

That rule was directed only to legislation abolishing the Commerce Court. These judges exist by virtue of law irrespective of the Commerce Court, and they are a part of the Federal judiciary of the country. They are only selected or transferred by the President for the purpose of holding the Commerce Court while the Commerce Court law remains in force and on the statute book.

But this amendment to abolish the five judges created by the statute does not come within the application of this rule at all, and is not covered by it. The attempt made here to add an amendment abolishing five of the judges of the Federal court is clearly out of order, and is not within the provisions of the rule in any respect whatever. This amendment is in direct conflict with article 3, section 1, of the Federal Constitution, and would be invalid if adopted. The special rule adopted permits legislation in this bill abolishing the Commerce Court, but it does not provide for legislation abolishing the offices of five circuit judges. Because these five circuit judges hold the Commerce Court is no reason for the abolishing of their offices. That could not be done even if authorized by the special rule. I respectfully submit the point of order made against the amendment is well taken and ought to be sustained.

Mr. FOSTER. Just a moment, Mr. Chairman. I think if the Chair will make the distinction which exists in reference to these judges in connection with the court he will see that these judges are not created especially for the Commerce Court, but are designated from the circuits, I think by the Supreme Court, one each year, to act as Commerce Court judges, so that when the Commerce Court is abolished these circuit court judges go back to their circuits. The distinction ought to be understood—that they are not Commerce Court judges, but circuit court judges of the United States.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. FOSTER. Yes.

Mr. MURDOCK. How many circuit judges were there before the Commerce Court was created?

Mr. BARTLETT. Forty-two, I believe.

Mr. MURDOCK. Twenty-nine.

Mr. BARTLETT. Yes; twenty-nine.

Mr. MURDOCK. And when the Commerce Court was created there were 34. Now, when the Commerce Court is abolished, there ought to be 29 again. These men are not going back to their circuits. There are no circuits for them.

Mr. FOSTER. There is an attempt to create additional circuits and there are places where they now act.

Mr. MURDOCK. That might be true.

Mr. FOSTER. And there might be use for them at another time. But I think the Chair will recognize that these are not specially Commerce Court judges, but they are judges of the United States circuit courts, designated for a time temporarily to act as Commerce Court judges.

Mr. BARTLETT. Mr. Chairman, just a suggestion. I beg to suggest to the Chair that this amendment does come within the rule. It abolishes offices, reduces expenditures, and repeals the law creating the new offices; and therefore it comes within the Holman rule requirement of reducing expenditures.

Besides, Mr. Chairman, the amendment proposes to repeal the law which creates these judges. This provision repeals the court, and it simply extends the appeal to the office as well as to the court.

The CHAIRMAN. The Chair thinks the amendment is germane.

Mr. ADAMSON. Mr. Chairman, I would be glad to be heard against that proposition for a moment.

The CHAIRMAN. The Chair is ready to rule.

Mr. ADAMSON. I do not think the Chair's ruling will be the correct ruling in that case, and I want to call the Chair's attention to a distinction, though I may be infelicitous in the use of language.

The act of 1910 created a Commerce Court. In the paragraph creating it, defining its powers and duties, it did not undertake to put judges on it, but in a subsequent paragraph it was pro-

vided that circuit judges should preside in that court, and while the President is authorized to appoint five other circuit judges, the five named became part of the general body of circuit judges.

The body of circuit judges was increased by those five. The Commerce Court itself is an entirely distinct and independent creation from the judiciary body of circuit judges. The court can be abolished without interfering at all with the judges, because the law itself provides for them to go back to their circuits, as each one serves his turn on the Commerce Court, and resume the circuit work. It is not germane to a proposition to abolish a court, which is independent in itself, to attempt to reform and modify the judicial system of the United States. It is not germane to a proposition to abolish this court to say that circuit judges who have been designated to serve upon it shall also be recalled when their office and life tenure as circuit judges are entirely independent of the Commerce Court.

The CHAIRMAN. The Chair thinks that under the Holman rule this amendment is germane.

Mr. BARTLETT. Mr. Chairman, I voted against the establishment of the Commerce Court. In company with my friend and colleague from Georgia [Mr. ADAMSON], Judge RICHARDSON, of Alabama, and Mr. PETERS of Massachusetts, a minority report was made against the establishment of this court and the creation of these offices. I have voted in this House on several occasions to abolish the court. I think it was an unnecessary creation of a useless court. When the decisions of that court first came to be considered by the greatest court on the face of the earth, the Supreme Court of the United States, that court reversed them because they set themselves up to destroy the policy of Congress in enacting the interstate-commerce law.

In the case of *Procter & Gamble v. United States* (225 U. S., 282, 294, 295, 298) the Supreme Court reversed the decision of the Court of Commerce (188 Fed., 221), holding that the court had jurisdiction to grant relief from an order of the Interstate Commerce Commission refusing to award the relief sought, on the ground that the jurisdiction conferred by clause "second," section 207, of this code, "to enjoin, set aside, annul, or suspend in whole or in part any order of the Interstate Commerce Commission," applied only to affirmative orders of the commission. Mr. Chief Justice White said:

It can not be disputed that the act creating the Commerce Court was intended to be but a part of the existing system for the regulation of interstate commerce which was established by virtue of the original adoption in 1887 of the act to regulate commerce, and which was expanded by the repeated amendments of that act which followed, developed in practical execution by the rulings of the body (Interstate Commerce Commission), upon whom was cast the administrative enforcement of the act, the whole elucidated and sanctioned by a long line of decisions of this court. That in adopting the provisions concerning the Commerce Court and making it part of the system, it was not intended to destroy the existing machinery or method of regulation, but to cause it to be more efficient by affording a more harmonious means for securing the judicial enforcement of the act to regulate commerce is certain. The first six sections, which called into being the Commerce Court and defined its powers all demonstrate the purpose as above stated; that is, to adjust the powers and duties of the newly created court in such manner as to cause them to accord with the system of regulation provided by the act to regulate commerce as it then existed. It is impossible, we think, in reason, to give to the act creating the Commerce Court the meaning affixed to it by the court below, since to do so would be virtually to overthrow the entire system which had arisen from the adoption and enforcement of the act to regulate commerce.

I have not the time to enter into a legal argument as to the right of Congress to abolish the office of judge created by act of Congress. It is true that these judges after being appointed hold their office during good behavior; but as a lawyer I maintain the proposition that when you create an office, and that office is filled by appointment as provided by the Constitution, if you take away the office the whole superstructure falls. No judge can hold an office when the power that creates the office takes the office away.

When Adams went out of office on the 4th of March, 1801, he appointed what were called the "midnight judges," who were commissioned as circuit judges. When Jefferson came in, answering the demands of the people, he had Congress repeal the law that created those seven circuit judges, who had their commissions in their pockets. Jefferson restored the old judicial system of district judges, requiring the Supreme Court judges to sit as circuit judges, and those seven circuit judges appointed by Adams were turned out of office, and they never had the effrontery to appeal to Congress to pay their salaries. It was such a well-accepted doctrine that it never was questioned; and I, as a representative of the people, stand here to assert that no judge, and no other officer who draws his power to hold an office from an act of Congress, can become greater than the

creator and hold that office in spite of the will of Congress. We are repealing the law that creates this court. Let us at the same time repeal the act that creates the office of judge, take away the power of the judge to hold office, and let the courts settle the question. As a lawyer, after some investigation which I have not the time to state to the House now, I have not the slightest doubt that if we enact this amendment and repeal the act that creates the office of judge, repeal the act to establish the court, the court will go, the office of judge will go, and the judges themselves will go. Either that, or else we have arrived at that stage in the history of this Republic where an officeholder created by act of Congress is greater than the creator of the office—the Congress itself. For myself I am willing to vote to abolish this court, but I think we should follow it with this amendment that not only strikes the court from the statute book, but takes away from the judge whose office was created by this act the right to continue longer in office. [Applause.]

Mr. FITZGERALD. I yield to the gentleman from Kansas [Mr. MURDOCK] 10 minutes.

Mr. MURDOCK. Five minutes will be enough.

Mr. MANN. The gentleman might take the 10 minutes and reserve 5.

Mr. MURDOCK. I will take the 10 minutes and reserve 5.

Mr. FITZGERALD. I will only give the gentleman five minutes.

Mr. MURDOCK. Mr. Chairman, I favor the proposition in the bill which abolishes the Commerce Court, and I also favor the amendment which has been offered by the gentleman from Georgia [Mr. BARTLETT] which does away with the five judgeships. It must be that Congress is not helpless in a matter of this kind. When the Commerce Court was created we created along with it 5 circuit judges. Previous to that there had been 29 circuit judges in this country. The additional 5 created made the number 34. Now, the court itself is to pass, and when the court passes these 5 additional and unnecessary judgeships should pass with it. I particularly favor the abolishment of the Commerce Court, because I believe that it was not only useless but that its creation has tended to defeat justice in the matter of the regulation of railroad rates. The Interstate Commerce Commission was created largely because of delay which met the shipper when he sought redress in the courts.

The Interstate Commerce Commission, a legislative creature, in its development through the years met with many obstacles in judicial limitations, and finally the special Commerce Court was established, created when Congress was really not inclined to create it, but because political powers forced the new court on Congress. When the new Court of Commerce was created it began to arrogate to itself powers which belonged to the Interstate Commerce Commission.

In one notable case in its short history the court took upon itself the right to review the administrative judgment of the Interstate Commerce Commission. The case came about through a complaint before the commission by Procter & Gamble, manufacturers in Cincinnati, who claimed that a railroad did not have a right to charge demurrage on a private car held on a private track and not unloaded.

The Interstate Commerce Commission acting in its administrative capacity, and entirely within its rights, held that the railroad rule should stand; that is, decided against Procter & Gamble. That should have settled the matter; that should have been final. The Interstate Commerce Commission was created for making just such decisions final as the one which resulted from this dispute between Procter & Gamble and the railroad. The original idea was to bring speedy relief in a controverted matter without recourse to the courts. But this new Commerce Court in its very beginning showed its disposition to go beyond its powers and take commission jurisdiction away.

Mr. BROUSSARD. Will the gentleman yield?

Mr. MURDOCK. Yes.

Mr. BROUSSARD. Did not the Commerce Court uphold the decision of the Interstate Commerce Commission?

Mr. MURDOCK. It did; but it went beyond its province. I agree that the Commerce Court upheld the Interstate Commerce Commission, but when the Commerce Court did that it went beyond its jurisdiction; it was reviewing the administrative judgment of the Interstate Commerce Commission, a thing it did not have the right to do, and the Supreme Court of the United States so held.

Mr. BARTLETT. The gentleman will find that decision in my remarks.

Mr. MURDOCK. There is no disagreement between myself and the gentleman from Georgia and the gentleman from

Louisiana. I am stating the fact—that the new Commerce Court arrogated to itself powers that it did not have.

Mr. BARTLETT. And undertook to destroy the powers of the Interstate Commerce Commission.

Mr. MURDOCK. I hope that the Commerce Court will be abolished. This is not the only time that it went beyond its jurisdiction, and if it is continued it will undoubtedly continue to do so in the future.

Mr. BROUSSARD. Mr. Chairman, do I understand that under the agreement all the amendments are to be offered now?

Mr. FITZGERALD. The gentleman has 25 minutes in which he can offer all the amendments he pleases.

Mr. MANN. Mr. Chairman, I desire to submit an amendment to be pending. The amendment is to strike out the entire paragraph.

The CHAIRMAN. Does the gentleman desire to be heard on it now?

Mr. MANN. Not at present; I want the amendment pending.

Mr. BROUSSARD. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 21, line 13, after the words "United States," strike out the comma and insert a period, and add the following words:

"The several district courts of the United States shall also have jurisdiction over the cases brought to correct any error of law made by the Interstate Commerce Commission in granting the rights and granting relief in any proceeding before said commission."

Mr. SIMS. Mr. Chairman, I make the point of order against the amendment.

The CHAIRMAN. What is the gentleman's point of order?

Mr. SIMS. The point of order is that it is not germane to the provisions of the bill which are made in order by a special rule. The provisions of the bill provide for two things—first, the abolition of the court, and second, vesting the jurisdiction from now on in the district court. Those are the two purposes of the legislation, and any amendment that follows this purpose is germane, but an amendment that is offered to increase or decrease the powers of the Commerce Court is not germane, or any amendment that increases jurisdiction of the court is not germane. The amendment proposes to give appeals to the courts from what is called negative orders of the commission, or, rather, no orders, and that is legislation on the powers of the commission which is not embraced within the legislation in the appropriation bill made in order under the special rule.

The CHAIRMAN. Does the gentleman from Louisiana desire to be heard?

Mr. BROUSSARD. I do, unless the Chair is ready to overrule my point of order.

I desire to present this proposition to the House: There has been a whole lot said here about the Commerce Court overriding the Interstate Commerce Commission. The fact of it is that Congress has never been willing to permit the poor shipper anywhere in this land to appear before this court. We have sought here to give him that right, and it is germane to the jurisdiction that some are now seeking to abolish, to give that jurisdiction to the district courts of the country, so that, as my friend from Kansas [Mr. MURDOCK] says, when the commission seeks to override the shipper in favor of the railroads the shipper may have a chance to go into the district court and present his case.

Mr. MURDOCK. Mr. Chairman, I think the gentleman does not intend to misstate my proposition.

Mr. BROUSSARD. No; but the gentleman will have a chance, because I propose to offer another amendment.

Mr. Sisson. Mr. Chairman, I rise to a point of order. I want to know whether the gentleman from Louisiana is now consuming a portion of his time or debating the point of order?

Mr. BROUSSARD. I am debating the point of order.

Mr. Sisson. Then, Mr. Chairman, I make the point of order that the gentleman is not talking to the point of order, because the committee has endeavored to limit debate upon this question to an hour and 45 minutes. I have no objection to the gentleman discussing the point of order.

The CHAIRMAN. The point of order is well taken.

Mr. BROUSSARD. I think the amendment is germane. The provision in the pending bill seeks to take jurisdiction from one court and vest it into several courts. I think that this matter is subject to amendment upon the floor of the House or in this committee of the House, and that is exactly what I seek to do by my amendment.

I seek to extend the jurisdiction of the United States district courts, just as the Rules Committee, under the provision fixed in this bill, proposes to extend the jurisdiction of those courts. It is proposed in this bill to take the jurisdiction which belongs somewhere and vest it in several other courts elsewhere in the Nation. If that is true, which we all know is true, why is it

not competent under the rule to go a little further and extend that jurisdiction to other courts upon a question absolutely germane to the particular jurisdiction recited in the bill? If the Commerce Court is abolished, the district courts have, under this bill, jurisdiction over every affirmative order of the commission whenever it may please the railroads to apply to any district court in the United States. If that jurisdiction is extended to the district courts, in favor of the railroads, why can it not be extended to shippers when the commission decides against them? And the question being so germane, I submit to the Chairman that the ruling just made by the Chairman with regard to the amendment of the gentleman from Georgia applies with greater force in this case than in the case of the gentleman from Georgia [Mr. BARTLETT].

Mr. FITZGERALD. Mr. Chairman, this provision does two things. It purports to abolish the Commerce Court and it purports to make provision for the litigation over which that court now has jurisdiction. It does not give any new right to any parties. The amendment of the gentleman from Louisiana proposes to extend the rights which are not now in existence, under the law, and it seems to me there is quite a distinction and that it is not germane. I ask for a ruling.

The CHAIRMAN. While the Chair is in some doubt, he believes the amendment to be germane, and overrules the point of order.

Mr. BROUSSARD. Mr. Chairman, I can now yield to the gentleman from Missouri [Mr. BORLAND] if he desires to discuss the amendment. This amendment is a bill that was introduced by him in the last Congress and unanimously reported by the Committee on the Judiciary.

Mr. FITZGERALD. He has 10 minutes. The gentleman from Illinois gave him 10 minutes.

Mr. BORLAND. I will ask the gentleman from Illinois to yield me 10 minutes of his time.

Mr. MANN. I yielded the gentleman 10 minutes a while ago.

The CHAIRMAN. The gentleman from Missouri is recognized for 10 minutes.

Mr. BORLAND. Mr. Chairman, this amendment is the exact wording and substance of a bill that was introduced by me in the Sixty-second Congress and referred to the Committee on the Judiciary, considered by that committee in full hearing, and reported by the committee in report No. 1012 of the Sixty-second Congress, second session. So that it is not a new proposition at all. It has been before a committee of this House, clothed with ample jurisdiction to consider it, and has been considered and favorably reported by that committee. The question is what it seeks to do. It is very brief in its language. It says that the district courts shall have the jurisdiction in cases to correct any error of law made by the Interstate Commerce Commission in granting or refusing to grant relief in any proceedings before said commission.

In the present condition of the law the shippers have not an equal chance with the railroads in reviewing the action of the Interstate Commerce Commission. This amendment is designed to put the shippers on an equal footing with the railroads.

The condition of the law as decided by the Supreme Court of the United States in the Procter & Gamble case was that if the shippers applied to the commission for relief from certain practices of the railroads, certain conditions of service, certain charges which were imposed upon traffic, or a division of earnings or any other proposition, and upon presentation of their case to the commission it was decided that the case did not come within the letter of the interstate-commerce act, the shippers could not have any relief under the law. The order of the commission was said to be a negative order, and, even though based on an erroneous view of the law, was not reviewable. The shippers then were foreclosed from any other action. But take the other side of the proposition. If the Interstate Commerce Commission decided upon the same state of facts that the interstate-commerce law did cover the case, and did give the shippers relief, and ordered the railroad to cease the practices in which they were engaged or abate the charges which they were making against the shippers, then the railroads have unlimited power of appeal. That was the difference between an affirmative order which was made against the railroad and a negative order which was made against the shippers on the same state of facts, on the same points of law, the point of law being whether the act complained of came within the wording of the interstate-commerce law. Now, we say that the shippers should have the same right to an appeal to the courts on points of law that the railroads have. Every man here concedes and has conceded in all these arguments and hearings that the right of appeal of the railroads can not be taken away. The railroads now have a right of appeal to the courts in three cases, as stated in these hearings. First, confiscation. If the

order made by the Interstate Commerce Commission be confiscatory of the railroad company's property. That, they say, is a constitutional right which can not be taken away. We do not want to take it away. Second, an error of law. The railroads have a right to appeal, the Interstate Commerce Commission says, not only on confiscation, but on errors of law. Third, arbitrary and unwarranted action; that is, if the Interstate Commerce Commission exceeds its power, even in a case where it has jurisdiction.

In those three cases—confiscation, errors of law, arbitrary and unwarranted action—the railroads have full right of appeal. In those three cases the shipper has no right of appeal. In the first place, the shipper can not prove a case of confiscation of his business against a common carrier. As to the other two cases, errors of law will exist in many cases, or arbitrary or unwarranted action may possibly exist; in those two cases the shippers ought to be on precisely the same basis as the common carrier. This amendment does not say anything about arbitrary or unwarranted action, because we are not assuming that the Interstate Commerce Commission is going to be prejudiced against the shippers. The railroads have the right to appeal on unwarranted and arbitrary action, but our amendment goes only to one of those three cases in which it is conceded the railroads have the right of appeal. We ask that the shippers be given the right of appeal on errors of law made by the commission. This is not a question relating solely to any special line of business. There will be a good deal of opposition by members of the Interstate Commerce Committee of this House on the ground that this is some kind of a special privilege applying to a special class of industry. Now, every industry in the United States is a special industry as far as that is concerned. The lumber business is a special industry. Of course, the soap industry of Procter & Gamble is a special kind of industry and business. Each industry raises a special question for the consideration of the Interstate Commerce Commission, but this law is not directed to any special line of business. It is particularly applicable, however, to the lumber business of the great Southwest—Missouri, Kansas, Arkansas, Texas, and Louisiana.

The lumber business is one of the most important lines of industry for the development of the Southwest. It is the great pioneer in opening up the country. It is a highly competitive business. Lumber can not be gotten out to market unless the millman has a little lumber road to take his product down to the trunk-line railroad. The millman has to build that little road himself. He goes back into the country 50 or 100 miles from a railroad and sets up his little sawmill. He begins to develop the country and get out lumber. Throughout all the Southwest there is a blanket rate on lumber to the basic point on the Mississippi River. Mills located on the trunk-line railroads or within switch limits therefore get the benefit of that rate, but mills located back in the country are largely at the mercy of the trunk-line roads as to what allowance they would get for bringing the lumber down. This is a most unfortunate condition of affairs, so far as the business interests of the Southwest are concerned. I plead very earnestly for fair treatment and an equal show for all business men, big and little, in these transportation matters.

The railroads are bitterly opposing this change. They have no right to do so, for they should have no special privilege that is not given to the shippers.

Many good men have been misled by the false clamor that has been raised about this bill.

It was first said that it applied only to a special line of cases—the tap-line cases. This is not true, because the Interstate Commerce Commission changed the form of its ruling in the tap-line cases from a negative order to an affirmative order. Thereupon the tap-line cases were taken into court, where they are now. This shows that the bill did not have for its sole purpose enabling the tap-line cases to get a trial.

It was said also that this would enlarge the rights of the railroads to appeal. Such a thing is clearly impossible, for the railroads have almost unlimited rights in that direction now. It is the shipper who has no right of appeal, and the railroads do not want him to have. It was said, also, with more noise than truth, this was an attempt to destroy the Interstate Commerce Commission. Instead of being an attempt to destroy, it is an attempt to perfect that system. I believe strongly in the strict regulation of railroads, and I believe the Interstate Commerce Commission is a splendid thing. It ought to be upheld and sustained, but its benefits ought to be made as equal as possible. I maintain, without fear of successful contradiction, that most of the railroad legislation and decisions of the past 20 years have been a direct aid to the railroads.

I come from a great railroad center and know something about the matter. The truth is that the railroads are getting

more clear money out of their business to-day than ever before in their history. Twenty years ago they were giving rebates right and left to all big shippers. A man would hardly ship a carload of freight without asking for and getting a special rate. The railroads seldom collected tariff on anything. Now they get full tariff on everything, which is clear gain for the railroads. The railroads used to employ an army of traffic agents, soliciting freight agents, and so forth, with fine offices and big expense accounts, to get business. Now all that has ceased. They used to give passes right and left. Hardly a respectable white man wanted to pay fare. A man felt cheap if he could not get a pass. Cut-rate tickets were openly sold at the broker's offices. Now all this is changed. Everybody pays fare; even the politicians. This is all right, but the railroads are winners to that extent. They even charge now for excess baggage.

All these abuses were properly corrected, but the reforms put money in the pockets of the railroads. This saving ought to come back to the people by a general reduction of freight rates, but it has not done so. When the railroads stop paying rebates to the big shippers, then the little shippers ought to get some reduction in the general tariff rates, but they did not get any reduction. The railroads simply pocketed the winnings. I am glad to see the railroads prosper, but my main interest is to see that the shippers get not only uniform rates but as low rates as possible. It makes a big difference to a business community that is as far from the seaboard as Kansas City.

This bill has been indorsed practically by every commercial body in the United States. It has been indorsed by every city big enough to have a traffic bureau maintained by the shippers instead of by the railroads. There is not a city big enough to have a traffic bureau of its own that has not indorsed this legislation. I think that statement can be made almost without exception, and nearly every board of trade, nearly every business club, nearly every business association in the South and Southwest has asked to be put on the same basis as the railroads.
